A cursory look at the colonial era exposes how rife the period was with inaccurate or, at best, understudied versions of African desire, pleasure, identity, and performances. The “dark continent discourse” of this period is apparent in several ways. Initially, Western colonizers conceived of Africans as having a primitive and bestial sexuality, which they used to justify the capture and use of African slave labor. The sexualization of such primitive Africans can be traced at least to Edward Gibbon's *History of the Decline and Fall of the Roman Empire*, first published between 1776 and 1788 ([Murray and Roscoe 1998](#)). As Western imperialism, exploitation, and science spread, Christian dogma was used to demonize queer African expressions and pairings. Myths about African sexuality were sustained through early scholarship on indigenous African cultures that neglected rigorous and accurate documentation about the different patterns scholars observed.

Not only were same-sex intimacies considered examples of African inferiority, the myth of universal heterosexuality, which was rooted in a deeply sexualized and racialized view of Africa, was further established. The European imagination has consistently constructed African sexuality as exotic and depraved. This is further evidence of the colonial and postcolonial continuities of the “dark continent discourse.” As a result, the range of African
sexual expressions and practices has been reduced to something outside the norm and certainly distinct from European and Western sexualities (Arnfred 2004). As a result of the combined effects of slavery and colonialism, this period is also representative of ideas about racialized female African bodies, as evidenced by the familiar nineteenth-century case of the Khoikhoi woman Saartjie Baartman, who was put on display as part of a freak show in Europe. Such stark distinctions in racial and sexualized terms have also functioned to effectively “co-construct that which is European/Western as modern, rational, and civilized” (Arnfred 2004, 7). The continuation of this type of colonial thinking is manifest even in early studies of sexuality in Africa, which often portrayed African forms of desire and intimacy as an essential, premodern, and tribal phenomenon (Epprecht 2008).

**The Postcolonial African Context**

The second instantiation of these ideas is in the postcolonial African context. A compelling example of this is contemporary homophobic expressions of African nationalism transmitted through public rhetoric and policy-driving moral condemnation. The notion that same-sex desires are “un-African” is widespread among African leaders. For example, several African leaders, from Zimbabwe’s Robert Mugabe to Namibia’s Sam Nujoma, have criticized the rising emphasis on gay rights and protections in Western nations, calling same-sex and other queer intimacies and practices “un-African” and therefore inappropriate for Africa. Same-sex relations between men are penalized in thirty-eight of the fifty-four African nations, while same-sex relations between women are punished in twenty-nine of them. In places such as South Africa, where same-sex unions are legally protected, gays and lesbians continue to face violence because of their sexual orientation. However, other African leaders such as Kenya's retired chief justice Willy Mutunga and former Malawian president Joyce Banda have advocated for greater tolerance of gay rights and urged lobbyists to further discuss such social justice and human rights concerns.

While coloniality has significantly affected the development of queer identities in Africa, a central issue with questions of terminology, translation, and the Africanization of queer erotics and identities lies with the institutionalization of racism, sexism, and homophobia in contemporary African political and social contexts. The continuities of the “dark continent discourse” of the colonial era play a role in how these forces coincide on a globalized scale today. One argument that has been presented regarding Africa’s contemporary homophobia, in the words of Kapya Kaoma, a Zambian scholar, pastor, and human rights activist, is that it is “as much an expression of resistance to the West as a statement about human sexuality” (2009, 4). It is not so much that queer behaviors, practices, and desires are foreign concepts or phenomena within African tradition. Instead, what scholars and activists are calling attention to is the imposition of Western lenses and interpretive frames to investigate and define that which constitutes African sexuality. Approaching issues of African gender and sexuality in new ways, such as through an
excavation of indigenous and/or Africanized practices, facilitates alternative lines of thinking and theorization. A focus on such practices shows how alternative approaches produce distinct images and therefore realities that are undergirded by varying political, historical, and cultural genealogies.

Another issue is the hegemonic tendencies of contemporary Western intervention in African LGBTI efforts. Often, Western LGBTI groups focus their attention and advocacy overseas to keep up the momentum of their successes at home. In these groups’ efforts to save a desperate Africa from itself, the West’s influence on LGBTI activism has tended to be hegemonic, Eurocentric, and detrimental to Africans and has ultimately yielded antiqueer conceptions of African gender and sexuality. More specifically, a problem that has been identified with such postcolonial Western conceptual structures and modes of thought is that they operate on narrow definitions of sexuality and queer identities, thereby ignoring the diversity and depth of African ones. For example, Thabo Msibi (2011) argues that because of the specific historical, political, and cultural experiences from which the terms *gay* and *homosexuality* emerged in the West, these terms have little import for Africa, where there is no historical equivalent to Western constructions of sexuality as social categories. Further support for Msibi’s criticism comes from Robin Morgan and Saskia E. Wieringa’s 2005 study categorizing more than forty examples of same-sex intimacies in contemporary African cultures, including the Nandi, Kisii, Kamba, Kalenjin, and Kikuyu in Kenya. In other words, it is not the presence or absence of queerness that emphasizes the difference between Africa and the West but their divergent social constructions and historical contexts.

**HUNGOCHANI**

As of 2017 the word *ngochani* still did not appear in the authoritative chiShona/English dictionary (Hannan 2000), notwithstanding behind-the-scenes lobbying from Gays and Lesbians of Zimbabwe (GALZ). Yet it is widely used in common parlance in Zimbabwe to mean “homosexual” with the connotation of a slur like “faggot” or “moffie”—an effeminate, receptive man or boy with an implied hint of prostitution or even dangerous occult practices. The word, moreover, does not sound particularly chiShona, the main African language spoken in the country. For some that confirms the claim that homosexuality is a foreign practice, probably imported by the colonialists, which many political and religious leaders have promoted since the mid-1990s. Tracing the etymology of the word helps to defuse the harmful implications of that claim and in a small way to support struggles for sexual rights and sexual health in Zimbabwe and the region more generally.

The first documented appearance of the word in colonial Zimbabwe was in 1907 during a trial for sodomy laid under then–Southern Rhodesia’s Roman Dutch law. The charge was against a Tonga man from then–Northern Rhodesia (modern Zambia) who
was alleged to have committed the offense against his *ngotshana*. This was translated as “a small boy used by the Zambesi boys as a wife,” which the translator claimed was a Tonga custom. Similar versions of the word appeared elsewhere as early as the 1880s far to the south along the route that African men took to get to the diamond and gold fields of the Kimberly and Johannesburg areas. The consensus then was that it derived from xiTsonga (Shangaan), spoken in southern Mozambique, the main source of male migrants to South Africa. One theory held that it was a corruption of a derogatory term for a “loose woman” adapted to the brutal living conditions of same-sex hostels, where elder men took younger men or boys first as servants, then as sexual partners. This was more than situational or opportunistic pleasure seeking. Rumor was that the men used the sex for metaphysical protection against the manifold dangers of the workplace. The word was subsequently adopted in other African languages used at the mines, presumably as other men adopted the practice. The first dictionary to acknowledge it (as *inkoshana* or “sodomy”) was for isiZulu, the largest language group in South Africa with related languages across the region, including siNdebele, the second language of Zimbabwe (Doke, Malcolm, and Sikakana 1958). The term cropped up occasionally in criminal cases in Zimbabwe with diminishing association with mining and migrant labor. By the time of independence in 1980 it was a rarely spoken, scandalizing term mostly linked to males in same-sex boarding schools, prisons, and hustling in the big cities.

GALZ, by contrast, has since the mid-1990s adopted a variant to combat these historical associations: *hungochani*. The prefix *hu* in chiShona (or *i*- in the second language of Zimbabwe, siNdebele) conveys the presence of a fundamental essence or nature to something (*munhu*, for example, is a person, whereas *hunhu* is the spirit of humanity, or the essence of being human). The new word thus not only sounded distinctly indigenous but countered the suggestion of an immoral lifestyle choice or evil; *hungochani* asserts homosexuality as a natural phenomenon. This class of noun is also genderless. *Hungochani* thus transforms a highly masculine slang term into one that is inclusive of lesbians, trans women, and other sexual minorities. Homosexuals in that very broad sense become part of the national family deserving of the human rights theoretically available to all citizens.

**BIBLIOGRAPHY**

Gays and Lesbians of Zimbabwe. *Sahwira: Being Gay and Lesbian in Zimbabwe*. Harare,
At the heart of this has been the internationalization of Western LGBTQI identity politics that prompted research into African same-sex practices, stressing the political dimensions of the nationalistic homophobia prevalent on the African continent. Such homophobic discourses have found confirmation across several African nations and are evidenced by fervent legislative responses to African same-sex practices. However, a central tension lies between queer identity (which is itself a consequence of the globalization of Western notions of sexuality as identity) and queer practices. Western Africanists such as Marc Epprecht and William J. Spurlin have debated the utility of a Euro-American queer theory for African social and political realities. But rather than find ways to assimilate into “oppressive hetero-patriarchal-capitalist frameworks,” African scholars call attention to the importance of perspectives that account for gender and sexual plurality with an eye toward revolutionizing and transforming oppressive orders (Ekine and Abbas 2013, 3).

Because terms such as homosexual, gay, queer, and LGBTQ are considered exogenous and are, therefore, highly contested in the discourses of African queer practices, some scholars and activists have also taken up efforts to Africanize the discourse on same-sex relationships and identities. Beginning in the 1990s, these efforts were pivotal in the discursive developments around African sexuality, especially as more and more queer Africans became increasingly vocal and critical about white scholarship that either suppressed or gave a functionalist reading to narratives of queer desires among African men. Zackie Achmat (1993) was among the African individuals urging a new generation of scholars to bypass the heterosexist nationalism and homophobia in their search for and documentation of diverse African sexual desires. The outcome of this has been a growing body of queer anthropological and sociological analyses within African studies. Despite this, and because no system is perfect, traditional African expressions of nonnormative sexualities may continue to misalign with the contemporary expectations and needs of African queer communities.

**Conceptual Approaches to African Sexuality Studies**

Yet, because of these developments, there have been two key forms of Africanization underway. On one level, Africanization is accomplished through a focus on conceptual
approaches that bring to view the nonnormative and non-Western sexual and gender identities and practices among Africans. Analyses of sexuality and gender in African contexts are better apprehended through analytical categories such as "same-sex–desiring individuals" or "same-sex erotics," which can, as Deborah P. Amory argues, disclose practices among "many people in many different historical contexts, [and] do not always necessarily lead to the emergence of homosexual identities" (1997, 5; see also Msibi 2011). Examples of these queer intimacies include intersex relations, “boy-wives,” “woman-to-woman marriages,” and “female husbands.” Moreover, scholars call for analytical approaches that are more intersectional through their awareness not just of gender and sexual criteria but age, racial, cultural, social, and historical criteria as well.

Although there has been considerable debate about the relevance and utility of the Western umbrella term queer; some African scholars have adopted it, as evidenced by such publications as Zethu Matebeni’s edited volume Reclaiming Afrikan: Queer Perspectives on Sexual and Gender Identities (2014), Sokari Ekine and Hakima Abbas’s edited volume Queer African Reader (2013), and Kevin Mwachiro's edited volume Invisible: Stories from Kenya's Queer Community (2014). Nevertheless, debate regarding its significance and functionality prevail. Epprecht (2008), a leading scholar on African sexuality, questions the productivity and relevance of queer theory for studying African sexuality largely because of its heavy dependence on Western theory and inability to overcome colonialist conceptions and tropes such as Africa as the “dark continent.” Spurlin (2006) intervenes by proposing that an intersection of queer theory with postcolonial theory will sharpen and strengthen critiques of the former's Western hegemony and foundation. Spurlin also underscores the need to “decolonize assumptions in queer scholarship about sexual identities, politics, and cultural practices outside the West” (2006, 17). Another approach advocates for use of the term queer in its application to Africans following the Austrian queer theorist Gudrun Perko’s concept of “plural-queer variation” (2005, 8). In Perko’s conceptualization, this term encapsulates “the widest possible variety of human beings and living forms” in gendered and sexual terms (8; translations by Doris Leibetseder).

**The Use of Indigenous African Terms**

Although the conceptual and paradigmatic concerns of African sexuality studies is a contested arena, a second effort of Africanization includes excavating and relying on the use of indigenous African terms to identify and define certain queer practices and categories. Such attempts, particularly in eastern and southern Africa, have made legible not just more culturally relevant terminology but language that highlights the ethos and political and social realities of a much broader spectrum of African sexuality. These might include *ashtime* among the Maale of southern Ethiopia; *inzili* among the Bagishu and *kiziri* among the Maragoli in western Kenya and Tanzania; *mashoga* and *lelemama* among Swahili speakers in Mombasa, Kenya, and Zanzibar; *iweto* marriages among the Kamba of Kenya;
The *ashtime* among the Maale in southern Ethiopia formed an effeminate class of men who “dressed like women, performed female tasks, cared for their own houses, and apparently had sexual relations with men” ([Donham [1990] 1999, 92](https://doi.org/10.1007/978-90-411-0557-6_2)). Ashtime are considered “neither man nor woman” and were typically brought together and protected by Maale kings ([Donham [1990] 1999](https://doi.org/10.1007/978-90-411-0557-6_2)). They performed ritual functions and domestic labor in the king’s court, particularly in preventing the king and other men in the king’s court from the pollution of intercourse with women prior to a major ritual function. For men to sleep with ashtime instead during such times was considered acceptable and a means to preserve the symbolic and heterosexual virility of the head of the nation. In Maale thought, penetrating an ashtime was not considered unmanly, homosexual, or bisexual.

**KUCHU**

In Uganda, the term *kuchu*, considered to be of Kiswahili origin, means “same” and is commonly used to mean “same sex.” *Kuchu* functions as an umbrella term referring to a range of Ugandan gender and sexual identities that exist outside heteronormative forms. *Kuchu* is comparable to the Euro-American all-encompassing term *queer*. For many years, *kuchu* was used largely within and among queer communities of Uganda until about 2007, when a local periodical, *Red Pepper*, outed the term in a Sunday edition article that listed the names of self-identified queer Ugandans. Because of the dangers of identifying as kuchu, many queer Ugandans are in an ongoing negotiation of the risks and opportunities associated with living openly as queer people ([Peters 2014](http://www.redpepperuganda.com/)). Despite *Red Pepper*’s exposure, kuchu groups such as Freedom and Roam Uganda (FARUG) highlight the importance of raising awareness, education, and empowerment by “talking” ([Canavera 2017](http://www.redpepperuganda.com/)). Part of the balancing act between risk and opportunity has to do with Ugandan law that, as of 2018, permitted arrests for homosexual acts but not for identifying as “queer,” which makes “talking” about queer issues less perilous ([Canavera 2017](http://www.redpepperuganda.com/)).

Regardless, in 2011, David Kato, a prominent figure as a self-identified gay African man and LGBTI activist, was attacked in his home by unknown assailants, which resulted in his death. These events drew international attention to Uganda and shed light on the LGBTI debates in the Ugandan parliament and, especially, the highly controversial Anti-Homosexuality Bill, first presented in 2009. This bill called for criminalizing “aggravated homosexuality” by prohibiting “sex outlaws” and advocacy on behalf of gay people ([Tamale 2007](http://www.redpepperuganda.com/)). Kato’s prominence in Uganda’s LGBT community, as well as the activism of other gay rights groups, is portrayed in the 2012 documentary film *Call Me Kuchu*. In this film, the Ugandan scholar Sylvia Tamale comments that the very notion that homosexuality is a crime was introduced by the British. She stresses how Uganda’s antigay laws are examples of legislation that Britain
The reason kuchu as a queer signifier is gaining currency is because Ugandan queer activists favor a more indigenous term over its Western equivalent. This approach, according to leaders of the gay rights group Sexual Minorities Uganda, legitimizes their work and visibility not just as Ugandans but in terms of their multiplicitous sexual identifications as well. It facilitates recognition of certain aspects of an individual, with no single identity being taken to be “the only or the whole truth of the person” (Peters 2014, 10). Key to their conceptualizations of both morality and personhood are frameworks motivated by discourses based in human rights, freedom, and autonomy, as well as the Kiganda principle of ekitiibwa (respect/honor) (Peters 2014). Kuchus balance the Western-based emphasis on the self as autonomous, integrated, and cohesive with the indigenous values of appropriate interdependence and relationality (Peters 2014). Kuchu, therefore, offers queer Ugandans a culturally grounded mode of reference for their sexual identities. Because of its broad appeal, kuchu facilitates the coming together of a range of LGBTI organizations and individuals for common advocacy goals. Thus, kuchu communities are an example of efforts to indigenize the discursive currency and terminology related to African sexuality.

**BIBLIOGRAPHY**

*Sureshi M. Jayawardene*

*Assistant Professor, Department of Africana Studies*

*San Diego State University, San Diego, CA*

Among the other examples, *mashoga* is a practice of Swahili-speakers along the East African coast. Mashoga are men who are reputed to be passive homosexuals who dress
entirely in women's clothing or select articles of such clothing at certain ritual and social occasions (Amory 1998). Amory (1998) considers mashoga socially equivalent to the drag queen of Western society. While the Swahili coast in East Africa stretches from southern Somalia to northern Mozambique, its unifying cultural practices include Kiswahili (Swahili), Islam, and an economy driven by trade, fishing, agriculture, and tourism (Amory 1998).

Among the Kamba of Kenya, iweto unions are common. Iweto marriage is when a childless heterosexual Mukamba woman marries a childbearing one. Such unions occur in two primary ways. First, as a first wife in a heterosexual partnership, a Mukamba wife can acquire additional wives for her husband. Although the first wife enjoys a superior position in the family, the co-wives help her tend to their husband’s properties. In this situation, an iweto would bring forth offspring on the first wife’s behalf (Samita 2004). The first wife would arrange the courtship, payment of the bridewealth, and even retain a caregiver for her co-wife (Samita 2004). A first wife can also enter into an iweto marriage for herself and become a “female husband.” This practice also typically follows the cultural norms surrounding bride-price common in heteronormative marriages. In such a scenario, the female husband, or mwaitu, appoints a man to father children with the iweto, and this responsibility is seen as distinct from the man’s own marriage and family obligations (Kitetu and Kioko 2013). Kamba “communal law” has always recognized iweto marriage as a given. The term iweto stems from the Kamba verb kwetwa, which means “to mention” or “to gossip.” According to Catherine Wawasi Kitetu and Angelina Nduku Kioko, taken together, the term implies “one who is to be ‘mentioned’ or ‘whispered about’” (2013, 37).

In Uganda, kuchu communities comprise a range of “queer” gender and sexual practices and identities. As Melissa Minor Peters (2014) notes, kuchus typically identify in multiple ways—as transgender, as women, as gay men, as ex-gay men, and as generically kuchu. The contemporary Ugandan case of gay rights activism and queer identities has come under great global scrutiny because the country itself has been identified as ground zero for intense antigay policy making on the African continent. There is historical evidence, however, suggesting that certain Bugandan rulers of the Kabaka royalty expressed nonnormative sexualities (Mutua 2011). An examination of historical examples of sexuality in Uganda can help current gay rights activists in their search for recognition of and protection for sexual orientation as a human right.

While indigenous terminology is productive and necessary to inform and shape queer African sociopolitical agendas and frameworks, they too can be laden with oppressive notions of gender, age, sexual relations, and hierarchies. Treading with care and caution is important, even in the embrace of vernacular terms. African values and worldviews, together with culturally appropriate human rights frameworks, should be consulted in order to ensure that indigenous terminology does not replicate and reinscribe oppressive systems.
Cultural reasons underpinning sexual relations very much reflect the dictates of African conceptions of the community and family. In some cases, these principles extend to the nation and its leadership as examples of morally appropriate behaviors. Equally, cultural integrity, African spirituality, and ethics are important considerations in any analysis of queer African practices and expressions. For instance, the existence of intersex spiritual deities has been documented among many African ethnic groups. Transgender transformation is common in West African religious ceremonies, just as it is in spirit possession rituals in East Africa. These are documented even in the present day. Even among activists, turning to African terms and discourse on queer intimacies and practices is regarded as more in line with the political and cultural goals of African queer agendas. They argue that policy changes alone are insufficient to adequately enhance the lives of queer Africans (Waechter 2016), and they continue to advocate for education as the most appropriate path for queer African liberatory outcomes (Waechter 2016).

Language in Europe

JO STANLEY
Honorary Research Fellow, Maritime Historical Studies Centre
University of Hull, United Kingdom

The development and use of queer-specific words and phrases by the LGBTQ communities of Europe.

Language is a key form of communication, both written and spoken. Definitions of language vary. However, it is agreed that the words used and the ways they are used (such as the use of *he* as a pronoun, or intonation) enable people to understand and describe themselves and their worlds, as well as to communicate with others. Language reflects and produces ways of thinking and identities. Today’s positive uses of the formerly pejorative *queer* (meaning “peculiar” or “questionable”) and the appropriation of *gay* (which usually meant “merry”) are important examples of new non-oppressive uses of language. Impassioned queer arguments *against* using such words (on the grounds that it is still stigmatizing in the case of the former, and it is inappropriate to lesbians in the case of the latter) indicate how much language matters.

There is some question as to whether queer discourse can exist without queer language. Queer language can variously be seen as a concerted, serious, and proud way of asserting complex queer identities; a joyous collective piss-take and celebratory in-joke; an ever-escalating creative perverse riposte to anodyne heteronormativity; or a handy pragmatic device, born of times when coded communication helped radically disenfranchised people in heteronormative and homophobic cultures evade pillorying and death. Yet one could also argue that “queer language” is problematic because it implicitly states that an oppositional binary exists: “queer language” versus “normal language.”

Such language has often involved obscenity, sharp humor, self-parody, stylish put-downs, appropriation of stereotypical feminine styles, sexual innuendo, derision toward receptive partners (for example the US word *faggots*), and a triumphant refuting of abjection, as in “out and proud.” The extent to which the various sorts of “LGBTQ language” are used is often determined by a situation; for example, it is easier—but perhaps less necessary—to exuberantly flaunt “gay slang” in a queer-friendly nightclub than in a far-right football crowd.

The most commonly used “gay words” are those associated with male sexual practices (for example, *cruising*) and with body parts (particularly for the penis, which is *cartzo* in the
queer language of Polari), but lexicons are expanding constantly. Today some words that make up queer language are often not politically correct and can arouse heated argument, as do the terms *queer* and *coon*. Language fluidity reflects and produces changes in LGBTQ culture; for example, *pride* is now automatically associated with the gay pride urban demonstrations now held every year in June. The mutation has been both heteronormative (*gay* is now widely used by straight people) and queer influenced in a quest for precision, inclusivity, and respect. (For example, *trans* was not in use at the beginning of the twenty-first century.)

**Lavender Approaches to Linguistics**

The study of language used by LGBTQ speakers is related to linguistic anthropology, which studies endangered languages and the influence of language on social life. Lavender linguistics evolved in the United States, not least as part of feminist recognition that language was not only manmade but patriarchal and misogynist. Just as in the new proud use of the word *queer*, there have been black and feminist liberatory reclamations of language, such as the words *nigger* and *bitch*, since the 1970s. Those Challenges to languages' oppressive use were mirrored in the emerging queer world. US anthropologist William L. Leap's annual Lavender Languages and Linguistics conferences, from 1993 onward, along with his founding in 2012 of the *Journal of Language and Sexuality*, with Heiko Motschenbacher, who is based in Germany, have made studies of queer language increasingly international.

From the 1990s into the twenty-first century, queer linguistics analysis moved swiftly from anthropology to cultural, gender, sexuality, and discourse studies. It often involves queer activism as well. Linguistics experts in European and other countries are constantly developing the study. Some connect digitally via the Queer Linguist(ic)s Network on Facebook and its spin-off Non-Binary Linguistics Network.

 Understandings have become increasingly nuanced as gender theorists move beyond the binary (meaning it is now recognized that human beings can have many gender identities rather than being limited to just “male” or “female”). Therefore, language use is a major and sensitive political issue for those no longer prepared to define themselves and their culture in exclusionary or hierarchical terms. New terms are emerging all the time and are controversial—for example, *same-sex–desiring people* or GSD (gender and sexual diversities) rather than LGBT.

 Gender identity is now recognized as something stylized that humans unconsciously perform, depending on the circumstances. Without thinking, people daily and provisionally select “scripts” available to them to help them speak and act like an acceptable sort, such as a properly sweet girl who admires alpha males. Identity is not something innate, which somehow flows from a mysterious and eternal center of one's being. The language used by
queer people is understood to be actively selected, too, in order to act a part. Therefore, as people move in and out of multiple identities—for example, bisexual and lesbian—they choose labels such as “pansexual dyke” that they believe appropriate for specific situations, even though they may do so with insufficient political power, knowledge, and options.

Discourses about sexuality and queer culture have long flourished despite hegemonic silencing. Coded queer “camp talk,” are a collective response to argots, or homophobic mainstream culture. It is similar to the way thieves’ cant and Cockney rhyming slang were partly cryptolects, meaning an intentionally created means by which people who needed to be covert could communicate; Cockney street traders could collude in cheating “outsiders” in this way.

There are two main views of queer language's origins. Some, such as US academic writer Michael Bronski (1984), contend that “camp talk”—especially gay men referring to one another with women’s names or pronouns—evolved as a coded, protected way of speaking about one’s personal or sexual life. It is part of a counter-discourse, amounting to a resistant political reaction to hostile and reductive mainstream culture, including labeling, such as “beaver” and “pouf.” A compensative attempt to create solidarity, it can undermine repressive straight culture and proudly brandish difference. Others feel that language evolves out of queer people’s lives and their needs to communicate with each other, including to sound out new friends' availability, talk discreetly about HIV illnesses, and have fun. The London-based historian Rictor Norton (2011) argues that camp talk came into existence for its own sake: to enable people with something in common to usefully communicate with each other.

Both views and others are valid. The scope of queer language is huge and global. English, Greek, and Turkish have such self-cultivated queer “languages” (which are better called “cants,” as no syntax or grammar exists). Other countries have just a range of words, often borrowed from other countries’ queer lexicons. Many of the words used are from a range of countries and cultures over centuries, including Italian, Romani (Gypsy), and Yiddish, and from the worlds of theater and thievery, fairgrounds and circuses, street trading, and the sex industry.

### European Queer Language Use

Varieties of queer language have been in existence in Europe since ancient times in countries such as Thrace (in presentday Bulgaria, Greece, and Turkey) and Phrygia (in present-day Turkey). English and American English have predominated in queer cultures, including in Germany and France. It is increasingly argued (Provencher 2007) that because new technology has enabled extensive international communication, gayspeak (such as outing) has become global, constituting a transnational hybrid mix of many words and terms. In addition, the growth of gay tourist destinations such as Ibiza off the coast of Spain
and Mykonos off the coast of Greece has meant that visitors return with expanded lexicons. The website Moscas de Colores offers “gay dictionaries” for most European countries. The United Kingdom, Greece, and Turkey, however, are the only countries to have what some call an entire queer argot.

**United Kingdom** The United Kingdom is known for Polari/Palare, a form of mongrel language or a lexicon that includes around 500 words. It has roots stretching back to at least the eighteenth century, including thieves’ cant and theatrical jargon. These were mixed with words from Italian, French, and Occitan. Later additions came from Parlyaree (slang used by tinkers and strolling players). More was brought by seafarers from the eastern Mediterranean, deriving from Lingua Franca, initially the main and polyglot commercial language. It also mixed with back slang, meaning words are spelled backward (e.g., *hair* is *riah*). Seventeenth-century molly-house culture had many self-created terms, such as *giving caudle*, which was derived from the Latin for “tail.”

Polari was used especially by camp male catering crews on passenger ships of the late twentieth century. Sea queens with elaborate and rude female nicknames such as Piss-Elegant Louise, often based on the movie divas they emulated, spoke Polari, not least to discuss passengers’ desirability. *Vada the lallies* meant “look at those legs,” for example. Polari enhanced collective identity in these floating gay havens. But it was also widely used by straight shipmates, too, in a classed solidarity against “outsiders” (customers). Polari became popularly known on land through the BBC Radio series *Round the Horne* (1965–1968), featuring Kenneth Williams as “Sandy.” It is argued that this exposure brought Polari into decline in the camp world because it lost its exclusivity, its delightful secrecy. Polari is still, but decreasingly, spoken by straight and LGBTQ ex-seafarers in the seaport of Southampton. The 2003 Polari translation of the King James Bible controversially continues to be used. In it the world’s creation is written as “munge was upon the eke of the deep” (darkness was upon the face of the deep).
Lancaster University professor Paul Baker (2002, 2017), who has extensively studied the language, comments that it has now been commodified and gentrified. It passed from widespread usage partly because of some 1970s gay liberationists' hostility to camp stereotypes. “Current attitudes towards it are still fragmented and ambivalent within the gay scene, with some people claiming it to be silly, feminising and outdated, others wanting a revival and others thinking it's an important part of gay heritage but shouldn't necessarily be brought back” (Baker 2017). Businesses such as Vada (Look) magazine, Staffordshire’s Polari Lounge café, and Brighton salon Bona Riah bear Polari names. London’s main queer literary salon is called Polari. In a 13 February 2017 message to the author, founder Paul Burston explained, “I named it Polari because it means, literally, gay language, and we’re a celebration of LGBT words.”

**Greece** Other countries have similar linguistic phenomena. There is a modern Greek argot, known as Kaliarda or Latinka, of over 6,000 words. It is said to be much used by receptive partners and by trans sex-industry workers. It has a secret sublanguage, Vathia or Latinika. Kaliarda was identified by the folklorist Elias Petropoulos in 1971. In the late 1960s opponents of the Greek military dictatorship used Kaliarda words as a way to evade censorship (Anna T. 2014).

**Turkey** Lubunca, the queer slang also used by Istanbul sex workers today, has been spoken

Glossary of Polari Words
for at least 100 years. Nicholas Kontovas (2012) has identified roots in thirteen other languages. Many of them are also used in Kaliarda.

**Other Countries** While lacking a full lexicon, the following countries use some “queer words”:

- **France**: The most comprehensive study of queer language among French queered people is by Denis M. Provencher, a US-based professor of French and intercultural studies. His seminal work, *Queer French* (2007), sees the language used as a “vague English Creole.” He argues that while French people use English terms such as *outing* that therefore influence how people conceive of queer culture, they also use a homegrown language.

- **Germany**: Labels such as *warmer Bruder* (hot brother) existed in at least the 1700s in Berlin. They continue to be used, both pejoratively and by GBQ men themselves. Words also reflected contemporary politics: a “175er” (*Hundertfünfundsechzig*er) was a gay man pilloried under paragraph 175 of the German Criminal Code, especially in World War II (1939–1945) concentration camps.

- **Italy**: Many Italian words are used in Polari, Lubunca, and Kaliarda. The principal word for “faggot,” *finocchio*, was reputedly associated with the smell of fennel (*finocchio*), which Catholic clergy sprinkled on bonfires as they burned castrated men at the stake.

- **Russia**: Goluboi is gay slang. Russians have also Russianized English words, such as *kvir*, meaning “queer.”

- **Scandinavia**: Gay slang exists in Swedish, Danish, and Norwegian. Most of the words for gay men are derogatory toward receptive partners. The post-1920s Finnish terms *Hintti* and *Hinttari* are thought to originate from the German word for “from the back” (*von Hinten*). The Polari phrase “to troll,” meaning to walk alluringly, may originate in the Swedish verb *trolla* (to charm or bewitch).

These examples, which contain interesting overlaps, indicate the rich historical and international mix of “queer language” origins; they also demonstrate how the words are often insulting ones, especially when referring to “effeminate” men. The focus is on taboo male sexual activity rather than the whole person. Women are omitted. Implicitly, words reveal how male same-sex sex has been pilloried, forced underground, and punished by death in many European countries. The emergence of a queer cryptolect for those evading “Hilda Handcuffs” (the law) and creating heartening solidarity was, perhaps, inevitable. Celebratory words, such as *pride*, are crucial evidence of cultural change; new queer language also assists in producing still more respectful, insightful, and playful attitudes toward sexual orientation.

Language in Latin America

LAWRENCE LA FOUNTAIN-STOKES
Associate Professor of American Culture and Romance Languages and Literatures
University of Michigan, Ann Arbor

Stigmatized terms for nonnormative gender and sexual identities in Latin America, and how the LGBTQ community is resignifying them.

The reclamation of language in contemporary Latin America, including the resignification of stigmatized terms and the reevaluation or contestation of gender-marked linguistic practices, is a complex and ongoing process that goes hand-in-hand with the growing adoption of widely circulating global terms, such as lesbian, gay, bisexual, transgender, and queer (LGBTQ). Some Latin American and diasporic Latina/o or Latinx (a gender-neutral way to render “Latina/o”) sex- and gender-nonconforming and LGBTQ individuals have actively reshaped the semantics of pejorative and derogatory terms, turning them into reclaimed terms of identity and into political tools. This process has not been seamless and has been accompanied by a variety of controversies and debates regarding linguistic innovation, questioning the efficacy of such efforts and criticizing the incorporation of “foreign” or stigmatized terms. Similar to phenomena happening in parts of the Francophone and Anglophone Caribbean, in Portuguese in Brazil, and perhaps even in some indigenous languages, Spanish-speaking language activists and others have also challenged hegemonic conceptions of appropriate linguistic practices, particularly regarding intonation, pronunciation, spelling, and the usage of singular and plural third-person pronouns and other gendered personal descriptors in attempts to mark their speech as nonsexist and/or queer—for example, by following feminist language reforms and incorporating the letters x or e as gender-neutral suffixes or by feminizing multiple words with the suffix a. These processes occur in tension with speaking and writing practices that favor gender compliance and the maintenance of traditional linguistic standards.

Reclaimed Language in Latin America

Language reclamation in Latin America entails the negotiation of multiple varieties of the European languages that became dominant through the process of conquest and colonization (English, Spanish, Portuguese, French, and Dutch), but also of original indigenous languages, African languages spoken by enslaved populations, and other languages brought by migrants from Africa, Asia, Europe, and the Middle East. The descriptor “Latin America” requires some clarification, as it is not a stable signifier. The
term is most frequently understood in relation to locations in North, Central, and South America colonized by Spain and Portugal in the sixteenth century, including Hispanic Caribbean locations, such as Cuba, the Dominican Republic, and Puerto Rico. But historically the term has also referenced French colonization in the Americas—for example, in Haiti, Martinique, and Quebec (Mignolo 2005). “Latin America” or its variants “Latina/o” or “Latinx America” can also refer to diasporic or colonized populations elsewhere who maintain a relationship to the Spanish or Portuguese or French languages, particularly in the United States and Canada, although many diasporic Francophones and Lusophones do not self-identify as Latinas/os or Latinx (González 2011). Nearly two centuries of US military, political, economic, and cultural interventions in the Americas and the ascendency of American global hegemony have also had an impact on linguistic practices, causing the rise in popularity of English-language terms that at times substitute or compete with local conceptions.

**Stigmatized Vocabulary**

Highly charged, potentially offensive Spanish-language terms such as *pato, pata, maricón, joto, puto, pájaro, mariposa, afeminado, ponca, loca, vestida, bugarrón, marimacho, marimacha, tortillera, bucha, muxe, and sinvergüenza*; Portuguese-language terms such as *viado* (or *veado*) and *bicha*; Haitian Kreyòl terms such as *massisi*; and Nahuatl terms such as *cuiloni* have frequently been used in a pejorative sense to describe supposedly “effeminate” men or “masculine” women or tranvested individuals or persons who are perceived to have sex with others of the same sex (particularly the male “passive” partner). These terms circulate widely, continue to have varied meanings, and are critically adopted by some (Murray 1995; Sigal 2005; Braziel 2008; Estrada 2011). Many individuals feel profoundly ambivalent about these words or reject them altogether, given their historically pejorative connotations. Others have never stopped using them, or see them as full of possibility, advocating for their critical usage, particularly as a way to combat the blanketing effects of hegemonic transnational English-language terms such as *gay, lesbian*, and *queer*, which do not account for the specificity of particular locations and groups. Because many of these terms are highly stigmatized, it is crucial to understand the specificity of use, including the social identity of the speaker and the context and intention of the utterance. Reclamation of terms can function as a way to limit, challenge, or negotiate injurious speech.

**Contested Language and Lavender Linguistics**

Language is a constitutive feature of LGBTQ community identity and self-fashioning and can be a tool of empowerment and survival, particularly through the process of linguistic reappropriation and resignification (Cameron and Kulick 2003). This process occurs at the individual and collective level and can be led by activists, artists, educators, journalists, and other media content producers, scholars, and writers, or it can simply occur among a group
of friends, peers, or acquaintances that interact with each other on a regular basis. It can also occur as the result of a single individual or a single cultural production having a broader impact.

The queer languages of Latin America form part of complex transnational frameworks and have been the object of multiple scholarly analyses. In general, diverse global studies on language, gender, and sexuality address issues of queer language, at times in the framework of lavender linguistics, using the term popularized by the American scholar William Leap (Leap and Boellstorff 2004). Research by anthropologists, sociologists, linguists, and literary and cultural critics documents the particularities of queer language in local contexts and can refer to vocabulary or lexical choice, semantics, intonation, pronunciation, grammatical markers, and other linguistic practices, such as the use of gendered pronouns, adjectives, and nouns. One example is Don Kulick’s ethnography Travesti: Sex, Gender, and Culture among Brazilian Transgendered Prostitutes (1998), where the Swedish anthropologist noted the ease with which Brazilian travesti, or female transgender sex workers, in Salvador, Bahia, moved back and forth between referring to themselves with the gendered pronouns of he and she, at least when documented in the early to mid-1990s.

Another example is Horacio Federico Sívori’s Locas, chongos y gays (2005), in which the Argentine anthropologist mapped out three subject positions, or labels, for men who have sex with men in Argentina in the 1990s: (1) the stigmatized locas, referring to effeminate homosexuals, but also used by militant gays as a sign of affirmation, along with the equally stigmatized term putos; (2) chongos, a term used by locas and others to describe men who perceive themselves to be masculine, not stigmatized by effeminacy, and who are not socially recognized or self-identify as homosexuals; and (3) “gays,” who adopt international or cosmopolitan models of public self identification and masculine behavior, at times reject effeminacy, distance themselves from the label locas, and demand civil recognition. Sívori refrains from offering value judgments on these positions and is more interested in the interplay between the three.

Neologisms and Linguistic Innovation

It is important to note that language is constantly evolving as it reflects cultural, social, political, scientific, and historical changes. Neologisms such as the term homo-sexual, which was coined in 1869 by the Austrian-born writer Karl Maria Kertbeny (1824–1882) to challenge the stigma of such older terms as sodomite, and more recent terms, such as transgender and cisgender, are constantly being introduced to reflect novel concepts and ideas. Linguistic borrowing also occurs when speakers take a word or phrase from one language and incorporate it into their speech in another, such as queer/cuir and gay/gai/guei. Simultaneously, older terms change and evolve, and at times there might be competing definitions or understandings of what these mean. There are multiple examples
in the English language, including the changes in the meanings of the words *gay* and *queer*, which at times receive alternate spellings in Latin America that reflect local linguistic practices. Latin American activists, artists, educators, scholars, and other individuals who consume transnational media or who travel or interact with tourists and foreigners are fully informed of global developments regarding global LGBTQ politics and serve as a conduit for linguistic innovation in the region. At the same time, Latin Americans and other Spanish- and Portuguese-speakers expose global subjects to their linguistic practices.

**Maricones in the 1920s**

The transnational circulation of both spoken and written vernacular terms in Spanish and Portuguese is longstanding. In his 1929 Spanish-language poem “Oda a Walt Whitman” (Ode to Walt Whitman), included in the volume *Poet in New York*, Federico García Lorca (1898–1936) included a veritable transatlantic glossary of common terms from the English-, Spanish-, and Portuguese-speaking world, referring to the “Fairies of North America,” “Pájaros of Havana,” “Jotos of Mexico,” “Sarasas of Cádiz,” “Apios of Seville,” “Cancos of Madrid,” “Floras of Alicante,” and “Adelaidas of Portugal,” which the poet collectively identified as “Maricones [faggots] of the world, murderers of doves!” (*García Lorca 1998;* translation by Lawrence La Fountain-Stokes). In this tortuous poem, the Spanish poet sought to document but also distance himself from these categories, particularly from the stigma of effeminacy synthesized in the term *maricón*, an augmentative derived from *Marica*, the diminutive of the proper name María or Mary. Instead, the Spaniard favored the love or attraction among masculine-acting men portrayed in the life and poetry of the American poet Walt Whitman (1819–1892). Lorca, who was murdered by fascists in 1936 during the Spanish Civil War, was known for his homosexuality and republican sympathies; his poem would not circulate freely until well after his death.

**“Gay” and “Queer”**

The popularization of the term *gay* in the United States in the 1940s and 1950s led to the abandonment of previous terms, such as *fairy* and *pansy*. The term *gay* would gain great traction in the 1960s and 1970s as part of the gay liberation movement, which had international repercussions (*Murray 1995*). As Sívori notes, individuals in Latin America also adopted the term *gay* as a sign of modernity—spelled either *gai* or *gay*—and as a rejection of the stigma of local vernacular terms, but also of the medical-pathological tinge of “homosexual.” The rise in popularity in the 1990s of the reclaimed term *queer* as a radical signifier in the United States led once again to a semantic shift away from the stigma previously associated with this word. However, “queer” has not had the same traction in Latin America as “gay,” although it appears at times with the alternate spelling *cuir* (*Epps 2007*). The articles in Leap and Tom Boellstorff’s edited volume *Speaking in Queer Tongues:*
Globalization and Gay Language (2004), focus on the homogenization of queer language and the tensions that have ensued as a result of the global ascendancy of English-language terms, but the book's chapters also document distinct, local forms of resistance to this process—for example, among Cuban American men in Miami. Mexican literary scholar Héctor Domínguez Ruvalcaba, in his Translating the Queer (2016), has highlighted the possibilities for using the conceptual frameworks of queer theory to critically analyze Latin American experience.

Multilingualism and Vernacular Language in Latin America

Vernacular language refers to local or regional variations that mark the speech of a particular group of people and that are not necessarily considered standard. Individuals are frequently aware of the functioning of vernacular forms as more intimate or informal, distanced from the standard language taught in schools and used in mainstream media; these terms might not appear in general dictionaries or be understood by persons from other regions, countries, or social groups. While the term vernacular accounts for regional variation, particularly marked by geographical distance, it also reflects subcultural practices of minoritarians, frequently marginalized, or disenfranchised groups. The
maintenance, recuperation, and popularization of vernacular language has been a central feature of LGBTQ artists and movements in Latin America.

**Joto** One example of this linguistic recuperation is the current use of the word *joto*, a Mexican term indexing homosexuality or male effeminacy that is also very common among Mexican Americans or Chicanxs in the United States but that is not widely understood outside of its local context. The pejorative usage of the masculine term *joto* and the female term *jota*, which can also refer to gender-nonconforming women, has been overcome in very particular contexts. One example is the title of the anthology coedited by Michael K. Schuessler and Miguel Capistrán, *México se escribe con J: Una historia de la cultura gay* (2010; Mexico is spelled with a J: A history of gay culture). In this case, the coeditors took advantage of the double meaning of the word *jota* as “queer” but also the name of the letter *J*, highlighting the fact that in Spanish, the *x* in Mexico is pronounced as a *j* and that several nineteenth-century formulations of the name of the country were written as *Méjico*. In their whimsical yet cogently political formulation, there is no Mexico (no national culture) without the centrality of “jotas,” a point demonstrated in the essays through the discussion of leading cultural figures.

Another example appears in the academic embrace of the term *jotería* and the rise of “*jotería* studies” in the United States (Hames-García 2014)—for example, in the name of the Association for Jotería Arts, Activism, and Scholarship, which uses four butterflies in a circle as its emblem. In this case, predominantly English-speaking or bilingual Latinx (specifically Mexican American or Chicanx and Central American) activists, artists, and scholars chose to mark their distance from the terms generally understood in the initialism LGBTQ and inserted a linguistically specific Spanish-language Mexican regional marker, *jotería*, which refers to the culture and practices of *jotos* and *jotas*, understood as gender-nonconforming and/or sexually diverse individuals of Latinx descent.

**Mariposa** Use of the Spanish-language word *mariposa* (butterfly), which is stigmatized when used in reference to effeminate men, dates back as early as the seventeenth century, as the scholar Federico Garza Carvajal discusses in his book *Butterflies Will Burn* (2003), which treats sodomy in colonial Mexico and early modern Spain; Garza Carvajal theorizes the significance of the word *mariposa* in relation to sodomy and desire. The contemporary linguistic recuperation of *mariposa* is evident in the title of anthologies such as Charles Rice-González and Charlie Vázquez’s *From Macho to Mariposa: New Gay Latino Fiction* (2011), Emanuel Xavier’s *MARIPOSAS: A Modern Anthology of Queer Latino Poetry* (2008), and Rigoberto González’s memoir *Butterfly Boy: Memories of a Chicano Mariposa* (2011), as well as his Mariposa Boys series for young adult readers, including *The Mariposas Club* (2009), *Mariposa Gown* (2012), and *Mariposa U* (2014). The engaging Cuban documentary *Mariposas en el andamio* (1996; Butterflies on the scaffold), directed by Margaret Gilpin and Luis Felipe Bernaza, positively highlights the experiences of a multiracial cast of gay men who perform in drag in the working-class neighborhood of La Güinera in Havana.
Meanwhile, the Puerto Rican documentary *Mala Mala* (2014), directed by Antonio Santini and Dan Sickles, portrays the activism of the transgender activist group Butterflies Trans Foundation in San Juan, including their efforts to obtain island-wide legislation favoring employment protection.

**Tortilleras** A third example of linguistic recuperation involves challenging the use of the term *tortilleras* (female corn or flour tortilla makers), used as a slur against lesbians or masculine women, particularly in Mexico, which has regional variations, including *cachaperas* (female *cachapa* or corn-cake makers) in Venezuela and *areperas* (female arepa makers) in Colombia, all of which refer to women who make food by bringing their hands together to shape raw dough. The resignification of *tortilleras* appears in the title of the anthology *Tortilleras: Hispanic and U.S. Latina Lesbian Expression* (2003), coedited by Lourdes Torres and Inmaculada Pertusa, as well as in the name of *Potencia tortillera* (Tortillera power), a lesbian digital archive based in Argentina (*Peralta* 2014). According to Torres and Pertusa, the term *tortilleras* is used along with many others in Latin America (*jota, loca, pata, marimacho, culera, lambiscona, pajuelona*); the coeditors indicate that “although these words are often used in derogatory ways, Hispanic and Latina lesbians have reappropriated many of them as affirming identity markers” (2003, 6).

**Pato and Pata and Other Animal Metaphors** In Puerto Rico and in other locations in the greater Hispanic Caribbean, such as Venezuela, to be called *pato* (male duck) or *pata* (female duck), far from being a sign of affection, is a rather disconcerting and at times traumatic event, for it is to be marked as queer, strange, different, sexually or gender nonconforming, or simply marginal (*La Fountain-Stokes* 2007). Much like the word *gallina* (chicken), which also has profoundly negative implications (of cowardice, in that case), *pato* and *pata* are traumatizing terms and can operate as a form of bestialization with negative implications. Remarkably, this linguistic phenomenon is not limited to Caribbean Spanish but also occurs in other languages, such as British English (duckie) and American Yiddish (*feygelekh*, meaning “little bird”). It is not clear how and why these animal names became synonyms, stand-ins, or epithets for stigmatized gender and sexual behavior.

**The Widespread Use of Animal Epithets** The use of animal metaphors in reference to homosexuality and to individuals who transgress dominant gender and sexual norms in the Americas and in Europe—particularly the pejorative, stigmatized usage by dominant groups who do not identify with or practice queer sexualities—and the reappropriation and transformation of these terms by marginal subjects, is actually a widespread, multilingual phenomenon. Linguistic analysis of queer bird and animal epithets reveals manifestations in the greater Hispanic Caribbean (*pájaro/pájara* or “bird,” *pato/pata* or “duck,” *mariposa* or “butterfly,” and *mariquita* or “ladybug,” used with varied frequency in Cuba, the Dominican Republic, Honduras, Mexico, Puerto Rico, and Venezuela) and in Brazil (*bicha* or “female animal,” *veado/viado* or “deer,” and *frango/franga* and *galinha* or “chicken”), in addition to the nonanimal term *puto*, the masculine version of *puta*, or female
prostitute, which is in common usage in Mexico and Argentina.

The definitive origin of the usage of the words *pato* and *pata* to describe gender-nonconforming persons has not been determined, although there are many competing theories and conjectures. For example, there is an interesting coincidence in the frequency of other Hispanic Caribbean lexical items, such as *pájaro* (bird), *mariposa* (butterfly), and *mariquita* (ladybug), which are used in Cuba and the Dominican Republic to refer to male homosexuals. All of these animal words refer to insects or birds that have wings and fly, associating their use to terms in other languages such as *fairy* in English and *feygele* in Yiddish. Clearly, *pato* and *pájaro* would seem to be lexically related, while *mariposa* and *mariquita* (which is also popular in Spain) seem to be derived from marica and its superlative, maricón, all of which derive from María (Mary), a proper name that is also used to refer to male effeminacy in the English language. *Pato* and *pájaro* would also seem to be directly linked to the Spanish phrase *tener pluma* or *plumero* (literally, to be full of feathers), which has a quite generalized usage in Latin America and Spain as indicating effeminateness.

**Literary and Performative Rewritings of Patos** Puerto Rican and Nuyorican artists have challenged the stigmatized use of *pato*. Perhaps the first author to fully engage this symbol as the central motif was Alfredo Villanueva-Collado in his poetry collection *Pato salvaje* (1991; Wild or savage duck), where the poet documented his relationship with his lover of seventeen years, Victor Manuel Amador (1944–1988), an artist who died from AIDS-related complications. In his introduction to *Pato salvaje*, the poet Carlos Antonio Rodríguez-Matos highlights how Villanueva-Collado dialogues with other gay Puerto Rican poets, referencing the work of the well-known writer Manuel Ramos Otero (1948–1990) and their shared rejection of domesticity and domestication (*Villanueva-Collado 1991*). Additional cultural productions that critically engage the trope of *pato* include the Arthur Ávilés Typical Theatre's performance piece *El pato feo* (2000; The ugly duckling), performed in the Bronx, and Frances Negrón-Muntaner's short story "La patita fea" (1999), which was published as “The Ugly Dyckling” in 2007. Alexandra Pagán Vélez's award-winning short story "El cisne" (2001; The swan) also takes up this trope and gives it a novel twist, highlighting transformational elements and a different bird as a replacement for the stigma of ducks. Many of these retellings build upon the metaphor of duck as homosexual in the context of Hans Christian Andersen’s well-known and widely translated children's tale “The Ugly Duckling” (1844), which has been seen as a reflection of the gay Danish author’s own personal travails.

One cogent example of the complex resignification of *pato* (duck) is Ángel Lozada’s loosely autobiographical novel *La patografía* (1998; The pathography), the title of which plays with the phonetic similarity of the word *pato* (“duck” or “faggot” in Spanish) and the terms *pathos* (“pity” or “sadness”), *pathology* (the science that explores illnesses), and *pathography* (the description of illnesses). It was first published in Mexico in 1998 in the
context of the International Book Fair of Guadalajara, which was dedicated to Puerto Rico on the centennial of the US invasion of the island. The novel’s cover features a visually arresting red, white, and green watercolor painting of a duck flying over a tropical landscape full of plantain and banana leaves by the gay Puerto Rican artist Rafael Rosario Laguna. The book is a bildungsroman, or developmental narrative, that tells the story of Ángel Rosado Mangual, also referred to as Luisin, a child growing up in the 1970s in Mayagüez, a city often linked in the popular imagination with male homosexuality. The protagonist of La patografía is harassed and persecuted for being effeminate, and in a Kafkaesque twist, sprouts plumas (feathers), grows a beak, and lays eggs, and finally is hunted, desplumado (defeathered), shot at, sodomized, kicked, cooked, and consumed in a violent homophobic carnage, or what the author calls a patocidio (a duck/queer pathocide); the child’s body becomes that of a sacrificial duck à l’orange, instead of a scapegoat or sacrificial lamb.

Organized as a new Puerto Rican Bible, Lozada’s novel has sections with such titles as “Génesis”; four gospels according to Mamá, Titi Alicia, Mami, and Tío Lázaro; an “Arrebato” (rapture); and a conclusion called “El Patocidio,” which can be read as a type of apocalypse. The child’s persecution is narrated in detail as he falls victim to the entire town as led by Profesor Nerón (Professor Nero, like the Roman emperor) and an evangelist referred to as “Jode y Rasca” (“bothers and scratches”), an apparent parodic reference to Jorge Raschke, one of the most visible and vociferously antigay religious figures on the island. The anal rape of El Pato (i.e., Ángel Rosado Mangual, who has now become a duck) is carried out by the police with a bottle of Malta India, a nonalcoholic, extremely rich malt beverage manufactured in Mayagüez that is popular with Puerto Rican children. The novel’s end is striking in its double move of horror and redemption, as Ángel’s aunt proceeds to cook the duck in orange sauce, making duck à l’orange. After the execution, the narrator offers a social critique, commenting on the government’s and the general public’s complicity and lack of concern with the situation of homosexuals. This violence leads to a broader pronouncement on the island population’s desire to deny any space for homosexuality, and to an identification of a particular (nationalist, autochthonous) Puerto Rican homophobia.

**Locas and Sinvergüenças** Two final examples of reclaimed language are loca (“madwoman,” “effeminate homosexual, lesbian”) and sinvergüenças (shameless individuals), both of which circulate in varied ways. Loca, registered in Argentina (Sívori 2005), has been popularized by entertainers such as the Puerto Rican drag performer Nina Flowers, who made the term her catchphrase in 2009, on the first season of the television reality show RuPaul’s Drag Race (La Fountain-Stokes 2011b). It is also central to Dominican American and Cuban American conceptualizations (Decena 2011; Peña 2013), as well as to transnational Central American immigrants (Viteri 2014). Sinvergüenza, meanwhile, has been used to express lack of shame and appears as the name of activist organizations, literary works, and academic and activist conferences (La Fountain-Stokes 2011a).
Nonsexist Language and Queer Linguistic Practices

It is important to point out that the reclamation of particular words is only one aspect of a much broader effort to reclaim language as it pertains to the LGBTQ experience in Latin America. Additional efforts include strategies to overcome traditional gender correspondence in speech, as in the example of Latinx. The Spanish and Portuguese languages require speakers to use forms (whether nouns, pronouns, or adjectives) that ostensibly match their gender assigned at birth when speaking about themselves, and they also require gendered forms when speaking about others in the second and third person. Therefore, there is an expectation that each speaker will reveal their personal gender through language and that speakers will also identify the gender of others to whom they are referring or speaking.

Gender-nonconforming persons have historically resisted these practices to varying degrees, particularly in private, but there have been limitations regarding public, formal speech. More recent innovations include the substitution of gender-specific vowel suffixes, moving away from the o referencing masculine and a referencing feminine in favor of e or the universal U, or even the consonant x, perceived as gender-neutral forms. As of yet, these practices are somewhat limited to queer and feminist activists and have not been widely adopted, but their use has generated wide debates. The recuperation of gender-inflected intonation and pronunciation has also challenged mainstream norms.

Lavender Menace

AGATHA BEINS
Associate Professor and Director of the Master's Program, Department of Multicultural Women’s and Gender Studies Texas Woman’s University, Denton

Lavender Menace was a New York City–based lesbian feminist collective that coalesced in 1969 in response to homophobia and heterosexism in the women's liberation movement and to sexism in the gay liberation movement. As with many feminist groups at this time, Lavender Menace existed informally, and members are more likely to be known for their participation in Radicalesbians, formed in 1970 by women primarily from Lavender Menace and the Gay Liberation Front (Shumsky 2009). Although short lived, Lavender Menace had a lasting impact on feminism because of its zap action—a theatrical public protest—disrupting the Second Congress to Unite Women and its position paper “The Woman-Identified Woman,” both of which laid the groundwork for lesbian feminism as an identity and politics.

When Lavender Menace formed, the members reclaimed their name from Betty Friedan (1921–2006), leading feminist and a cofounder of the National Organization for Women (NOW), who in a 1969 speech called lesbians a “lavender menace.” Jo Freeman writes in a 1975 analysis of the women’s liberation movement that “Friedan was using McCarthy scare tactics to ‘purge’ NOW of what she called the ‘lavender menace’” because she believed that “lesbians were trying to take over the organization” (99). Established in 1966 and supporting hundreds of state and city chapters by the mid-1970s, NOW worked in legal and political spheres to challenge sexism on a wide range of issues, from the gendered wage gap to violence against women. Friedan, then president of NOW, feared that if feminism were conflated with man-hating lesbianism, it would impede the organization’s efforts to achieve equality between women and men. Friedan’s 1963 book The Feminine Mystique and her articles in mainstream magazines and newspapers characterize homosexuality in a negative light as well (Gilmore 2013; Pomerleau 2010; Poirot 2009). Also catalyzing Lavender Menace was Susan Brownmiller’s New York Times Magazine article titled “Sisterhood Is Powerful.” This 1970 overview of the women’s liberation movement makes a parenthetical reference to lesbianism as “a lavender herring, perhaps, but surely no clear and present danger” (140). Brownmiller claims that she meant to repudiate Friedan’s construction of lesbians as a threat to feminism, but others found it dismissive, patronizing, and insulting (Jay 1999).
Context of the Group’s Formation

Sponsored by NOW and held in New York City, the Second Congress to Unite Women brought together several hundred participants from across the political spectrum. On 1 May 1970 a group of about twenty women interrupted the event (Jay 1999; Echols 1989). After gaining control of the stage and the sound system, the activists bared pale purple T-shirts with the phrase “lavender menace” and carried signs reading, “The woman’s movement is a lesbian plot!” The group also passed out a draft of a manifesto-like document titled “The Woman-Identified Woman,” a position paper that makes “the primacy of women relating to women” critical to women’s liberation (Radicalesbians 1971, 83). They then turned the evening into an open dialogue and consciousness-raising session among all participants that focused on lesbianism and the hegemony of heterosexist culture. Altogether this action brought sexuality to the fore and demanded that NOW—and the women’s liberation movement more broadly—recognize the significance of lesbians in feminist activism and the need to actively challenge homophobia.

Lavender Menace Member Rita Mae Brown (standing, far right) at the Second Congress to Unite Women, May 1970. Lavender Menace gained notoriety when they interrupted the Second Congress to Unite Women on 1 May 1970 in order to bring attention to homophobia within the National Organization for Women and the role of lesbians within the women’s liberation movement.
Congress attendees appeared to heed these concerns, adopting a resolution that affirmed lesbianism as a way of relating to other women and as significant to feminist politics (Echols 1989). Then, in 1971, NOW amended its official position on sexuality with the resolution “Lesbian Rights,” which outlined the range of oppression lesbians faced and concluded by averring that "NOW recognizes the double oppression of women who are lesbians ... that a woman’s right to her own person includes the right to define and express her own sexuality and to choose her own lifestyle, and ... that NOW acknowledges the oppression of lesbians as a legitimate concern of feminism” (NOW 2000, 334).

Although Friedan is often singled out as the source of NOW's homophobia, resistance to lesbianism characterized the group more generally. At the national level, NOW privileged heterosexuality. When it was founded, the organization's political program foregrounded marriage and equality between husbands and wives, and discounts in NOW membership for married couples limited marriage to a heterosexual union (Gilmore 2013). Also erasing lesbianism, NOW’s statement of purpose adopted in 1966 emphasized women’s roles as mothers and caregivers but made no mention of sexuality as a topic of activism. Moreover, New York's First Congress to Unite Women (1969) omitted the homophile group Daughters of Bilitis as a sponsor (Orleck 2015), and the second congress excluded lesbianism from its agenda (Jay 1999). Some actions within NOW were interpreted as actively homophobic. For example, in 1969 Friedan asked prominent lesbian Rita Mae Brown (1944–) to leave her position as editor of NOW's newsletter. And Del Martin (1921–2008), cofounder of the Daughters of Bilitis and an active NOW member, faced resistance from NOW board members when she attempted to bring sexuality within NOW's purview (Gilmore 2013; Pomerleau 2010).

**Impact of the Group**

Lavender Menace's disruption of the Second Congress to Unite Women reverberated widely, and “The Woman-Identified Woman” circulated throughout the nation (Poirot 2009). Participant Karla Jay considers the zap action the “single most important action organized by lesbians who wanted the women’s movement to acknowledge [their] presence and needs” and claims that it “completely reshaped the relationship of lesbians to feminism for years to come” (1999, 137). Most immediately, Lavender Menace influenced discourses about sexuality within feminism, which it did primarily through “The Woman-Identified Woman” (Garber 2000). This statement, attributed to Radicalesbians when published in 1971, was one of the first to explore the political facets of being lesbian, thus setting a foundation for lesbian feminism as a philosophy and way of being in the world. Because the piece de-emphasizes the role of romantic and sexual relationships and instead explores the revolutionary potential of women-centric interactions, it constructs lesbianism as a political choice and, therefore, as open to all women.

In addition to redefining women's relationships, “The Woman-Identified Woman” suggests
that lesbianism represents the acme of feminism. By defining “woman identification” in opposition to women who relate to men, this piece implies that any affiliations with men inherently reinforced patriarchal power and, by extension, that lesbians are the vanguard of the women’s liberation movement. From this perspective, only a separatist agenda would do. Such a program alienated many women—heterosexual and lesbian—causing some groups to fracture and revealing some of the heterogeneity within lesbian and feminist communities.

While Lavender Menace’s zap action and “The Woman-Identified Woman” marked a significant moment in the women’s liberation movement, the prominence of NOW and New York City may overemphasize the group’s effects on feminism in the 1970s. New York City was an important site of feminist activism and, as such, has weighed heavily in national histories of the movement. Studies of feminism, for instance, tend to portray a gay/straight split as pervasive. There were widespread debates about sexuality, but a closer look at different cities reveals a range of feminist practices, coalitions, and tensions (Clark 2007). Not all lesbians experienced hostility from NOW, and some local chapters actively welcomed lesbians and addressed issues of sexuality in their political programs. Especially in smaller cities, NOW chapters may have offered women their only connection to feminism, making members more willing to work through disagreements rather than leave or split up the group (Gilmore 2013). In contrast, some radical feminist groups continued to marginalize lesbians and lesbianism in their political programs (Echols 1989; Pomerleau 2010). Recognizing this diversity in the women’s liberation movement does not diminish the political, ideological, symbolic, and affective weight of Lavender Menace, but it does highlight the way place and time conspired to shape the particularities of this group’s actions and to situate it so visibly in national histories of feminism.

Lavender Scare

ANDREA FRIEDMAN
Professor, Departments of History and Women, Gender, and Sexuality Studies
Washington University in St. Louis

A Cold War campaign targeting gay people in the US government for reasons of national security that paralleled the anti-Communist campaign known as the Second Red Scare.

In 1992 the historian Geoffrey S. Smith coined a new term to describe how anxieties about gender and sexual normativity informed US politics and culture in the years after World War II: the “lavender scare” (318). Operating in tandem with the anti-Communist crusade known as the Second Red Scare, the Lavender Scare exploited and inflamed concerns about national security at the beginning of the Cold War to deny rights to privacy, personal security, and employment to gay men and lesbians, and those suspected as such. While most narrowly “Lavender Scare” denotes the implementation of loyalty-security policies to prevent homosexuals from working in federal civilian agencies, it also encompasses related efforts carried out by the Federal Bureau of Investigation (FBI), the military, immigration officials, local police, state legislatures, and others to expose and stamp out the “homosexual menace” (D’Emilio 1998). As such, it constitutes an important episode in the construction of the US state, a state that is not simply “straight” but that premises its security on its capacity to exclude a wide range of “others” from recognition and legitimacy (Canaday 2009).

The antihomosexual campaign that lasted from the end of World War II in 1945 into the 1960s was part of a postwar moral panic that erupted in response to broad social, economic, and political shifts. These included the rise of corporate culture and its impact on long-standing ideals of masculinity; the massive social disruptions of the Great Depression and war years; an expanding federal bureaucracy; heightening racial conflicts; the growing visibility of gay men and lesbians in the nation’s cities, in the cultural imagination, and in scientific and medical discourses; and intensifying competition between the United States and the Soviet Union for global influence. In this context, many scholars agree that both the Lavender Scare and the Second Red Scare reflected widespread anxieties about American society more than realistic assessments of the Soviet threat to internal security. The common roots of these crusades were reflected in the parallel ways that Communists and gays were imagined to constitute a threat to the nation: both were morally weak and psychologically immature; both were marked by sexual immorality and gender nonconformity; and both constituted secretive “hidden subcultures” whose loyalties to
their group superseded their loyalty to the nation (Johnson 2013, 63). Senator Kenneth Wherry (1892–1951), one of the foremost promoters of the Lavender Scare, summarized this logic: “You can't hardly separate homosexuals from subversives. Mind you, I don't say every homosexual is a subversive, and I don't say every subversive is a homosexual. But a man of low morality is a menace in the government, whatever he is, and they are all tied up together” (quoted in Johnson 2004, 37–38).

Institutionalizing the Lavender Scare

Concerted efforts to expel gay men and lesbians from federal jobs dated from 1947, when President Harry S. Truman (1884–1972) issued Executive Order 9835 mandating loyalty investigations for all civilian employees and those seeking employment. As the historians Allan Bérubé (1990) and Margot Canaday (2009) have shown, military officials expanded their existing antihomosexual efforts in the same year. In response, the State Department created the Personnel Security Board, which went further, permitting the exclusion of those with “character weakness,” including sexual perversion. In 1950, after Senator Joseph McCarthy (1908–1957) charged that the department was harboring Communists and homosexuals, John Peurifoy (1907–1955), the department’s deputy undersecretary, revealed that ninety-one homosexuals had been fired under this policy. McCarthy’s attention to the issue was fleeting, but Peurifoy’s admission prompted other Republican legislators to take up the charge. Sensing an opportunity for partisan advantage, men such as Styles Bridges (1898–1961) and Wherry participated in a series of Congressional hearings and investigations that aroused public opinion about the homosexuals-in-government “problem” and pressured administrators to expand existing antigay initiatives (Johnson 2004).

Late in 1950, their efforts received bipartisan approval when a Senate committee chaired by the southern Democrat Clyde R. Hoey (1877–1954) issued an influential report titled “Employment of Homosexuals and Other Sex Perverts in Government.” Despite quite mixed testimony on the question, the report concluded that “those who engage in acts of homosexuality and other perverted sex activities are unsuitable for employment in the Federal Government…. One homosexual can pollute a Government office.” This logic culminated in President Dwight D. Eisenhower’s 1953 executive order that any federal employee could be dismissed on grounds that his employment might be “contrary to the best interests of the national security” (Executive Order 10450). Enforcing this policy required increasing surveillance of American citizens by the FBI, which was responsible for conducting investigations, and local vice squads, who shared arrest records and lists of “known” homosexuals with federal agencies. The “routinization and institutionalization” of the Lavender Scare within the national security bureaucracy made this persecution both less visible and more efficient (Johnson 2004, 5). According to the historian David K. Johnson (2004), more Americans were fired or never hired under these policies because of
accusations of homosexuality than disloyalty or political subversion (see also Charles 2015).

The effects of the Lavender Scare were not uniform. Male applicants and employees seem to have been more severely affected, in part because they were more likely to be arrested under public morals laws, making them more identifiable and providing sufficient evidence for dismissal. Furthermore, anxieties about failing masculinity in the postwar years may well have focused attention on male government employees (Johnson 2004; Cuordileone 2000). In addition, although in the postwar years the civil service became more diverse, white men held the majority of positions. Still, in general, women and African American employees came under particular suspicion in loyalty-security investigations, and further research may demonstrate that this extended to investigations for homosexuality in particular. Certainly, unmarried and professional women were already suspect in the postwar conservative milieu; in this context, accusations that they had “odd-shaped lips” or associated mainly with other women may have been enough to fuel investigations (Johnson 2004, 120; see also Storrs 2013). Similarly, the experience of nongovernment workers who were both black and gay in postwar America, such as the civil rights activist Bayard Rustin (1912–1987), suggests that their compatriots in the civil service might have been particularly vulnerable (D’Emilio 2003).
US Senator Clyde R. Hoey, Head of Committee that Issued “Employment of Homosexuals and Other Sex Perverts in Government” in 1950. This influential report concluded that those who engage in homosexual activity were unsuitable for employment in the federal government, lending institutional support for the persecution of homosexuals in government service.

Beyond the Federal Government

The Lavender Scare extended to employees of many states, as well as government contractors, private industry, and universities. The Florida Legislative Investigation Committee, popularly known as the Johns Committee, is a notorious example. Created in 1956 to investigate “organizations advocating violence,” the Johns Committee was part of a coordinated attempt in the South to use state power to mount massive resistance to federal civil rights efforts. Its members first attacked the National Association for the Advancement of Colored People (NAACP), accusing it of supporting Communism. When this campaign stalled, committee staff escalated a concurrent investigation of homosexuality, focusing on driving gay men and lesbians out of the state’s universities and public schools. While the staff’s efforts ultimately subjected them to censure and ridicule, from 1957 to 1963 the committee succeeded in terrorizing numerous teachers, engineering the firing of professors at two state universities, and prompting the revocation of teaching credentials of dozens of women and men (Braukman 2012; Graves 2009).

In certain ways, the Johns Committee’s purge of teachers, especially at the primary and secondary level, relied on a different logic than did other efforts associated with the Lavender Scare: gay and lesbian teachers were imagined to pose a moral threat to children rather than to be security risks who might betray national secrets. Yet the Johns Committee shows particularly clearly how changes in the racial, gender, and sexual orders could be linked as attacks on the nation. The committee justified its campaign against the NAACP as a fight against “racial perversion” (support for interracial sex), made necessary by the infiltration of the group by Communists, who allegedly sought to encourage “social mixing,” offered pornography to youth, and sanctioned homosexuality in order to assault American culture from within. Teachers, who at best did not provide proper moral teachings and at worst were pedophiles, were equally dangerous (Braukman 2012).

The Lavender Scare and the Global Order

The United States was not alone in intensifying the persecution of homosexuals, especially gay men, in the postwar years. Canada, Australia, and the United Kingdom all created similar campaigns; international organizations such as the United Nations fired gay and lesbian employees; and in France some forms of homosexual conduct were recriminalized (Kinsman and Gentile 2010; Wotherspoon 1989; Johnson 2013). There is evidence that these efforts were shaped, encouraged, and even mandated by US officials, but they also reflected homegrown homophobia and local developments. Canada’s campaign appears
most similar to that of the United States, encompassing increased quotidian policing of same-sex sexuality, immigration restrictions, and a purge of government employees suspected of being gay. But in Canada as well as the United Kingdom, concerns about homosexuals’ “character weakness” conflicted with respect for privacy rights and civil liberties. Consequently, there was more resistance within these governments to such policies, and a quicker move toward liberalization. Even Canada’s infamous “fruit machine”—developed, though never fully implemented, to identify homosexuals through measuring “pupillary response” to pornographic images—was proposed as a more precise and judicious technology than notoriously inaccurate polygraph tests that US officials expressed no hesitation about using (Robinson and Kimmel 1994; Kinsman 1995).

Focusing on the global politics of the Lavender Scare also sheds more light on the international tensions animating US policy. The scholar Robert D. Dean (2001) argues that this “sexual inquisition” enabled conservatives to attack an entrenched foreign policy elite, which they justified in the name of protecting the “free world” from the incursions of worldwide Communism. In addition, ideas about the moral foundations of empire and US exceptionalism legitimated these policies. If, as had long been contended, tolerance for homosexuality was a key cause of the decline of civilizations and empires, then US officials, competing with the Soviets for influence with a newly decolonizing Global South, faced particularly pressing challenges as they grappled with the “problem” of sex perversion at home. The historian Naoko Shibusawa has suggested that, along with Communists, homosexuals were Orientalized, “categorized ... as diametrically opposed to Americans and the West” (2012, 732). This logic infuses R. G. Waldeck’s influential 1952 article “The Homosexual International,” which warned of a “Homintern” that paralleled the Comintern: “Here is why homosexual officials are a peril to us in the present struggle between West and East.... Without being necessarily Marxist they serve the ends of the Communist International in the name of their rebellion against the prejudices, standards, ideals of the ‘bourgeois’ world” (quoted in Shibusawa 2012, 732).

**Unintended Consequences**

The Lavender Scare cost thousands of US citizens their jobs, their peace of mind, and their sense of security. It undoubtedly destroyed careers, families, and friendships. There are stories of suicides. It was multifaceted and multipurpose: an effective strategy for partisan maneuvering and the pursuit of political aims; a means of shoring up a moribund gender and sexual order; an instrument of Cold War governance. Nonetheless, a policy that depended on suspicion, secrets, and fear was likely to have unforeseen and unintended consequences, and these could destabilize the national security state itself.

For example, insinuations about homosexuality within his intimate circle helped bring down McCarthy himself. When, beginning in 1953, the senator accused the now Republican-controlled federal bureaucracy of being soft on Communism, both Cold War
liberals and the Eisenhower administration used homophobia as a tool against him. Slyly questioning his masculinity and circulating gossip about the too-close relationship between his aides Roy Cohn and G. David Schine, they raised questions about McCarthy’s trustworthiness, his autonomy, and his “perversion of power.” While not the only reason for McCarthy’s fall from influence, the ideas popularized within the Lavender Scare made it possible for his enemies to coalesce against him even as they differed over how best to contain Communism (Dean 2001; Friedman 2005).

Furthermore, the intensified policing of the Lavender Scare was intended to suppress growing gay and lesbian visibility, but it also contributed to the emergence of the homophile movement. In an era of extreme state-sponsored homophobia, most homophile groups, including the Mattachine Society and the Daughters of Bilitis, enacted a strategy of respectability politics in defense of homosexuals’ right to exist. These organizations sometimes urged members to avoid “swish” or to dress in gender-normative ways, prioritizing assimilation over queer difference, but their overall commitment was to gaining civil rights and recognition (Loftin 2012). The discrimination and persecution enabled by the Lavender Scare motivated early homophile leaders to organize. Mattachine Society founder Harry Hay (1912–2002) was particularly incensed by the “encroaching American Fascism” embodied in state policy toward “androgyynes” (quoted in Johnson 2004, 170). The Washington, DC, Mattachine chapter made opposition to federal employment discrimination against homosexuals its highest priority, particularly after the scientist Frank Kameny (1925–2011), himself a victim of the Lavender Scare, assumed its presidency. David K. Johnson concludes that “the struggle with the civil service was a driving force behind the gay rights movement” (2004, 212). But this was a long struggle. Not until 1969 did a federal court of appeals rule that homosexuality was not a prima facie reason for being barred from federal employment; not until 1975 did the US Civil Service Commission rewrite its regulations to eliminate the presumption that homosexuality was a distinctive form of immoral conduct; and not until 1995 did President Bill Clinton (1946–) sign an executive order prohibiting the government or its contractors from denying security clearances on the basis of sexual orientation.

Lesbanese (2008; Alissar Gazal)

NICOLE FARES
Independent scholar
Alpharetta, GA

Short documentary spotlighting the struggle of the women of Lebanon and their burgeoning sexual identities.

The Israel-Hezbollah War of 2006 was a thirty-four-day conflict that led to the destruction of Lebanese civilian infrastructure, including roads, bridges, electrical facilities, and the Hariri International Airport in Beirut. And although Hezbollah considered the United Nations–brokered ceasefire a victory, the conflict resulted in the deaths of over 1,000 Lebanese civilians and the displacement of approximately 1 million people (Bouckaert and Houry 2007). Alissar Gazal’s short documentary Lesbanese (2008), about the lesbian community in Lebanon, shows how these women maneuver the politics of their daily lives and depicts their survival of and reactions to the Israel-Hezbollah War. It was filmed in Beirut nine months after the war as the conflict’s effects have settled on the country and its people. The documentary opens with a rough filming of an Al Jazeera news report: “If you live in the West,” Gazal begins, “the image you are left with of Lebanon is that of chaos and war, political assassinations, civil strife, and endless death. That is not the Lebanon that I know” (0:10). She transitions with upbeat music to the streets of Beirut, referring to the famous resilience of the Lebanese people and how, as the streets show, they live their days despite the daily chaos and instability of their country.

The Filmmaker and the Film’s Context

Gazal is a Lebanese Australian actress, director, and producer. She identifies as a political artist and activist and uses her art for social and political activism. Politics drives her work in many ways, whether in film or theater, and she employs it to help the Lebanese and Arab LGBT communities in the Middle East and Australia. She considers humor a key tool to be employed when approaching sensitive topics and when seeking to communicate with a minority community. Gazal has served on the management committee of the Arab Film Festival Australia and the selection committee for the Sydney Film Festival.

While many books and films have reported the coming-out stories of the LGBT communities in the Middle East (e.g., Bareed Mista3jil [2009]), Gazal’s documentary fills a gap in these representations as it focuses on Arab lesbian interests, which have yet to be as consistently thematized as Arab male homosexual interests have been. It also offers an
alternative to the representations of nationalist Arab lesbians in the Middle East. The women in this documentary comfortably appropriate and bend certain Western queer ideologies and epistemology, but they do not dwell on the technicalities; instead, they speak of their personal experiences and their attempts to negotiate their sexualities under a variety of local and geopolitical pressures. They are not preoccupied with the theoretical; they instead share their techniques and advice on navigating gender and sexual identities between the private and the public, the difficult and the possible. They help the viewer grasp the queer Arab identity as postcolonial, hybrid, and unfinished. Sexuality is not expressed as defiance or pride; instead, these women address their sexual orientation with the vulnerabilities and survival techniques associated with gender shaming. These interviews validate the presence of these lesbian Arab women in the global queer community as political resistance. For, as lesbian Arabs, they face a dual struggle as they battle oppressive forces within their own communities and resist the global narrative that tries to use their “oppression” for broader military or political goals.

*Lesbanese* is a documentary that, at its core, is an engaged and oppositional political film. Its rough filming and collage production technique reflect a philosophy inspired by anticolonial thought and independent cinema that is anti-imperialist and anticapitalist in nature. Gazal, the film’s director and writer, hails from a generation of filmmakers whose memories of Lebanon’s bloody civil war (1975–1990) remain omnipresent. She seeks to incorporate the economic situation and the political aspirations of the Lebanese people she documents, while depicting the transitional stage from posttraumatic crisis to postrevolutionary catharsis.

Lebanese cinema has a long and unstable history rife with unmet potential and colonialist hindrances. It reached its peak in the 1960s and 1970s with mainstream flicks and folk musicals, but its progress was quickly halted by the Lebanese Civil War, when Lebanese filmmakers became reliant on foreign funding and grew accustomed to the restrictive conditions that came with it (Fahim 2016). Apart from a few Lebanese film producers who managed to receive funding from private investors or institutions, most producers continue to be reliant on foreign funds. Modern Lebanese cinema seems to also explore various topics within the context of the civil war. Even the films that offer a social and economic critique—including films and documentaries on the Lebanese LGBT community, such as Nadine Labaki’s *Caramel* (2007) and Samer Daboul’s *Out Loud* (2011)—seem to revolve around religion and war. *Lesbanese* is no different, for Gazal portrays the intersectionality of nationality, patriarchy, religion, and war as inseparable within the discussion of sexual orientation in Lebanon.

**Depicting Progress in LGBT Rights**

Lebanon is on track to decriminalizing homosexuality, as Judge Rabih Maalouf declared homosexuality “a personal choice, not a criminal offence” in a ruling on 26 January 2017
that challenges Article 534 of the Lebanese penal code, which states that homosexuality is “contrary to the order of nature” and punishable by up to one year in prison (Reid 2017). The progress being made for the rights of LGBT individuals in Lebanon largely stems from the work of activists and human rights organizations, such as Helem, that are featured in Lesbanese and that organize workshops and seminars, while also recruiting famous figures to advocate LGBT rights in an effort to normalize homosexuality among the public. Lesbians tend to be marginalized or underrepresented in discourses of queer representations in the Middle East mainly owing to the assumption that their homoerotic behavior is more tolerated in Arab societies. Lesbians in Lebanon, however, have organized under Meem and other nonprofit organizations to take part in shaping the discourse regarding gender and sexual rights in their country. The lesbians interviewed in this documentary, or the “Helem Girls” as Gazal refers to them in her credits, include eight women: Faten, Jacky, Luby, Mia, Mira, Nadz, Stephanie, and Zeina. They compose a friendly cast that makes the documentary more approachable despite the sensitive topics it tackles. They describe their flirting skills and hangout spots and speak, in broken English and determined body language, of their relationships with their parents and how they live as part of Lebanon’s active LGBT community.

The most revealing footage that gives a hopeful outlook for the future of LGBT communities in religious and conservative societies is the interview with Luby, a seventeen-year-old Muslim lesbian. Her supportive mother spoke of her and her husband’s acceptance of their daughter’s sexual identity, making it clear that it is indeed mainstream society that would not be as tolerant:

I can accept, but our country can’t accept. I can’t go to my parents and tell them: this is Luby’s girlfriend or fiancée [6:50].... We believe in Allah, that is what God willed, it’s not how she chose to be. Nobody wants to be different. It’s not her choice, that is what Allah willed. What can I do about that? [7:40]

In a world that regards homosexuality and Islam as incompatible, Lesbanese shows Muslim parents accepting their lesbian daughter’s sexuality and providing her with the space to express her complex identity freely. That, in turn, provides a space for the veil to play a role in Luby’s personal expression of her gender and sexuality and her manipulation of her identity within Lebanese society, placing an importance on fashion as a signifier of cultural behavior for this subculture: “When I’m on the street, I feel really happy wearing my veil, because ... I believe it’s a protection for me. And I like to feel mysterious. That no one knows the real me unless they get to know me more.... I’m not going to take it off no matter what” (20:05).
Gazal enables another perspective to come forward: the struggle these lesbians share with Lebanese women regardless of their sexual orientation. The women speak of gender discrimination in the workforce and the restrictive fashion imposed by certain companies; they speak of their struggle to meet impossible gender standards and to perform strict gender behaviors. “Everything is politicized,” Mia expressed (20:53), even hairdos and footwear, and not making the right statements with your physical appearance and behavior renders life for these women difficult: “Enough stepping on women! They’ve stepped on women enough. We have a lot of pressure from abroad and life here is difficult, but our generation, the young, want things different now. We want freedom without having people go against us” (24:30).

**Highlighting Differences with Western Queer Communities**

While Gazal shows how the coming-out narrative fails homosexuals in Middle Eastern communities, the women in *Lesbanese*, many of whom belong to religiously conservative families, make no secret of the incompatibility of their end goals as activists in the Lebanese queer community with those of Western queer activists. For instance, Luby, a high school student, makes it clear that “getting married to someone means absolutely nothing to me” (10:30) and that, in fact, marriage equality is not a priority for this Arab queer community, which contrasts with their counterparts in Western queer communities, who strived for years to achieve this right. Maternal and parenthood rights, however, are more relatable and crucial demands for such a family-oriented community. Luby explains with teary eyes that attending her cousin’s marriage revealed to her a desire for children: “For some reason, I looked at my cousin and her husband … now I know that my cousin is looking forward to … raise her kids and to see them grow up, and, you know, be a mother and stuff. I got really bothered, and left that dinner. I couldn’t stay there” (11:30).

The dilemma of queer identifications began with academic confirmations that to discuss gay identity in Arabic is inauthentic, but “there is nothing easy about inhabiting new identities in what is inevitably and irreversibly a postcolonial, globalized modernity” (*Mourad 2013, 2543*). Despite the self-conscious awareness of Western influence, the women in *Lesbanese* comfortably shift from Lebanese dialect to English when discussing their sexual orientation and experiences as lesbians. Luby came out to her father by saying, “I am not like my brothers and sisters, I am not straight, I am gay. Exactly these words” (07:55; emphasis added). These women could have easily chosen to identify as “mithliya” (Arabic for “lesbian”; a more preferred term among the Arabic-speaking LGBT communities), but, even while speaking with their parents, they chose to rely on the English *gay* and *lesbian*. This *Arabish* language has acquired, or begun to acquire, “an imported system valuation and foreign signification brought upon by the colonial experience, and exasperated by the aborted national projects of most postcolonial nations” (*al-Samman 2008, 271*), causing it to lose its cultural specificity. Whether the incorporation
of a postcolonial homoerotic lexicon could also be determined by education in foreign languages or exposure to Western media (as the United States continues to be the largest exporter of culture), or attributed to Lebanon’s socioeconomic background, it is still the case that the adoption of English with or to replace Arabic words means that terminologies of sex, along with other modern terminologies, are much more accessible in English than in Arabic. The equivalent terms in Lebanese dialect are also too derogatory; thus, the adoption of English homoerotic terminology is an attempt to move away from the stigma that terms such as shadhda (queer), mukhannath (pansy), and luti (faggot) carry (Mourad 2013). This is not simply a matter of incorporation or translation; it is the process of expanding the mother tongue to include positive and affirmative terminology of gay and lesbian sexualities. Developing an LGBT-friendly language, then, is among the main challenges for Arab queer activists today. The embedding of Western terminologies and the invention of new words is not a surrender to the West’s imperialist agenda but is about creating new methods of being, as competing demands of queer representations are gradually leading to the shaping of hybrid queer identities.

Montgomery College, Rockville, MD

The development and early years of lesbian feminist organizing in Latin America via encuentros, or conferences, starting in 1987.

Regional lesbian encuentros, or conferences, have been occurring every few years in Latin America and the Caribbean since 1987. Growing out of regional feminist encuentros and international lesbian organizing, the lesbian encuentros have served as spaces where lesbian women discuss topics of sexuality and gender and share and develop strategies to promote social justice, as well as lesbian rights in the region. Conflict has often ensued over the role of international organizations and individuals supporting the encuentros, and the early meetings faced threats of violence. This entry will trace the origins of the first lesbian encuentro, held in Mexico. It will also briefly discuss the historical and cultural significance of the first three encuentros, held in 1987, 1990, and 1992.

Origins

Beginning in the early 1980s, Latin American and Caribbean lesbians and bisexual women began forming transnational alliances at regional feminist encuentros. Feminist conferences have been held biannually since 1981, when the first was held in Bogotá, Colombia, and they have provided opportunities for Latin American women to share experiences, collaborate with one another, and organize for change. The celebration of 25 November as the Día Internacional de la Eliminación de la Violencia contra la Mujer (International Day of No More Violence against Women) and regional campaigns for abortion rights have been concrete outcomes of these conferences.

Despite the hesitancy of some heterosexual feminists to work with lesbians, women from various countries initiated dialogue on lesbian issues at the first feminist encuentro. Thereafter, at the second feminist encuentro held in Lima, Peru, in 1983, a small group of women, mostly from Mexico, organized an informal workshop titled “Patriarchy and Lesbianism.” Enthusiasm for the workshop surpassed organizers’ expectations, and more than three hundred women attended. The formation of various lesbian organizations in Latin America was a direct outcome of this meeting (Bunch and Hinojosa 2000). For example, in a 2000 interview that was part of an oral history project conducted by the
Mexican organization Colectivo Sol (Sun Collective), Cecilia Riquelme, a Chilean lesbian, described the conflicts at this workshop, where participants became both ideologically and spatially divided between those who identified as lesbian and those who identified as heterosexual.

During the workshop, Riquelme “came out” to herself and committed to become active in lesbian politics. In 1984, she began Chile’s first lesbian discussion group, Ayukilen. However, political repression in Chile during the dictatorship of Augusto Pinochet (1973–1990) seemed insurmountable to Riquelme, and she soon fled the country for Brazil, where she immediately began working with a lesbian organization that helped to organize the 1985 Latin American feminist encuentro. At this meeting, various workshops on lesbianism were part of the official program; dialogue among heterosexual and lesbian feminists increased; and participants first began to discuss the possibility of forming a Latin American lesbian network and holding a lesbian encuentro prior to the 1987 feminist encuentro.

Forging International Connections

Along with meeting one another at regional Latin American and Caribbean encuentros, Latin American lesbians began working with European and US-based organizations like the International Lesbian and Gay Association (ILGA) and the International Lesbian Information Secretariat (ILIS) in the early to mid-1980s. Strongly critical of discourses of victimhood that essentialized third world women, Latin American lesbians negotiated their need for financial support with their desire to organize and lead their own endeavors according to their own principles and needs. Ultimately, conflicts emerged that would lead Latin American lesbians to limit participation of women from the Global North in the first Latin American lesbian conference.

European lesbians sought to offset economic disparities between lesbian organizations located in the Global South and the Global North by acquiring funds to pay for the travel of women who otherwise would have been unable to attend their conferences. With funds from the Dutch government, ILIS was able to fund the travel of twenty women from the Global South to the 1986 conference in Geneva, Switzerland (Bunch and Hinojosa 2000). As a result, whereas a vast majority of participants in ILIS’s earlier conferences were European, women from over thirty countries attended the 1986 conference. As indicated in an announcement for the 1986 conference, organizers sought to foster “global lesbianism” in the face of rising conservatism.

During United Nations (UN), ILGA, and ILIS conferences, such activists as Claudia Hinojosa of Mexico had been working to advance lesbian rights globally since the late 1970s. Hinojosa and others engaged in this work because they believed that the commonalities of oppression shared by lesbians throughout the world outweighed cultural differences, and
that there was an urgent need to protect lesbians' rights to live freely without fear of discrimination or violence. According to Hinojosa, ILIS spent at least a year contacting and recruiting women from around the world, including women of color from the Global North, to attend the 1986 ILIS conference. While there, with the encouragement of ILIS leaders, lesbians from such countries as Mexico, Peru, and Brazil met in an effort to consolidate a Latin American lesbian network that would focus on promoting lesbian activism within Latin America and the Caribbean. While still in Geneva, the group began to make plans for a Latin American lesbian encuentro to be held in Mexico in 1987, in the week prior to the already planned fourth Latin American feminist encuentro (Bunch and Hinojosa 2000).

Yet, in planning for the lesbian encuentro, Latin American organizers faced issues with funding and recruitment. Funding from governmental and nongovernmental entities was unavailable in Latin American countries. Furthermore, the informal Latin American lesbian network lacked connections with lesbian women in various parts of Latin America and the Caribbean. Thus, as in Geneva, the Dutch government funded scholarships for Latin American women who wanted to attend the 1987 encuentro in Mexico. Sylvia Borren, a Dutch leader in ILIS, also received funding for a recruitment effort within Latin America. Despite their lack of Spanish-language skills, Borren and another woman traveled to Brazil, Chile, and Peru in early 1987 to work with lesbian organizations and solicit leaders to attend the lesbian conference in Mexico later that year. As a result, three women from each country received full funding to attend the conference.

ILIS also provided funds to conference organizers in Mexico. Describing this initiative in the Second ILGA Pink Book (1988) on lesbian and gay rights, Borren justified the need for transnational lesbian solidarity: "Lesbians are beginning to organize in countries where their fight is literally a matter of life and death. I believe we Western lesbians can and should collect resources to support them" (68). Based on the assumption that lesbians shared universal commonalities, Borren's intentions went beyond providing financial assistance to Latin American lesbians, as she also offered organizing advice. In her Pink Book article, Borren described the need for European women from ILIS to advise Latin American women on how to develop strategies to advance rights and increase consciousness-raising around lesbian issues in Latin America. Lourdes Pérez and Alida Castelán, lesbian leaders from the Mexico City–based organization Mujeres Urgidas de un Lesbianismo Auténtico (MULA; Women in Urgent Need of an Authentic Lesbianism) who had attended the 1986 ILIS conference, led the Mexican-based organizing committee, called Latina Americana Lesbian (LAL; Latin American Lesbian). Other members of LAL included women from MULA and Seminario Marxista Leninista de Lesbianas Feministas (Marxist Leninist Lesbian Feminist Seminar) in Mexico City and Patlatonalli in Guadalajara.

Two Latina groups from the United States, Lesbianas Unidas (United Lesbians) from Los Angeles and Las Buenas Amigas (The Good [Women] Friends) from New York City, also raised funds for the encuentro and disseminated information in the United States about the
conference (Romo-Carmona 1997). In their organizational documents, Lesbianas Unidas, a subcommittee of the Los Angeles–based Gay and Lesbian Latinos Unidos, describes a history of communicating with and supporting Mexico City lesbian feminist organizations since the early 1980s (International Lesbian and Gay People of Color 1986). Based on this history of solidarity and the importance they saw in organizing a regional Latina lesbian encuentro, Lesbianas Unidas worked to support the conference by sponsoring and subsidizing participants from both the United States and Latin America.

While many Latin American organizers appreciated the financial support offered by Lesbianas Unidas, Las Buenas Amigas, and ILIS, controversy soon arose over the level of involvement and the roles that women from these groups should play in the conference. In an interview about conference planning published in the magazine Plexus in August 1987, Pérez voiced Mexican lesbians’ concern over relationships of power between women from the Global North and the Global South, and she questioned whether women from the Global North, particularly white women, would attempt to control the direction of the Latin American conference. Critiquing past experiences of racist interactions with lesbians from the Global North, she noted that “these women are very paralyzed by their racism. There was this pretense, ‘Oh, we’ll send you our money’ or ‘we’ll send you our leftover magazines.’ There’s a total lack of acknowledgement from them of what they do learn from us.” This statement clearly challenges the presumed collaborative intentions of “global lesbianism” as articulated by Borren and ILIS. Mexican organizers resented European women’s presumption that they had nothing to learn from Latin American lesbian activism. Therefore, in order to avoid possible attempts by women from the Global North to unduly influence Latin American lesbian activism, organizers decided to limit the conference to 500 participants, with caps of 100 for US-based Latinas and 100 for non-Latina women.

The First Encuentro

Focusing attention on participants from Latin America, leaders took measures to provide a safe environment for the conference. Organizers were well aware that holding a lesbian encuentro in Latin America in 1987 was a dangerous endeavor because of the prevalence of homophobia, political instability, authoritarian rule, and military dictatorships in the region. Although Mexico was chosen to host the conference because of its relative level of democracy, organizers were concerned about both the threat of police violence and the general climate of homophobia in Mexico. Anticipating possible hostility toward participants, organizers did not openly publicize the conference and kept the location secret until the last moment. Describing precautions taken to protect the safety of participants, Pérez stated, “We must take into consideration at this encuentro that there will be women attending from such violent countries as Argentina, Uruguay, and Chile—we must provide maximum security. Can you imagine what problems a police raid would cost these women? It could mean jail or even death” (Plexus 1987). Pérez's comments pointedly
address threats of antilebian repression, exposing the reality of police violence in Mexico and the risk of extralegal imprisonment or murder in the Southern Cone.

In the end, women from approximately ten countries in Latin America attended the conference, and workshops were offered by Latin American and US Latina lesbian organizations and by ILIS. In workshops, participants discussed such topics as lesbian identity and families, sexuality, political repression, racism and classism, religion, and how to overcome conflicts within lesbian organizations and forge stronger collaborations with the feminist and gay male movements (Yarbro-Bejarano 1993). Attendees also watched films and performed theater, dance, and poetry.

Yet, the conference itself was plagued by the continuance of arguments among Mexican lesbians over priorities and political ideology. At issue were not just political ideologies and North-South relations, but the question of whether bisexuals should be in attendance and whether Chicanas and other Latinas living in the Global North should be allowed voting rights. Some Latin American women felt that Latina women, particularly in the United States, enjoyed privileges that women living in Latin America lacked. However, the approximately thirty US-based Latinas and Chicanas in attendance strongly contested this claim, based on the racial and class discrimination they faced living in the United States. A vote on the issue gave US Latinas and Chicanas full rights to membership within the organization (Yarbro-Bejarano 1993). Despite such turmoil, activists at the conference succeeded in further developing the Latin American lesbian network. They made plans to hold the next encuentro in Peru in 1989 and to create a stronger presence in the Latin American feminist encuentros. Reporting about the conference was widespread internationally in ILIS-affiliated publications and in report-backs throughout the region.

The Second Encuentro

Though activists at the first encuentro had planned to hold the second in Peru in 1989, organizers decided to move it to Costa Rica because of political issues, as well as the climate of violence and general repression directed against the lesbian and gay community in Peru. Considering Costa Rica’s reputation for democratic rule of law, activists assumed that it would be a friendly place to hold a lesbian gathering. However, as in Mexico, threats of violence against the lesbian participants occurred in Costa Rica as well. Las Entendidas (The Understood Women), a lesbian organization based in San José, Costa Rica, took the lead in organizing and planned the meeting for 11–15 April 1990.

However, after conservative organizations in Costa Rica learned about the planned conference via an article publicizing the encuentro in Mujer fempress (Fempress woman), a Chilean women's journal with circulation throughout Latin America, several articles appeared in Costa Rican newspapers with such titles as “An Invasion of 150 Foreign Lesbians, along with a Group of Costa Rican Lesbians Is Expected: They Will Corrupt and
Pervert the Minds of Innocent Young Women” and “Lesbians Coming to Costa Rica to Have a Satanic Orgy” (Reyes 1998, 46). Thereafter, activists faced a severe backlash from several factions, including the Catholic archbishop of Costa Rica, the federal government, and a right-wing paramilitary organization. An article also appeared in the national newspaper declaring opposition to the conference and posting the location of the gathering, as well as the names of organizers (Mogrovejo 2000). The archbishop openly expressed his condemnation at a press conference and requested that the government take action against the conference and its participants (Sagot 1990). As a result, the minister of the interior announced that he would investigate all women entering the country alone and encourage the consulate to reject visas. Fortunately, because organizers leaked false dates for the conference to a local newspaper and because authorities did not reject visas or investigate participants as proposed, many women chose to follow through with their plans to attend the conference and were able to enter the country. There were approximately 100 attendees (Mogrovejo 2000).

Foreign attendees were escorted by organizers from the airport, and the encuentro was held in secrecy at an undisclosed location. Workshop topics included lesbianism and feminism, sexuality, health, internalized lesbophobia, lesbian art, and drag. On the last night of the conference, a group of local men arrived in trucks and surrounded the location, harassing participants and threatening violence. The following day, a small group of activists held a press conference where they denounced the climate of violence fostered by the government and conservative organizations and filed a complaint with the UN Human Rights Commission. The print media reported widely on the press conference and actually portrayed the lesbian encuentro in a more nuanced and less negative way than they had previously (Mogrovejo 2000).

Security and Longevity

Two years later, on 14–16 August 1992, the third lesbian encuentro was held in Puerto Rico, the first that did not face threats of violence. The groups Aquelarre (Witches’ Sabbath) and La Coordinadora del Encuentro Lesbico Feminista (Coordinating Group for the Lesbian Feminist Conference) organized the conference, reaching out to potential participants from throughout the Americas. However, because of the difficulty of securing visas and the cost of travel to Puerto Rico, few people from South America attended. Of the 200 participants, about half were Latina lesbians from the United States (Mogrovejo 2000). Workshops covered such topics as the inclusion of Latina lesbians from the United States, internalized lesbophobia, the ghettoization of lesbians, sexism, and identities.

Since this time, lesbian encuentros have been held every few years throughout Latin America and the Caribbean. Concerns over international funding and influence, as well as tensions between autonomous and institutionalized lesbian organizations, have continued. A more recent conflict involves controversy over whether transgender women should be
permitted to attend the encuentros. Despite these challenges, the encuentros continue to be important spaces for regional sharing and organizing among lesbians throughout Latin America and the Caribbean.

Lesbian Herstory Archives

RACHEL CORBMAN
PhD candidate, Women’s, Gender, and Sexuality Studies
Stony Brook University, Stony Brook, NY

*The oldest, largest historical collection of lesbian material in the world.*

The Lesbian Herstory Archives (LHA) was founded in New York City in 1974. During its first two decades, the collection was housed in writer and LHA cofounder Joan Nestle’s apartment on the Upper West Side. In 1993 the collection was moved to its permanent location: a limestone building in Park Slope in Brooklyn. From the beginning, the LHA has been an all-volunteer organization that makes decisions by consensus. The LHA is guided by a set of principles that differentiate it from more traditional archives (e.g., university or state archives) and instead locate the LHA within a broader lesbian community.

**The Founding**

The LHA traces its origins back to the founding conference of the Gay Academic Union (GAU) in November 1973. The GAU was a professional organization with the mission of supporting individual gay and lesbian academics, while advocating for research and curricular design on topics related to gay and lesbian people. Because the majority of active members in the GAU were gay men, women in the GAU created a separate women’s caucus that organized small consciousness-raising groups—a form of structured discussion that was frequently used by US feminist and lesbian feminist groups in the 1970s.

In 1974 one of these consciousness-raising groups discussed the different ways in which lesbians had been left out of history. This pattern of erasure made the GAU women additionally concerned about the historical memory of their contemporaneous gay liberation and lesbian feminist political movements. To fight against historical amnesia, the consciousness-raising group came up with the idea for a grassroots archive that would collect and preserve material related to lesbian lives and activities. The five cofounders of the LHA—Sahli Cavallaro, Deborah Edel, Joan Nestle, Pamela Oline, and Julia Penelope Stanley—were members of this consciousness-raising group. In 1974 and 1975 the five cofounders put together the LHA’s first newsletter and began to build the collection.

By the end of the decade, Edel and Nestle were the two cofounders still actively involved in the LHA’s daily operations. In the 1970s and 1980s the collection was housed in Nestle’s apartment on Ninety-Second Street. Edel moved in with Nestle in 1976 and lived with the
collection until 1984. Initially, the nascent collection was stored in milk crates in the back room of the apartment. As the collection grew, however, it gradually took over the entire apartment. During these years, thousands of women visited Nestle and Edel's apartment to use the collection or to attend special events known as “at homes.”

**LHA's Principles**

In 1978 Daniel Tsang—an editor of the *Gay Insurgent*—invited Nestle to respond to an article by Jim Monahan, a member of the Chicago chapter of the GAU. Monahan's article argued that university-based special collections were better equipped than community-based archives to preserve and provide access to material related to gay history. In response, Nestle penned “Radical Archiving: A Lesbian Feminist Perspective” ([1979](#)). In contrast to Monahan, Nestle argued that it was politically dubious and “suicidal” to rely on traditional institutions to collect marginalized histories (11).

**PHOTO COURTESY OF SASKIA SCHEFFER**

*Reading Room of the Lesbian Herstory Archives.* As the oldest and largest historical collection of lesbian material in the world, the Lesbian Herstory Archives is a valuable source for research on feminist, queer, and lesbian histories.

Nestle's article concluded with a list of general principles for archiving from a radical lesbian perspective. This list formed the basis of the Lesbian Herstory Archives' principles,
a living document that continues to guide the organization's decision-making. In addition to critiquing the exclusionary practices and “elitism” of “traditional archives,” the principles offer a vision for an archive that is open, “nourishing,” politically engaged, and accountable to its broader community (Nestle 1979, 11). Specifically, Nestle's original version put forth two core principles. The first principle contended that the archive “must serve the needs of Lesbian people,” while the second principle called for a broader network of regional lesbian archives (11). Furthermore, within the first principle, Nestle appended eleven additional principles (labeled a through k) that drew specific connections between the identity of volunteers, the material in the collection, and the broader lesbian feminist politics of the archive. Although some of Nestle's language dates the original principles as a product of its time, such as the provision for going underground if “the community” is in peril, the document presciently concluded with a promise that “some day the archives will have its own space” (11).

The Move to Brooklyn

By the mid-1980s, it was clear that the collection would need a larger and more permanent home than Nestle's apartment. Thus, the LHA created a volunteer coordinating committee to spearhead a grassroots fund-raising effort, which was known as the “building fund.” In December 1991 the LHA raised sufficient funds to purchase a three-story limestone building in Park Slope. One and a half years later, in June 1993, the LHA celebrated the opening of its new location with a parade through the neighborhood. This building at 484 Fourteenth Street continues to be the home of the LHA.

The LHA’s collection occupies two stories and the basement of this building, with the top floor serving as an apartment for the caretaker, a volunteer from the coordinating committee. Unlike most archives, the LHA does not have an appraisal policy: the LHA accepts any and all material by or about lesbians or queer women. As of 2017, the LHA had more than 11,000 books and manuscripts in its library; more than 1,000 titles in its periodical collection; approximately 3,000 cassette tapes in its spoken-word collection; 600 videos in its video collection; 1,000 T-shirts in its T-shirt collection, as well as collections of other ephemeral objects such as banners and buttons; and more than 400 collections of personal papers and organizational records in its special collections. In addition, the LHA has a large photography collection and extensive collections of material organized by topic in the subject, geographic, biography, conference, and organizational files.

As the oldest and largest lesbian collection, the LHA attracts visitors and researchers from across the United States and around the world. Academics, journalists, artists, filmmakers, students, and other interested people routinely use the LHA's collection for their research on feminist, queer, and lesbian histories. Notable projects that were researched at the LHA include John D'Emilio's Sexual Politics, Sexual Communities: The Making of a Homosexual Minority in the United States, 1940–1970 (1983), Lillian Faderman’s Odd Girls and Twilight
Lovers: A History of Lesbian Life in Twentieth-Century America (1991), Elizabeth Lapovsky Kennedy and Madeline D. Davis's Boots of Leather, Slippers of Gold: The History of a Lesbian Community (1993), Ann Cvetkovich's An Archive of Feelings: Trauma, Sexuality, and Lesbian Public Cultures (2003), Marcia M. Gallo's Different Daughters: A History of the Daughters of Bilitis and the Rise of the Lesbian Rights Movement (2006), Victoria Hesford's Feeling Women's Liberation (2013), and Christina B. Hanhardt's Safe Space: Gay Neighborhood History and the Politics of Violence (2013). In the twenty-first century, the LHA has also become an object of historical study in its own right, as evidenced by items in this entry’s bibliography. Despite its growth in size and stature, however, the LHA continues to be a fiercely independent archive anchored by the vision of its founders in the early 1970s. In keeping with the spirit of its founding, the LHA is run by volunteers, open to everyone, and supported by small donations from its community.

Lesbian Lands, Women's Lands, and Separatist Communes

KATHERINE SCHWEIGHOFER
Visiting Assistant Professor of Women's, Gender, and Sexuality Studies
Dickinson College, Carlisle, PA

The development of communities by and for the exclusive use of women for the exploration of sexual identity and feminist politics in the United States.

In the opening section of her 1984 lecture titled “Notes toward a Politics of Location,” the lesbian feminist poet Adrienne Rich (1929–2012) recalls comments by the English writer Virginia Woolf (1882–1941) nearly fifty years earlier: “As a woman I have no country. As a woman I want no country. As a woman my country is the whole world” (Woolf 1938, 166). Although she disagrees with Woolf’s globalizing statements, Rich also seeks geographical belonging and suggests women look to the material body in making a world beyond patriarchy. The desire for a physical space where feminist politics were embedded in everyday experience and women could form an alternative “Lesbian Nation” motivated what became the lesbian separatist land movement.

Definitions

Lesbian separatist lands and communes arose from the proliferation of feminist thought and activism that dominated the decade of the 1970s. Individual lands were often short lived, facing challenges ranging from limited funds to personal conflicts to climate that forced groups to disband. Numbers for the movement are difficult to calculate, but based on the circulation of Country Women, a periodical popular within the movement, estimates suggest 2,000 to 3,000 lands operated between 1970 and 1985, with over 10,000 individual residents. New lands continued to be founded throughout the 1980s and 1990s, and approximately eighty still existed as of 2017. Today's lands face new struggles that call for different models of operation; for example, the aging residents of Alapine, a land in Alabama, work with nearby college students to keep their land operational.

What Makes a Land? In the context of the larger lesbian land movement, “lands” often looked quite different. The iconic version of a land invokes the multiresident, cooperative or collective communities. They had between three and fifteen members and a range of different financial agreements: some pooled all earnings; others built individual sleeping structures and shared the costs of community buildings, or had outside funding sources and sliding-scale member contributions. Organizations such as Lesbian Natural Resources...
assisted new or struggling lands financially. Women on lands had varied income sources, including the WIC (Women, Infants, and Children) program and food stamps, wages, savings, exchange and barter systems, and the occasional inheritance. In Vermont, members of Redbird shared a single one-room unfinished house one winter to reduce heating costs; at Adobeland in Arizona women slept scattered in the open-desert air; the women of Kentucky’s Spiral Wimmin’s Land Cooperative built personalized sleeping cabins; and others refurbished existing farmhouses or barns. Many built homes from their own designs. Besides the collectives, individual women or couples who owned homes or farms were integral to local networks and the lesbian land movement, taking in visitors and participating in goods and service exchanges. For example, Hawk Madrone (1939–), despite wanting to live alone, relied on and contributed to the local network of lesbian lands in southern Oregon; the women from these lands even helped reframe her barn.

Lands were founded all across the continental United States. Some of the most popular areas for these lands were upstate New York, southern Oregon, and parts of Arkansas, Wisconsin, and Minnesota. Women chose these locations for their inexpensive land, the climate, a reasonable drive to a major city, or proximity to existing lands. The focus of these women on rural geographies counters prevailing metronormative, or urban-prioritizing, models that presume LGBTQ life thrives only in coastal cities and that LGBTQ people raised in small towns flee to cities for safety, community, and happiness.

**Lesbian or Woman?** The women living on these lands used the term *lesbian* in different ways. Many of these groups referred to themselves as “women’s lands” instead of “lesbian lands,” even if the majority (or entirety) of their members were lesbians. Some of the women in these communities used alternative spellings as a linguistic resistance to the presence of *man* and *men* in language. Alternative terms include *womyn*, *wimmin*, *womoon*, and *womben*. Such usages were the result of the women’s more flexible use of and less emphasis on sexual identity, as well as a focus on their shared identity as “woman-identified” women. The phrase “woman-identified woman” came from a 1970 manifesto by the Radicalesbians, who called for women to focus their energy on relationships with other women. Women-identified women did not necessarily have sex with other women, and in fact many straight women lived on lesbian lands. Women on these lands were often engaged in examining the politics of their own sexual practices, and many were celibate, experimenting, or in the process of coming out as lesbian or bisexual. Thus the designation of these communities as “lesbian” or “women’s” land masked the complexity of the sexual practices of their members.

**Separatism, Women-Born-Women, and Transgender Women** Although definitions of lesbian were somewhat flexible, the term *separatist* carried much more weight. Separatism here refers to the politics of living without men. In extreme forms of separatism, women chose not to raise male children, did not purchase goods or services from male-owned businesses, and asked male postal carriers and deliverymen to stay off their property.
These forms of separatism fueled stereotypes of “man-hating lesbians” and were logistically difficult to practice. Lesbian land communities often struggled with separatist politics when deciding whether to welcome women with male children or to allow male visitors such as adult sons, lovers, or feminist men. Lands often set rules for male visitors based on specific incidents; D.W. Outpost in Missouri, for instance, eventually decided no male children and no male dogs would be permitted after negative experiences with both.

Equally politically charged was the debate over trans women. In 1979 the radical feminist Janice Raymond (1943–) incited a national controversy over trans women in women’s spaces when she publicized that a trans sound engineer named Sandy Stone worked at a women-only recording studio. The result was that some women-only spaces—including women’s music festivals and some lesbian lands—started using the language of “womenborn-women” in their policies specifically to exclude transgender women. The evidence of trans women living on lesbian lands is nearly nonexistent, perhaps because the intimacy of women’s lands meant no woman would try to join a land where she was not welcome. The regular appearance of these policies, however, reveals the vehemence with which lesbian land members defended spaces from men, as well as the ongoing influence of national feminist debates in these communities.

**Feminist Politics**

Understanding the dynamics of lesbian separatist lands requires an overview of the feminist politics that motivated them. During the early years of the 1970s, a flurry of political theorizing and activism took place, bringing feminist ideas into everyday life. The most visible and mainstream feminist political work focused on equal pay, equal access, abortion rights, and the Equal Rights Amendment. White middle-class women steered these efforts to alter male-dominated institutions from within to produce widespread change. Other feminists were less interested in negotiations with patriarchal institutions. Radical feminist organizations such as the Redstockings, New York Radical Feminists, and Cell 16 instead sought the elimination of the sex caste system and rejected or actively disrupted the operation of patriarchal institutions. Some of these urban-based groups practiced forms of separatism and collective living. Yet some radical feminists, despite calling for separation from men, did not advocate or even support lesbianism. This antigay message from radical feminism and mainstream feminism's famous dismissal of lesbians as a "lavender menace" prompted the rise of lesbian feminism. Lesbian feminist groups such as the Radicalesbians and the Furies Collective discussed and theorized about lesbian-specific feminist issues. Meanwhile, other feminists believed the injustices of sexism would be undone through a revaluation of the feminine. This concept coalesced into cultural feminism: a rejection of maleness and masculinity, an embrace of women’s connections with nature, and a globalized view of sisterhood. Cultural feminism focuses on women's individual abilities to heal, on spiritual and personal reflection, and on perceived links
between women's bodies and greater cosmic energies.

These three different responses to mainstream feminism—radical feminism, lesbian feminism, and cultural feminism—were the primary politics motivating many lesbian lands. Their members wanted to escape systems of patriarchal oppression, to empower themselves through healing and self-sufficiency, and to build a life with other women. In some places, black, Chicana, and Native American feminisms or Marxist and anticapitalist ideologies shaped the politics of lesbian and women's lands. For example, La Luz de la Lucha (The Light of the Struggle) was a collective in California for women of color founded on black and Chicana feminist ideas. Many groups also embraced environmentalism, ecofeminism, back-to-the-land ethics, or sustainable food and land management practices. In a sly move of environmental resistance, the members of a land in Tennessee dubbed their organic farming community Okra Ridge Natural Labs in response to the nearby Oak Ridge National Laboratories, an atomic research site.

**Criticisms** The lesbian separatist land ideology garnered criticism within feminism. White middle-class women with the means to leave jobs and relocate to the country were predominant in the land movement, and some argued women from different class or racial backgrounds were excluded. Women of color in particular pointed out the ongoing forms of racism operating within these spaces. Others pointed to the marginalization of earlier generations of lesbians, including 1950s butch-femme cultures, produced by cultural feminist lesbian ideologies. Lesbian land communities reinforced the belief that rural space is empty and available for the taking, perpetuating a settler colonialist mind-set. As discussed previously, lesbian separatist communities were also notorious for policies excluding trans women.

The archives also reveal, however, that the land movement was an early site where white second-wave feminists began to grapple explicitly with the operation of race and class in their politics and practices. The emphasis on the daily practice of political values led to real-world responses: white women financially supporting women-of-color spaces, workshops for reflecting on racial privilege, sliding-scale membership in land communities, and policies that enabled women without resources to own land.

**Examples**

The stories of lesbian separatist lands and communes in the United States appear irregularly in the historical record because of inconsistent documentation, lost or damaged materials, and difficulties finding an archival home. Yet some of their tales still survive.

Individual women shaped lesbian lands to fit their needs. The 1970s and 1980s saw the growth of a thriving feminist and lesbian community in the northwestern corner of Arkansas, near Fayetteville. In 1977 Maria Christina Moroles, also known as Sun Hawk, was
living in Fayetteville with her young daughter. Sun Hawk was a first-generation Mexican American lesbian born in Texas to migrant-worker parents. She had visited a local women's land called Sassafras, which like many lands had all-white residents, but did not stay. A few months later, she fell seriously ill, and the women of Sassafras cared for her and her daughter. During her illness, Sun Hawk had a vision of a land exclusively for women of color. She shared this vision with the women of Sassafras, and they began a series of negotiations, eventually agreeing to divide the land. Sun Hawk and her partner, Miguela Borges, took control of a portion of Sassafras for a separate, women of color–only space where they established Arco Iris, a “spiritual community ... and a survival place for us to relearn many skills and lost traditions of our earth peoples” (Sun Hawk, quoted in Cheney 1985, 30). Arco Iris continues today as a community nature preserve open to everyone.

Some lesbian separatist communities were founded to address specific needs. In 1980 nearly 100 kilometers (60 miles) from Poughkeepsie, New York, a land known as Beechtree was founded as a place for lesbians with disabilities. Founder Concetta Panzarino was inspired by the communities created at women's music festivals and wanted a space for lesbians to live without ableist limits in the country. She purchased property from the feminist Barbara Deming and made modifications to the main house and surrounding acres to make the land more accessible to women with different disabilities. She found the work demanding and sometimes met with resistance: “I have a lot of harassment from the locals and from the county, so it’s been hard for me to find attendants, because I’m a known lesbian disabled activist organizing in the community” (Panzarino, quoted in Cheney 1985, 43). Beechtree’s residents saw rural living as an escape from various and intersecting forms of oppression.

Some women’s lands were founded by a central group of long-term organizers or residents who incorporated short-term visitors into their mission and daily practices. Three different groups of women—a founding board, caretakers, and visitors—shaped A Woman's Place (AWP), founded in 1974 in Athol, New York. The board focused on funding and executive management decisions, while the caretakers lived on the land and were leaders and organizers of various events. Visitors to AWP attended planned retreats and events or came separately for short-term reflection or recuperation, or, in some cases, to escape domestic violence.

Community building was often a priority. The women of Northern California's Mendocino County, living in and around the town of Albion, had a major impact on two communities. The first was local; the network of lands owned by women—some in collectives, some individually—became a powerful force for shaping their extended community. Over several decades their impact grew into informal goods exchanges, sustainable practice sharing, and activism on a range of issues involving the entire community: men, women, heterosexual, and LGBTQ (York and Goodyear 2012). The women of Albion also shaped the nationwide community of rural women through their publication Country Women, the circulation of
which topped 10,000 in the late 1970s. Articles ranged from discussions of sexual identity to histories of inspirational rural women, and each issue included technical advice columns on shoeing horses, fixing pumps, or choosing chicken feed. The cover art for issue 14, “Foremothers,” which appeared in February 1975, reveals the importance of agricultural work and the do-it-yourself ethics espoused by the magazine. *Country Women*'s readership extended beyond exclusively lesbian women, linking readers through feminism, sexual identity exploration, and rural living.

The stories of lesbian women who bought individual homes in the country during the 1970s and 1980s are often part of this history. Many of these women shared the same desires as lesbian land members, seeking to escape urban patriarchal violence, connect with natural energies and cycles, and build skills enabling self-sufficiency. *Weeding at Dawn* (2000), an autobiographical account by Madrone, is one such story. Madrone moved to Myrtle Creek in southern Oregon and established Fly Away Home in the mid-1970s. She lived on the land well into the 1990s. She joined a local network of women's and gay men’s collectives sharing information, goods, and labor.

Although most lesbian lands had folded by the late 1980s, the impact of these communities continues. Many of the land participants developed a stronger sense of themselves and continued political and community activism long after leaving a land. The phenomenon of
rural collective living was not isolated to women: the Radical Faeries embraced a gay male version of rural retreat culture starting in the 1980s, and in the mid-1990s queer, trans, and gender-nonconforming activists interested in rural community building founded the still-active Tennessee community known as IDA. With the increasing gentrification and homogenization of many urban areas, LGBTQ people today are looking again to small towns and rural areas for the opportunities they present. Lesbian lands continue to provide a model for identitybased community living designed to enable personal and political change.

Lesbian Mothering and Adoption in Latin America

FLOR DE MARÍA GAMBOA SOLÍS

Universidad Michoacana de San Nicolás de Hidalgo, Mexico

YESENIA MADRIGAL GARCÍA
Psychologist
Universidad Michoacana de San Nicolás de Hidalgo, Mexico

The status of lesbian-headed families in Latin America against the backdrop of the greater LGBTQI movement in the region.

Lesbian mothering and adoption in Latin America cannot be conceptualized without referring to lesbian social movements and political protest against heteropatriarchal-normative systems that have naturalized notions of parenthood and family around the globe, especially in the West. Lesbian families present a transgressive challenge to dominant meanings and traditional representations of family, although such transgression is not limited to that realm. Lesbian families also translate into a powerful challenge to normative notions of “mother” and “woman” because lesbianism is a dissident way of experiencing sexual identity. As such, lesbianism dismantles the hegemony of imposed heterosexuality and with it a cultural paradigm based on phallocentric views and androcentrism.

The practices of lesbian mothering, as well as the social, cultural, and political barriers lesbian mothers face and the specific legal arrangements that have given access to lesbian adoption, are rooted in geopolitical contexts and vary from country to country in Latin America. However, the cases of Mexico and Argentina are particularly relevant and can be used to branch outward and reflect on the issues facing lesbian mothers throughout all of Latin America; these two countries became, from the 1970s onward, iconic grounds of formally organized lesbian social movements and political protest (Mott 1997). Argentina is considered by many to be the pioneer of the homosexual movement in Latin America (Perlongher 1997; Bazán 2010). Mexico, “due to its vicinity with the United States, where the homosexual movement is extremely well organized and very strong, and thanks to the contact with homophile Chicanos, is the Spanish-American country where gays and lesbians are more organized: they have accomplished public manifestations with more than four thousand maricones [slang for gays] and tortilleras [slang for lesbians]” (Mott 1997, 142; translation by Flor de María Gamboa Solís).
Lesbian Social Activism and Protest in Latin America

According to the lesbian academic and activist Norma Mogrovejo (2000), the lesbian movement in Latin America is intimately bound up with Latin America’s political history. The establishment of authoritarian regimes during the 1960s and 1970s (Brazil in 1964; Bolivia in 1971; Chile and Uruguay in 1973; Argentina in 1976) sparked a reaction through various outraged sectors of the population: guerrilla groups, students, workers and peasants, women, and homosexuals, all of whom claimed respect for human rights and demanded democratization. New concepts of sexual freedom appeared around this time, and homosexual civil society organizations, which were partly influenced by the political claims established by the 1969 Stonewall riots in New York City, were emerging with increasing frequency. Nuestro Mundo (Our World), created in 1967 in Argentina—in the midst of a military dictatorship and therefore semi-clandestine—was the first formal group to pursue the defense of homosexuals’ rights in Latin America. In 1971 this group became part of a larger gay and lesbian organization called Frente de Liberación Homosexual (Homosexual Liberation Front), which edited the first homosexual bulletin of South America, Somos (We are). In the same year, in Mexico, two fellow entities emerged: Sex-Pol
and the other, adopting the same name but with a nationality remark, Frente de Liberación Homosexual de México (Homosexual Liberation Front of Mexico), the first gay and lesbian group in Mexico, led by the theater director Nancy Cárdenas (1934–1994), the first public face of the Mexican lesbian movement. In Argentina, according to Stephen Brown (2002), lesbian and gay groups proliferated in the early 1990s, while rooted in the Comunidad Homosexual Argentina (Homosexual Community of Argentina), founded in 1984 and by far the most influential and powerful organization until 1991, when as a result of internal divisions and disagreements both personal and ideological, the group dissolved.

Lesbian-specific groups in both Argentina and Mexico trace their origins to the feminist movement but also became separatists over sexism within the gay-dominated movement (Brown 2002). One of the groups most remarkable for its influential historical role as a pioneer seeking to increase the visibility of the specific lesbian identity was in Argentina: Las Lunas y las Otras (an untranslatable pun literally meaning “The Moons and the Others”), which met for the first time in July 1990. Later, in 1991, the appearance by Argentine lesbian activist and journalist Ilse Fuskova (1929–) on national television as an “out” lesbian “galvanized many lesbians into activism and greater visibility and led to the formation of Convocatoria Lesbian” (Brown 2002, 122). In Mexico, in 1977, emerged Lesbos, which was the first clandestine lesbian group and was led by Yan María Castro (1952–). A year later, Castro and Luz María Medina created the Grupo de Lesbianas Feministas Socialistas Oikabeth (Socialist Feminist Lesbian Group Oikabeth), which sought to give lesbianism a new revolutionary image (Careaga Pérez 2011).

Mogrovejo (2000), after a critical analysis of lesbian activism and protest in Latin America, concludes that there has been a divorce between its theoretical and its organizational levels owing to the lack of a strong social base and amid a global strategy to turn it into a massive and sustainable movement. The reasons for its rather “vulnerable state” (35) can be understood in her view through three main intertwined arguments:

- The historical discontinuities of the links between lesbian activism and heterosexual feminism
- The confrontation of sexual diversity with conservative and Catholic views that are strongly influential in the region, as well as with day-to-day violence and lesbophobia
- The conflation of the personal (love and sex) and the political in the leadership of the movement

In this new century of more political openness, such a “vulnerable state” has been partly overcome because new ways have become increasingly available for the political organization of dissident sexual identities. The participation of out lesbians in Mexico’s formal political structure has served to reinforce public and legal recognition of same-sex marriage and lesbian and gay adoption of children. Nowadays, lesbians in Mexico and Argentina, as in other parts of the world, have integrated into the wider queer movement.
Lesbian Mothers in Action: The Cases of Mexico and Argentina

In 2009 LGBTQI political activism, while embracing human rights discourse, prompted the approval of same-sex marriages and adoption by same-sex couples in both Mexico City and Argentina. (In subsequent years, same-sex marriages and adoption by same-sex couples were approved in eight other Mexican states and gained *writ of amparo* legal protection in the remaining twenty-four states.) The first legally sanctioned lesbian marriages in Mexico were celebrated on 11 March 2010 (Torres 2010). Through a variety of sources, including Sara Espinosa Islas’s book *Madres lesbianas* (2007; Lesbian mothers), several journal articles, content on Facebook sites and other online venues, and networking activities of civil society organizations online (blogs, WordPress sites, podcasts), it becomes possible to access lesbian mothers’ narratives in Mexico and Argentina.

For example, Ana de Alejandro—a Mexican lesbian and feminist mother, blogger, and activist, who uses the internet to advocate for change—wrote an online article titled “Historia de los grupos de madres lesbianas en México hasta marzo de 2013” (History of lesbian mothers’ groups in Mexico up to March 2013). Following Mogrovejo’s historical work on lesbian movements in Latin America (2000) and Gloria Careaga Pérez’s interesting review of lesbian activism in Mexico (2011), de Alejandro’s 2013 article notes that 1986 was the year in which the first group of lesbian mothers appeared in Mexico. The name of the organization was Grupo de Madres Lesbianas (GRUMALE; Lesbian Mothers Group), and it was founded by the aforementioned Cárdenas. Reflecting the intertwining of the personal and the political in social movements, Cárdenas, an emblematic figure of huge political influence on the lesbian agenda, began a relationship that same year with a woman who was a mother.

GRUMALE practically disappeared after the Primer Encuentro Lésbico-Feminista de América Latina y el Caribe (First Lesbian-Feminist Encounter of Latin America and the Caribbean), which took place in Cuernavaca, Mexico, in October 1987, because, according to Careaga Pérez (2011), only one couple sought to sustain it with a variety of activities but with little success. In the words of Chelita, one of the last members of GRUMALE, this group “officially dissolved” (quoted in Mogrovejo 2000, 212) in 1989, after the separation of one of the two couples who had led it.

In 1995, during the Primer Encuentro Nacional de Madres Lesbianas en México (First National Encounter of Lesbian Mothers in Mexico), some of the participants expressed the need to organize another group, so it was under the initiative of Rosa María Ortiz and Guadalupe González (couple and coordinators) that Grupo de Madres Lesbianas II (GRUMALE II; Lesbian Mothers Group II) emerged. The main concern of the group at that
time was to open space for discussion and the construction of what they called “lesbian mothering culture” (de Alejandro 2013; translation by Flor de María Gamboa Solís). In Madres lesbianas, Espinosa Islas ventures into the lives of forty lesbian mothers who participated in GRUMALE II and provides a broad picture of the conflicts surrounding lesbian mothering in Mexico. Most of these conflicts emerged from the different types of access to motherhood experienced by these lesbians: (1) artificial insemination; (2) women who became mothers during previous heterosexual relationships; and (3) women without children who were involved in a relationship with a partner who is a biological mother. Espinosa Islas labeled the first type as “mother lesbians,” the second as “lesbian mothers,” and the third as “mothers by choice.” In all these cases, she concludes, the support of the women’s social networks (family and friends) was crucial to overcoming conflicts.

By 2008 a group of LGBTQI mothers and fathers, all of whom were artists, professionals, and activists, founded the Círculo de Familias Diversas (Circle of Diverse Families). Its main purpose was to create networks for their children’s safety and socialization among equals. Lesbian mothering organizations did not form only in Mexico City. A few groups started to appear in other Mexican cities including Monterrey, where, at the end of 2007, the cultural space called Visibilidades (Visibilities), originally conceived by Olivia Garza, was followed by Lesbianas en Estrategia Social Monterrey (Lesbians in Social Strategy Monterrey). In both spaces the participants exhibited art and shared their views on their experiences as lesbian mothers. A small faction from Visibilidades decided to organize a local support network that eventually became Comunidad de Madres Lesbianas (Lesbian Mothers Community). This group participated in various gay pride demonstrations in Monterrey, which helped make public and visible the subject of lesbian motherhood in the northern state of Nuevo León, a region where machismo and “tradition” flourish.

Lesbian mothers in Guadalajara have established two associations that put forward lesbian mothers’ concerns and needs. The first is Patlatonalli, a name resulting from two words in the Nahuatl language: patlache, a largely untranslatable term that seems to indicate a woman who has sexual relations with another woman, and tonalli, which means “energy” or “life force.” The second association is Diversiles (Diverse Lesbians). These groups have served as points of encounter to tackle the subject of lesbian mothering. Members provide support for each other on Facebook with sites such as Madres Lesbianas México (Lesbian Mothers Mexico). Dos Mamás GDL (Two Mothers Guadalajara), a Facebook page administered by Ale Reyes and Zen Romartz, also has similar goals and moves in the same direction as these other groups.

As for the Argentine case, Micaela Libson, an Argentine academic and researcher, offers a historical account (2013) in which she argues that family-oriented claims in 2000 included not only debates about and laws for the state’s regulation of same-sex couples but also the emergence of lesbian mothers and gay fathers groups. Madres Lesbianas Feministas Autónomas (Autonomous Lesbian Feminist Mothers) was the first one, founded in 2001; it
held its first meetings at the headquarters of La Casa del Encuentro (The Meeting House), a feminist civil society of Buenos Aires. Two more groups—Lesmadres (Lesmothers) and Mis Mamás Rosario (My Mothers Rosario)—established the grounds for the first national meeting of gay and lesbian families, which was held in the city of Rosario in June 2010 and aimed at major legal recognition of their family contexts. Such organizations made visible the existence of co-maternal families, with lesbian mothers representing a “subject able to embody, in light of public opinion, the image that loving stability is not the exclusive heritage of heterosexual couples” (Pecheny and de la Dehesa 2010, 23; translation by Flor de María Gamboa Solís). These three lesbian mothers political organizations are still active, though mostly through websites (blogs), under the consensus that lesbian mothers deserve respect, recognition, and equal opportunities for their children.

In both Mexico and Argentina, lesbian mothers have greatly enhanced their private lives by finding one another online: “Websites and other applications expanded the opportunities for lesbian identity construction, the fundamental building block of counterpublics” (Friedman 2017, 172). By using such technologies and resources, lesbian mothers have been able to forge networks through which they can share experiences and participate with their equals. These women resist heterosexual constructions of femininity, and in doing so they offer models of sexual diversity and legal rights to younger generations. They also demand respect and public acknowledgment of the democratization of sexual identity, mothering, and the family. The cases of Mexico and Argentina are emblematic of efforts to tackle the broader scope of Latin American lesbian mothering and political action surrounding adoption, in as much as those two nations have been the sites of historically pioneering, successful, and highly influential LGBTQI movements across the region. Although lesbian mothering in Latin America still has a long way to go in terms of legal rights and general acceptance by the public, these early activists have paved the way for generations to come.

The Lesbian Music Movement

BONNIE J. MORRIS
Lecturer, Department of History
University of California, Berkeley

The development, heyday, and decline of a grassroots movement to create and showcase music made by lesbian artists for women-only audiences.

Like many other social movements of the twentieth century, the post-Stonewall campaign for gay and lesbian liberation used songs and comedy to reach new audiences, transmitting radical ideas through political performance. But whereas gay men had long-established private parlor and public theatrical roles in cabaret, drag, and Broadway shows, North American lesbians asserted their own separate movement of woman-identified song in the 1970s, claiming stages and retreat spaces through new grassroots music. For over forty years, from roughly 1973 to 2015, “women’s music” served as a euphemism for lesbian music, identity, and activism. Unique to woman-identified lesbian music was a threefold agenda: (1) challenging the patriarchy of mainstream entertainment with a politically informed alternative; (2) empowering women with the technical training once only available to men (so that women-only teams could engineer, record, and produce concerts); and (3) establishing women-only or majority-female sites for performance touring that broadcast the lesbian pride message in an environment where couples and individuals felt safe from male harassment and homophobia.

Concerts, album releases by independent recording companies like Olivia and Redwood, and women’s music festivals boldly named lesbian issues and relationships in every musical style, mobilizing audiences toward political action. In an era informed by radical feminism, before social media, women’s music supporters made concert events into community celebrations of lesbian lives, paving the way for the eventual mainstream commercial success of Melissa Etheridge and the Indigo Girls. Concerts also offered an alternative to bar culture, and thus women’s music acts filled the lesbian calendar year-round at sites such as Mountain Moving Coffeehouse (Chicago), Herizon (Binghamton, New York), the Michigan Womyn’s Music Festival, Sisterfire, Campfest, the National Women’s Music Festival, Rhythmfest, the Southern and West Coast Women’s Music and Comedy Festival(s), the North East Women’s Music Retreat, Provincetown Women’s Week, and even a women’s restaurant, Bloodroot (in Connecticut). The albums, flyers, posters, and programs from these events now constitute a treasure trove of historic research materials, sought by LGBT archives, university collections, and mainstream museums.
Prehistory: Lesbian Blueswomen and Protest Music

Though the “women’s music” sound and stance remain strongly associated with the radical networks of second-wave feminism, lesbian performance culture had roots in earlier song and drag shows. The earliest known (and recorded) performances were typically located in marginalized but artistically prolific minority communities, including the Yiddish Theatre and the Harlem Renaissance. In the 1920s, some gay male drag shows and Harlem blues clubs featured lesbian stars, such as the cross-dressing Gladys Bentley, or songs with obvious references to lesbianism. Interwar Berlin hosted an astounding range of over fifty lesbian bars. Both Angela Y. Davis (Blues Legacies and Black Feminism [1998]) and Lillian Faderman (Odd Girls and Twilight Lovers [1991]) offer scholarly research on women’s truth-telling blues songs of the 1920s, music primarily performed and recorded by African American blueswomen. From “B. D. [bulldagger] Women” and Ma Rainey’s “Prove It on Me Blues” to “The Boy in the Boat” (with its sly references to lesbian lovemaking), recorded songs acknowledged lesbian realities that blossomed both during the Roaring Twenties and during two world wars that left women alone with one another on the home front. Victorian England, with its ribald underground of sexual clubs and scientific sexologists, likewise produced parlor and cabaret cultures with women in drag as “toms.” Such gender-bending performance is today understood as a precursor to lesbian stage arts.

In 1947 a young woman using the name Lisa Ben began writing the column “Lesbian Lyrics” for Vice Versa, one of America’s first lesbian magazines, which she typed and carbon-copied by hand while working as a secretary in Los Angeles. Ben, who was also a singer and songwriter, later recorded a single for the Daughters of Bilitis, a national lesbian organization. Lisa Ben was born Edythe Eyde in 1921; her pseudonym was an anagram of the word lesbian. In Eric Marcus’s Making History: The Struggle for Gay and Lesbian Equal Rights, 1945–1990 (1992), Ben declares that she was inspired to start songwriting after feeling appalled by gay male drag performers who made fun of women and butch lesbians. “I thought, ‘well, I'm going to write some gay parodies, and they're going to be gay, but they're not going to be demeaning.'” Later in the interview, she calls herself a “separatist,” qualifying that for her, at that time, this meant “I never sang my gay parodies for straight people” (Marcus 1992, 13–14). Thus, humor and frankly sexual content existed in lesbian music long before the 1969 Stonewall riots in New York City.

The women’s music that emerged in the 1970s also drew from the civil rights movement of the 1950s and 1960s, which revived and relied on the black tradition of freedom songs. Protest music was often led by women who might not necessarily identify as lesbians but who, like civil rights activist Bernice Johnson Reagon, saw music as a way to take a stand. Written and performed by women willing to go to jail for a cause (addressed by folk singer Malvina Reynolds in her satire “It Isn’t Nice”), women’s freedom songs became a celebrated aspect of antiwar concerts and speeches. But women’s music emerged when artists such as
Holly Near, who toured Vietnam with Jane Fonda, began to name and confront the sexism within the progressive antiwar movement. Throughout the radical 1960s, political action and theory remained dominated by charismatic male leaders, leading frustrated women to break away and form their own cells, newspapers, and bands. In search of original subject matter that reflected women’s authenticity, feminists with roots in the civil rights and peace struggles gradually found one another and began a new musical journey, leaving behind their male comrades.

In 1971 the Chicago Women’s Liberation Rock Band formed in part to critique the often violent tropes in male rock music. The band offered a counterpoint to popular songs that brutalized women. Musician Jennifer Abod recalls that her Chicago bandmate Naomi Weisstein was incensed by the Rolling Stones’ hit “Under My Thumb,” in which Mick Jagger brags about controlling a woman he refers to as “the sweetest pet in the world.” In personal correspondence with Bonnie Morris in 2008, Abod remembers performing on Women’s Equality Day (26 August 1970) for a women-only audience in New Haven, Connecticut: “We played at the DKE fraternity house at Yale University, which we thought ironic since most of us were dykes.” Lesbian and feminist performers took the protest music of the 1960s to a new level of politically charged content, with lived female experiences—and oppression—as the focus.
The 1970s

During the four years between 1971 and 1975, key elements defining *womyn’s music* emerged simultaneously on the East Coast, the West Coast, and in the heartland of the Midwest. The sound of confrontational feminist rock began with *Mountain Moving Day*, a release by the Chicago Women’s Liberation Rock Band and the New Haven Women’s Liberation Rock Band on Rounder Records. It was followed by two provocative lesbian-themed albums, both produced independently: Maxine Feldman’s single “Angry Atthis,” produced by Robin Tyler in 1972, and Alix Dobkin’s LP *Lavender Jane Loves Women*, famously taped in one day in 1973 (thanks to engineer Marilyn Ries’s access to a spoken-word recording studio). Feldman’s song title used a play on words (“angry at this”; Atthis is believed to be one of lesbian poet Sappho’s lovers) to name frustration with not being able to hold another woman’s hand in public. The song ends with a powerful declaration, “Proud of being a lesbian.” Later, Feldman would record her signature song “Amazon,” which became the opening-night anthem for the Michigan Womyn’s Music Festival. For her part, Dobkin was determined to use the word *lesbian* as many times as possible in her recordings and concerts, encouraging the hesitating with titles like “Any Woman Can Be a Lesbian,” “Talking Lesbian,” and the humorous “Lesbian Codes.” Both Feldman and Dobkin made clear that their Jewish heritage and identity informed their outsider/resistance status as much as their lesbianism, and Jewish lesbians soon formed a substantial presence in lesbian music, whether onstage, in recording, in festival production, in distribution, or in light and sound work and sign-language interpretation.

![SOURCE: OLIVIA RECORDS](cover_1977_album_lesbian_concentrate.jpg)

*Cover of the 1977 Album Lesbian Concentrate.* This album was one of the first LPs with “lesbian” in its title. Its famous orange-juice can cover directly challenged the antigay initiative then being led in Florida by former juice spokeswoman and beauty queen Anita Bryant.

Two of the most influential record companies in women’s music were founded in 1973:
Redwood Records, started by Near, and Olivia Records, founded in Washington, DC, by a collective of women including Ginny Berson, Meg Christian, Judy Dlugacz, Kate Winter, and Jennifer Woodul. The idea of a lesbian-run recording company was actually suggested by Cris Williamson during an interview with Christian and Berson on the Radio Free Women program. Feminist radio played an enormous role in broadcasting new lesbian artists, often through college stations and the Pacifica Radio network.

Olivia Records (named for the title of Dorothy Bussy’s 1949 love novel) began with a single featuring artist Christian, sales from which raised $12,000 in funding to record Christian’s full-length album, *I Know You Know*. That unquestionably lesbian LP sold five thousand copies in its first two months of circulation, and the income from Christian’s touring then made possible the most successful women’s music album of all time: Williamson’s *The Changer and the Changed*, released by Olivia Records in 1975. *Changer* would sell more than a quarter million copies over the next twelve years. The album awakened four decades of audiences to lesbian-identified music, although the word *lesbian* does not appear anywhere in Williamson’s lyrics. In contrast, Christian electrified fans with songs such as “Sweet Darling Woman,” “Leaping Lesbians,” and “Ode to a Gym Teacher,” and Olivia’s daring 1977 album *Lesbian Concentrate* was one of the first LPs with the word *lesbian* in its title. Its famous album cover, with a picture of an orange juice concentrate can, directly challenged the antigay initiative then being led by Anita Bryant, a singer, beauty pageant winner, and spokesperson for the Florida orange juice industry.

Between 1974 and 1975, the growing popularity of women’s music spawned three more significant institutions, expanding fans’ access to the music while keeping control of production in women’s hands. These new elements were women’s music festivals, women-only sound companies, and album distribution companies. Following initial lesbian conferences at Sacramento State University and the University of California, Los Angeles, the first full-length women’s music festival was held on the campus of the University of Illinois in 1974. It was produced by Kristin Lems (a feminist, though not lesbian herself). Incensed by a recent folk festival that featured no female artists, Lems and her staff countered with a weekend that institutionalized lesbian artists as new stars of women’s music. By 1975, Boden Sandstrom’s WomanSound company and the Goldenrod music distribution network were in place (later joined by Ladyslipper), able to deliver the sound and product of lesbian culture to any venue: stage, park, campground, bookstore, church basement, or private living room. One independent band, the Deadly Nightshade, whose members included lesbians and whose music was overtly feminist, released a self-titled women’s liberation anthem on Phantom Records that enjoyed airplay on commercial radio in 1975 with the song “High Flying Woman.” Popular women’s music artists of the 1970s included Margie Adam, the band Alive!, Gwen Avery, the Berkeley Women’s Music Collective, Ginni Clemmens, Casse Culver, Therese Edell, Maxine Feldman, Sue Fink, Robin Flower, Deidre McCalla, June Millington, Betsy Rose, Woody Simmons, Linda Tillery, Teresa Trull, Willie Tyson, and Mary Watkins.
Competent stage and sound technicians were also new lesbian role models for audiences; however, Olivia Records experienced significant backlash (and a threatened boycott) for employing trans woman Sandy Stone as chief sound engineer from 1974 to 1978. After her identity became known, Stone was forced to resign, presaging the later tension between lesbian separatists and trans women that brought pressure on the woman-only Michigan Womyn's Music Festival beginning in the late 1990s. Lesbian music producers also confronted charges of racism after Olivia's 1975 “Women on Wheels” tour featured the four white artists Adam, Christian, Near, and Williamson. In response, Olivia set up the “Varied Voices of Black Women” tour, with Tillery, Watkins, Avery, and poet Pat Parker. Parker then teamed with white lesbian poet Judy Grahn to record Olivia's spoken-word album, *Where Would I Be Without You*, in 1976.

Despite these ongoing controversies over racism, women-only spaces, and gender identity, the women’s music movement of the 1970s grew as a defiant counterpoint to the limited roles and opportunities for female artists in the male-dominated recording industry. It spread to every city where self-taught producers dared to bring in artists and expanded globally as well by the 1980s with performers such as Libby Roderick in Alaska, the duo Ova in England, the Topp Twins in New Zealand, and Lucie Blue Tremblay, Heather Bishop, and Faith Nolan in Canada. Three lesbian bands emerged from Germany: the Flying Lesbians (recording the song with the title, in English, “I'm a Lesbian, How about You?”), Lysistrata, and Witch Is Which. By the 1990s, the Irish duo Zrazy tackled not only lesbian issues but abortion rights for all women in Ireland. Throughout the global expansion of lesbian music, the mainstream press and rock journalism ignored nearly all these developments, but North American and international lesbian artists were covered by lesbian publications, such as Boston's *Sojourner*, Washington, DC's *offour backs*, and the Chicago-based *HOT WIRE: The Journal of Music and Culture*, edited by lesbian activist and organizer Toni Armstrong Jr.

The transmission of a lesbian-feminist message by women to women included a specific set of practices at events: sliding-scale admission prices for low-income women; sign-language interpretation at concerts and upfront seating areas for deaf or disabled fans; and intentionally diverse stage lineups. Near performed openly lesbian music with Christian at the California Institute for Women, a prison concert arranged by women’s music scholar Karlene Faith (*Near 1990*). With in-your-face lyrics critical of patriarchy and male privilege, few artists expected to please male fans or mainstream critics, and the new issue of separatism fueled endless debate: should men even be allowed at concerts? What about men from the Left, men some women considered comrades and allies? This conflict exploded at the very first festival, the National Women’s Music Festival, in 1974 in Illinois, where performer Christian asked that her audience be women-only. Soon, production companies that had formed to promote women’s music concerts developed broshsheets and flyers to explain, in differing ways, the rationale of women-only space, such as this flyer...
The atmosphere of a women-only event is different. It often allows us to experience a new level of support from other women, and it provides a time to relax with each other without needing to explain or defend our ideas to men. If a performer requests a women-only audience, to develop and sustain communication and intimacy, we must respect that in deciding to produce her. Feminist and lesbian singers often perform materials that makes [sic] them very vulnerable; they have the right to choose their audience.

(MORRIS 2016, 29)

The Festivals

Prior to the expansion of any other feel-good messages about lesbian life and identity, women’s music festivals generated pride by bringing women together in multigenerational events that were a welcome alternative to bar nights for the underage and sober. Festivals also made it possible for a talented pool of artists, musicians, speakers, and producers to earn a living creating entertainment by and for lesbians, and they constructed role models at a time when, in the words of lesbian photographer Joan E. Biren, “There was nothing in the culture that nourished us” (Mosbacher 2002). Biren, producing photographs of lesbian culture under the professional name JEB, captured early portraits of women, including those associated with the Olivia collective, that became iconic reference points within the women’s music business.

The fact that bars had long been one of the only gathering spaces in isolated gay communities played a definite role in fostering alcoholism for the pre-Stonewall generation. The often-lampooned statement that women’s music was “healing” held a real truth for those combating dependence on alcohol and drugs. At least one women’s music festival, Gulf Coast in Mississippi, was deliberately substance-free. Together, the performers, producers, album distributors, and fans supporting this underground-yet-visible subculture forged a network of accessible celebrities at a time when almost no other performers or politicians were out. With the advent of cassette tape releases, women could drive to and from work listening to lesbian music and planning their next trip to a women’s festival. After the first National Women’s Music Festival, the Michigan Womyn’s Music Festival followed in 1976, occurring each August for the next forty years. By the mid-1990s, nearly every state had a lesbian-majority women’s music festival meeting annually, including the Alaska Women’s Music Festival, Campfest (Pennsylvania), Camp Sister Spirit (Mississippi), the East Coast Lesbian Festival (upstate New York), Heart of the West Fest (Las Vegas, Nevada), In Gaia’s Lap (Maryland), the Lone Star Women’s Festival (Texas),
SisterSpace Pocono Weekend (Pennsylvania), Tam's Jam in Bellingham (western Washington State), Wimminfest (New Mexico), and many others.

Classically trained musician Kay Gardner (who played flute on Dobkin's *Lavender Jane Loves Women*) explored the roots of female vocals, harmonies, and tonal structures in her work onstage, in workshops, and in her book, *Sounding the Inner Landscape* (1990). Gardner’s argument that women’s music employed different sound structures than men's was an exciting theory in an era of artistic radicalism, when many feminists were rediscovering works by forgotten foremothers. The movement gained theorists, composers, and scholars who lent their expertise to concerts. But cultural research aside, concerts were a novel, affordable date night that couples could look forward to; they were places for newly out and/or single lesbians to encounter each other; and, as largescale community events, they served as a radical awakening for entire audiences. Artists ranging from Near to Dobkin and Casselberry-Dupréé intentionally used the stage to convey information about the civil war in El Salvador, anti-Semitism, apartheid in South Africa, African American women’s music heritage, and wage discrimination.

**Moving beyond Separatism**

By the end of the 1980s, despite a more media-savvy gay and lesbian rights movement, just a few lesbian artists had made the transition from the women’s music subculture to mainstream media visibility. College and radio audiences embracing the music of Tracy Chapman, Melissa Etheridge, and the Indigo Girls were not initially aware of the artists’ sexual orientation, or that all four had played onstage, in their early years, at radical women-only festivals around the country. The leap to what Adam termed “overground” success was clear when short haired, gender-bending k.d. lang suddenly appeared on network television in 1988. The riot grrrl movement of the mid-1990s soon satisfied young women’s desire for an “angrier” sound, but Lucy O'Brien notes that some artists brushed aside the very recent history of feminist music. “The 1990s hardcore girl groups took their success for granted ... a sense of feminism refracted through a younger generation put off by their mothers' acoustic separatist protest” (2002, 161).

By the early 1990s, the vintage/separatist “womyn's music” scene was mocked by both mainstream and lesbian entertainment publications as being out of date or oppressively politically correct. For young fans born in 1974 or 1976—the founding years of the National Women’s Music Festival and the Michigan Womyn’s Music Festival—separatism could be rejected, in 1995 or 1996, as their mothers’ generation of lesbian style. By the late 1990s, hip younger artists appealing to bisexual fans and riot grrrls shrugged about their involvement with men. The fading support for a women-only ethic and the mainstreaming of a limited quantity of feminist media also affected independent feminist bookstores, which closed their doors in city after city, hence reducing those alternative spaces where women’s music artists had staged concerts and sold their products. By 1995, young, queer
activists began to stage their own backlash against long-running lesbian music institutions, such as the Michigan Womyn's Music Festival, charging that women-only space ignored transgender inclusion.

Concepts like “branding” or “platform” did not exist when, almost overnight, the lesbian music movement and its fan base proved to be a previously untapped consumer niche. Moreover, even at its peak, the women's music movement remained true to its leftist roots —ambivalent about upward mobility and about profiting from its own. Lesbian artists resistant to sharing the stage with men faced difficult choices, as did festivals trying to continue a tradition of showcasing women only. Separatism also meant, for some artists, placing parameters around who might experience the music produced by brigades of women workers. Linda Shear's albums, for example, stated clearly that her music was intended not just for women only, but for lesbians only. The ongoing success of Olivia Travel (formerly Olivia Records), however, today demonstrates the sustainability of a fan base. The original consumers of lesbian music are aging in style, enjoying cruises on the high seas where many of the original Olivia artists continue to perform.

**FILMOGRAPHY**

Available scholarship on same-sex literary discourse in Ottoman Turkey (both in Turkish and Western languages) is scarce and often disappointing in the sense that it almost always embraces an apologetic position, and it is often not based on actual (philological) contact with manuscripts. One reason why scholars have largely ignored this significant aspect of Turkish literary heritage may be that still few primary sources of this tradition have been deciphered from their manuscript forms and made accessible, but the argument can be made that there exists a strong state- and self-imposed censorship toward such “sensitive issues,” at least when it comes to scholarship in Turkish. Studies dealing with same-sex literary discourse in other “Islamic” literary traditions, such as Arabic, Persian, and Urdu, are likewise infrequently encountered. Although more analyses of the topic have appeared since the late 1990s thanks to the growing interest in cross-cultural gender studies, classical scholars continue to withdraw from the subject because of its academic, religious, cultural, and political “consequences.” One notable exception is Dror Ze’evi’s 2006 book *Producing Desire: Changing Sexual Discourse in the Ottoman Middle East, 1500–1900*. Using some of the most significant primary sources, Ze’evi adopts a transdisciplinary approach in analyzing the highly diverse sexual realities of the Ottoman Middle East and explains the complex relationship between sex, religion, and law.

### Falsification of Gender

Even some Western researchers have expressed discomfort in dealing with such an issue. For example, J. Christoph Bürgel, a scholar of Islamic literatures, felt the need to make the following statement to his audience before the presentation of his otherwise valuable scholarship on the subject at a conference in 1977: “In this paper I do not intend to be indecent; I do not report a single story for the sake of mere indecency. Nor, however, do I refrain from bringing to the knowledge of the reader what I think is the stuff of which eroticism in medieval Islam was made” (1979, 82). John Boswell noted other interesting examples of the cautious approach adopted by Western scholars of Middle Eastern Islamic literatures when same-sex literary discourse is an issue: “When the Persian moral fables of
Sa’di were translated into English in the early nineteenth century, Francis Gladwin conscientiously transformed each story about gay love into heterosexual romance by altering the offending [English] pronouns. As late as the mid-twentieth century, the ghazels [lyric poems] of Hafiz were still being falsified in this way (1980, 18).

In the overwhelming majority of the scholarship in Turkish, the falsification of the gender of the beloved, as Boswell described, remains the most effective tool in keeping Ottoman same-sex literary discourse veiled. Even those who attempt to make extremely guarded statements about the “possibility” of gay themes in classical Ottoman literature strive to discover a “foreign,” specifically Greek, origin for what was found in Ottoman poetry. According to this rhetoric, what looks like homosexuality in Ottoman poetry is, in fact, nothing more than an unfortunate continuation of the Persian poetic vocabulary that carried into the Ottoman tradition certain Persian homosexual themes. And furthermore, they maintain, these elements had entered Islamic Persian literature from the ancient Greek tradition. This dominant critical approach has resorted to other remedies to cover up a “shameful” part of the Turkish cultural heritage. The fact that neither Turkish nor Persian shows a grammatical distinction of gender was and still is one of the greatest aids for the moralist/Islamist critics, enabling them to translate every pronoun concerning the beloved as she. In a 1991 study titled Divan şiirinde sapık sevgi (Perverted love in divan poetry), researched and published outside the Turkish academe, İsmet Zeki Eyuboglu stated that the only form of love depicted with realism in Ottoman court literature was homosexual love.

Islam in the Ottoman Empire

The question of whether the Ottoman Empire was an Islamic establishment is one that both present-day Islamism and the official ideology of the Republic of Turkey have often answered in the affirmative, although for completely different reasons. Both Islamism and Turkish ideology had their own political rationale, the former struggling to transform nearly everything from the past into an Islamic (and Islamist) icon, whereas the latter contrasted the medieval Islamic past with the superiority of Turkish modernity and secularism. For the Islamists, the Ottoman military, economic, and cultural success was attributed to its “strong” ties with Islam and Islamic ideology. Phrases such as the “Islamic empire,” “Turkey’s Islamic past,” the “splendid Islamic Ottoman times,” and the like are found in the pages of many publications. Yet a careful examination of Ottoman manuscripts regarding the personal details of the sultans, court poets, and others reveals the contrary.

The written remains of the empire expose the fact that the Ottoman cultural and political entity was more practical and this-worldly than religious. This perhaps explains why the Ottoman system was designed to allow Muslims, Christians, and Jews to live together without fear. The so-called Ottoman millet system (of organized religious communities) and total cultural and linguistic freedom could not possibly exist under the modern-day
interpretations of the Islamic canon law called shariʿa. There is no doubt that both Islam and shariʿa had a significant place in the Ottoman system and society, but the Ottoman shariʿa had its own unique principles and was quite different in structure and application from what is called shariʿa today as practiced in societies such as Saudi Arabia. The existence and application of the Ottoman kanun (secular law) since the fifteenth century also confirms the fact that “Islamic law” was not the one and only regulation in organizing the state and society in the Ottoman Empire. The Ottoman ideology’s de facto separate application of kanun and shariʿa laws may have been a misunderstanding on its part of what Islam truly is. But it was this misunderstanding that created a cultural and political space where even gay identities and discourses could blossom (sometimes with intellectual manipulations), for otherwise how could one explain the dominant (but still overwhelmingly denied) discursive power of gay literature throughout the Ottoman centuries despite the clear warnings of the Qurʾan: “If two men among you / Are guilty of lewdness, / Punish them both. / If they repent and amend, / Leave them alone; for God / Is Oft-returning, Most Merciful” (4:16).

**Islamic Mysticism**

Among the most significant elements of the misunderstanding and/or intellectual manipulation was Islamic mysticism. Mystical vocabulary came to the rescue of the gay poet by offering a means of expressing his desires symbolically and therefore ambiguously or even equivocally. For centuries medieval “Islamic” poets struggled to create extremely abstract allegories. This abstraction was there in early Arabic literature and later on became even stronger in the Persian, Ottoman, and Urdu poetic traditions. As Annemarie Schimmel noted in her 1975 book *Mystical Dimensions of Islam*, some “mystics drew up whole charts to explain the simplest words in a mystical sense” (300–301). This “mystical” vagueness created a poetic discourse that indeed provided a shelter to those poets who sought to refer in their poetry to “immoral” descriptions of and interactions with the beloved. Arslan Yüzgün mentions in his study of homosexuality in modern Turkey that some Turkish gays use “a kind of secret language” when they want to talk to each other in public about their “activities” (1986, 34–35). Secret or coded speech serves as protection from the likely discrimination and threats of dominant normative structures that would condemn and threaten the group. Similarly, the mystical ambiguity not only helped the “Islamic” poets to enrich and circulate their discourses of dissonance freely but also ironically continues to provide present-day moralist and Islamist literary critics with a means to refuse or explain away such “inappropriate” elements in the “Islamic” literature of Ottoman Turkey. One of the most respected scholars of Ottoman poetry, Harun Tolasa, for example, refrained from dealing with the gay beloveds of the fifteenth-century Ottoman poet Ahmed Pada in his 1973 analysis of Ahmed Pada’s divan (poetry collection). It is documented that Ahmed Pada wrote several independent ghazels (love lyrics) for his male beloveds. He even mentioned their names, such as Īshak, Kasem, ‘Ali, and the like, which
are exclusively male names. It should be noted that writing about the beloved with his or her name is extremely rare in the Ottoman lyric tradition. Yet İshak, Kasem, ‘Ali, and others have been transformed into Islamic figures in this book. Although Tolasa states in his introduction that his analysis avoided “subjective ideas and judgments” (1973, 3), his approach could see only mystical lovers and beloveds in the divan of Ahmed Pada thanks to the adoption of a prescribed literary criticism of Islamism based on “Islamic” or “mystical” solutions for almost any given classical poem.

As it was fashionably named in modern historiography, the so-called Ottoman Age of the Tulips (1718–1730) was “a secular trend, which made Turkey seem like a country experiencing a renaissance,” according to Niyazi Berkes in The Development of Secularism in Turkey (1964, 51). The most significant and quite evident change in the eighteenth century was the weakening of the existing religious institutions, along with the fading dominance of Islamic mysticism in literature and other courtly arts. Berkes noted signs of weakening religious authority and an evident laxity in the observation of traditional moral values in the eighteenth century even among the common people. In addition, the orthodox aspects of Sunni Islam were rapidly losing their ethical and moral authority among Ottoman administrators, intellectuals, artists, and poets. The more open representation of sexuality, the switch from imaginary to a more natural imagery, and other critical changes all represented transgressions and departures from both the artistic and the religious canon. Ariel Salzmann depicts the court of Ahmed III as “gay processions to the gardens and palaces” (2000, 97), likely using the word gay in its dual meanings. Refik Ahmet Sevengil indicates that Ahmed III’s grand vizier Ibrahim Paşa used to invite poets into his presence and enjoy their “indecent” writings ([1927] 1990).
Manuscript Page of the Hubanname (Book of Handsome Ones) by Ottoman Poet Fazıl-ı Enderuni. The Hubanname is one of the most significant manuscripts of eighteenth-century Ottoman gay literature, based on Enderuni’s descriptions of “man beauties” from around the world.

Nedim

In his 1994 book *Nedim and the Poetics of the Ottoman Court: Medieval Inheritance and the Need for Change*, Kemal Silay partly argued against contemporary scholarship’s failure to adequately address Ottoman gay literature, especially with regard to the case of Ahmed Nedim (1681–1730), one of the most significant poets of the eighteenth century. Gay expressions in court poetry of the eighteenth century were undeniably prevalent through this revolutionary poet’s open discourse, but he also suggested that there were numerous followers of his discourse within the courtly tradition. Fazıl-ı Enderuni was one of them. His *Hubanname* (Book of handsome ones) is one of the most significant manuscripts of eighteenth-century Ottoman gay literature. Similar to his other works, the book is mostly based on Enderuni’s own experiences and observations—an aspect in itself that constitutes a turning point in the development of court poetry in Turkey. And because the manuscript is based on Enderuni’s descriptions of “man beauties” from around the world (including Istanbul, Anatolia, India, Iran, Iraq, Egypt, Syria, Yemen, Algeria, Tunisia, Armenia, and Albania), it has a unique multicultural and multiethnic character. Yet, there exists almost no scholarly study on this invaluable source. For “moralistic” and various other political
reasons already discussed, to this day no philologist has published either a transcription or a facsimile of this work.

One prevalent aspect of Ottoman gay literature is a discursive practice that could be classified as scopophilia, or an expression of sexuality in which sexual pleasure is derived from looking at objects. An example of this phenomenon can be seen in a few lines by Nedim:

Oh zealot, as long as one’s heart is free from suspicion and hypocrisy

It doesn’t matter whether there is a wine glass in his hand or prayer beads

As long as I can watch the beauty of that rose

It doesn’t matter whether the place where I watch him is a rose garden or a bathhouse

(GÖLPINARLI 1972, 293; TRANSLATED BY KEMAL SILAY)

It is the suggestion of seeing this “rose” in the bathhouse that indicates that the “rose” is a man because there was and still is a complete separation of men and women there. The tesbih, or prayer beads, and cam, or wine glass, are not objects used exclusively by men, although they are most often associated with primarily male-oriented activities. It must also be pointed out that the tesbih is not used only for praying. In fact, it is often fondled and the beads passed through the fingers almost unconsciously. These three elements taken in conjunction leave little room for doubt about the gender of the “rose.”

Nedim continues on every possible occasion to criticize the ascetic for his intolerance of perverted sexual activities and persists in defying the established orthodox religious values with his bitter tone. In the following couplet, he even boasts that his sexual activity is more than a perversion or scopophilia but instead is “normal”:

Oh zealot, if you have any problems in making love to the beauties, ask me

I have in that science done quite some research and I do it very well.

(GÖLPINARLI 1972, 258; TRANSLATED BY KEMAL SILAY)
Nedim was by no means alone in criticizing the ascetic or orthodox Muslim figures and their intolerance of those who enjoyed this-worldly pleasures. It was common in both the Persian and Ottoman poetic traditions for poets under the influence of Islamic mysticism to criticize and even mock the orthodoxy with which it was always at odds. Yet, many of those “mystical” poets were merely imitating common thematic paradigms in their invectives and following preexisting patterns. Furthermore, though they criticized certain religious orthodoxies, the mystics were still religious men. This is what distinguishes Nedim from almost all his predecessors, mystic or otherwise.

Nedim’s voyeuristic perversion is best represented in his poem about the bathhouse, commonly called *Hammamiye*. It is still clear that the object of the poet’s attention is a young man—most likely a *tellak*, or “bath attendant”:

```
Early in the morning I woke up, but suddenly my hangover began to bother me

Hardly had I set out for the bathhouse my belt loose, the corner of my turban fluttering

Arriving in the bathhouse in that shape
I found a solitary spot there

Oh my! I saw a beauty, a calamity for the soul
Approaching me, he began to emanate gleams like the sun

His hair was scattered just like his lover’s sleep his look was distracted, just like his lover’s heart

His body was whiter than pure silver, softer than a rose
his posture was straighter than a fresh, young sapling

Was his body a moonlike dough or a sunny confection?
Was his stature a crystal bough or a precious pearl tree?

That stature, that cheek, that perfect proportion, that double chin, those nipples
that beauty and strength, that coquetry, that graceful walk

were all colorful and precious, they were truly flirtatious and alluring
they were from head to toe beautiful like a resplendent face
```
A Second Level of Voyeurism

It should be mentioned here that there is also a second level of voyeurism in the consumption of such literary products. As previously noted, the grand vizier Ibrahim Paşa used to invite the poets of the century into his presence to hear and enjoy their “indecent” writings. Thus, listening to such stories that were created as a result of conscious (secret or otherwise) processes of watching brings a second dimension to this perversion. The poet, by writing down such private experiences and presenting them to a third party, exposes these experiences to the public gaze or ear, therefore turning those participants into observers of such sexual activities. In his *Medieval Poet as Voyeur: Looking and Listening in Medieval Love-Narratives* (1993), A. C. Spearing, regarding Western narratives, states that “as readers or listeners to such narratives, we too can be made to feel that we are secret observers; and, in the later Middle Ages especially, the love-poet is often realized as one who looks and tells, himself a secret observer of experiences in which he does not participate” (1).

In a veiled society in which both pre- and extramarital sexual interactions were prohibited, the image of the beloved for the poet was nothing other than blurred fragmentations of the whole. Indeed, this fragmentation was perhaps the main cause for the way the poet looked at the outside world. His eyes functioned like a fixed telephoto lens. Although voyeurism and exhibitionism are perhaps as old as humanity itself and can be found in all societies of all times, the social and ethical restructurings of the shariʿa provided a sexual mechanism in which looking (often with secrecy attached to it) at the other sex became the predominant sexual interaction between the sexes: a man gazing at a woman, a woman gazing at a man, and, most importantly, as far as the courtly poetic discourse is concerned, a man gazing at a man.

**BIBLIOGRAPHY**

Boswell, John. *Christianity, Social Tolerance, and Homosexuality: Gay People in Western*

The twenty-first century has seen a rapid efflorescence of discourses, both scholarly and creative, which engage with same-sex sexualities in Africa. In relation to African creative writing, this might be called the “contemporary queer turn.” By presenting a number of experiences and styles, these short-story writers, novelists, memoirists, and autobiographers testify to the complexity and variety of queer sexualities and sensibilities on the African continent—what Pumla Dineo Gqola in the introduction to *Queer Africa* calls the “multiversality of queer subjects and imagination” (2013, 2). Through the variety of narrative approaches, styles, and formal innovations, these writers also evidence the fecundity of the literary imagination of these contemporary queer writers.

Given the growing popularity of the term *queer* among scholars, it is used in this entry not simply as a catchall term for nonheteronormative sexualities but to deploy the political imperatives embedded in the use of the term. There are some caveats. First, the term *queer* is clearly distinguished from *LGBTQI*, which relates to the acquisition of certain rights within a human rights agenda. Second, although *queer* is used by editors of collections (of short stories, life writing, etc.), the authors themselves rarely use the term, preferring instead *gay*, *lesbian*, *trans man* and *trans woman*, and sometimes the more old-fashioned *homosexual*. Finally, *queer* is a highly contested term and its use is very often qualified by the editors who tend to use it.

**The Contemporary Queer Turn**

The term *queer* appears in the titles of many of the anthologies under discussion in this entry, such as *Queer Malawi* (2010), *Queer Africa* (2013), and *Queer African Reader* (2013). The contemporary queer turn in African creative writing appropriates and marks its distance from the Western one by insisting on the highly political nature of the retooling of *queer*. The editors of *Queer African Reader*, Sokari Ekine and Hakima Abbas, who bring together a range of material—academic, testimonial, and artistic—from and about queer Africa and its diaspora, articulate this generally held position with some verve: “We use queer to underscore a perspective that embraces gender and sexual plurality and seeks to
transform, overhaul, and revolutionize African order rather than seek to assimilate into oppressive hetero-patriarchal-capitalist frameworks” (3).

The contemporary queer turn signals a shift from earlier representations of queer sexualities in African creative writing. A number of critics have addressed what Chantal Zabus calls these “early queer gesturing[s]” (2013, 134); examples include the seminal survey articles of sub-Saharan African fiction by Daniel Vignal (1983) and Shaun de Waal (1995) and more recent elaborations in Cheryl Stobie’s survey of bisexuality (2007b), chapter five in Marc Epprecht’s book Heterosexual Africa? (2008), and Zabus’s Out in Africa (2013), one of the first book length studies of same-sex sexuality in African writing. Chris Dunton in his highly influential 1989 article “‘Whyeting Be Dat?’: The Treatment of Homosexuality in African Literature” points out that in a number of texts, when the issue is raised, homosexuality is treated pejoratively and “monothematically” (422). In the urgent nationalist postcolonial project of authentic cultural reclamation, the queer subject is figured as the “Other” of Africa, be it Western (e.g., Wole Soyinka’s The Interpreters [1965], Kole Omotoso’s The Edifice [1971], and Ama Ata Aidoo’s Our Sister Killjoy [1977]) or Arabic (Soyinka’s Season of Anomy [1973] and Ayi Kwei Armah’s Two Thousand Seasons [1973]).

These and earlier literary treatments also often associate same-sex practice with what has been called “situational homosexuality,” produced by the woes of colonial industrialization and the destabilization of traditional social organization, thus stressing the Western production of homosexuality in Africa (e.g., the very early Zidji by Henri Junod [1911] and Peter Lanham and A. S. Mopeli-Paulus’s Blanket Boy’s Moon [1953]). In addition to correlating queer sexualities with “foreignness,” either through its importation or production, early African writers also associate queer identity and practice with mental illness (e.g., Yulisa Amadu Maddy’s No Past, No Present, No Future [1973] and Rebeka Njau’s Ripples in the Pool [1978]) and/or drug and alcohol addiction (e.g., Blanket Boy’s Moon and Maddy’s above-mentioned novel, in which the queer character Joe Bengoe states, “I sold my youth to perversion. I have lived rough. Homosexuality, drug addiction, drinking, and finally madness. The sum total of me is, I am a confirmed disciple of the permissive society’s worst cult” [155]). In these novels, queer sexuality is represented as alien to Africa and alienating to Africans.

A certain ambiguity in these novels’ portrayal of same-sex sexuality is attested by Vignal (1983), Dunton (1989), Epprecht (2008), and Zabus (2013). A few examples will suffice here. In Blanket Boy’s Moon, queer sexual practice is related to the situational homosexuality in prisons and mine hostels and a reaction to the guilt the protagonist Monare feels when he commits liretlo (ritual murder); in addition, the novel contains multiple references to homosexuality, including the “traditional” role of the mosuoe (teacher) at the circumcision school and the organic teenage sexual relations between Monare and his “heart’s friend” Koto (Dunton 1990). Similarly, in the lengthy discussion between the characters Joe Golder, the queer American lecturer in African history, and Sagoe, one of Soyinka’s protagonists in The Interpreters, Joe reminds Sagoe, who insists on
his “comparatively healthy society,” of the “Emirs and their little boys” and “the exclusive coteries in Lagos” (1965, 199). The various chapters of *The Interpreters* are mediated through the consciousness of a number of “interpreters.” With Joe’s poignant chapter in the latter half of the novel, we become aware of the difficulties of being queer in Nigeria in the 1960s: loneliness, violence, and blackmail. In Aidoo’s novel *Our Sister Killjoy*, Sissie, the central character, refuses the sexual advances of a German woman, Marija, and makes claims that lesbianism is alien to African womanhood. Yet, Epprecht (2008) points out that even here, Aidoo balances this disavowal with Sissie’s memory of two girls at her school who were caught in sexual exploration by a white missionary woman; Sissie, through the girls’ defiance, seems to chastise the missionary’s attempt to stifle an organic expression of sexuality among African girls. In all these novels, one can discern a subtle attempt to distinguish between queer experiences that are authentic (indigenous, local, and a healthy part of teenage exploration) and inauthentic (colonial, foreign, and/or produced by the machinery of the colonial state), between African homosexualities and Western ones.

The one creative piece to buck the trend in the generally negative portrayal of queer sexuality in these early literary representations is a short story by Tanzanian D. N. Malinwa. In “Everything under the Sun,” which appeared in a collection of short stories in 1969, two African roommates, Meta and Welimo, quarrel over banal domestic issues: money, unemployment, one of them drinking too much, and the other taking up religion. As the story progresses, the reader realizes that they are lovers. There is no condemnation or judgment on the part of the author, and no hint that their relationship is a product of foreign influence. “The relationship is normalized as a de facto marriage between struggling working-class African men” (Epprecht 2008, 140). Nonetheless, apart from Malinwa’s story, Dunton is surely right when he suggests in his survey of early African fiction that “what remains conspicuous in all these works is the abstention among African writers, and even among the most searching and responsive of these, from a fully characterized and nonschematic depiction of a homosexual relationship between Africans” (1989, 445).

The contemporary queer turn in African creative writing is a powerful response to the early novelistic queer gesturings. Through the postcolonial strategy of “writing back,” it draws attention to both the historical and contemporary presence of a number of African queer sensibilities, thus contesting the claim of the un-Africanness of queer identities; it testifies to the complexity of African queer experience, already complicated by intersections/discontinuities with class, race, gender, colonial/postcolonial histories, and political violence; and it provides readers with fully characterized, nuanced, and “nonschematic” treatments of queer lives lived with varying degrees of difficulty.

There is a dispiriting aspect of this contemporary turn. For the most part, the twenty-first-century flourishing of African queer writing has been brought about by small African independent presses and, in many instances, collaborations with nongovernmental
organizations (NGOs). While this is laudable in terms of attempts to create greater visibility of often occluded or disavowed subjects of the African nation-state, what this means is that many of the books discussed (or referenced) in this entry have had very limited print runs; some are available only on Amazon’s Kindle platform. These important books run the risk of disappearing altogether.

**NO PAST, NO PRESENT, NO FUTURE (1973; YULISA AMADU MADDY)**

The novel *No Past, No Present, No Future* by the Sierra Leonean playwright Yulisa Amadu Maddy (1936–2014) presents a textured account of race, class, and sexuality in an independent African nation, as well as in the diaspora. The novel follows the relationship of three best friends—Ade, Santigie, and Joe—who emerge from drastically different social classes in the fictional African country of Bauya (largely assumed to be based on Maddy’s own Sierra Leone), and eventually migrate to London and later to continental Europe in the well-rehearsed narrative of postcolonial African subjects emigrating in search of educational and economic advancement. Published in 1973, the novel was a contemporary of newly independent countries producing self-reflexive literature concerned with postcoloniality and the newly developing relationships between African nations and the “West,” viewed through the lens of everyday experiences. Maddy’s novel joins this conversation with an emphatic, critical eye on the racial and class dynamics that shift as postcolonial subjects navigate this convoluted geopolitics. This is demonstrated in the dissolving relationship between Ade, Santigie, and Joe, who quickly adopt the Western values of individualistic gain in educational, romantic, and economic pursuits, slowly dismantling their once brotherly bond with one another.

What perhaps sets this novel apart from its contemporaries is its explicit yet nuanced incorporation of queer sexuality, namely in the character of Joe. In many ways, this novel’s representation of gay Africans is just as relevant in the twenty-first century as when the novel was published several decades ago, demonstrating the persistence with which sociocultural stereotypes shape our representations of, and therefore our beliefs about and treatment of, marginalized subject positions. These common tropes include gayness as a European disease imposed on Africans through colonization; gay men as misogynistic; gayness associated with drugs and alcohol; and the characterization of Europe and the West as exceptionally progressive and welcoming toward queer people and therefore the site of necessary escape for sexual liberation and survival. This is evident from Joe’s early gay experiences with Father O’Don, a Roman Catholic priest who runs the mission where Joe, Ade, and Santigie first meet. Joe later has several traumatic sexual experiences with women that cause him to aggressively denounce women. And, Joe’s queerness is openly revealed only once he arrives in London, starting a relationship with a French boy and embracing the sexual
liberation of the West.

At the same time, however, the novel suggests that Joe began his sexual explorations openly in Bauya and that, while not necessarily “out” in a stereotypically Western configuration of gayness, it was common knowledge that Joe was gay both in Bauya and in London, where he goes to school, and those close to him discuss it openly with little disapproval. Furthermore, while Joe faces significant struggles in his life, they are not directly connected to his sexuality. In fact, there are no representations of violence toward Joe because of his sexuality. On the contrary, the novel stages Joe, with regard to his relationship with a white man, as the most well-adjusted of the three friends and proposes that it is actually his sexuality that pulls him through other social and economic hardships and that of all the characters Joe has the most secure future. Additionally, the novel offers direct dialogue about assumptions that Africans are obligatorily heterosexual and offers inroads to arguing for the historic embeddedness of queer sexuality, which is not necessarily perceptible to or resulting from the Western gaze and colonial intervention. This complex, dynamic representation of queer African sexuality remains pertinent today, as these representational tropes continue to play out in contemporary struggles around LGBTQI politics and lived experiences both on the continent and in the diaspora.

This is further evidenced by the fact that, while the novel appears to have received little critical reception at the time of publishing, it later was taken up in more scholarly analysis. In his 1989 article “‘Wheyting Be Dat?’: The Treatment of Homosexuality in African Literature,” Chris Dunton charts how Maddy’s treatment of Joe’s homosexuality shifts from pejorative to sympathetic over the course of the novel, at the same time that it resists indexing Joe’s sexual orientation in a discrete, diagnostic fashion and integrates his sexuality more fully into his lived experience, challenging the conventional sexual morality that runs through much of African literature. More recently, Chantal Zabus’s 2013 book Out in Africa: Same-Sex Desire in Sub-Saharan Literatures and Cultures expands on this analysis. While Zabus demonstrates how Maddy’s portrayal of homosexuality perpetuates many damaging stereotypes such as pedophilia, the Western destruction of African culture and tradition, drug addiction, suicide, and more, she also fine-tunes how Maddy nuances these stereotypes by tracking Joe’s transformation into a selfpossessed, relatively happy, and accepted African gay man—in his words an “Afro-queer.” The complexity and duality embraced by these analyses might help those who continue to engage with LGBTQI African struggles to approach and use the novel as scaffolding for imagining and shaping contemporary activism in and through representation.

**BIBLIOGRAPHY**

Dunton, Chris. “‘Wheyting Be Dat?’: The Treatment of Homosexuality in African
Given the wealth of material that has emerged since the rapid growth of creative discourses on queer(ing) Africa, this entry approaches the material by alternating between a synoptic perspective and a telescopic one, between a zooming out to provide a larger view of the still-growing creative field and a zooming in on particular stories or novels that foreground some of the salient features of this new writing. Also, two other points about the analytical approach: given the paucity of poetry that deals primarily with queer sexualities, the focus is on short stories, novels, and life writing, and the texts are principally concerned with queer sexuality, either through the protagonist’s subject position or the thematization of the topic in African countries and their diaspora.

**Queer Identities in Short Stories**

The first collection of queer short stories in English to appear in Africa was *The Invisible Ghetto* (1993). Collected and edited by Matthew Krouse and Kim Berman and published near the end of the apartheid system in South Africa, these stories focused solely on white queer South African experience. In the contemporary queer turn in African creating writing, the short story has proved to be a very popular form among black writers in Africa south of the Sahara and its diaspora. The form is attractive for a number of reasons. Aesthetically, it is related through its literary forebear, the folktale, to traditional African poetics: it is a folktale for the modern age where capitalism, rapid industrialization, and urbanization have thwarted the communicative potential of the folktale, where the short story captures “the afterglow of storytelling” and the “melancholic beauty of an art form as it disappears” (March-Russell 2009, 26). Historically, the form “has appealed to writers at odds with the dominant values of their society: women writers, colonial subjects, sexual minorities,” often providing these writers with the means of dodging “economic deprivation and political oppression” (March-Russell 2009, 70). Pragmatically, the popularity of the short story form might have something to do with the fame (or infamy, in...
some circles) of the Caine Prize for African Writing, which advertises itself as “Africa’s leading literary award,” with winners often going on to secure book deals with major publishers. Formally, single-author collections of short stories allow the author to inhabit and voice very different subject positions. In Diriyе Osman’s much-lauded *Fairytales for Lost Children* (2013), the writer shifts the narrative voice in his stories from the supportive mother of a lesbian who has never left the coast of Bosaaso in Somalia (in “Watering the Imagination”) to a Somali lesbian woman suffering from schizophrenia (in “Earthling”), from a Jamaican lover of a Somali man (in “My Roots Are Your Roots”) to the highly personal “I” in the more or less autobiographical vignettes. In a similar vein, Makhosazana Xaba voices a variety of female subject positions to produce a nuanced vision of girlhood and womanhood in an evolving South Africa in *Running and Other Stories* (2013). Many of the stories in *Running* deal primarily with experiences of queer women (a fact strangely omitted from the foreword to her collection).

Many stories in both the single- and multiauthored collections place queer sexuality, its acknowledgment, its expression, and its difficult embrace, in direct opposition to family, community, and, in some cases, religion. This marks a shift from much of twentieth-century African creative writing, where family or community, or both, act as important conduits of escape from colonial and postcolonial degradation. Instead, family, community, and religion become sites of conflict and crisis for these new writers. The stories in these collections, being true to their form, are character-driven and thus foreground psychological exploration. Some trace the emotional arc of “coming out” from alienation and shame, which results from a transgression of social and religious norms, to self-affirmation, love, and a kind of liberation from these social strictures; examples include many stories in Osman’s collection, as well as Abbas’s powerful story of a trans woman, “Crimson Waves,” Happy Mwende Kinyili’s “Telling Stories” in *Queer African Reader*, and, more subtly, Wame Molefhe’s “Sethunya Likes Girls Better” in *Queer Africa*. Some trace the uncomfortable relationship between violence, power, and sexuality, as in Rahiem Whisgary’s “The Filth of Freedom” and Barbara Adair’s “A Boy Is a Boy Is a …” in *Queer Africa*. Yet others refuse the not-so-easy consolations of self-affirmative sexual identification: see Xaba’s literary responses to both the canonical Can Themba’s “The Suit” and its contemporary reimagining in Siphiwo Mahala’s “The Suit Continued” in the first and last stories in her collection, *Running and Other Stories*, and Osman’s “Tell the Sun Not to Shine” in his own collection (2013) and also in *Queer African Reader*.

In almost all of the stories, the tropes of transgression (sexual, social, religious) and shame loom large. However, and unsurprisingly, various writers handle these tropes very differently. Two examples will elucidate these differences. In Monica Arac de Nyeko’s “Jambula Tree” (2013), the idea of transgression figures repetitively, but the psychological concomitant of shame is, for the most part, externalized. De Nyeko achieves in “Jambula Tree” a Lukácsian “epic concentration” (*Lukács 1969*, 111): in a few pages, she not only provides a comprehensive exposition of a particular social milieu (the lives of people in a
poor housing estate in Uganda during a civil war) but also uses the inner drama of her characters to pose social problems (class differences, sexual abuse, and most significantly, the social disavowal of same-sex sexual desire). Transgression and shame, the social process and its psychological concomitant, structure the narrative. We are consistently reminded that as adolescents, the two young girls (Anyango and Sanyu) at the center of the story transgressed the social and religious norms of their society by the sexual expression of their desires: “lines we crossed” (2013, 93); “the rules that you broke. That I broke. That we broke” (98); “these are boundaries we should not cross nor should think of crossing” (104). The first-person narrator subtly repudiates community (embodied in their antagonist, Mama Atim) and, to a lesser extent, religion. Family also becomes a source of crisis, as Sanyu is sent away as soon as the girls are “outed” by Mama Atim.

If we follow Theodor Adorno in his assertion in his posthumously published 1970 work *Ästhetische Theorie* (Aesthetic Theory [1997]) that form is a sedimentation of content, it is clear that de Nyeko’s short story is also formally transgressive. It seems to take the form of a letter addressed to Sanyu on the eve of her return after her postouting exile, but it includes social, personal, and geographical details that Sanyu would know already. Thus, it both is and is not a letter; the short story includes other genres within the short-story form—for example, excerpts from the songs sung by soldiers, official letters from Anyango’s school, love letters from her absent father to her mother, and the only letter from Sanyu to Anyango. It is also temporally disjunctive: although the story is set in the present, Anyango haphazardly recalls events from the past that eventually led to that fateful night of their sexual encounter and their being found out. The style blurs the line between prose and poetry; repetition of phrases throughout the short piece (e.g., Sanyu’s name, the “you,” “me,” and “we” in the construction of sentences, and the words green and jambula tree) create an incantatory, poetic, and indeed, melancholic effect. Significantly, like many contemporary African creative writers, de Nyeko refuses the anthropological impulse of earlier African fiction. Local Swahili words remain untranslated (e.g., mandazies, kwepena, dool, etc.) and certain metaphors/similes require local knowledge (e.g., “like the Kabaka subjects who lay prostrate before him” [101], the Kabaka being a famously queer figure in Ugandan history). Language is used innovatively, as when Mama Atim is described as having a “machinegun mouth,” a personal symbol that resonates with the broader political conflict of civil war. In “Jambula Tree,” de Nyeko, in a departure from many contemporary queer stories, places shame, which follows the transgression, outside the protagonist, in their community and in the families who separate them. Although Anyango points out that the couple “Anyango-Sanyu” “became forever associated with the forbidden” (91) and she imagines “shame trailing after me tagged onto the hem of my skirt” (93), she also makes clear that “she was not sorry” (104). At the end of the story, Anyango tells Sanyu (and the reader) that she commissioned “two paintings of two big jambula trees” (105), offering testament to the beauty of a love lost and the hope of its rekindling.

By contrast, in “Earthling,” Osman explores in an extreme way the repercussions of the
internalization of shame. In this third-person narrative, Osman painstakingly and painfully follows the actions and thoughts of Zeytun, a Somali lesbian suffering from schizophrenia, whose aural and visual hallucinations revolve around homophobic images and slurs. At an internet café she imagines that the Nigerian woman sitting next to her is interspersing her conversation with someone in Nigeria with homophobic statements directed at her: “dykes are such nasty creatures”; “Hell, that’s where you’re headed, you dirty bitch”; “lesbians are nothing but cheap whores” (2013, 77–78). On first reading, the reader is shocked, imagining this to be real, but then Zeytun reveals, “She knew she was hallucinating” (78). Osman thus very cleverly forces the reader to experience some of what Zeytun is going through. The painfulness of her hallucinations when she imagines murder threats from pedestrians, starlings, and crows as she makes her way home acquires, then, a startling immediacy for the reader. Although “Earthling” reprises many of the themes in the other stories of Osman's highly praised collection, Fairytales for Lost Children (for example, race; displacement; alienation/shame/abjection; self-affirmation vs. the demands of family, community, and religion; and queer relationships as both sites of refuge from these demands and a space of complex interactions), its main companion piece is the seemingly autobiographical “Your Silence Will Not Protect You,” in which the first-person narrator, Diriye, experiences a number of schizophrenic episodes related to homophobia suffered at the hands of his family. In “Your Silence,” like in “Earthling,” it is only by disassociating from family and embracing a queer identification (through selfaffirmation and a nurturing relationship) that the protagonist can begin to heal. An important difference emerges here in representation of mental illness: in the earlier queer novelistic gesturings, mental illness is a concomitant of queer sexuality, a symptom of a pathological sexual condition, but in the contemporary revisioning, mental illness is the product of homophobia, a psychological torment produced by the stigmatization and ostracism of an intolerant family and society.

Osman crafts a language specific to each of his stories, which may include poetic devices, untranslated Somali words, pidgin, and a globalized slang, described by July Westhale as “linguistic sound patterning as texture” (2013). The collection brings two aesthetic fields into conversation with each other: the visual and the literary. Each short story in the collection is preceded by an illustration that attempts to capture in visual form the central aspects of the narrative to follow, and an Arabic translation of the story title. Because there is no direct translation of earthling in Arabic, a productive tension is created between the supplied Arabic translation (“of the earth,” or “of the soil”) and both the English title and the narrative. Thus, in both de Nyeko’s story and Osman’s there is a clear attempt to destabilize/expand the inherited form. “Writing back” is bidirectional in the “contemporary African queer turn”; writers actively engage both an earlier tradition of African fiction, giving voice to often excluded sexual minorities, and the conventions of the (colonial) Western tradition.

Queer Identities in Novels
Nigeria and South Africa have dominated the production of African queer novels. Referring to what has been called the third generation of Nigerian writers, Pius Adesanmi and Chris Dunton (2005) have pointed to various ways these writers distinguish themselves from the earlier generation, but what has been left out of their analysis is the new elaboration of queer subjectivities. In internationally acclaimed works, including Chris Abani’s *The Virgin of Flames* (2007), two stories in Chimamanda Ngozi Adichie’s short-story collection *The Thing around Your Neck* (2009), Teju Cole’s *Open City* (2011), and Uzodinma Iweala’s *Speak No Evil* (2018), the queer subject is placed outside Nigeria, perhaps testifying to the Western locations of these writers. There are a few novels that explore queer experience and its concomitants of social opprobrium and homophobia in Nigeria itself. The first is Jude Dibia’s *Walking with Shadows* (2011), which was first published in 2005. Dibia resists what could have been an account of a queer man (Adrian), who has been “outed” by a corrupt colleague, coming to terms with his sexuality, by, for the most part, alternating the focus of the narrative between Adrian and his now estranged wife, Ada. Through the experiences of Adrian and Ada, Dibia is able to address the variety of queer experience in contemporary Nigeria, where homosexuality is illegal and stigmatized, from the ostensibly monogamous and loving relationship between Adrian’s old friends, Femi and Abdul, to the survival tactic of bisexuality adopted by a number of high-powered men; from the occasional queer sexual trysts of Rotimi (a working-class colleague who is sympathetic to Adrian’s plight) to the rearing of a child suspected of being gay; from overt and covert manifestations of the public condemnation of queer subjects to the violent treatment of queer subjects by a highly commercialized and Americanized evangelical Christianity. At least from Adrian, there is no suggestion that homosexuality is a foreign import. In relation to the elaboration of queer sexuality, however, there are some serious problems with the rhetoric employed by Adrian (and, by extension, possibly Dibia). Throughout the text, one can discern a particular “campo-phobia” at play. After Adrian visits a bar frequented by gay men, he says to Abdul, “I’m sort of glad that gay men are finally coming out of hiding. I’m not talking about the divas who are so loud and so effeminate, but the good-looking professional-types” (2011, 119; my emphasis). Adrian is also very moralistic. When he visits his white erstwhile lover Antonio, who tells him that he is HIV-positive, Adrian tells Antonio many times that he is going to die, and later thinks about the situation: “He would not have wished this for even his worst enemy. But Antonio had brought this on himself…. This was part of the reckless lifestyle of many gay men that bothered Adrian” (2011, 198). Where Adrian is quick to condemn certain gay men, he is more sanguine about the homophobic elements in Nigerian society: “The majority of people here still viewed his sexuality as abnormal. Maybe they were right, maybe they were wrong” (2011, 202). In Adrian’s mind, then, the ideal queer subject is straight-acting, monogamous, good-looking, and wealthy enough to escape the homophobic confines of Nigerian society. In drawing attention to the panoply of indigenous queer experience in Nigeria, Dibia’s novel is laudable, but one must be wary of the reactionary queer politics advanced by the text.
In the historical novel *Under the Udala Trees* (2017), Chinelo Okparanta explores the relationship that develops between two young teenage girls, Ijeoma and Amina, and the repercussions for Ijeoma when their relationship is discovered. In the milieu of the Biafran civil war, their relationship is doubly prohibited because Ijeoma is Igbo and Amina is Hausa. Not only does the novel mimic the narrative arc of de Nyeko’s story (which was originally titled “Under the Jambula Tree” [2015]), but here also, family and religion become sites of conflict and crisis for the young lovers, as Ijeoma’s mother quotes verses from the Bible to try and eradicate the “unnatural” behavior of her daughter. By revisiting a sensitive historical period in Nigerian history, Okparanta addresses contemporary queer concerns and the role of women in the reproduction of patriarchal culture.

Nnanna Ikpo’s debut novel *Fímí sì òlétì: Heaven Gave It to Me* (2017) is, by contrast, set in near-contemporary Nigeria. Dreadlocked twin brothers Wale and Wole are human rights lawyers. The first is closeted; the second is as out as one can safely be as a sexual rights activist in the context of Nigeria’s gathering political homophobia. Whereas many of the novels discussed here have a didactic quality, this one allows the richly drawn characters to speak to readers in the contradictory, idealistic, hormonal, and globally connected discourse that characterizes the gay scene in Nigeria and elsewhere on the continent.

When considering the South African queer novel, assertions about the contemporary queer turn have to be somewhat qualified. On the one hand, South African creative writing represents an exception to the largely twenty-first-century phenomenon of the African queer turn, because it has a longer history of engaging with same-sex experience and relationships during apartheid. From Michael Power’s *Shadow Game*, first published in 1972, to Stephen Gray’s *Time of Our Darkness* (1988), issues of cross-class and cross-racial male same-sex relationships are explored in the context of the apartheid state’s racial laws, violence, and surveillance. These novelists often oppose affiliative sexual connections with state networks of power and control, as we see in Gray’s novel, in which resistance, subtle collusion, and a future liberatory imaginary figure in the representation of the relationship between a black teenage boy and a white male teacher.

On the other hand, postapartheid queer novels represent an intensification of the African queer turn. The number of novels produced in South Africa far outstrips the rest of the continent. There are many reasons for this: the relative wealth of South Africa and its writers; a lively local publishing scene; and, most significantly, the legal protections against discrimination on the basis of sexual orientation afforded to LGBTQI persons by the 1996 democratic constitution and the Civil Union Act of 2006. However, like the apartheid-era novel, the postapartheid queer novel has been dominated by white male authors, and by a particular form—the male bildungsroman/coming-out story, such as Mark Behr’s *The Smell of Apples* (1996) and *Embrace* (2000); Michiel Heyns’s *The Children’s Day* (2002); and Craig Higginson’s *The Hill* (2005). These “new South Africa novels” are less interested in exploring the possibilities of queer emergent collectivities, which are based on cross-racial
affiliations, than in developing the white queer self against a white patriarchal order embodied in the family, schools, and the army.

There are racial, gender, and thematic exceptions to this dominant trend. Although the contemporary South African queer novel is almost exclusively a male phenomenon exploring the complexities of male gay experience, Shamim Sarif’s *The World Unseen* (2001) deals with the burgeoning relationship between two Indian women in 1950s South Africa. Sarif explores the development of female agency through a same-sex affiliative relationship against the backdrop of the newly introduced apartheid laws and the patriarchal strictures of a traditional Indian community. What is most disturbing about this multipleprize-winning novel is its representation of black people. In Sarif’s novel, black men are represented as either constant but necessary figures of labor, or as rapists. There is not much distance between Sarif’s portrayal of black men and their representation in colonial discourse, and the cross-racial intimacies that were the grounds for resistance to state control in the apartheid-era novels are entirely absent in Sarif’s historical novel.

There are also exceptions to the bildungsroman/coming-out story, where gay sexuality does not occasion much of a crisis for the characters; these include Damon Galgut’s novels and, most notably, Gerald Kraak’s *Ice in the Lungs* (2006), joint winner of the European Union Literary Award. Although very much a new South Africa novel in its linking of queer rights, feminism, cross-racial networks, and human rights, it is, strictly speaking, a historical novel. Kraak uses a doubled temporality in the novel’s narrative structure as he draws global and historical parallels between a group of antiapartheid activists in South Africa in the late 1970s and a group of activists in Stalinist Greece. It is an important novel as “the text reinscribes a gay cultural presence into South African historiography and provides a type of gay cultural history” (Carolin 2015, 50). As it works to script a queer sexuality within the antiapartheid movement and explore both state homophobia and the liberation struggle, it participates in the larger queer global project of cultural recuperation, of giving voice and presence to silenced sexual minorities in the past.

The most significant exception to the dominant trend of white male bildungsroman/coming-out novels in South African writing is the emergence of black writers engaging with queer sexuality, in, for example, Ahraf Jamal’s *Love Themes for the Wilderness* (1996); Tatamkhulu Afrika’s *Bitter Eden* (2002), a historical novel that explores the intimacies that develop between men in a degrading prisoner-of-war camp during World War II; Fred Khumalo’s *Seven Steps to Heaven* (2007); and K. Sello Duiker’s *Thirteen Cents* (2000) and *The Quiet Violence of Dreams* (2001). In their nuanced handling of queer sex and sensibilities, in their destabilization of the new South Africa novel, and in their formal inventiveness, Duiker’s novels set themselves apart from most other South African queer writing, and indeed from queer writing across the continent. Because *The Quiet Violence of Dreams* has already received much scholarly attention, this entry focuses instead, briefly, on Duiker’s first published novel.
*Thirteen Cents*, which was awarded the Commonwealth Writers’ Prize for Best First Book (2001), focuses on the precarious existence of an “ambiguously raced” (Spain 2016, 418) boy prostitute, Azure (pronounced Ahzoo-ray) in postapartheid Cape Town. The first-person, present-tense narration provides the reader with a child’s insight into Cape Town’s world of pimps, gangsters, and pedophiles. There is an uncomfortable sense of immediacy in Azure’s recounting of extreme bouts of violence meted out against him—including his sex work, a gang rape, starvation, and homelessness—which eventually shatter the young boy’s psyche. Duiker’s novel thus represents a “radical negation of the present”—not just in the apocalyptic ending of the novel, where a ball of fire comes down from the sky and the sea devours the city, and where “there is no image … that will secure a positive identity for the future” (Spain 2016, 422) but also in its destabilization of the new South Africa novel through its insistence of continuities with the racial discrimination, power relations, and social inequalities of the apartheid regime. Despite the brutalities and violence of his precarious existence, Azure is able to create spaces and times when he is not dependent on the treacherous adult world for his survival, either through his escapes to Table Mountain or, somewhat surprisingly, through his sex work, which he steers and controls “with a skilled, cultivated self-commodification” as “he takes pleasure in the sensuality, the sex, but also small pleasures the encounters bring, from clean sheets to lingering in showers after the sex” (Spain 2016, 428). In addition to following Azure as he navigates the streets of Cape Town, the locus of contestations of brutal masculine power, Duiker in a very nuanced way has Azure struggling to come to terms with his own identity in the transition from boyhood to manhood, as well as with issues of race and sexuality. Duiker presents us with a typically confused teenage response, as Azure rejects the world of moffies (the pejorative term for gay men in South Africa). “Moffiedom” is associated with exploitation, pedophilia, and sometimes pain, sometimes pleasure for Azure. However, on the mountain he meets a gay man who does not participate in this particular world, and this encounter has a lingering effect on him. Later, although he declares, “I’m not a moffie,” he also says, “I never dream of doing it with a woman” (Duiker 2000, 175). He muses, “It’s strange that I never dream of doing it with a woman” and then asserts that men are “hairy and ugly. What’s there to like?” (Duiker 2000, 176).

In addition to the radical and critical negation of postapartheid Cape Town and the irresolution of the problems the novel raises, another striking element of the novel is its formal inventiveness. Various genres are brought into play in the novel: gritty, urban realism jostles with the magic realism of the sections on the mountain; surrealism, the oneiric, and the dystopian vie for textual attention. It is also a novel that is highly intertextual. The most obvious connection is with Ben Okri’s *The Famished Road* (1991); indeed, the name of Duiker’s protagonist echoes that of the abiku-protagonist, Azaro, in Okri’s novel. The magic realism of the dream sequences and Azaro’s escapades in the forest bear striking resemblance to Azure's experiences on the mountain, and even the warnings that Azure gets from a number of men in the novel about certain people trying to steal his
soul (as he is sacred) mirror the various kidnappings of Azaro in Okri’s novel. However, unlike Okri, Duiker links the shift into the magically real with a disintegration of a child’s psyche, with mental illness. Here, again, mental illness is not linked directly to homosexuality but is the result of “abject violence, trauma, and loss” (Spain 2016, 429). In Duiker’s novel, as in the short stories discussed previously, these textual strategies, in form and content, seem less like postmodern textual games and more driven by a political imperative—to address queer concerns as part of a larger project of social emancipation from poverty, violence, and homophobia.

Finally, Tendai Huchu’s The Hairdresser of Harare (2015) is a rare example of a novel depicting a homosexual protagonist outside of Nigeria and South Africa. It is an even rarer example of a novel that explores the subtleties of a burgeoning friendship between an effeminate gay man (Dumisani) and his heterosexual female coworker, landlord, and friend (Vimbai), whom his family excitedly assumes will become a daughter-in-law. As is the norm for the genre, tragedy eventually catches up with Dumisani, but a fascinating plot twist links homophobia in Zimbabwe to the endemic corruption and racism of the ruling party.

**ONE DAY I WILL WRITE ABOUT THIS PLACE (2011; BINYAVANGA WAINAINA)**

This 2011 coming-of-age memoir chronicles the childhood and maturation of the Kenyan author Binyavanga Wainaina, who has become a public face for African LGBTQ groups. Wainaina grew up in Africa’s middle class as the son of a Kenyan businessman and farm owner and a Ugandan salon owner. The “place” of his title is actually three different places: the Kenya of his childhood, his mother’s homeland of Uganda, and South Africa, where Wainaina went to college and realized his dream of becoming a writer.

The memoir explores sex, sexuality, and gender constructions but eschews explicit investigations for oblique explorations that are deliberately filtered through the perspective of a child—a reticent or a naive, uncomprehending narrator. Although there are direct references to sexual activity, most of the memoir addresses the elusive sites of sexuality and desire, such as the erotic nature of music and dance and the sexual attraction circulated between bodies, while also including accounts of sexual fantasies expressed by the author and other individuals. The narrator’s frequent bouts of masturbation as an adolescent hint at a suspended sexual release. His sexual frustration is tied as much to the lurking presence of dominating father figures in political life as it is to his uncertainty over his gender identification and sexual preferences, which sharply contrast with the actions of other individuals who often belong to lower social classes free of middle-class and elite aspirations and who appear unburdened by religious and colonial inheritances or fixed notions of masculinity and the good life. When Wainaina writes of individuals who publicly embrace their homosexuality or bisexuality, their self-affirmations constitute
courageous acts in the face of opposition. Therefore, Wainaina’s juxtaposed silence charts the social costs of and prospects of “coming out” through proxy figures.

As a child, the narrator explored sexual life and the functions of gender performance through observation, but his adolescence coincides with social turbulence following the introduction of structural adjustment programs and the cessation of the Cold War. The ensuing developments transformed all facets of social and economic life in African countries. Wainaina’s sojourns at South African universities and his subsequent travels on writing assignments offer insights into communities across the continent. While his development as a writer constitutes a major narrative strand, the search for just societies and an emancipation from the flawed foundations of colonialism are significant co-implicated themes. They are interwoven with oblique and overt explorations of sex, sexuality, and sexual embodiments. By scrutinizing sex-gender conventions, Wainaina reveals the ways in which individuals are adapting and transforming configurations of gender, sexuality, and family. For example, Wainaina’s sisters contravene expectations when they bear children outside wedlock. Wainaina thus couples his own unarticulated nonnormative sexuality to observations of ongoing profound challenges to all forms of normativity across multiple scales, from the family to the nation-state and the continent.

In January 2014 Wainaina announced his homosexuality in an open letter to his mother (“I am a Homosexual, Mum”). Labeled a missing chapter to the memoir, the letter has become its complementary counterpoint text. When the memoir is read alongside Wainaina’s public affirmations of his homosexuality and his defense of LGBTQ rights to dignity and sexual expression in Africa, it becomes obvious that the book’s strategic exploration of the links between freedom from sexual and gender constraints and the larger realization of a democratic nation-state with guaranteed freedoms for the individual gestures toward a future community in which such freedoms are acquired.

Queer Identity in Life Writings

One of the most salient features of the contemporary queer turn in African writing has been the emergence of an abundance of queer life writing. A forerunner of these is Mark Gevisser and Edwin Cameron’s groundbreaking *Defiant Desire: Gay and Lesbian Lives in South Africa* (1995). Although mostly made up of scholarly essays on South African queer experience, the anthology contains an important section on life writing titled “Testaments,” which includes Zackie Achmat’s “My Childhood as an Adult Molester: A Salt River Moffie.” The collection also includes an edited transcript of Gevisser’s interviews with Simon Nkoli (1957–1998), the queer activist and founder of the first black queer organization in South Africa, the Gay and Lesbian Organisation of the Witwatersrand (GLOW). Contemporary queer life writings are collected in biographical anthologies or appear as single-author memoirs. The former, in almost all cases, are in collaboration with or supported by NGOs. Notable examples include *Queer Malawi* (2010, edited by Patricia Watson), a collection of stories gathered together by the Centre for the Development of People (a Malawian sexual rights association) and Gay and Lesbian Memory in Action (the South African gay and lesbian archive); *Blessed Body: The Secret Lives of Lesbian, Gay, Bisexual and Transgender Nigerians* (2016; edited by Unoma Azuah), a collection of queer nonfiction that resulted from a collaboration with Queer Alliance, a gay, lesbian, bisexual, and transgender NGO based in Nigeria; and *Rivers of Life: Lesbian Stories and Poems* (2014), which arose from the work of Free Gender, a South African black lesbian organization, and was published, along with *Invisible: Stories from Kenya’s Queer Community* (2014; edited by Kevin Mwachiro), with support from the Heinrich-BöllStiftung, a German political foundation. These collections of queer life writing thus demonstrate the importance of local and global networks of affiliation, not only in helping to provide publishing platforms to often excluded and disavowed sexual minorities—moving these communities from invisibility to visibility, from voicelessness to articulation, from being the objects of discursive representation to self-representation—but also in offering a riposte to the idea that queerness is un-African, a Western imposition. These nonfiction stories do not simply represent an occluded and socially marginalized group but work toward constituting that group.

They also explore what it means to be queer in Africa today. A generational divide is apparent. Older queer people looked to forms of sociality (either civil society groups or gay bars and clubs) as they struggled to escape social isolation and to find a name for their desires, which helped to determine their identities and to forge connections with an established community. Younger queer Africans, more often than not, look to the internet for help and advice. Indeed, one of the seven sections of *Blessed Body* is titled “Facebook Fantasies,” and the collection includes blogs from queer Nigerians (see especially “Stephanie’s Fears (1)” and “The Pains of ‘Transgenderment’ and the So-Called Friends (2)” by Nigerian trans woman Stephanie Adaralegbe). In all these life stories, the African queer
body is represented simultaneously as the site of violence (state-sanctioned or otherwise), blackmail, torture, ostracism, and isolation, and the locus of desire, pleasure, joy, and utopian fantasy.

*Trans: Transgender Life Stories from South Africa* (2009) is typical of the strategies deployed in the queer African anthologies discussed previously and also represents a departure in that it “is the first book of its kind in South Africa, and indeed the continent” to deal with “the experience of being transgender” (Morgan et al. 2009, 3). “Transgender issues,” Liesl Theron claims in the foreword to *Trans*, “have continued to be a taboo subject for discussion” despite the progress that has been made in relation to gay and lesbian rights in South Africa (3). The collection arose from a collaboration with the NGOs Gender DynamiX (a South African organization that focuses on the issues of transsexual, transgender, and gender-nonconforming people) and Gay and Lesbian Memory in Action (GALA; originally Gay and Lesbian Archives). The life stories in the collection are edited versions of interviews, which might explain the flattened effect of many of the stories. As if to mimic the diversity of the stories and the complexity of transgender experience and, at the same time, to register a certain precariousness about the project, the collection includes a range of materials in addition to the life stories: a glossary, which “was extremely difficult to compile due to the contested and constantly evolving use of terms by trans people” (Morgan et al. 2009, 12); photographs of a number of the contributors; newspaper clippings that suggest a long history of the representation of trans people in the media; reproductions of artworks from a 2007 exhibition; a summary of discussions with trans men about the relationship between South African culture and masculinity and another summary of a formal discussion with a “reference group” about the silences, the unspoken, in the collected life writings.

Despite the racial, class, and religious diversity of the life stories collected in *Trans*, a familiar arc of experience can be detected: early childhood experiences of a mismatch between body and gender, religious crisis, early adult experiences of struggling to name their identity, with almost all of the storytellers going through a period of being gay or lesbian, acknowledging to themselves that their body does not match their gender, beginning to live as the opposite gender, and finally engaging in the process of transitioning (a double coming out—first a “false” one as a gay or lesbian person and then a “true” one as a trans person). What is striking about the stories in this collection is the lack of what has been called intersectionality; this is not addressed in the summary of the discussion of silences in the collected stories. So, while there has been much progress made in relation to legal protections of sexual minorities in South Africa (including the trans-focused Alteration of Sex Description and Sex Status Act [2004]), these protections have led, paradoxically, to an increasing “ghettoization” of these communities, which seem less interested in forging affiliative connections with other marginalized groups—such as feminist organizations, gay and lesbian groups (in the case of trans), and social movements that attempt to address poverty, social inequality, racism, and other injustices in a broader
politics of revolutionary change—than in creating spaces for self-expression and advocating for the rights of a specific group. Perhaps, one hopes, this is a stage in the dialectical movement of historical change.

Apart from *Blessed Body*, in which many of the stories (all written by the contributors) focus on the telling moment or a decisive event, the other anthologies are similar in that they employ the familiar life writing trope of cradle-to-present narrative. In contrast to these anthologies, the single-authored queer memoirs are strikingly dissimilar from each other. Binyavanga Wainaina’s memoir *One Day I Will Write about This Place* (2011) is the most stylistically accomplished—that is to say, it is the most literary. The lines between autobiography and fiction and between prose and poetry are deliberately blurred. At the beginning of the memoir, the young Wainaina describes a scene at home: “Mum issues instructions. Sharp voices explode: clunking and whooshing and foaming like hands shaking up cutlery in the sink. They bubble like water when it is starting to make glass” (14). Wainaina’s memoir unfolds in a chronologically linear fashion as the Kenyan writer, academic, and activist casts a critical eye on the culture and politics of a number of African and Western countries. The uncharacteristic use of the present tense in the memoir creates an ambiguous effect for the reader; a sense of immediacy, sincerity, and authenticity is destabilized by its dissociated tone. Indeed, dissociation is central to the effect of the memoir, where one constantly gets the impression that the writer is merely observing, merely reporting the events that he is experiencing; this dissociation is ameliorated when his sexuality is revealed. Thus, the form of the memoir is, as Adorno claims, a sedimentation of its content.

A stylistic contrast to Wainaina’s memoir is Nkunzi Zandile Nkabinde’s *Black Bull, Ancestors and Me: My Life as a Lesbian Sangoma* (2008), “an auto-ethnographic text that is part cultural analysis, part memoir, part manifesto” (Hoad 2016, 189). Nkabinde’s memoir is formally traditional, with a past-tense narrative and a chronological unfolding of significant events in her life, and it is straightforwardly realistic. However, it is highly transgressive in locating her queerness in traditional African religion, thus subverting the idea of the un-Africanness of queer identity: “My name is Nkunzi. I am a Zulu woman, a lesbian and a sangoma. This is my story” (Nkabinde 2008, 4). Her memoir blurs the line of the well-worn opposition in postcolonial criticism of the traditional and the modern, as it is the traditional that provides the girding of modern explorations of queer identity. Ancestral calls and her experiences as a sangoma (traditional healer) are inter-articulated with gay and lesbian activism and an exploration of South Africa’s history.

A memoir that stylistically lies somewhere between Wainaina’s and Nkabinde’s is Chike Frankie Edozien’s *Lives of Great Men: Living and Loving as an African Gay Man* (2017). Cosmopolitan in its reach, Edozien’s text eschews the narrative strategy of the chronological unfolding of events, the cradle-to-present model of Wainaina’s and Nkabinde’s memoirs. Instead, Edozien’s memoir is composed of a series of
nonchronological autobiographical vignettes from the Nigerian journalist and academic; in each chapter a personal experience is used to explore a variety of issues, either directly related to queer concerns in Africa and the diasporic communities (bisexuality, homophobia, asylum, familial relationships, etc.), or concerned with broader issues in various African countries (AIDS, the rural/urban divide, class inequalities, etc.). “Forgetting Lamido” is typical of the narrative strategies employed throughout the memoir. Here, a present experience (having sex with his first love on a return trip to Nigeria) provides an opening for him to explore significant aspects of his personal biography (middle-class family life, his first sexual experiences, the development of his relationship with Lamido) and also to address the issue of the ontological dominance of bisexuality in Nigeria: “Get married. Have babies. Then continue with secret boyfriends” (2017, 12). Explanations for this phenomenon include a specifically African idea of maturity (that of being married, which is necessary for professional success), internalized homophobia, a traumatic gay relationship, and most importantly, “the criminalization of gays, and the prescribed fourteen-year jail-term for same-sex marriages, approved by lawmakers and the president in 2014 as a populist gambit ahead of an election they ended up losing anyway” (16). Despite their differences in style, these memoirs, like the stories collected in life writing anthologies, and like the short stories and novels, make clear that the personal—as feminists have always argued—is always political.

The contemporary queer turn in African creative writing not only “shatters the epistemic blindness to African marginal sexualities” (Zabus 2013, 26) but also offers testament to the variety and complexity of queer experience in Africa south of the Sahara, where queer subjects live under varying degrees of social, political, and religious constraint. Where previously African queer subjects were the objects of (often pathological) representation, these short-story writers, novelists, and practitioners of life writing assert their humanity, their daily struggles (finding love, managing their relationships with their family and community, etc.), and their constant battle with homophobia. One can also discern, in this queer contemporary turn, a desire to destabilize inherited forms (both Western and African), to cast a queer critical eye on the postcolonial moment, and to foreground sexuality in the constitution of a queer African imaginary.

BIBLIOGRAPHY

The Malian writer Yambo Ouologuem (1940–2017) rose to fame and controversy with his 1968 polemical novel *Le devoir de violence* (*Bound to Violence* [1971]). The novel offended 1960s African cultural nationalist sensibilities with its portrayal of a precolonial Africa mired in violence, slavery, despotic rule, incest, and pedophilia, among other ills. *Le devoir* also offers one of the early stark representations of homosexuality in Francophone African literature. Ouologuem first uses homosexual behavior to cement his negative characterization of the despotic Saif dynasty in the fictional Nakem Empire, in what would be present-day Mali. But in a tentatively less damning treatment of homosexuality, the writer proceeds to detail the love affair between the adopted son of the ruler of the dynasty and a Frenchman while the son is a student in France. The depiction of homosexuality in the novel met with pushback, most notably from the Senegalese writer Cheikh Hamidou Kane (1928–). Kane, whose novel *L’aventure ambiguë* (*Ambiguous Adventure* [1963]) secured his position as a notable of Francophone African literature, called out Ouologuem for “a concept of love which is atrocious; homosexuality which does not exist in our culture” (quoted in *Egejuru 1980*, 118).

Until well into the 1980s, Francophone African literary works have upheld such expressions as Kane’s of the “unafricaness of homosexuality” through total silence on homosexuality or stigmatization of homosexual characters as cultural aliens. From these early negative and at best tentative engagements with homosexuality in Francophone African literature, the representation of homosexuality has evolved, through successive generations of writers, toward steadier, more forceful, and more affirming images of same-sex sexuality (*Vignal 1983; Dunton 1989; Zabus 2013; Diabate 2016*). The 1980s also saw the emergence of a dissenting thread that resisted the stigmatization of homosexuality as a foreign import, mentioned transgender characters, and introduced lesbianism. Nonetheless, the thread deploys same-sex sexuality as a metaphor. In the 1990s and the first two decades of the twenty-first century, gradually more assertive writing about homosexuality and lesbianism has centered same-sex sexuality as a theme and queer characters as protagonists.
Through the 1980s: Negative Portrayals, Western Import

Significant and affirming representations of same-sex sexuality were scarce in Francophone African literature well into the 1980s. A culture of silence about same-sex sexuality pervades early Francophone African literature. The African worlds of early Francophone African literature are unequivocally heteronormative. The trope of homosexuality as colonial depersonalization and cultural alienation in some texts occasionally breaks the normative silence on same-sex sexuality. In these latter texts, all novels, homosexual characters represent a placeholder for cultural national anxieties about postcolonial African identities, the perceived corruption of Africans by Western values, and neocolonial subjugation. Ouologuem's *Le devoir de violence* remains the most famous text of this era to have broken the silence on same-sex sexuality. Still, as Chris Dunton (1989) has noted, Ouologuem’s treatment of homosexuality is ambiguous. On the one hand, homosexuality in the novel furthers the negative characterization of the despotic Saïf dynasty, while the homosexual love affair between Raymond Kassoumi, the adopted son of Saif, and a Frenchman relates to the cultural alienation of Raymond. On the other hand, Ouologuem’s description of the homosexual relationship is “thoughtful” and emphasizes “tenderness,” “sensuousness,” and “regard for the other” (Dunton 1989, 436).

In his nuanced engagement with homosexuality, Ouologuem stands out from his literary peers of the 1960s through the 1980s who stigmatized homosexuality unequivocally. The Senegalese novelist Aminata Sow Fall in *Le revenant* (1976; The revenant) and the Congolese writer and scholar V. Y. Mudimbe in *Le bel immonde* (1976; *Before the Birth of the Moon* [1989]), although they devote very minimal space to same-sex sexuality, are also of note for not stigmatizing same-sex sexuality as an imported European perversion. Fall references a transgender and homosexual character. In addition, her use of the local Senegalese term for both transgender and homosexual individuals, *goorjigeen* gives indigenous Senegalese anchors to homosexuality and transgender individuals. In a narrative move that anticipates the lesbian separatism in the first novel of the Cameroonian writer Calixthe Beyala (1987), Mudimbe uses a lesbian relationship as a metaphor for the emancipation of Congolese women from patriarchy.

In a number of 1970s and 1980s novels, the first encounter of the African protagonist with the notion of homosexuality takes place when the protagonist travels to Europe as a student. This discovery furthers the cultural estrangement of the protagonist from Europe. The Guinean writers Camara Laye in *Dramouss* (1966; *A Dream of Africa* [1968]) and Sàïdou Bokoum in *Chaîne* (1974; Chain), the Malian writer Abdoul Doukouré in *Le déboussolé* (1978; The disoriented), and the Cameroonian writer Bernard Nanga in *La trahison de Marianne* (1984; Marianne’s treachery) use the trope of homosexuality to frame the experiences of African students in Europe as journeys into the heart of savage perversion and immorality. In a reversal of the trope of Africa as the heart of darkness,
homosexuality in Europe signifies the “otherness” of Europe. The protagonists in this group of novels are repulsed by homosexuality, except for the protagonist of Chaîne. Bokoum has his protagonist succumb to homosexuality, a symbol of his descent into European perversion and his degradation by Europe.

**LE DEVOIR DE VIOLENCE (1968; YAMBO OUOLOGUEM)**

The Malian author Yambo Ouologuem’s novel Le devoir de violence (1968; Bound to Violence [1971]) covers several centuries of Malian empires, including the Bambara and Toucouleur Empires, between 1202 and 1947, culminating in the fictitious nation-state of Nakem just prior to its independence. The novel charts the oppression of white (in particular, French) colonialism, as well as conflict among Africans, and is steeped in violence and eroticism. The novel won immediate acclaim, garnering the French Prix Renaudot for Ouologuem, the first African writer to be so honored. Although the book’s reputation suffered under accusations that the author plagiarized passages from other works, it is noted for its uncommonly sympathetic representation of homosexuality from this period in African literature.

Any discussion must acknowledge the generally transgressive impulse of the novel, which is set in the fictitious, feudal empire of Nakem that is strangled by rigid social hierarchies. European colonizers entering this field behave no better or worse than the indigenous elite. Because the novel narrates precolonial and colonial life with vying indigenous and French assertions of power, sex is deeply intertwined with power and class politics. The novel’s scenes of rape, bestiality, orgies, and pederasty, along with detailed descriptions of female circumcision, characterize the wantonness of the indigenous feudal lords and the French colonial elite. In France a similar sexual
exorbitance characterizes the ennui of young Frenchmen and the alienation of Africans adrift in the colonial metropolis. Set against these excessive exploits are two sensuous and companionate romances between two couples who seek to overcome their isolation and social constraints.

The novel offers two axes of same-sex desire. The first involves power-inflected acts between older men and young boys; these characterize political degeneracy and sexual exploitation. The second axis unfolds as a relationship between Raymond-Spartacus Kassoumi and the Frenchman Lambert. Born to slave parents, Kassoumi earns a scholarship to study in France. There, he meets Lambert, scion of an affluent family, with whom he has an affair that is interrupted when the latter’s mother demands his heterosexual marriage. Shocked and devastated, Kassoumi turns to marry a woman.

Although the novel subordinates its homosexual affair to other themes, the encounter constitutes a contained micronarrative that acquires amplified meaning because of the emphasis on companionate love in a novel in which sex and sexual desire are so thoroughly interwoven with power and financial incentive. Ouologuem uses Kassoumi not only to explore homosexual love and its social expression but also to solicit a recognition of homosexual love as the same as any other expression of desire. Kassoumi sees the encounter with Lambert initially as a racialized, financial exchange in which he succumbs to the “white man” and later as an expression of African alienation. Ultimately, he recognizes it as a relationship in its own merit outside the representational schemes of a racial or colonial allegory. The vital transformation in Kassoumi’s view of the affair, from his initial apprehension to his sense of profound loss at its end, consecrates Ouologuem’s representation of homosexual love and sets it apart from, say, Wole Soyinka’s *The Interpreters* (1965), in which Africans principally have negative reactions to the homosexual figure.

The reciprocal but censored relationship between Kassoumi and Lambert echoes the mutually reciprocal but illicit love between the former’s slave parents whose euphoric exchanges are reformatted by the formal process of marriage that reasserts social norms: his mother must undergo prenuptial genital infibulation (a type of female genital mutilation) to regain her virginity for the feudal lord’s rights of the first night, and his father must execute a mock punishment for her “infidelity.” Comparably, Lambert’s mother’s insistence on his marriage imposes social restrictions on his relationship to Kassoumi. The parallels between the companionate pairs place homosexual love on par with heterosexual romances; the comparable connections to race and class in the pair also suggest that Ouologuem permits an affirmative reading of homosexuality because the novel reveals how social restrictions and negative representations affect all perceptions of sexuality schemes.

**BIBLIOGRAPHY**
Dissenting Texts, More Transgender and Lesbian Characters

While Kane rejects homosexuality as a Western import, the early evocations of homosexuality that anchor it in an indigenous African sociocultural context have been by Kane’s fellow Senegalese writers. In addition to Fall in Le revenant, Mariama Bâ in Un chant écarlate (1981; Scarlet Song [1986]) and Ken Bugul in Le baobab fou (1982; The Abandoned Baobab [1991]) casually mention homosexuality and reference goorjigeen (transgender men) in their novels. The casual approach of the three women writers normalizes homosexuality and transgender men in the Senegalese context. The novels of Bâ and Bugul, like those of Fall and Mudimbe before them, are precursors to a group of Francophone African texts of the late 1980s that do not necessarily destigmatize same-sex sexuality or devote significant narrative space to the question. The importance of these latter texts lies in their dissent from the Francophone African literary tradition of troping foreignness and cultural contamination via same-sex sexuality.

Among these dissenting texts are Calixthe Beyala’s C’est le soleil qui m’a brûlée (1987; The Sun Hath Looked upon Me [1996]), the Gabonese writer Angèle Rawiri’s Fureurs et cris de femmes (1989; The Fury and Cries of Women [2014]), and the Malian writer Doumbi-
Fakoly’s *La révolte des Galsénésiennes* (1994; The revolt of the Galsénésiennes). In Doumbi-Fakoly’s novel set in Senegal, a group of LGBTQ citizens join a coalition of women’s groups, but this inclusion has no bearing on the narrative of the novel. Beyala’s *C’est le soleil qui m’a brûlée* and Rawiri’s *Fureurs et cris de femmes* stand out for devoting significant narrative space to same-sex sexuality.

Beyala’s novel, her first, uses lesbian desire to articulate a feminist critique of the postcolonial African nation, as reflected in her native Cameroon. Ateba, her main protagonist, has lesbian yearnings that culminate in her rejection of heterosexuality and her cataclysmic murder of her male lover at the end of the novel. Female same-sex sexuality in Beyala’s novel articulates a political dissent with the heteropatriarchal structure of the postcolonial African nation. The lesbian awakening of Ateba shadows her development of a feminist political consciousness. Throughout the novel, Beyala consistently pinpoints the subordination of women to male sexual pleasure and correlates the heteropatriarchal structure of sex to the subaltern condition of women in the nation. Scenes of heterosex in the novel always reflect the subaltern positioning of women, and Ateba is repeatedly forced down on her knees by her male sexual partners.

Henceforth, Ateba nurtures a political project that reimagines the postcolonial African nation as a lesbian continuum. The new imaginary of Ateba culminates in her act of revolutionary violence against her male lover at the end of the novel. But the narrative indecision of the novel revokes Beyala’s bold representation. The author backpedals on her affirming depiction of same-sex sexuality through various forms of narrative ambiguity. The suggested potential insanity of Ateba, further reinforced by the hallucinatory ending of the novel, and her equally suggested “un-African” ways throughout the novel work to safely contain the lesbian yearnings of Ateba. The suggested cultural and mental alienation of Ateba is a narrative gesture that resignifies Ateba as a social outcast and tentatively stigmatizes her same-sex desire. Beyala returns to the theme of lesbian desire in her second novel, *Tu t’appelleras Tanga* (1988; *Your Name Shall Be Tanga* [1996]), where the homoerotic relationship between the young female protagonist and an older Frenchwoman is also shrouded by narrative ambiguity. In addition, the interracial relationship plays into the narrative of same-sex sexuality as an imported perversion.

Whereas Beyala portrays lesbian yearnings, Rawiri in *Fureurs et cris de femmes*, set in Gabon, explicitly represents a lesbian sexual relationship. Jilted housewife Émilienne has a lesbian relationship with Dominique. Unbeknownst to Émilienne, Dominique is the mistress of her husband, and Dominique initiated the relationship with Émilienne to precipitate the divorce of the couple. But the function of the lesbian sexual relationship as revenge sex limits the discursive reach of lesbian sex. Rawiri’s portrayal of the lesbian relationship as a method to regain firm ground within the heteropatriarchal economy constitutes a major limitation of her otherwise bold novel.
Born in 1961 in Douala, Cameroon, Calixthe Beyala published her first book, *C'est le soleil qui m'a brûlée* (*1987; The Sun Hath Looked upon Me* [1996]) at age twenty-three. Her novels have a strong feminist viewpoint, reflecting the powerful maternal influences she experienced during her formative years. Critical reception of Beyala’s work has been mixed. The themes that Beyala addresses in her work have made her a controversial figure both in Cameroon and in Africa. Some critics regard Beyala as the most provocative writer of her generation and applaud her originality, both thematic and stylistic. Some critics are uncomfortable with what her subject matter says of Africa, others have described her work as pornographic, and still others have criticized her for plagiarism.

Beyala’s novels offer a persistent indictment of human depravity in African urban slums, of patriarchal appropriation and misuse of power, and of societies that are not only oppressive to women but encourage women to act as oppressive agents toward other women, especially their girlchildren (Nfah-Abbenyi 1998). Beyala’s twelfth novel, *Femme nue, femme noire* (Nude woman, black woman), reprises the theme of social degradation and patriarchal injustices that inhabit the worlds she creates. One such patriarchal injustice is the idealized portrait of the African woman in Léopold Sédar Senghor’s poem “Femme noire” (*1945*), which Beyala wrests from the poet and deconstructs throughout the novel. She asserted in an interview, “When I restate [Senghor’s] verses, it is to empty them of their patriarchal burden…. I make them coexist with words … that express all the rebellion of the black woman and her ability to be what I call ‘women stars’” (Chanda 2003, 42; translation by Juliana Makuchi Nfah-Abbenyi).

Irène Fofo, the protagonist-narrator, states that she is only interested in two things—stealing and making love—adding, “I am something new. Something depraved, something dissolute, without scruples, devouring life from wherever it comes!” (Beyala 2003, 63; translation by Juliana Makuchi Nfah-Abbenyi). Irène is the familiar street kid of Beyala’s novels but she is also without a doubt something new, something different. This self-professed kleptomaniac steals a bag containing the corpse of a dead child, runs, and is pursued by the police. She ends up in a neighborhood where no one knows her and spends three months with Ousmane, his wife Fatou, and scores of men engaging in sexual orgies. It is noteworthy that Irène, who has been sexually active since the age of fifteen, now chooses with these encounters to pursue sexual pleasure for its own sake. She is the woman in control, imposing her will and desires on her sexual partners. Irène’s unapologetic pursuit of sexual satisfaction with men and women is transgressive and captures her rejection of the mother who taught her that her behavior would lead her straight to hell, as well as her rebellion against women...
degraded by centuries-old gender expectations who suffer from collective hysteria as a result. After three months of living outside those socially constructed lines that women have been taught to internalize, Irène, who is after all an adolescent, a child who still yearns for her mother’s love and care, chooses to return home to the mother she hopes will save her from a chaotic world. This, however, is not the triumphant return of Beyala’s “women stars,” but that of a girl-child who is savagely beaten and raped on her way home by a group of men. In the end, we are left with a dejected mother, holding her daughter’s head in her lap, a sign of her resignation to what she deems is a woman’s lot in a violent male-dominated world.

Some critics describe *Femme nue, femme noire* as an uncompromisingly bleak portrait that reinforces the image of African women as sacrificial lambs to patriarchal authority. Others maintain that Beyala is an iconoclast whose novel breaks new ground by rethinking the heterosexual Freudian family structure, and by tackling head-on the taboo of speaking openly about sex, especially about African women’s pleasure, a subject that has long been the preserve of male African writers but not female African writers. Some critics praise Beyala’s artistic use of the French language to define African eroticism, while others have condemned the novel as a work of pornography penned solely for publicity and financial gain.

*North Carolina State University, Raleigh*

Despite their tentativeness, the novels of Beyala and Rawiri represent landmarks in the writing of same-sex sexuality in Francophone African literature. As the first novels to devote significant narrative space to nonnormative sexualities, the two texts lent an unprecedented visibility and a voice to same-sex sexuality. In putting the theme to new uses, especially in the feminist novel of Beyala, the two novels also presented readers and students of Francophone African literature with innovative frameworks for thinking about
sexuality. Perhaps the more immediate contribution of *C'est le soleil qui m'a brûlée* and *Fureurs et cris de femmes* lies in jumpstarting more straightforward and affirming narratives of same-sex sexuality in Francophone African literature. In the first two decades of the twenty-first century, Beyala’s *Femme nue, femme noire* (2003; Nude woman, black woman), the Congolese writer Bertrand Nguyen Matoko’s *Le flamant noir* (2004; The black flamingo), the Cameroonian writer Frieda Ekotto’s *Chuchote pas trop* (2005; Don't whisper too much) and *Portrait d'une jeune artiste de Bona Mbella* (2010; Portrait of a young artist from Bona Mbella), the Cameroonian writer Max Lobe’s *39, rue de Berne* (2013; 39 Berne Street), and the Senegalese writer Karim Deya's *J'attends mon mari* (2014; Waiting for my husband) have extended the bold thread started by Beyala and Rawiri and center same-sex sexuality as a theme in its own right.

With *Femme nue, femme noire*, set in Cameroon, Beyala operates a queer subversion of the Négritude poet Léopold Sédar Senghor's (1906–2001) classic poem “Femme nue, femme noire” (1945). Senghor’s poem feminizes and sexualizes the continent, figured alternatively as a mother and a lover. The passive and desubjectified woman in the poem exists through and submits to male desire. The poet derives sexual gratification from the female body but never returns the favor because the heteropatriarchal optic of the nationalist poem does not accommodate female desire and sexual pleasure. In rewriting Senghor’s poem, Beyala continues her literary project, started in her first novel, of sapping the heteropatriarchal foundations of the postcolonial African nation. Irène, the female protagonist of the novel, is a gender-nonconforming young woman who revels in wandering without a destination and engaging in sexual promiscuity with both men and women.

In an unprecedented move in Francophone African literature, the novel includes very graphic, almost pornographic sexual scenes. Sexual orgies and nonnormative sex abound in the novel. The sexual promiscuity of Irène is subversive. Irène deploys sex to queer heteropatriarchal frameworks, make room for female sexual agency, and redistribute sexual subject positions. The sexual orgies she provokes constitute assemblages of desires where sex is then bound to happen in a variety of configurations and women can claim sexual agency for themselves. Irène uses nonnormative sex to poke holes in the dominant heteropatriarchal structure, including the wider political and economic scene exacerbated by neoliberal reforms. She exposes the performative construction of gender, which then sets the stage for a reinterpretation of normative identities. Yet *Femme nue, femme noire* concludes with the death of Irène at the hands of a mob that accuses her of human organ trafficking.

Irène is literally bludgeoned to death. In upholding a type of murder that is meant to obliterate any trace of Irène, Beyala’s narrative revokes the queer sexual female body that it has just enunciated. The narrative acquiesces to the brutal demise of Irène and the community’s negative construction of the queer female body. Likewise, the narrative decision to have an agonized Irène repent and promise that she will abide by the norms of
society further muddles the gender and sexual politics of the novel. Despite her head-on graphic engagement with gendernonconforming sexualities, Beyala ultimately fails to carry through with the bold politics of her novel.

The same tentative politics mar Ekotto's *Chuchote pas trop*. The novel is set in Cameroon and follows the journey of the young female protagonist, Ada, to save Affi, the daughter of her deceased mentor, from sequestration in a forced marriage. The relationship between Ada and her mentor is ambiguous and often borders on homo-erotic intimacy. The only explicit same-sex relationship in the novel occurs between a female European missionary and one of the wives of the local community leader. This use of a foreign woman to introduce same-sex intimacy displaces same-sex sexuality from African societies and constitutes a step back to the representation in early Francophone African texts of same-sex sexuality as a foreign import. As in Beyala’s *Tu t’appelleras Tanga*, the figure of the foreign woman may write off nonnormative sexualities as a foreign and un-African perversion.

In the wake of these dissenting treatments of same-sex sexuality in Francophone African literature came the first openly autobiographical text by a Francophone African author. In *Le flamant noir* (2004), Nguyen Matoko opens up about his homosexuality and details his many sexual adventures as he relocates from the Republic of the Congo to Europe and the United States. The text almost functions like a sociological account that lifts the veil on same-sex sexuality and breaks down for the reader the codes and social realities of these communities.

**Increasingly Straightforward and Militant Treatments of Same-Sex Sexuality**

It was Ekotto's second novel, *Portrait d'une jeune artiste de Bona Mbella* (2010), that finally delivered the first forceful and uninhibited narrative of same-sex sexuality in Francophone African literature. The novel is set in Cameroon and rehearses the same critique of hetero-patriarchy that ferments the queer praxis of Beyala’s Irène. Lesbian lovers Pane and Chantou come together after the former murders the men in her adopted family for turning her into their family sex slave. Images of sexual violation and statements of sexual deprivation in the novel provide the clear impression that heteropatriarchy precludes female sexual pleasure. Ekotto's women exercise subjectivity and agency by refusing to participate in this sexual structure. Lesbianism as framed by Ekotto is a subjectifying act of resistance and reclamation of female sexual pleasure.

Whereas Beyala’s Irène is queer, Ekotto opts to set her characters on a trajectory of lesbian separatism. The separatism in her novels has strong resonances with the separatist feminism and lesbianism of Beyala’s *C’est le soleil qui m’a brûlée*, in which Ateba, the female protagonist of the novel, murders her male lover and symbolically unites with her
girlfriend. That scene resonates to a point with the one in Portrait d’une jeune artiste de Bona Mbella in which Pane brutally murders her sexual violators. Ekotto never shies away from explicit sex scenes. Most importantly, and going beyond Beyala, Ekotto makes a significant narrative decision when she does not conclude her novel with the demise of her lesbian protagonist. Instead, the novel ends with a scene of sexual intimacy that beautifully affirms same-sex love. This positive conclusion is a sharp departure from the brutal demise of Irène in Beyala’s novel. With Portrait d’une jeune artiste de Bona Mbella, Ekotto thus contributed the first affirming representation of same-sex sexuality to Francophone African literature.

Like Ekotto, Lobe has an upfront and destigmatizing treatment of same-sex sexuality. Dipita, the homosexual narrator of Lobe’s 39, rue de Berne (2013) tells his story from a Swiss prison cell, where he is serving a long sentence for a crime of passion against his boyfriend. As in Ekotto’s Portrait d’une jeune artiste de Bona Mbella, the love story at the center of Lobe’s novel works to ground and positively affirm the theme of same-sex sexuality. But unlike Ekotto, Lobe portrays an interracial couple. Arguably, the trope of the interracial couple, which Lobe uses again in La trinité bantu (2014; The Bantu trinity), also set in Switzerland, may not be an effective anchor for the theme of same-sex sexuality in a Francophone African text. The trope has been used by Francophone African writers to prop up the notion that homosexuality is un-African.

Karim Deya contributes the most openly militant novel to this new body of Francophone African literature with J’attends mon mari (2014), a novel that unequivocally champions LGBTQ rights on the continent. Thiossane and Moctar, a persecuted Senegalese gay couple, flee their Senegalese homeland and seek refuge in Europe. Deya sets his novel against the background of the 2008 rise of antigay vigilantism in Senegal. The novel interrogates the new construction in Senegalese society of same-sex sexuality as an import. Deya proceeds to expose the function of homophobia as a political resource for African leaders. The latter use the figure of the homosexual as a scapegoat and opportune diversion from the burning issues of high unemployment, bad governance, and rampant poverty.

The theme of same-sex sexuality has yet to gain a firm foothold in Francophone African literature, and writers rarely feature openly transgender characters in their texts. However, a few works published in the twenty-first century, especially the novels of Ekotto and Deya, as well as the autobiographical text of Nguyen Matoko, are certainly building a foundation for a more prolific and uninhibited treatment of same-sex sexuality in Francophone African literature, including significant inclusion of openly transgender characters.

The late twentieth and early twenty-first centuries have been marked by important shifts in the field of Caribbean literature. One of these has been the “articulation and inscription of diverse sexual identities” (Donnell 2006, 181). In her 2006 survey Twentieth-Century Caribbean Literature, Alison Donnell locates “the period from the 1990s to the present day as a new critical moment” in which writers have effectively challenged “a significant absence within models of identification ... by writing sexual identities onto the Caribbean matrix” (181–182). Donnell further notes the implications of this, arguing that “writing on this subject can be seen to have called into question the dominant matrix of race, ethnicity, gender, class, and nation through which Caribbean literary forms and cultural identities have been discussed” (181). Other discussions of sexuality and Caribbean writing have similarly located the end of the twentieth century as a particular site of attention. These discussions are not without some differences and contestations. Rosamond King, for example, in her 2002 critical essay “Sex and Sexuality in English Caribbean Novels—A Survey from 1950,” locates a discursive shift in relation to the 1980s, one decade earlier. She argues that texts “published since 1980 spoke into the relative silence around Caribbean homosexuality” (33). According to King, in this most recent period, “Caribbean authors have broadened and enriched our understanding of the region by ‘sexing’ Caribbean literature” (36).

Critical, Historical, and Social Contexts

In highlighting the final decades of the twentieth century as a period of change, Caribbean literary scholars have variously noted a number of important critical, social, and political factors that have shaped the terms of representation of sex and sexuality in recent writing. This period coincided with the emergence and consolidation of queer theory in the academy that served to revise stable and hegemonic categories and notions of gender and sexuality, foregrounding instead a continuum of sexual behaviors and subjectivities and challenging the cultural construction of heterosexuality “as simply there, invisible, beyond question, not requiring explanation” (Smith 1999, 5). The development of queer postcolonial studies and black queer studies also provide important context for
understanding and locating the terms, preoccupations, and concerns of queer Caribbean critical discourses and their particular challenges to white- and Euro-American–centered articulations of queerness. In their introduction to *Black Queer Studies*, the editors comment on a decade of queer studies anthologies produced during the 1990s, noting that “while all of these volumes contain sections on ‘identity’ or present a few token essays by and/or about queers of color, none includes race as an integral component of its analysis” (Johnson and Henderson 2005, 16). Against the background of this particular critical absence, they situate black queer studies as concerned with “provid[ing] insight into the category of ‘queer’ in raced communities” (2).

However, while *Black Queer Studies* as a text primarily focused on African American voices and criticism, the necessary critique offered by Rinaldo Walcott in his contribution to that volume highlights some of the critical stakes for the wider black diaspora and for queer Caribbean writing. In his essay “Outside in Black Studies: Reading from a Queer Place in the Diaspora” (2005), Walcott calls into question the ways that focusing on black queerness primarily in the US context and privileging a particular kind of visibility as a mode of legibility risks foregrounding an understanding that “the possibility for queer life in the Great Free North is so much better than it is in the so-called Third World” (95). For Walcott, this perspective further constitutes an “imperialist stance … of the kind that does not adequately … account for the disjunctures of desires, political utterances and disappointment in various places and spaces” (96). What is potentially left unaccounted for, Walcott suggests, are the multiple and complex ways in which those “in the Third World might sign themselves queer in ways that might not constitute an intelligible speech act” in the context of global(ized) constructions and understandings of queerness emerging from and dominated by contexts and discourses of the Global North (96).

In the Anglophone Caribbean, debates during the early 1990s about heterosexism and homophobia in Jamaican dancehall music and in Caribbean popular cultural production were a key site for discussions of the sexual politics of Caribbean cultural life and creative production. Yet, while these debates were transnational in their scope (occasioned by the consumption of particular dancehall songs in the international cultural marketplace), as Timothy Chin has shown in his analysis of a series of public discussions, newspaper and magazine articles, and scholarly essays, the very terms that defined these discussions demarcated “certain fixed oppositions between native and foreign, indigenous and metropolitan, us and them and so on” (1997, 79). In this relational schema, homophobia (constructed and understood as inherently constitutive of Jamaican and wider Caribbean culture) and homosexuality (essentially linked with foreignness) became distinct representational and conceptual coordinates. The terms of this binary belied the complex lived social and historical presence, reality, and experience of Caribbean queer lives and served to ideologically render Caribbean queerness itself as an unarticulated presence. In other words, the binary terms of this debate rendered queer Caribbean lives and concerns invisible despite the presence and contributions of a number of gay rights groups and
organizations such as the Jamaica Forum for Lesbians, All-Sexuals and Gays (J-FLAG, formed in 1998), the Society against Sexual Orientation Discrimination (SASOD, formed in 2003 in Guyana), and the Coalition Advocating for Inclusion of Sexual Orientation (CAISO, formed in 2009 in Trinidad), which have provided keen advocacy regarding Caribbean LGBTQ human rights and freedoms. Within this binary representational schema that Chin outlines, Caribbean literary narratives can be seen as one alternative archive through which the work of imagining the “indigenous gay/lesbian subject” might be accomplished (88). As Chin has argued, it has served as a cultural space that enables “non-binary modes of thinking that resist ... totalizing impulses” (94).

Similarly, in the mapping of the cross-cultural debates about Caribbean sexual citizenship in the Dutch Antilles, Omise' eke Natasha Tinsley (2010) has pointed to key ways in which binary discourses have served to construct the Caribbean, as evidenced by its cultural production and legal realities. Tinsley uses the 2004 Oduber-Lamers legal case in Aruba, which centered on the right of two women married in the Netherlands to have their marriage recognized in Aruba, as a case study to interrogate representations of Caribbean culture vis-à-vis Europe and the Global North. Tinsley highlights how much of this discussion focused on laws and how postcolonial sovereignty (in terms of laws) continues to coalesce around questions of sexual difference. Her observations, in this regard, echo and extend earlier work by M. Jacqui Alexander in “Not Just (Any) Body Can Be a Citizen: The Politics of Law, Sexuality, and Postcoloniality in Trinidad and Tobago and the Bahamas,” in which Alexander examines and critiques the “racialized legislative gestures that have naturalized heterosexuality by criminalizing lesbian and other forms of non-procreative sex” (1994, 5). But Tinsley's work also complicates the terms of the discussion by moving beyond the legal context. Instead, she focuses attention on what she terms Afro-Caribbean tradition as a cultural space that demonstrates “a rich history of sexuality—and particularly female same-sex sexuality—that marks (former) Dutch colonies” (Tinsley 2010, 31). In her examination of mati, a term that she argues must be understood as “verbalizing sexuality, not as identity but as praxis, something constantly constructed and reconstructed through daily actions” (7), Tinsley discusses a long history and praxis of same-sex intimacy traced back to Middle Passage crossings. She notes that mati might be understood as derived from “mate,” as in “shipmate”: “she who survived the Middle Passage with me” (7). Drawing on this history, Tinsley argues that “far from standing outside a ‘real Aruban’ lifestyle, these same-sex relationships could also be called on as historically specific Creole formations exemplifying the cultural complexity and transculturating inventiveness of Caribbeanness” (32). Here, Tinsley methodologically returns to the question of the need to examine Creolized forms of relational intimacies and their histories and epistemologies, and she foregrounds how these intimacies are culturally negotiated and signified. She also demonstrates how Caribbean narratives (including literature, ethnography, and history) offer spaces that usefully detail past and continued presences of vernacular sexualities and practices, or what Chin (1997) has called
“indigenous” modes of gender and sexuality, and attends to the ways in which queer Caribbean subjects might “sign themselves” (to use Walcott’s phrase) in particularly distinct cultural terms.

**Poetry and Poetics**

One rich site to which Tinsley turns, for its articulation of other ways of naming Caribbean desire and sexuality and for its signification of a long history of queer Caribbean presence, is the region’s oral poetry. In *Thieving Sugar: Eroticism between Caribbean Women* (2010)—a book that takes its title from the work of the Caribbean poet Dionne Brand—Tinsley’s first chapter focuses on Surinamese Creole poetics, or what she calls mati oral poetry, and examines the tradition of *kot'singi*, translated by the Dutch musicologist A. C. Comvalius as “a crossover genre of the Negro song which in form lies between African and European songs” (quoted in *Tinsley 2010*, 59). Her focus on oral poetry as a space of articulation (as opposed to a singular focus on scribal poetic practice) highlights the fact that struggles around sexuality cannot be seen as separate from other decolonial struggles, including those regarding language and literary form. In the Caribbean, the politics of sexuality, like that of language, has included the demarcation of forms deemed proper and improper. These notions of propriety, cultivated through colonial histories, have rendered both language and sexuality as intense sites of cultural policing. In linking these decolonial struggles, Tinsley suggests that the cultural acknowledgment of sexual difference in Creole terms might contribute to the decolonization of both the politics of language and the politics of sexuality.

Tinsley’s work, like that of critic Ian Smith, calls attention to the need to Creolize sexuality discourse as one way of reflecting and representing the multiplicity of Caribbean genders and sexualities. As Smith argues in his outlining of the Caribbean Creole continuum as a useful trope for discussing Caribbean queerness: “The Creole continuum recognizing the plurality and availability of ‘lects’ ... offers a model consonant with a contemporary sexual continuum that dislodges the ‘homo-hetero’ binary to admit what one might call a plurality of sexiolects, a plurality of desires that combine and recombine according to individual sexual formation” (1999, 8). While Tinsley’s linking of the politics of language and of sexuality foregrounds the importance of terminology, Smith’s work here engages the question of multiplicity and underlines the importance and utility of engaging culturally relevant tropes and metaphors for exploring Caribbean sexualities.

In her reading of mati oral poetry, Tinsley perhaps most directly examines questions of form and metrics and the beautiful use of metaphoric language (such as the use of flower imagery as a way of queering and Creolizing naturalized inscriptions of sexuality and desire). However, she also pays attention to performance, including the use of call-and-response and the significance of ritual performance in the context of communal gatherings such as what is called “the birthday party in the mati tradition—a gathering where women
mark the passage of another year and celebrate their love for each other through ‘dancing, singing, gift-giving, drinking’” (Tinsley 2010, 48). In her examination of these performance elements, Tinsley situates the poetry she examines within a folk tradition. The marking of this relation arguably represents another intersection that might usefully frame broader considerations of queer Caribbean poetry. Representations of the oral and folk traditions have served as means through which poets have marked historical queer presences.

Faizal Deen’s poem “Young Faggot,” for instance, locates its unnamed persona in a calypso, or rather in a bacchanal line. The poem connects present and past, situating its subject as a crossroads figure at the intersections of histories and futures but also between Caribbean worldings and traditions and the “discos of riotous night” (Deen 2008, 153) in the metropole for which he seems destined. Yet, while the poem is keen to inscribe this future destiny, the poetic persona is also narrated as taking with him an embodied legacy:

Your last memory of Trinidad. This steel pan
Jump up 1976. Sounded out from memory.
You will grow bacchic. With this crop-over,
You will learn that joy is something
Earned

(DEEN 2008, 153)

The references to “steel pan” (a musical instrument played as part of Trinidad carnival and a symbol of working-class cultural innovation) and “crop-over” (a popular Barbadian carnival celebration) locate the poetic persona among, and as part of, the mass of Caribbean folk that populate the region’s festivities, as much as the later references to “the hustle. Concrete. The lure / Of the big lights” situate him in the milieu of the nighttime pleasures of the gay northern metropole. In situating these folk and popular spaces alongside and as part of queer histories and memories, the poem marks queer bodies as part of the histories of Caribbean folk and performance traditions but also significantly marks those traditions and spaces as queer, not least of all through its acknowledgment of their challenges to, and departures from, (colonial) norms of respectability.

Life Writing

Life writing as a narrative genre has also played a key role in unsilencing histories of queerness and in calling attention to the diverse and complex ways in which Caribbean sexualities are socially and culturally articulated. Life writing, as used here, refers to an expansive body of texts—including essays, essay collections, autobiographies, journals,
diaries, community histories, biographies, memoirs, and performance texts—through which writers “have made self-representation” (Brown 2011, 276). This idea of self-representation (or self-identification) proves significant in reflecting on the uses of this genre. In much the same way that Helen Tiffin has argued that we might read Caribbean biography as “sites for a semiotics of resistance to English textuality” (1989, 30), queer Caribbean life writing has likewise engaged a practice of semiotic resistance, both to globalizing discourses of sexuality and to Caribbean heterocentrism.

The consideration of Audre Lorde’s Zami: A New Spelling of My Name (1982), provides one useful example. Lorde specifically draws on an Afro-Caribbean term for naming relations between women. She defines Zami as a “Carriacou name for women who work together as friends and lovers” (255). Her definition locates the term specifically within histories of Carriacou gender and sexual relations, yet at the same time Lorde also uses this cultural history as narrative framework for telling her own experience of black queer diasporic life in New York. We might also read Lorde’s text, and the wider body of queer Caribbean life writing, for its experimentation with form and the creative combining of individual and collective narrative and memory. As Lisa Brown notes, Caribbean life writing has been marked by a “relational model of autobiography which subordinates the ‘I’” (2011, 277). Personal histories are documented alongside the inscription of genealogies of queerness, and this provides one narrative site that resists, or writes against, the erasure of queer histories.

Lorde calls attention to this dynamic between individual and collective memory in the very naming of her text as *biomythography*, a term that refuses the singularity of *autobiography*. For Lorde, then, “the individual becomes the collective, as she recognizes the women who helped give her life substance” (Crichlow 2008, 103). In her innovation of this term and her explorations of its possibilities for narrating self and community, Lorde’s work provides a model that has been variously revisited by a number of other Caribbean writers with different elements emphasized and/or creatively reshaped. The use of the concept of the biomythography can be seen, for instance, in Wesley Crichlow’s “History, (Re)Memory, Testimony and Biomythography: Charting a Buller Man’s Trinidadian Past” (2008), which combines academic and narrative prose, and where he extends the framework of the biomythography by using it to narrate men’s lives. Like Lorde’s recuperation of Zami as a way of naming women's intimacies, Crichlow uses the concept of “bullers” to explore histories and communities of men-loving men. Additionally, the influence of Lorde’s work can also be seen in the theater practice of Jamaican Canadian playwright and poet D’bi Young Anitafrika, who uses the concept of “biomyth monodramas” to name her own one-woman performances based on her life narrative.

**Narrative Fiction**

Narratives of queerness in relation to the broader context of histories of the subaltern are
also evident in queer Caribbean prose fiction. While Lorde and Tinsley focus on Afro-Caribbean tradition, the work of writers such as Shani Mootoo and Patricia Powell have served to foreground the narratives of Indo-Caribbean and Chinese Caribbean queer subjects. In this regard, these literary narratives are in dialogue with queer diasporic representations, explored in the work of filmmakers such as Richard Fung (Dal Puri Diaspora [2012]; Re:Orientations [2016]), which have also shown how the racialized context of the Caribbean, with its long histories and processes of creolization, linked to the cultural and labor regimes of the plantation, slavery, and indentureship, must necessarily be accounted for in narrating Caribbean queerness. These texts represent queer gendered and sexual subjects but also inscribe the Caribbean itself as a site of queer intimacies and as a queer space shaped through histories of crossings which “transform racialized, gendered, classed, and sexualized selves [through] ... brutality and desire, genocide and resistance” (Tinsley 2008, 192).

In Powell’s 1998 novel The Pagoda, the protagonist, Lowe, is represented in relation to a number of crossings that mark the negotiation of the transnational capitalist context of the late nineteenth century. These include the economic and social context of indentureship but also Lowe's experience as a shopkeeper in Caribbean plantation society. The novel is set in the 1890s and opens with Lowe writing a letter to an estranged daughter, Elizabeth. This framework of the letter, which structures the beginning and end of the text, not only symbolizes the fact of their estrangement, which is central to the novel, but also signifies Lowe's position as a diasporic subject. Lowe arrives in the Caribbean after taking a ship to escape forced marriage to an old man in China. Although the tale of this journey is set against the backdrop of China’s prohibition on women’s immigration during this time, what Powell offers is not just a tale of cross-dressing. Rather, as Tzarina Prater argues, “Lowe does not cross neatly from one position to another, one nation to another, one sex to another, or from one articulation of sexuality to another. Lowe is not a transsexual figure, nor is he solely a ‘cross dresser,’ lesbian, heterosexual, or homosexual” (2012, 22). As the writing of Lowe’s letter unfolds, we observe Powell’s deliberate and careful plotting of a tale that engages with the complex currents of transnational, class, and gendered identity and marks these as important to an understanding of Lowe as queer diasporic subject and to an understanding of historical queer Caribbean trans/formations.

Yet, while contemporary Caribbean fictions have shown this recurring concern with histories, they also intervene in current debates and discourses about globalization and its ongoing effects with regards to race, gender, and sexual identity. In Mootoo's short story “Out on Main Street” (1993), the main characters' anxieties about performing cultural authenticity become linked with both their place in the diaspora and their queerness. While Powell’s text focuses on indentured diasporas in the Caribbean, Mootoo’s narrative is set in the context of the metropolitan Caribbean diasporas of Canada. The characters in Mootoo’s story narrate themselves with tongue-in-cheek humor as “watered-down Indians—we ain't good grade-A Indians” (1993, 45), thus situating themselves in a complex genealogy of
diasporas. At the same time, they also explicitly link their anxieties about belonging and about cultural exclusion to questions of gender and sexual difference. The narrator of Mootoo’s story says, “And den is a whole other story when dey see me with mih crew cut and mih blue jeans tuck inside mih jim-boots. Walking next to Janet, who so femme dat she redundant, tend to make me look like a gender dey forget to classify” (1993, 48). Much as with several other Caribbean texts, the terms of classifying gender and sexuality are called into question by Mootoo’s characters. However, Mootoo’s narration of the queer gender performance of the two main characters is represented as enmeshed with the complexities of their diasporic and racial belonging. In Mootoo’s narrative, Main Street as textual location becomes more than a setting for the story; it operates as an intersectional space for the exploration of identities—racial, genealogical, diasporic, gendered, and sexual—alongside, and in relation to, each other.

Queer Caribbean writing across the Creole Anglophone and Dutch Caribbean has provided specific sites and “alternative routes for contemplating queerness as political praxis and as social performance” (Cummings 2011, 325). The region’s literature has been marked by a complex engagement with colonial histories of power and with decolonial challenges linked to questions of sexual citizenship, sexual rights, legal recognition, and freedoms. These texts also draw on rich cultural Creole terms and vocabularies as one way of inscribing local specificity, community, and histories. However, in their signification of these Creole and vernacular expressions of gender and sexual difference, they not only inscribe the local concerns and contexts of queer Caribbean lives but also point to the region’s histories of transnational, Creole, folk, and diasporic intimacies that challenge any settled understandings of queerness.

FILMOGRAPHY

In her rigorous analysis of sex, sexuality, and gender in the Caribbean region, feminist sociologist Kamala Kempadoo argues that “Caribbean sexuality is both hypervisible and obscured. That is, it is celebrated in popular culture as an important ingredient in Caribbean social life and flaunted to attract tourists to the region, yet is shrouded in double entendre, secrecy and shame” (2009, 1). In some ways, this observation is even more applicable to LGBTI identities in the Caribbean. Thus, an examination of the range and diversity of LGBTQ writing in the Francophone Caribbean context might begin with this fraught dynamic that moves between such binaries as visible and invisible, presence and absence, rigid and fluid, liberal and conservative.

Most of the scholarship on literature by gay, lesbian, and queer authors of Caribbean descent has been centered primarily on the work of Anglophone authors. Traditionally, there has been less foray into the Hispanophone and Francophone contexts, but since the dawn of the twenty-first century, pathways have been forged in this area as well. Some of the early anthologies help to illustrate this point. Our Caribbean: A Gathering of Gay and Lesbian Writing from the Antilles (2008), edited by Jamaican author Thomas Glave, remains one of the most powerful examples of LGBTQ writing in the Caribbean, as well as one of the earliest collections to present the work of these authors. In the introduction, Glave raises a number of questions about visibility and invisibility for queer writers from the Caribbean: “How did they dream? What colors would their stories have taken, if one could have seen them? Read them? How would they have sounded?” (3). While this robust collection of stories includes almost every part of the Caribbean, the only Francophone country that is present is Haiti. That Our Caribbean remains one of the most extensive collections of LGBTQ writing, and yet its inclusion of Francophone writers is so minor, is revelatory. Indeed, this tendency seems to also be a characteristic of paradigms pairing queer studies and Caribbean studies. For example, Zoran Pecić’s Queer Narratives of the Caribbean Diaspora (2013) focuses exclusively on the Anglophone Caribbean, looking at authors such as Shani Mootoo and Dionne Brand. Likewise, the collection The Queer Caribbean Speaks: Interviews with Writers, Artists, and Activists (2014) features only Anglophone Caribbean authors. If the Caribbean is queer, these works seem to suggest, that queerness is expressed...
mostly in the English language. As such, the frame of the visible and invisible becomes even more relevant in this context.

Among the most compelling and groundbreaking examinations of same-sex desire in the Caribbean that includes Francophone examples is Omise'eke Natasha Tinsley’s *Thieving Sugar: Eroticism between Women in Caribbean Literature* (2010), in which she examines work by women authors from Haiti, Martinique, Suriname, Grenada, Jamaica, and Trinidad. Tinsley offers new ways to imagine the liberatory poetics of Caribbean women’s writing in relation to contemporary LGBTQ activism in the Caribbean. Like Kempadoo, she also acknowledges visibility and invisibility as a primary mode for analyzing these texts: “Francophone Caribbean histories of sexuality weave complexly between visibility and invisibility” (103). One reason for this dynamic might be that, as anthropologist David Murray argues in *Opacity: Gender, Sexuality, Race and the Problem of Identity in Martinique* (2002), in these regions sexuality is less fixed than the terms *homosexual* and *heterosexual* suggest. To provide a literary history of how LGBTQ writing has figured in the Francophone Caribbean, then, is to study the implicit and explicit ways in which same-sex love is present in these works. Tinsley examines the work of Haiti’s Ida Faubert (1882–1969) as one of the earliest examples of eroticism between women in the Francophone Caribbean. Faubert’s work is a reminder that as early as the nineteenth century, Francophone Caribbean authors wrote attentively about same-sex desire, homoeroticism, and sexual relations between people of the same sex in their literary works. In the twentieth and especially the twenty-first centuries LGBTQ writing in the Francophone Caribbean has taken on a different tenor that is increasingly inclusive and refuses to bow to the conventions of queer exceptionalism.

**Guadeloupe and Martinique**

Guadeloupean author Ernest Pépin’s novel *Cantique des tourterelles* (2004; *Canticle of the turtledoves*) tells the story of two women whose same-sex relationship is one of love and freedom. By focusing on their dynamic as a liberatory force, Pépin evokes the ability of same-sex relationships to challenge social norms and resist restrictive sexual politics. Still, in other books in his corpus, such as the novel *Tamour-Babel* (1996), Pépin’s use of the pejorative term *macommères-sodomites* to refer to gay men is emblematic of a harshly negative and stigmatized view of same-sex sexuality. This reference occurs in a passage containing various “vices” of the Antillean space of the novel, reminding us that stereotypes of sexuality are classed and gendered. Later in his career, Pépin offered a rare example of a gay male protagonist, in the novel *Le griot de la peinture* (2014; The griot of painting), based on the life of the queer American artist Jean-Michel Basquiat (1960–1988), who died of a drug overdose at age twenty-seven. The life and art of Basquiat, who was born in the United States to Haitian and Puerto Rican parents, present a rich universe for Pépin to explore in the novel, which focuses on the artist’s internal world. Pépin’s trajectory
indicates how views toward homosexuality shift over time; as authors moved into the twenty-first century, ideas about how samesex desire figures in their novels shifted and progressed.

For the Guadeloupean author Gisèle Pineau, a rare example of queer love in her novels surfaces in *Morne Câpresse* (2010; The hill of Câpresse), in which two members of an all-women community outside Point-à-Pitre indulge in an illicit love rendered in explicit detail. The love between the women serves as a refuge from their abusive pasts as incest survivors. When the novel announces without fanfare that “these two loved one another,” it is a declaration of love that is physical, spiritual, and emotional as well as liberatory (241; translation by Régine Jean-Charles). Their love transcends and transgresses the relationships of sisterhood that women in the community have with one another. While their love is described with lyric simplicity, their sexual lives are described with meticulous attention to detail. The descriptions of sexual intimacy between the tireless lovers are the most attentive scenes of lovemaking in the novel. There is peace and comfort in the love they have for each other: “At Morne Câpresse, they had found love, peace, and happiness” (247; translation by Régine Jean-Charles). Yet these two women, Sherryl and Zora, must hide their love even in a female-centered community such as Morne Câpresse, which suggests that lesbians have no place in society, even a society of women.

Martinican author Fabienne Kanor’s novel *Humus* (2006) is emblematic of a genre of writing that refutes the idea that same-sex desire existed only in the diaspora. The novel takes as its point of departure a note written by the captain of a slave ship from Nantes, in which he describes an incident during which fourteen enslaved women jumped overboard. The novel imagines the lives and the afterlives of these women, dedicating one chapter to each of them and exploring the possible paths their lives could have taken after the incident. In her essay on *Humus*, Dominique Aurélia points out the variety of the women included in this novel: “These captives are murderous women, infanticidal mothers, servile and traitorous lovers, lesbians and androgynous warriors. In the Before Land, the queen poisoned her own son as well as her rival. The Amazon decapitated hundreds of warriors and the whitey emasculated her incestuous stepfather” (83). One chapter stands out for its depiction of erotic love between women prior to the transatlantic slave trade, and it brings to mind a question Tinsley asks in “Black Atlantic, Queer Atlantic”: “What would it mean for both queer and African diaspora studies to take seriously the possibility that, as forcefully as the Atlantic and the Caribbean flow together, so too do the turbulent fluidities of Blackness and queerness?” (2008, 193). With *Humus*, Kanor disabuses the reader of the idea that same-sex relationships are the exclusive province of the diaspora.

**Haiti**

In addition to these few examples from Martinique and Guadeloupe, a number of works concerned with LGBTQ issues emerged from Haiti. Three novels by Haitian authors help to
illustrate the range and diversity of Francophone LGBTQ literature. Myriam Chancy’s *Spirit of Haiti* (2002) is one of the few novels written by an author of Haitian descent that features a queer protagonist. Though written in English, its Francophone contexts of Haiti and Montreal make it useful for this analysis. Set primarily in the northern city of Cap-Haïtien, *Spirit of Haiti* follows the intertwining lives of four protagonists, one of whom is Philippe, who learns that he has contracted HIV/AIDS. Throughout the novel there is a lack of clarity about Philippe’s sexuality; his sexual identity is not emphasized, and his relationship to it is confused as well as confusing for the reader. In this way Philippe becomes a queered body, expressing transgressive sexuality. At times, the novel’s performance of this ambiguity seems to reflect societal discomfort with homosexuality. Reading this as Chancy’s queering of the text means considering her refusal to lock Philippe into categories viewed as normative or deviant and thus blurring the rigid lines of sexual desire. Throughout the novel we are reminded of the widespread homophobia present in the novel’s cultural context. Philippe’s performance of sexuality has sociocultural underpinnings, but the textual reenactment of this sexuality raises additional questions. Are his homoerotic sentiments for his childhood best friend Alexis the result of an intimate friendship between two men, brotherly affection, or sexual desire? Given the ways that homophobia informs the enduring stigma of homosexuality in Haiti, how can we reconcile Chancy’s blurred poetics with the problem of invisibility? When we consider that “same-sex always has been tolerated in both working and elite classes, but remains routinely unnamed [in Haiti]” (Tinsley 2010, 104), is this unnaming upholding or challenging social norms?

The queering of Philippe’s character is also linked to spiritual revelation and divination. His ability to hear voices of the ancestors and spirits and to commune with the past is significant in the larger narrative, making his status as a person living with AIDS secondary. Philippe occupies an otherworldly spiritual realm; he not only lives in a different reality, but also operates in a metaphysical dimension. This metaphysical connection should also be interrogated for its problematic political implications. Must Philippe occupy this supernatural space as a result of the limited possibilities that life in Cap-Haïtien offers a “gay man” (if we are to categorize him as such) living with AIDS? When Philippe tells Alexis, “There are too many voices here ... they are searching for rest. There is no rest here” (180), his words are self-referential; there is no respite for someone aware of his sexuality yet unable to express it fully due to the cultural context he inhabits. Read differently, there is no room for someone unwilling to confine himself to the heteronormative boundaries of sexuality that this particular context demands.

Kettly Mars’s corpus is distinctive for how sex and sexuality figure prominently. The contemporary Haitian novelist has approached the themes of sex, desire, and sexuality in each of her novels, which depict situations of same-sex love between men or between women. For example, her novel *L'heure hybride* (2005; The hybrid hour) features a male protagonist whose fluid sexuality moves easily between binaries throughout the novel. In
his life as a professional gigolo, Rico goes from one sexual relation to another with very little affection or attachment. However, the novel concludes with a disturbing scene of sexual violence between the male protagonist and another young man. The characteristically (for Mars) ambiguous ending further troubles the reader and leaves the incident of rape unaddressed. In contrast to *L'heure hybride*, Mars’s novel *Je suis vivant* (2017; I am alive), offers a lesbian character written with care, nuance, and balance. Marylène, the eldest of the Bernier children, is an artist who, after living in France, returns to be with her family in the suburbs of Port-au-Prince. Her relationship to her sexuality is fraught, but after returning as a sixty-year old woman she feels liberated to express the fullness of her sexuality—desire, preferences, and appetite—in the context of her home. This development is important because it challenges the idea that queer Caribbean people are free to be out in their host countries but must remain closeted in their homelands. Mars’s novel problematizes the notion that nonnormative sexuality is usually left masked for Caribbean natives. That Marylène returns to live in the family home where she was raised further underscores this point. Described by her family as "l’artiste fragile" (the fragile artist), she is judged by them not because of her sexuality but because of her creativity (115). When Marylène enters into a relationship with a younger woman from a poor background, we are reminded that sexuality is intersectional. As the firstborn daughter in an upper-class family, Marylène is also a noteworthy example of a lesbian character for whom sexuality is a vexed site of freedom from the respectability politics of her class.

*Absences sans frontières* (2013; Absences without borders) by Evelyne Trouillot serves as a final example of how LGBTQ plots are written into a text and integral to its development without being the focus of the novel. In this story, a girl being raised by her grandmother and aunt (because her mother has died and her father is abroad in the United States) comes of age in Port-au-Prince. The aunt, Cynthia/Tanza, unsuccessfully hides her sexuality from her family, whose reactions vary. While much is left unsaid by members of the family, each of them reflects on Tanza’s sexuality and expresses their wish that she would not feel the need to conceal her identity as a lesbian. Tanza’s inclusion in the story is consistent with other novels from the Francophone Caribbean in which queer subjects are characters and often protagonists, but their sexuality is not a central identity issue in the plot of the novel. Contemporary authors such as Kanor, Trouillot, and Mars have featured LGBTQ characters without making sexuality central to their novels, thus indicating the presence of queer people in Haiti without making a spectacle or exception of their existence.

**Absence of Transgender Characters**

While the examples mentioned here point to the presence of gay and lesbian characters in a range of novels from various parts of the Francophone Caribbean, there is a notable absence of explicitly transgender characters—major or minor—in this literature.
Transgender people are more present in other popular forms, such as performance art and film. Just as the documentary *Of Men and Gods* (2002), about vodou and same-sex desire in Haiti, in some ways opened a door to more scholarship and cultural representations, perhaps what is needed is a transgender urtext that will open similar avenues of expression in Haiti, Martinique, and Guadeloupe.

Nonetheless, the twenty-first-century novels discussed here demonstrate the emerging and evolving destigmatization of same-sex sexuality as they highlight the range and diversity of LGBTQ writing from the Francophone Caribbean. As David Eng, Judith Halberstam, and José Esteban Muñoz have insisted, “The contemporary mainstreaming of gay and lesbian identity demands a renewed queer studies ever vigilant to the fact that sexuality is intersectional ... calibrated to a firm understanding of queer as a political metaphor without a fixed referent” (2005, 1). These contemporary examples are especially instructive to that end. For the characters in Kanor’s, Mars’s, and Trouillot’s novels, sexuality figures as a location of identity that shifts based on race, class, and religious affiliations and highlights the complexities of how these elements interface with one another. These examples are emblematic of Francophone Caribbean LGBTQ writing moving in a new direction that is catching up both to the Anglophone Caribbean and to other genres, such as performance art and film. In her study of the gay Haitian-born poet and performance artist Assotto Saint, Andia Augustin-Billy acknowledges the ways that literary fiction lays the groundwork for LGBTQ issues in the Caribbean. She writes of literary texts that “alongside the characters’ homoeroticism, such fictional representations have tackled issues of gender, sexuality, and performance within the Caribbean context. These works constitute an important foundation in outing closeted sexualities and destabilizing deeply embedded heteropatriarchy” (2016, 82). Today this foundation is being built on and expanded in the Francophone Caribbean and there remains much work to be done.

BIBLIOGRAPHY

João Francisco dos Santos (1900–1976), known as Madame Satã, or “Madam Satan,” was an Afro-Brazilian street hustler and drag performer and a well-known figure in the bohemian world of Rio de Janeiro in the 1920s, 1930s, and early 1940s. Later in life, he became an iconic representative of the classic malandro, a dapper urban rogue of bygone years who survives on street smarts. His ambiguous gender performance and the unabashed affirmation of his own homosexuality at a time when Brazilian society marginalized nonnormative gendered and sexual behavior have made him a cultural reference for Brazilians seeking nonconformist figures from the past.

**Early Years**

Born in the town of Glória do Goitá in the impoverished backlands of the northeastern Brazilian state of Pernambuco in 1900, dos Santos was one of seventeen children born to descendants of slaves. His father died when he was seven. Desperate to survive with such a large family, his mother swapped dos Santos to a horse trader in exchange for a mare a year later. Within six months he ran away with a woman who planned to set up a boardinghouse in Rio de Janeiro. She offered dos Santos room and board for long hours of work shopping for food, preparing meals, washing dishes, and cleaning the residency. He later commented that he received no affection and labored as if he were a slave. This speaks to the ways that the harsh conditions of slavery, legally abolished in 1888 in Brazil, persisted for many of the poorer descendants of slaves, even after abolition (Durst 1985).

Dos Santos escaped this arduous employment at age thirteen and lived on the streets of Rio de Janeiro for the next six years, surviving on odd jobs. At age eighteen, the madam of a brothel in the downtown bohemian neighborhood of Lapa hired him as a waiter. At the time, it was common to take on young effeminate men in such establishments as cooks, housekeepers, or servants—or even as occasional prostitutes for those clients who preferred a young boy rather than a female companion for a sexual liaison (Green 1999).

Dos Santos grew of age in the fast-paced life of bars, brothels, and malandros in Lapa. The
neighborhood was a crisscross of winding streets and one- and two-story buildings with large portals that opened onto tenements, bordellos, and rooms that could be rented by the hour. Corner bars and cabarets offered cheap beer and entertainment for working-class men and government employees who could meet so-called fast women or prostitutes for brief relationships. It was also a space where effeminate men might find a willing masculine partner for a furtive sexual encounter.

Dos Santos quickly adapted to this environment becoming a dandy and petty criminal. Dressed in the typical style of a malandro—silk shirts with rhinestone buttons, a white tie, shoes with Mexican heels, an expensive white panama hat, and hands filled with rings—he cut a sharp figure. He once described himself as someone who liked to join in the singing and carouse in bars and cabarets. He respected others but knew how to wield a knife when provoked.

The Life of a Malandro

In a city with high unemployment among men of color, many malandros survived by gambling, hustling, pimping, stealing, composing samba songs, or running some smalltime racket. Masculinity and virility were hallmarks of this urban prototype, and in this regard, dos Santos was an anomaly. He was known as being a “passive” homosexual—namely, the penetrated partner in the act of anal sex—which coded him as effeminate and frail, yet his agility with a knife; a strong, firm body; and a proclivity to take on others in street fights when insulted or attacked earned him a reputation as a dangerous adversary. Thus, dos Santos’s “passivity” destabilized his image, as his physical “virility” seemed to contradict what was considered his feminine essence because he was receptive in anal sex. Over the years his standing grew as a person of inordinate strength who could confront numerous attackers at the same time. Yet if he roamed the streets of Rio during the day as a tough malandro, by night he sometimes performed in drag in a local cabaret, where he sang and danced, in a slinky red dress and long hair falling over his shoulders.

Homosexuality was not criminalized in Brazil in the early twentieth century, yet traditional social norms, influenced by medical-legal discourses, Catholic morality, and pervasive notions of “appropriate” masculine and feminine gendered performance, marginalized effeminate men who engaged in same-sex behavior. Social spaces in downtown Rio de Janeiro at Tiradentes Square and in the movie district, known as Cinelândia, were favorite places for frescos (faggots) to congregate, although they ran the risk of violating “public decency,” affronting “proper moral behavior,” or being considered vagrants because they were unemployed. Because laws that punished sodomy had been removed from the criminal code in the 1830s, same-sex sexuality was not illegal per se. However, the police and other government officials used these public decency and vagrancy statutes to restrict public displays of nonnormative gender performances associated with homosexuality. As a way to keep flamboyant effeminate men off the streets, police officers would engage in
periodic roundups, charging them with these legal violations. Those who could afford to pay bribes avoided arrest. Others usually spent a few days in jail, where they were humiliated by the guards and other prisoners and then released.

Dos Santos easily moved in and out of this downtown world, constantly risking run-ins with the police. In the mid-1930s he shot dead a night guardsman, whom he alleged had called him a *viado* (faggot), and was sentenced to a sixteen-year prison term. He was released on appeal based on a claim that he had shot the man in self-defense. His conviction merely added to his reputation as a person who should not be crossed.

**Becoming Madame Satã**

Dos Santos became Madame Satã quite by chance. In 1938 friends persuaded him to enter a Carnival costume ball competition held in a downtown theater near Tiradentes Square, the popular public cruising area for homosexual men. For the occasion, he designed a sequin-decorated costume of a flying bat and won first prize in the contest. Several weeks later, the police picked him up for vagrancy. When the booking officer asked him to give his name, he facetiously offered the moniker Madame Satã in a direct reference to the title of the recently released Hollywood musical comedy *Madam Satan*, directed by Cecil B. DeMille, about a woman disguising herself as a temptress to win back her wayward husband. His peers began to tease him by using the name, and eventually it stuck. He later admitted that he had not liked it at first but soon became used to the name, considering it rather distinguished and beautiful.

Stories about his physical prowess and confrontations with the police, as well as his combative encounters with other street hustlers, made him a larger-than-life figure in the underworld of downtown Rio de Janeiro. Between 1928 and the late 1960s, he spent more than twenty-seven years in prison. He then retired to a quiet life in a remote area of Rio de Janeiro, where he lived in a small house and enjoyed fishing in a nearby lagoon.

**Image Resurrected**

In 1971 his image was resurrected by *O Pasquim*, a weekly left-wing cultural newspaper that offered lively copy about Rio de Janeiro’s “beaches, babes, and beer,” while constantly trying to avoid being shut down by government censorship during the harsh years of Brazil’s military dictatorship, which ruled the country from 1964 to 1985 (Cabral et al., 1971) Rediscovering Madame Satã as a relic of Rio’s forgotten bohemian past of the 1930s and 1940s, the editors of the oppositionist magazine reveled in this quixotic figure who was an aging queen yet still exuded the bravado of a streetwise and knife-wielding hustler. In a two-part feature article, with Madame Satã on the cover wearing a trademark panama hat and flashy rings, he recounted his past. His ambiguous gender performance confounded and fascinated the public. As a result of the publication’s national circulation, he became
known to a new generation of leftists and countercultural adherents who were intrigued by his personification as both a masculine and feminine man. Madame Satã simply did not conform to hegemonic Brazilian gender and sexual codes that still considered most homosexuals to be “passive” sexual beings, whereas their “active” partners remained normatively masculine and therefore nominally heterosexual. As a result of this media exposure, he enjoyed a renewed flash of fame before dying destitute in 1976 (Machado 1976).

The Brazilian filmmaker Karim Aïnouz’s feature film Madame Satã, which premiered at the Cannes Film Festival in 2002, once again revived interest in this colorful figure. The film retells dos Santos’s early life in the Brazilian Northeast and in the brothels and on the streets of Rio de Janeiro before he assumed the name Madame Satã. The movie lyrically captures Rio’s colorful underworld in the 1920s and 1930s, when effeminate men of humble means, some of whom cross-dressed as women, lived alongside prostitutes, pimps, and petty thieves at the margins of society.

For some scholars and activists in the Brazilian LGBT movement, Madame Satã represents the fate of thousands of Brazilian men of African descent, who, in the aftermath of the abolition of slavery in 1888, were drawn to the capital of Rio de Janeiro, where they faced a hard life. Most found menial jobs to survive but others chose hustling and petty crime to get by. With few biographies or known histories of poor and working-class homosexuals from the early twentieth-century, Madame Satã has become a symbolic stand-in for those men of humble origins who engaged in same-sex sexual and romantic relations with other men, while defying social norms and public censure.

FILMOGRAPHY

Mädchen in Uniform (1931; Leontine Sagan)

NIA LL RICHARDSON
Senior Lecturer, Media and Film, School of Media, Film and Music
University of Sussex, United Kingdom

Weimar German film that was one of the first to portray lesbianism on-screen.

Produced in 1931 in Weimar Germany, Mädchen in Uniform (Girls in uniform) is a critically acclaimed, feature-length film drama directed by Leontine Sagan. The film was based on the play Gestern und Heute (Yesterday and today), written by Christa Winsloe, and there was a commercially unsuccessful remake of the film in 1958 (also titled Mädchen in Uniform) that was directed by Géza von Radványi (see Mayer 2012). Mädchen in Uniform has become a cult classic and has received critical acclaim from feminist film critics and scholars working within the disciplines of lesbian and gay film criticism and queer cinema studies. Mädchen in Uniform has been read as a key film in representing the spirit of the Weimar Republic, which made a space for new expressions of gender and sexuality, only to be eradicated once the Nazis came to power in 1933.

Plot Summary

Mädchen in Uniform tells the story of Manuela von Meinhardis (Hertha Thiele) who enrolls in a Prussian girls' boarding school where strict discipline is exercised by the authoritarian headmistress Fräulein von Nordeck zur Nidden (Emilia Unda). Even though the other students welcome Manuela, she feels very uncomfortable with the school's militaristic regime until she meets Fräulein von Bernburg (Dorothea Wieck), a teacher in the school. While the other schoolmistresses advocate using extreme discipline in the education system, von Bernburg favors showing compassion to the students. Manuela falls in love with von Bernburg, and the narrative also implies that this is mutual during a famous scene in which von Bernburg puts all the students to bed with a kiss on the forehead but bestows one directly on Manuela's lips. As time progresses, von Bernburg's relationship with Manuela becomes more intimate, and the teacher shows several acts of kindness to the student, such as giving her gifts of clothes. The senior faculty, however, learn of von Bernburg's compassion and kindness toward Manuela and the other students, and she is instructed never to speak to Manuela again. As a result of this, von Bernburg resigns from the school. Manuela is devastated and attempts to commit suicide but is saved by the other students of the school. The film ends with a chilling scene in which the students watch, in complete silence, the headmistress walking along the school corridor.
The German film Mädchen in Uniform is the story of a schoolgirl, Manuela, who falls in love with her teacher Fräulein von Bernburg (Dorothea Wieck) at her all-girls boarding school. It is one of the first films to represent lesbianism onscreen.

Critical Responses

Mädchen in Uniform has been the subject of sustained analyses within the field of feminist cinema studies and lesbian and gay film criticism. The film has been acclaimed for its feminist agenda—not only identified through an auteurist reading of its female director but for the way in which its narrative makes an implicit critique of patriarchal order (Mayer 2012; Rich 1981). The textual details of the mediation continually represent the tension between the hard regime of the school and the femininity of the schoolgirls. For example, the film's opening sequences juxtapose the exterior world of monuments—symbolizing the military, authoritarian regime—against the femininity of the schoolgirls who are forced to live in such an environment. Similarly, the softness in the representation of von Bernburg (the lighting often making the edges of her costume appear to glow) has been read as the film's celebration of femininity set in juxtaposition with the masculinist principles of the school (Dyer 1990).

However, it is within the field of lesbian and gay film criticism that the film has been identified as iconic. Mädchen in Uniform is remarkable for being one of the first films to represent lesbianism onscreen. Not only is the relationship between Manuela and von
Bernburg the main plot, but there are innumerable shots of the schoolgirls cuddling together in beds in which the sundappled imagery suggests the beauty and naturalness of their romantic attachments. The textual details of the film engage the spectator in the scheme of lesbian eroticism—especially in the scenes featuring Manuela and von Bernburg. For example, when Manuela is first seen by von Bernburg, she is standing at the top of a staircase (the usual cinematic coding for eroticizing the female body), and she is lit from the right so that her white collar gleams and she appears radiant. There is a reaction shot of von Bernburg that demonstrates that Manuela has taken her breath away, indicating the response that the spectator should also have toward the beautiful girl (Dyer 1990).

*Mädchen in Uniform* has also received attention for the way it addressed the political models of homosexual identification advocated by activists at the time: the gender liminal, in-between model and the gender conformist type. The in-between model, identified by the German sexologist Magnus Hirschfeld (1868–1935), advocated for the identification of gays and lesbians as a type of third gender: bodies that fell between the gender binary and therefore, by implication, also outside the scheme of heteronormativity (see Steakley 1975). While this offered a form of emancipatory politics, which explained homosexuality through a medical discourse, it did little to support an assimilationist agenda in which gays and lesbians could argue for their similarity to heteronormative society in everything but their sexual object choice. Photographs of the original play (*Gestern und Heute*) show von Bernburg played by Margarete Melzer, a female actor who conformed much more to the butch type of gender liminality that was advocated in the Hirschfeld model. By contrast, the film presents a much more feminine-coded von Bernburg and thus can be read as advocating for the assimilationist agenda of gender-conforming lesbian women.

Yet, as well as validating lesbian desire on the screen and affirming assimilationist lesbian politics, *Mädchen in Uniform* is also important for demonstrating that the progression of lesbian and gay rights has been far from linear. If one reads *Mädchen in Uniform* as a cultural barometer of Weimar Germany, then the 1930s were considerably more accepting of same-sex sexual desire than subsequent decades (Dyer 1990). In later years, *Mädchen in Uniform* was condemned by the Roman Catholic Church and banned in Germany. Similarly, US releases saw the more explicit sequences of same-sex passion edited from the film. It would not be until the 1970s that the uncensored version was available in the United States and that the film was available for consumption again in Germany.

Maghreb

MEHAMMED AMADEUS MACK
Assistant Professor of French Studies
Smith College, Northampton, MA

The historical and modern European perceptions of the geographic region of North Africa as an exotic land steeped in homoeroticism.

Maghreb is an Arabic term that denotes “the place where the sun sets” and thus also the modern-day country of Morocco, being the most Western point in the Arab world (save for Western Sahara and Mauritania). The word is based on the root gharb, which means “West”: it is opposed semantically to the Mashriq (the eastern part of the Middle East: Lebanon, Palestine, Syria, Jordan, Iraq). The Maghreb has come to signify a constellation of North African countries stretching from Mauritania to Libya (Maghreb Studies Association 2017). The epithet Maghrabi can refer to a Moroccan or more generally a North African person; however, many scholars have declined employing the term to refer to North Africans as it erases regional specificity and identity. It was furthermore a favored term of colonial organization, preferred because it allowed easy reference to a large geographical area that the French governed as protectorates (Tunisia, Morocco) and settlement colonies (Algeria). Ethnically, the Maghreb is quite diverse, a confluence of Berbers (whose presence predates that of the Arabs and the arrival of Islam), Berber Jews, Arabs, sub-Saharan Africans, Turks, Sephardic Jews, and Europeans (during colonial occupation and settlement).

North African Homoaffectivity

Travel writers have long noted, with curiosity and sometimes fascination, the homoaffectivity that animates male friendships and relationships in North Africa. Homoaffectivity, which can take many forms, refers to signs of affection between members of the same sex; in North Africa and more generally across the Middle East, it can anecdotally be seen in tender and often nonsexual gestures like arm or hand-holding, frequent touching, and effusive salutations involving kisses. Although this homo-affectivity is characteristic of female relationships just the same, European observers noted its presence between men because of its comparative absence in European male-male relations. Some have countered that this line of demarcation is not so black and white, with southern European (and French) customs of salutation having more in common with Mediterranean customs than with northern European ones. Although this North African homoaffectivity is not necessarily synonymous with homosexuality, it is not exclusive of it
either. However, many travel writers now in the canon of gay literature dwelled on this homoaffectivity and saw in it the potential for homosexuality, blurring these lines intentionally in their recollections.

Nacira Guénif-Souilamas has detailed an important history of North African homoaffectivity, eventually describing how the condition of immigration caused this homoaffectivity to go underground and risk erasure in diaspora: North African men hid these customs out of fear that their homoaffective customs would be confused with homosexuality by European observers (Guénif-Souilamas and Macé 2004). Tahar Ben Jelloun wrote a psychiatry dissertation (published in 1977) about how this warm homoaffective tradition was imperiled by the immigrant experience; he documented a startling incidence of North African manual workers complaining of impotence, an impotence he traced to the sexual and affective rejection these men faced in France, along with the resulting impossibility of imagining, let alone creating, a future in France through progeny.

European Perceptions of the Region

While Europe was not hospitable for North African homoaffective customs, the Maghreb in contrast provided sanctuary for European sexual dissidents at a time when the climate in Europe was resolutely homophobic. The French author André Gide (1869–1951), for example, found in the Maghreb a forum to explore his nascent homosexuality, unavowable in Europe; he contrasted the Maghreb and Europe, saying of the first that it was a place where one could finally give free flow to desire and come alive, as opposed to the second, with its rigid moral duties and emphasis on sanity and productivity, eventually leading toward a kind of bodily death. He explored these themes both in fiction and in an autobiography, where he recounted the discovery of his own homosexuality during travels to the Maghreb, alongside the likes of the Irish poet and playwright Oscar Wilde (1854–1900) (Gide 1935). However, Gide eventually grew tired of the dynamics of tourism, finding many potentials for abuse in it, eventually penning an opus renouncing travel entirely (Gide 1988). For other gay writers such as Jean Sénac (1926–1973), Jean Genet (1910–1986), François Augiéras (1925–1971), Pierre Herbart (1903–1974), and Daniel Guérin (1904–1988), their experiences in Africa, the Middle East, and other colonial possessions caused them to develop an anticolonial inclination that had little to do with the depoliticized exoticism cultivated by other gay travelers (Aldrich 2003).
instilled a more lax legal climate. The city's previous immortalization in Orientalist art, as well as its “open” seaside location and its proximity to Europe, made it a desirable travel destination. In particular, gay men fleeing stifling moralities and sexual persecution in Europe found in Tangier a sanctuary of sorts that could play host to experimentations both literary and sexual. There were two sides to this coin, however, and the condition of sexual refuge often concealed differences of class and the exploitative nature of a tourist economy. The sexual “availability” of young men concealed dire economic straits, with many—but certainly not all—young North African men turning to homosexuality out of economic necessity, as famously recounted by Mohamed Choukri (1935–2003) in his memoir *For Bread Alone* (1987).

Calling the phenomenon of gay writers descending on Tangier “literary colonization,” Marie-Haude Caraës and Jean Fernandez (2002) studied the perceptions authors such as Roland Barthes (1915–1980), Paul Bowles (1910–1999), Truman Capote (1924–1984), Samuel Beckett (1906–1989), and Tennessee Williams (1911–1983) had of the city: they determined that Tangier had no meaning for them as a site other than being a place where desires could be satisfied and fantasies realized. Caraës and Fernandez’s aim was to penetrate through the “ideological games” inherent in such literary illusions that end up leading to distorted visions of North Africa in which inequalities between travelers and natives disappear.

One of these visitors, Bowles, an American writer, played a central role in ushering in new Moroccon voices through the translation and recording of oral narratives, as in his collaboration with Mohammed Mrabet (Mrabet 1986). After earlier visits there, Bowles moved permanently to Tangier in 1947 and lived there with his wife, Jane. He was closely associated with the cosmopolitan aspect of Tangier and was a friend of Beat generation writers who were drawn to the city for its literary, narcotic, and, less avowedly, sexual freedoms (Jordison 2010). Bowles was a friend to such renowned Moroccan writers as Choukri and had enigmatic if not ambiguous relationships with several Moroccan interlocutors. The scholar Brian T. Edwards (2005) unpacks these in a comprehensive study of Jane and Paul Bowles, which examines American and hippie Orientalism and, in particular, the shifting erotics of collaboration and the politics of translation in Bowles’s sometimes vexed relationship with Mrabet. The Moroccan writer Tahar Ben Jelloun made accusations of manipulation (insinuating that Mrabet had been exploited) in a thinly veiled allusion to the Bowles couple in *Leaving Tangier* (2009). Ben Jelloun organized that novel around his characters’ desperate attempts to flee Morocco for the “forbidden land”: the Spanish coast visible from seaside Tangier. Ben Jelloun depicts in detail the financial desperation of young men with few prospects in their home country and the creative schemes some Moroccans resort to in order to secure papers. Gay men and older women are the usual targets, as they help facilitate the entry of their lovers into Europe, after which the Moroccan men branch off in new directions, often marrying European women to gain nationality.
Choukri (1997) profiled, in Arabic, the “paradoxical” couple formed by the Bowleses, interviewing Paul at length about his rapport with the Beats, his approach to travel, the ever-changing persona of Tangier, and the fact that the version of the city Moroccans know has little to do with that memorialized by Westerners. In a study devoted to the resonance of Tangier among writers, Michael K. Walonen (2011) describes the almost contrary representations of the city found in Moroccan as opposed to expatriate literature (of Paul and Jane Bowles, William S. Burroughs, Alfred Chester, and Brion Gysin). In that study, Walonen expounds on the power imbalances and gender dynamics that turned Tangier into a sexual marketplace. Edwards and Walonen, however, also allow room for an alternative account of Bowles's presence and influence in the country: as an anthropologist, musicologist, and oral historian who put Moroccan writers on the world literature map.

Choukri had close contact with writers now saluted as part of the gay literary canon: he documented his meetings with Tennessee Williams and Jean Genet (on two occasions), with two of these interviews published by Bowles in the United States. Genet (1910–1986) was especially important to Choukri and, in a way, to Moroccans in general, as he was widely seen as a “friend of the Arabs,” having been in political solidarity with the Palestinian and North African liberation movements; his body was eventually buried in Larache, Morocco (Choukri 1992). Such was Genet’s connection to Morocco that the famed Spanish gay writer Juan Goytisolo, himself a longtime resident of Marrakech, requested to be buried next to Genet’s tomb, a dream realized at Goytisolo’s death in 2017.

**BIBLIOGRAPHY**

Choukri, Mohamed. Paul Bowles: *Le reclus de Tanger* [Paul Bowles: The recluse of
From France, the Maghreb was often perceived through a strongly sexual lens, as has been reported in historical works published in the twenty-first century. In his 2007 study of the medical history of colonial Algiers and the Algiers school of psychiatry, Richard C. Keller divulged how French experimental psychiatrists sought to pathologize North Africans, as well as the religion of Islam itself, as sexually “perverted” and too permissive; North African cultures and religions and even the climate of the region was in their view conducive to sexual criminality, widespread sodomy, and bestiality. Todd Shepard has argued that a segment of the French intelligentsia and press—in seeking to sever France from a deep and increasingly problematic colonial implantation in Algeria (1830–1962)—cast French Algerians of European origin who had settled and populated the land (the pieds noirs) as sexually perverted and overly obsessed with machismo. This perversion resulted, in this version of history, from having been in contact with North Africa and North Africans. Represented this way, pieds noirs were prone to see their reckoning with the French general Charles de Gaulle (who wanted Algerian independence) and Algerian liberationists in terms of homosexual domination and a machismo contest. Meanwhile, 1960s and 1970s leftists in France found in the Arab male an erotic model for combat against colonialism (Shepard 2006).

Tourism

In the postcolonial period, North African economies in Morocco and Tunisia at the least
were and are strongly driven by tourism, with some arguing that colonial dependencies and inequalities are perpetuated through it. As the openly gay Moroccan novelist Abdellah Taïa (2009) has recounted, his country seems designed for tourists. Locals are strangers in their own land; taking European friends out for a tour, Taïa was stopped and violently interpellated by police officers who suspected he was defrauding tourists. Writers now part of the gay literary canon—from Oscar Wilde to Joe Orton (1933–1967) to Roland Barthes (1915–1980)—did not always pay attention to the power differentials inherent in tourism to North Africa, and more particularly sex tourism, focused as they were on experimentation and self-expression both literary and sexual (Orton 1986). In a substantial tome analyzing both visual and literary media, Joseph Allen Boone (2014) details what he calls the “homoerotics of Orientalism” that led the Maghreb, and the greater Middle East, to become such a focal point for fantasy and fictional projection. He also spelled out the flagrant lack of awareness around class and race privileges that characterized Euro-American travelers’ behavior in the region. Tourism in the Maghreb has also revealed the ways in which an increasingly ageist and youth-obsessed gay culture has led to middle-aged and older gay men pursuing greater sexual opportunity in the Global South. Barthes (2010) kept a diary of his encounters with young Moroccan men, just as he bemoaned his frustrated desire for younger men in Paris. In his memoirs (published in 2005), the former French minister of culture Frédéric Mitterrand confessed to sex tourism in Thailand and hosting young Moroccan boys in France.

Journalistic and semi-academic essay collections have delivered voyeuristic accounts of clandestine North African homosexualities in the Maghreb and its diaspora. Adopting the first-person, sometimes anonymous, perspectives of white travelers, these books tell stories of trysts in casbahs, riads, and hammams, while also describing in highly essentialist tones the timeless patriarchal laws that govern sexual attitudes in the region: chapters, some as short as four pages, bear titles such as “Moroccan Boys and Sex,” “An Italian in Morocco,” and “Arab Men in France” (Schmitt and Soefer 1992; Luongo 2007).

The View from Within

Because much of the extant literature on the Maghreb and homosexuality has been written by authors who do not hail from North Africa, it has become difficult to get a sense—outside of representation and absent projection and fantasy—of what North Africans themselves make of their own (homo)sexualities. There are indeed North African specialists who have tackled the social and cultural import of homosexuality. Abdelhak Serhane titled his 1995 study of North African sexuality “circumcised love,” to describe how sexual impulses can be thwarted in the name of traditional values regarding marriage, such that sexual energy is redirected to other avenues, including homosexuality. The Algerian-born Malek Chebel (1953–2016) staked out a career as an anthropologist of sexuality, using his multifaceted background in psychoanalysis, ethnology, and even political science to
become an authority on matters of sexuality in the Arab world. Although criticized by some for his occasional lack of academic caution and his liberal translations (Lagrange 2008), he was one of the first to carefully document the heritage of homosexuality in North Africa (Chebel 1988, 1995, 2006). This openness to divulging the normally guarded sexual customs of the Arab world, as well as his efforts to advance an Islam des lumières (enlightened Islam), won him a faithful French audience; he frequently made the rounds of talk shows and wrote op-ed pieces. More recently, an innovative collection on homosexuality in the Maghreb and its diaspora has shed significant light on lesbianism (often eclipsed by male homosexuality in this literature), as well as the ways that sexual “dissidence” in the Maghreb is actually less dissident and more widespread and integral to the social fabric than previous scholarship has found (Lachheb 2016).

Oftentimes, the language of choice for expressing sexuality in the Maghreb has been French, even after decolonization and Arabization programs in the realms of media and education. Jarrod Hayes argues in Queer Nations (2000) that, with their newfound independence, the countries that make up the Maghreb often defined identity in exclusionary terms, focusing on the unifying bonds of religion and language despite the diversity of the populations that used to inhabit the land prior to decolonization (conspicuously not included in this newfound unity). He notes, however, that Francophone Arab writers from the Maghreb carved out a counter-narrative that allowed for diversity to (re)emerge, a narrative that focused especially on sexualities that did not align with nationalist goals: in this way the Maghreb was an assembly of “queer nations” (the title of his literary study). Hayes importantly sheds light on the way that these writers shared stories about sexuality that had the potential to “queer” a queer studies field that has not always been in conversation with postcolonial studies and thus has unquestioningly accepted certain assumptions about sexuality that reveal a “Western” bias. Since the late twentieth century, writers with North African origins such as Taïa, Rachid O., and Nina Bouraoui have come “out” as openly gay, no longer speaking of homosexuality as a substitutive or juvenile phenomenon that one abandons after marriage. They have delivered highly autobiographical stories about their sexual coming-of-age in North Africa, their relationships with Europeans and perspectives on sex tourism, and their sometimes disappointing attempts to find sexual liberation in Europe (Taïa 2004; O. 1995; Bouraoui 2000).

**Cross-Dressing**

One of the more understudied aspects of North African gender expressions is the phenomenon of female-to-male cross-dressing in the Maghreb. Tahar Ben Jelloun recounted in his prize-winning book L'enfant de sable (1985: The Sand Child [1987]) the fictional tale of a young woman who was raised male by her father. He had already had seven daughters, and in order to escape inequalities related to inheritance laws, he had obliged his daughter to wear traditionally masculine clothes, although she later abandoned
this wardrobe at the moment she decided she wanted to be a mother. The Swiss-born Isabelle Eberhardt (1877–1904), an “exile” from Europe, made a nomadic life for herself in Algeria, occasionally dressing up as an Arab cavalier (horseman); she converted to Islam, married an Algerian, was at one point determined to be a spy and agitator by the French government, and died in Algeria swept away by a flash flood at the age of twenty-seven. Her life inspired a 2005 collection of short stories penned by Leïla Sebbar titled *Isabelle l’Algérien*, or, in English, *Isabelle the* [male] Algerian.

Male-to-female cross-dressing has more recently been explored on-screen. The Franco-Moroccan stand-up comedian Gad Elmaleh developed the comedic persona Chouchou, a charismatic immigrant with a thick accent who dabbles in sex work, it is suggested ([Allouache 2003](#)). The filmmaker Liria Bégéja cast the famed actors Sami Bouajila and Roschdy Zem in the roles of cross-dressing sex workers in her 2001 film *Change moi ma vie* (Change my life for me). Zem’s character, once a decorated athlete whose career was prematurely cut short, meets a struggling actress played by Fanny Ardant when she collapses in a park at night. Looking for the person who saved her life, Ardant comes to discover that Zem engages in sex work in women’s clothes, out of economic necessity.

**FILMOGRAPHY**

Malaysia

ROHIT K. DASGUPTA
Lecturer, Institute for Media and Creative Industries Loughborough University, United Kingdom

The status of LGBTQ rights in this Southeast Asian country, including major Malaysian literary and cinematic works on LGBTQ themes.

Since the start of the twenty-first century a growing body of scholarship on queer studies has emerged from the Global South on a range of subjects including queer arts and practices, queer identity formation, and activisms and protest movements. Malaysia provides an interesting terrain for the study of queer identities. While queer scholarship on Malaysia is sparse, these are significant interventions in understanding how queerness is articulated in Malaysia. This short entry is divided into three sections: the first section discusses the sociocultural background on same-sex sexualities in the country; the second covers Body 2 Body, a pathbreaking anthology of queer writings from Malaysia; and the third examines queer representations in Malaysian cinema.

Sociocultural Considerations

Malaysia is a constitutional monarchy in Southeast Asia with a predominantly Muslim population, but it also includes Buddhists, Christians, and Hindus. As a former colony of the British Empire, its laws are shaped by the colonial-era laws, which is also true for many other former colonies in Asia and Africa (Dasgupta 2017). Postcolonial Malaysia is framed by the tension between religion and traditionalism. Same-sex sexual activity in Malaysia is punishable by twenty years in prison and further corporal punishment. The criminal ban on nonprocreative sex (anal and oral) also applies to heterosexuals, though it is used almost exclusively against queer people. Walter Williams (2007) noted that Malaysia’s Penal Code, Section 377 also specifies punishment by flogging, which is administered with a bamboo cane. Furthermore, Sections 337 and 337a prevent any homosexual man from escaping conviction and prohibits all forms of “gross indecency”; this vague wording allows discrimination against and prosecution of queer people. The Malaysian government has over the years tried to silence any discussion of same-sex rights, and none of the political parties offer any proposals for LGBT rights.

Despite these legal restrictions, scholars such as Sharon Bong (2011) have chronicled numerous instances of same-sex Malaysian couples living together in an arrangement culturally similar to marriage, if not legally so. While some of them encounter resistance,
for many, acceptance of their same-sex “marriage” by their families offers a mode of resilience. Some of the narratives collected by Bong are testaments of the struggles that queer men and women face. In particular, she narrates the story of Dave, who came out to his parents and was met with hate speech and domestic violence. Dave’s experience of being both criminalized by the state and infantilized by his family is not atypical in a country where unmarried men are not seen as adults. The tyranny of the family that is hostile to queerness can be also traced back to an entrenched patriarchal system and the hegemonic construction of masculinity (see also Mellstrom 2003). When families do demonstrate support for their relatives’ same-sex relationships, the family home can become a space for same-sex couples to affirm their relationship in a ceremony or receive other forms of support.

Religion is another important aspect through which gender and sexual identity in Malaysia is policed. Human Rights Watch (2015) reported how shariʿa (Islamic law) was invoked to prohibit trans women from cross-dressing and to subject them to assault and extortion. One of the most prominent cases of homophobia and a national-level discussion on homosexuality happened with the 1998 arrest of a policeman, Anwar Ibrahim, accused of corruption and sodomy. This case can be clearly read as religiously motivated homophobia. Despite his claims of innocence, he was jailed. The former prime minister Mahathir Mohamad weighed in, declaring that homosexuals should not hold public office in Malaysia (Kanaraju 2007). Due to the intense public discrimination against nonnormative genders and sexualities, advocacy work on behalf of LGBTQ people must occur under the guise of sexual health awareness; the PT Foundation (founded in 1987) is one of the leading organizations in this regard, regularly organizing events for queer people in Malaysia.

**Body 2 Body**

In terms of the queer literary output from Malaysia, one of the most notable texts is the pioneering anthology of fiction and nonfiction *Body 2 Body*, edited by Jerome Kugan and Pang Khee Teik. The collection’s twenty-three chapters, most of which are autobiographical, present a rich and varied representation of queer life in Malaysia that is the first of its kind. Kugan and Teik begin their introduction to the volume by recounting that in 2003, while visiting a university, the minister of national unity and social development declared that universities were being run by “soft men” and highlighted the need to toughen up the effeminate boys of Malaysia. Ultimately, some universities responded by implementing boot camps run by army men, after which many boys “threw fabulous parties in camouflage drag” (Kugan and Teik 2009, 2). The rest of the book follows in this vein of humor and pathos as the contributors describe the daily struggles involved with being queer in a homophobic society. Themes include coming out to family, being trapped in oppressive community structures, and escaping violence and stigma.

Brian Gomez’s “What Do Gay People Eat,” the first story, is an account of a father waiting to
welcome his son’s boyfriend and wondering how to entertain him. Written in a humorous style, it brings up many issues around “naming” and recognition. The father relates that hearing the phrase “Prasad and his boyfriend” still makes him feel strange, but over the course of the story, his ignorance turns to acceptance and even advocacy when he confronts a homophobic man in a barbershop. Another notable story is Zed Adam’s “The Old Fig Council,” a surreal tale about animals and humans that opens with the death of a man in a pink shirt in the forest and the animal council swinging into action to see that the guilty accused of murder is punished. It is an allegorical tale of homophobia and redemption.

© LAI SENG SIN/AP PHOTO

Screenwriter and Producer Raja Axmi Raja Sulaiman during an Interview for Her Movie Dalam Botol, 2011. Despite its sometimes misinformed and unrealistic treatment of the trans characters, Dalam botol was nevertheless hailed as one of Malaysia’s first queer feature films to become a box-office success.

Most of the stories deal with middle-class English-speaking characters, and the perspective of the editors is quite urban-centric. The characters are mostly young and work in white-collar jobs or go to college. Their language (peppered with Malaysian colloquialisms such as lah and appa) situates the stories in a Malaysian context, giving them local authenticity. Despite the urbanity and affluence of the characters, the stories deal with issues of state repression, violence, and struggles with community intolerance. The chapters also celebrate love and eroticism. As the first, pioneering queer literature collection, Body 2 Body is an important addition to the narrative of same-sex sexualities in Malaysia.

Queer Cinema
Cinema plays an important role in social activism by representing the sociocultural realities of the contemporary moment to imagine new possibilities of living. Through subversion of heteronormativity, it provides a “queer” way of experiencing popular culture. Cinema in Malaysia, as in other countries of the Global South, becomes a site where the boundary between tradition and modernity is contested. There are numerous films produced in Malaysia that offer representations of queerness as a form of resistance, provocation, and possibilities. Khir Rahman’s *Dalam botol* (2011; In a bottle) is hailed as one of Malaysia’s first queer feature films to become a box-office success, despite its queer aesthetics and support for nonheteronormative lives. The film tells the story of a gay couple, Ruby and Ghaus, whose relationship begins to falter after Ruby undergoes a sex reassignment surgery. Rejected by her lover, and following a personal tragedy, Ruby sets off on a path of self-discovery. Despite the movie’s sometimes misinformed and unrealistic treatment of its trans characters, Joe Yan (2013) argues that it marked a significant moment in Malaysian cinema. Prior to this, filmic representations of gay and trans characters had been limited to supporting characters or those providing comic relief; with this film, queer characters moved from the periphery to center stage. The film is credited with “normalizing” queerness by depicting transsexuality and homosexuality as viable alternatives to heterosexuality. A more critical view is taken by Alicia Izharuddin (2011), who argues that the film perpetuates the conflation of being gay and being trans, where sex reassignment surgery is seen as the ultimate goal, and that the film has been used by a homophobic media as a cautionary tale. According to her, Malaysian independent films are engaging much more positively with LGBT issues than feature films such as *Dalam botol* have.

There are a few other films that also have been significant in the nascent queer cinema movement in Malaysia. Osman Ali’s documentary *Bukak Api* (2000; To open fire), which tells the story of mak nyahs (Malaysian male-to-female transsexuals), was banned soon after its release due to its sympathetic portrayal of sex workers and trans people. Andrew Hock Soon Ng (2012) argues that the film challenges the national construction of identities by directly and indirectly attacking the country’s attempts to modernize and erase “what it deems vulgar and anomalous” (119). In reference to the film’s use of reenactments to achieve authenticity, Hock Soon Ng maintains that although this compromises the film’s “truth value” (2012, 125), it was essential in order to capture the voices of disenfranchised groups who are constantly subject to policing and surveillance.

Mien Ly is another important figure in Malaysian video art, whose work is hailed by scholars such as Izharuddin (2015) for challenging patriarchal and hetero-normative society in Malaysia. In addition to her work as a filmmaker, she is also an activist who set up a filmmaking cooperative, organized a sexuality arts and rights festival, and is a regular speaker at international queer and lesbian feminist conferences and film festivals. Two of her films, *My Confession Diary* (2005) and *2 Boys, 2 Girls and a Beat-Up Car* (2009), are hailed as landmark films with themes of female sexuality and cultural transgressions that have contributed to the dialogue of decolonization and feminist articulation of queer theory.
in Malaysia. Izharuddin (2015) argues that these films have an ethnographic quality that subverts the normative paradigm of First World feminists and male ethnographers speaking for the subalterns.

The films discussed here provoke political dialogue about how queerness is treated in Malaysian culture and society. At the same time, they also represent a radical approach in the ways survival and protest strategies are being rethought, through popular culture and art, by the country’s queer communities. Notwithstanding the criticisms of these films and their representational politics, it is important to understand the activism inherent both in the making of the films and the viewing of them by the general public in the context of the increased surveillance of queer bodies by Malaysian state authorities. In that regard these kinds of films offer a critical discourse around queerness and also (demanding) multiple interpretations.

**Influence of the Internet**

To conclude, it is essential to mention the growth of virtual communities in Malaysia, especially in places like Kuala Lumpur. New media and information technology have had a significant role in the development of queer communities and queer socialization all over the world, and Malaysia is no different. The lack of open and friendly public spaces for LGBT people has prompted an increase in website/webzines and social media spaces for community building and consciousness-raising. Yunmei Wong (2013) argues that while the growth of information technologies in Malaysia has allowed certain social processes to accelerate the building of forums and online communities, it has also led to a rise in Islamic fundamentalism through the policing of these digital spaces. Nationalism and religion are important aspects of identity and belonging in Malaysia. The struggles of LGBT people to be recognized as citizens of the country is ongoing. In addition to political and civil lobbying, art and public culture have begun to play an important role in offering critical discourse and dialogue.

Hock Soon Ng, Andrew. “The Politics of Reclaiming Identity: Representing the Mak Nyahs in

Marches on Washington

NADINE SMITH
Executive Director
Equality Florida, Saint Petersburg

The series of national marches on the US capital by the LGBTQ community between 1979 and 2017.

Marching on the US capital has become a rite of passage for social justice movements seeking to capture the transformative power of Martin Luther King Jr.'s “I Have a Dream” televised speech from the Lincoln Memorial as it beamed into American living rooms in 1963. Since then, various movements have sought to issue similar clarion calls from that location in Washington, DC, asking Americans to join in the struggle against injustice. For the LGBTQ community, these gatherings have held an added allure. While many LGBTQ individuals fled their hometowns to more supportive urban enclaves, others remained in small towns and rural communities where being “out” posed a physical danger and an economic hazard. For a community that has had to fight discrimination, violence, stigma, and the invisibility of the closet, these mass gatherings have been a potent way to break down the deep sense of isolation.

In 1965 about a dozen lesbian and gay pioneers took their inspiration from those civil rights marchers who had donned their Sunday best to demand dignity and justice two years earlier. The effort was led by Frank Kameny (1925–2011), who had been dismissed from his position as an astronomer in the US Army Corps of Engineers' Army Map Service in Washington, DC, for being gay. Kameny formally appealed his firing by the US Civil Service Commission in what was the first-known civil rights claim based on sexual orientation pursued in a US court (Chibbaro 2006). Kameny's march was also backed by Jack Nichols (1938–2005), cofounder of the Mattachine Society of Washington, DC, which was established in 1950 as one of the first major homosexual political organizations in the United States.

The group of ten protesters consisted of seven men and three women, representing the Mattachine Society and the Daughters of Bilitis, the first lesbian civil and political rights organization in the United States. In addition to Kameny and Nichols, the group included Gail Johnson, Gene Kleeberg, Judith Kuch, Paul Kuntzler, Perrin Shaffer, Jon Swanson, Otto Ulrich, and Lilli Vincenz. On 17 April 1965 that small gathering of gay men dressed in dark suits and lesbians in conservative dresses held a picket line outside the White House and the Pentagon calling for an end to the government's ban on employing “homosexuals.” That
was the last time such a rigid dress code would accompany a call to rally in the nation's capital. The antiwar movement, feminism, and the growing counterculture made such assimilationist strategies anathema to movement leaders who believed in mass action. And just around the corner was the brutal confrontation at the Stonewall Inn in New York City in June 1969 that would become the emblematic start of the modern movement for LGBTQ rights.

A decade of steady cultural and political gains followed the Stonewall rebellion where bar patrons fought back against the routine practice of police harassment: groundbreaking literary works; gay visibility on national television; the formation of national religious, political, and legal organizations; and the first “out” gay person elected to office. And with that progress came a national backlash led by the former beauty queen and Florida orange juice spokesperson Anita Bryant (1940–).

First National March on Washington for Lesbian and Gay Rights, 1979. An estimated 100,000 people attended this march in Washington, DC

First National March, 1979

While many raised the possibility of a national march, Harvey Milk (1930–1978), San Francisco city supervisor, is generally acknowledged as the first to call for a gathering in Washington, DC, which he did during his 1978 Pride Week speech. A series of false starts and regional disagreements stalled the planning, but Milk's assassination in November 1978 broke the logjam, and national coordination began. The march, officially titled the National March on Washington for Lesbian and Gay Rights, was structured to ensure
diverse leadership, with 50 percent women and 20 percent “Third World” leadership. With a relatively short time to organize, an estimated 100,000 marchers strode down Pennsylvania Avenue and passed the White House on 14 October 1979.

The impact was profound. “After Stonewall, the 1979 march on Washington took us to a new level. It put us on the map as a large and serious movement,” said Leslie Cagan (1947–), a longtime social justice organizer who attended and would go on to organize the next big march in 1987. “Even for those who lived in urban centers, this was a new experience. We were just finding out that we really were everywhere” (quoted in Smith 2000, 442). Cagan had a long history of working on peace and justice campaigns, including Mobilization for Survival, an effort to end the nuclear arms race and the reliance on nuclear power. In the aftermath of the March 1979 disaster at the Three Mile Island nuclear power plant in Pennsylvania, Mobilization for Survival was able to draw 100,000 protesters to Washington, DC. Cagan’s experience and connections proved valuable as the support for a march began to grow.

**Second National March, 1987**

The beginning of the AIDS epidemic and its disproportionate impact on the US gay population was cause for even greater mobilization. The governmental indifference in the midst of the plague galvanized the community and drove the desire to march to the doorstep of President Ronald Reagan (1911–2004), who was unwilling to say the word AIDS let alone muster government resources to save lives. In the midst of march planning, the community was served another devastating loss as the US Supreme Court upheld the right of states to ban sodomy in 1986. The *Bowers v. Hardwick* decision drew outrage and bolstered attendance at the 1987 march—also called the National March on Washington for Lesbian and Gay Rights—inspiring civil disobedience action in conjunction with the march. More than 600 people were arrested in a demonstration in front of the Supreme Court. While the 1979 march drew mostly from the urban core, the 1987 march brought in people from smaller communities as the number of marchers swelled to 500,000. For those who traveled from rural communities and small towns, the march was an antidote to the isolation and an inspiration that led to grassroots organizing beyond the major urban areas where LGBTQ people fled to escape the closet.

The election of Reagan’s vice president, George H. W. Bush (1924–), as president in 1988 prompted virtually no change in either the government’s AIDS policy nor its hostility toward the LGBTQ community. Jesse Helms (1921–2008), a Republican senator, pushed homophobic amendments, and the Far Right launched antigay crusades in state legislatures ranging from Montana to Florida. In Colorado, voters in 1992 passed a ballot measure that repealed all existing nondiscrimination protections, including those involving sexual orientation, and prohibited the passage of future laws. The action triggered a national boycott of Colorado led by civil rights organizations, major companies, and celebrities.
Within seven months of its announcement, the Colorado boycott had garnered a coalition of more than 100 groups. About sixty US municipalities severed ties with Colorado, and sixty companies canceled meetings and conventions. New York City divested its stock holdings in all Colorado companies. Ziff-Davis Publishing canceled plans to relocate to Colorado, a move that cost the state an estimated $1 billion in revenue over five years. That grassroots fire helped to reignite the push to converge on Washington in greater numbers than before.

**Third National March, 1993**

The decision was hotly debated, and a date was set after a lengthy process of local, state, and national convenings that required gender parity and 50 percent people-of-color representation from each of seventeen geographic regions. The platform of the 1993 march differed little from the previous march and included these seven planks:

1. We demand passage of a Lesbian, Gay, Bisexual, and Transgender civil rights bill and an end to discrimination by state ... military; repeal of all sodomy laws and other laws that criminalize private sexual expression between consenting adults.

2. We demand massive increase in funding for AIDS education, research, and ... medical research and health care.

3. We demand legislation to prevent discrimination against Lesbians, Gays, ... adoption, and foster care and that the definition of family includes the full diversity of all family structures.

4. We demand full and equal inclusion of Lesbians, Gays, Bisexuals, and Trans... system, and inclusion of Lesbian, Gay, Bisexual, and Transgender studies in multicultural curricula.

5. We demand the right to reproductive freedom and choice, to control our own ... discrimination in all forms.

6. We demand an end to racial and ethnic discrimination in all forms.

7. We demand an end to discrimination and violent oppression based on actual or perceived sexual orientation, identification, race, religion, identity, sex and gender expression, disability, age, class, AIDS/HIV infection.

("PLATFORM" 1993)

But tensions that had been brewing between what could be broadly defined as assimilationists versus liberationists had bubbled to the surface. Liberationists saw the planks and the detailed demands contained within each as aspirational. To them, the document announced the LGBTQ movement as part of the civil rights lineage. Assimilationists described the platform as a utopian leftwing laundry list that would be used as fodder by the Far Right to discredit efforts to secure equal rights.

The march’s official title attempted to accommodate both sides and navigate the bisexual activists’ demands for visibility: March on Washington for Lesbian, Gay and Bi Equal Rights and Liberation. A long and contentious vote kept the newly emerging word transgender out of the title; instead, gender expression was embedded into the march preamble.

As the organizing for the march proceeded, something unexpected began to unfold in the
presidential election that would change the tenor of the march. Bush was expected to win reelection handily, but the Democratic governor of Arkansas, Bill Clinton (1946–), began to surge. He was dubbed the Comeback Kid, and young people were drawn to his campaign, which reached out with an accessible, youthful message that embraced the LGBTQ community.

By the time the march kicked off on 25 April 1993, the dread and anger that had sparked the organizing was eclipsed by a sense of hope and possibility. That optimism was a factor in drawing a record-breaking 1 million marchers to the capitol building in an event that drew more media coverage than any previous march (Smith 2013). The 1993 march sparked the exponential growth of local and state organizations and the hope that national legislation finally had a chance to move forward. But those expectations were snagged in the gridlock of federal politics, and the need to carve out progress at the local and state level began to gain greater currency.

**Twenty-First-Century Marches**

In 1998 a newly formed federation of statewide LGBTQ organizations called for fifty state marches called Equality Begins at Home. The grassroots action was widely seen as a counterpoint to the call for another national march in 2000. The latter event, dubbed the Millennium March on Washington for Equality, rejected the organizing model of the earlier marches and introduced corporate sponsorship. The march served as a flash point for the old tensions between assimilation and liberation. Law enforcement estimated the rally crowd at 200,000. Other related events drew strong attendance as well, but the event ended with significant debt (Gallagher 2001).

By the time rumblings began for another march to be held in 2009, many questioned whether marches were worth it. Democrat Barney Frank (1940–), the first openly gay member of the US Congress, famously discouraged people from participating in the 2009 march on Washington by insisting that the march was “a waste of time at best” and “an emotional release” that does little to cause change. “The only thing they’re going to be putting pressure on is the grass” (quoted in New York Daily News 2009).

But crowds returned, sparked in large part by the passage of a series of state amendments banning same-sex marriages. The 2009 National Equality March was in some ways a recalibration following the Millennium March. Speaking slots were largely reserved for new and emerging movement voices and the primary organizing push came from a cadre of activists who saw the LGBTQ organizational establishment as too reluctant to push the administration of President Barack Obama (1961–) on issues. The event relied on grassroots networks organized largely online to get marchers to the capital and drew a crowd that matched the previous march with an estimated 200,000 in attendance.
Another march, held on 11 June 2017, came in the aftermath of the election that put businessman Donald Trump (1946–) in the White House. Despite a few public pledges to support LGBTQ rights, Trump's campaign included prominent Far Right anti-LGBTQ activists, and his vice presidential pick, Mike Pence (1959–), had ushered in one of the most homophobic laws in the country. Feeling threatened, members of the LGBTQ community felt compelled to demonstrate for their rights. They also drew inspiration from the successful Women’s March—a January 2017 event that was initiated by a call from “a grandmother in Hawaii” via social media—with a New York–based gay activist making a similar call for a demonstration for LGBTQ rights. While many organizations debated whether to support an effort so antithetical to the organizing structures of the past, most took the lesson from the Women’s March and got onboard. Through social media, the call to march was changed from being the sole province of organizations with the infrastructure to support the effort to a process that relied on catching lightning in a bottle with a viral post. Despite limited resources and a short window to mobilize, the march drew a crowd estimated by organizers at near 200,000.

The evolution of march organizing from grassroots infrastructure to individual call to action makes Frank’s question a salient one. What is the value of these mass marches in the nation’s capital? How should their value and impact be measured? Although marches are often measured by attendance and media coverage, a more accurate analysis has to take into account the ripple effects. The same structure that mobilized hundreds of thousands to march became the seeds of new national, state, and local groups. And for a community that lived in isolation and fear of government hostility, marching to the center of political power was potent and life changing. Many of the items on the agendas of the 1987 and 1993 marches that seemed so distant and unimaginable are now the law. And the prevalence of state-based LGBTQ advocacy organizations can be traced back to the local activists who returned to their hometowns to fight for basic protections. The success of a march is not in the immediate fulfillment of its demands. It sets a goal for a community to aspire to collectively. It creates an army of activists who know they are not alone. And for many it is the first time they see people who affirm that their lives and liberty are worth fighting for.

Marriage Migration in Asia

HSIN-CHIEH CHANG
Assistant Professor, Institute of Health Behaviors and Community Sciences
National Taiwan University

The migration of LGBTQ persons for reasons of marriage between Asian countries.

Since the turn of the twenty-first century, the social, economic, legal, and cultural impact of intra-Asia marriage migration has received considerable attention from a wide range of scholars and policy makers. Most intra-Asia marriage migration reflects the movement of women from less developed to wealthier countries. Major migrant destinations include Taiwan, South Korea, Singapore, Hong Kong, and Japan. These societies share similar demographic features, such as low fertility, an aging population, and delayed age at first marriage. Among these migrant-receiving societies, the percentages of foreign-born migrants are higher in the city-states of Hong Kong (39.1%) and Singapore (46.0%) (UNDESA 2017); the figures remain relatively low in Taiwan (5%), South Korea (3.1%), and Japan (1.8%) (Iwabuchi, Kim, and Hsia 2016).

Governments in these emerging migrant-receiving societies generally consider marriage migrants to be legitimate citizens, while other migrants are seen as temporary residents. One possible reason for this distinction is the strong emphasis on the values of marriage and family in these societies, as well as the practice of filial piety, rooted in the historical influence of Confucian ideology (Wang and Hsiao 2009; Yang and Lu 2010). Consequently, the LGBTQ social movement and the same-sex marriage legalization process in these societies have raised heated debate, with some challenging the general public and policy makers to reflect societal changes and others arguing for continuity in traditional Asian values and everyday practices on gender, kinship, marriage, and the family.

More than two dozen countries had legalized same-sex marriage globally as of 2018, and another nineteen countries recognized civil unions and common-law marriages; none of these countries, however, is located within Asia. According to a 2016 survey on attitudes toward the LGBTQ population conducted by the International Lesbian, Gay, Bisexual, Trans and Intersex Association (ILGA), 48 percent of respondents from fifteen countries in Asia did not agree that same-sex marriage should be legalized, while 26 percent held more positive attitudes toward same-sex marriage (Carroll and Robotham 2016). In comparison with other continents, Asia appears to be more open (26%) than surveyed countries in Africa (19%) regarding the legalization of same-sex marriage, yet Asia falls behind the
Americas (35%), Europe (41%), and Oceania (56%) (Carroll and Robotham 2016). In a similar fashion, Europe is the only geographical region in which no country criminalizes consensual same-sex sexual conduct, while twelve countries in Asia and thirty-three in Africa continue to hold discriminatory laws that are considered a violation of human rights in other countries (Wilkinson et al. 2017). Importantly, the abovementioned reports identify wide variation across different subregions within Asia, calling for a subtle understanding of the ongoing LGBTQ movement across Asian societies that are in various stages of social, economic, civic, and religious development.

This entry situates the ongoing LGBTQ movement in the context of intra-Asia marriage migration, with a primary focus on population movement within or toward Asia. The entry begins with the prospects and challenges facing the LGBTQ movement in three subregions: East Asia, Southeast Asia, and South Asia and others. Next, the entry presents Australia’s experiences of accepting same-sex relationships as the basis for immigration as the starting point for further evaluating Taiwan’s potential for accepting queer migration, given that it is the only migrant-receiving society in Asia that is on its way to legalizing same-sex marriage. To engage with the nexus of the LGBTQ movement and intra-Asia marriage migration to Taiwan, the entry proposes a few points of concern through delineating the differences between potential same-sex intra-Asia intermarriages that are romance-based and tend to be socioeconomically homogenous and the current phenomenon of intra-Asia heterosexual intermarriages that are proportionally commercially arranged and hypergamous (Chang 2014).

**East Asia**

Since the late 1990s, the LGBTQ movement—both at local and transnational levels—has made major progress in East Asia, showcasing visible queer spaces and communities, especially in large cities. Ever since the first pride parade took place in Taipei in 2003, regular pride parades and festivals in Taipei, Shanghai, Tokyo, and Seoul have become occasions to further publicize these cities’ growing LGBTQ populations, creating a public dialogue for formal recognition of sexual minorities and the diversity of gender identities. Generally speaking, countries in East Asia demonstrate tolerant attitudes toward same-sex marriage due to their advanced economic development and the influence of Buddhism (Adamczyk 2017a). In 2016, 33 percent of respondents in Japan and 31 percent in China expressed positive attitudes toward the legalization of same-sex marriage (Carroll and Robotham 2016).

Homosexuality is considered legal in most countries in this subregion, except within certain segments of society, such as the South Korean Army (Hancocks and Suk 2017). In Japan and Taiwan, registration of same-sex partnership is possible at the municipal level. In Taiwan, the legislature proposed bills legalizing same-sex marriage as early as 2003. The Taiwanese constitutional court recognized marriage rights for homosexual couples in May 2017,
mandating that the civil law be amended accordingly within two years. In China, several proposals for legalizing same-sex marriage were denied in the National People's Congress between 2003 and 2016 (Jeffreys and Wang 2017). In Hong Kong, the first wave of the LGBTQ movement (1979–1991) successfully decriminalized male homosexual conduct, while the current phase, the fourth wave, has encountered significant setbacks both within Hong Kong's LGBTQ community and from Christian groups that promote monogamous heterosexual family values (Kong, Lau, and Li 2015). In summary, efforts to legalize same-sex marriage accompanied rapid modernization and democratization processes across East Asia, but obstacles posed by various factors have led advocates to seek recognition and political support on the global stage.

**Southeast Asia**

Across the booming economies within Southeast Asia—that is, those belonging to the Association of Southeast Asian Nations (ASEAN)—concern about human rights, including media freedom and legal recognition of the LGBTQ population, has been noted in recent years (Mosbergen 2015; Wilkinson et al. 2017). A majority of ASEAN countries consider same-sex sexual conduct to be legal. The exceptions are Malaysia, Myanmar, Brunei, Singapore, and the South Sumatra and Aceh provinces in Indonesia (Carroll 2016; Manalastas et al. 2017). Based on data from the World Values Survey, the percentages of respondents rejecting LGBTQ individuals as their neighbors were lowest in Vietnam, Singapore, and the Philippines (around 30%); slightly higher in Thailand (40%); and the highest in Malaysia (59%) and Indonesia (66%) (Manalastas et al. 2017).

Despite Southeast Asia's historically diverse indigenous expressions of gender, a lack of full attention toward human rights can be attributed to the pursuit of economic advancement and the work-in-progress democratization of countries like Myanmar and Laos. Islam plays a significant role in Malaysia, Brunei, and Indonesia, where same-sex sexual behaviors are framed as a moral problem (Adamczyk 2017b; Carroll 2016). Singapore, the city-state with the highest gross domestic product (GDP) and a higher proportion of foreign-born immigrants, simultaneously propagates strict laws (including the possibility of imprisonment) and tolerant attitudes, suggesting a somewhat problematic contrast. Since 2008, the annual Pink Dot event organized by and for the Singaporean LGBTQ community has gained popularity and corporate sponsorship (Wilkinson et al. 2017). According to one local LGBTQ activist describing the current penalty against male homosexuality, “Singapore is a case study of what happens when you have economic success without human rights” (Mosbergen 2015)—a situation in some ways similar to Hong Kong’s. As China and Laos attempt to copy Singapore’s laws and regulations against the queer community, the LGBTQ populations in this subregion may fall into increasingly disadvantageous social and economic positions.

Singapore's strict laws and penalties against homosexuality make it an unlikely destination
for same-sex transnational couples. Among the high proportion of foreign-born migrants to Singapore, interracial or interethnic transnational gay or lesbian couples may face immigration restrictions. Foreign-born partners either have to leave the country and return regularly for visa renewals, or they must rely on renewable work permits that allow them to stay for an extended period to be with their native partners. Under Singapore’s Immigration Act, persons with AIDS or infected with HIV are “members of the prohibited classes” and cannot immigrate to Singapore (Singapore Statutes Online 2008). In contrast, Thailand and Vietnam, two other ASEAN countries that will be considered aging societies by 2030 (Lee 2017), have begun to show less restrictive attitudes toward LGBTQ populations. In September 2015 Thailand enacted a groundbreaking Gender Equality Law intended to protect LGBTQ individuals from gender-based discrimination (UNAIDS 2015).

South Asia and Other Asian Countries

Compared to East Asia and Southeast Asia, countries in South Asia, West Asia, Central Asia, and elsewhere in Asia that criminalize same-sex sexual conduct outnumber those that acknowledge it by law (Carroll 2016). Potential reasons for this disparity may include the lack in some regions of rapid economic development, the strong influence of religion in some countries, and the distraction of nation-building in young democracies. Consequently, these countries have little potential to become destinations for same-sex partnership migration. One exceptional case is Israel, which recognizes some same-sex civil partnerships and has hosted the Tel Aviv Love Parade since 1997, making Israel the most LGBTQ-friendly nation in the Middle East (Hodges 2017).

Australia

Along with Canada, Belgium, and the Netherlands, Australia, in 1985, became one of the first countries to accept same-sex partnership migration. Between 1997 and 2004, 272 gay men from countries in Asia successfully settled in Australia through same-sex partnership applications, outnumbering foreign-born gay partners migrating from the United Kingdom and Ireland, other European countries, North America, and Africa (Yue 2008). Movements for LGBTQ rights gradually emerged in several Asian countries during this period, even as Australia’s multicultural immigration policies shifted to the post-9/11 border-control ideology, when Australia’s welcoming public attitude toward Asians was replaced by intolerance and hostility. However, such transitions, at both the state and the societal levels, did not stop Asian gay and lesbian partnership migration to Australia. The largest pools of visa applications came from Indonesia, Thailand, and the Philippines (Yue 2008). With Australia’s legalization of same-sex marriage in December 2017, the demographics of same-sex marriage migration may experience further changes in the years to come.

Asian Queer Migration to Taiwan
Taiwan's progress in legalizing same-sex marriage, beginning in May 2017 with the Taiwanese constitutional court's decision, is a major breakthrough for the LGBTQ rights movement within Asia. Over its three-decade experience of accepting marriage migrants and migrant workers, Taiwan is slowly learning to become a host society. As Taiwanese civil laws are amended by May 2019, there may be a rise in same-sex marriage registrations involving a non-Taiwanese spouse. In other words, the potential legalization of gay marriage may become a new pull factor in immigration flows to Taiwan.

There are a few possible scenarios for Taiwan's future. First, foreign-born LGBTQ migrants who are current alien resident card holders may decide to apply for citizenship under the Immigration Act through marriage registration with partners who are Taiwan passport holders. Second, considering that large numbers of foreign students, foreign visitors, and migrant workers in Taiwan come from other Asian countries, Taiwan may become an even more favorable travel, study, and work destination for LGBTQ individuals from other parts of Asia. Third, based on the assumption that legalization of same-sex marriage will lead to more positive attitudes toward the LGBTQ population (Hooghe and Meeusen 2013), more foreign-born LGBTQ migrants may consider extending their stay in Taiwan without marrying a local. They might decide to continue living in Taiwan because its social and legal systems are expected to become more gay-friendly after the law is enacted.

Taiwan's experience of hosting female marriage migrants from China and Southeast Asia differs from its hosting of same-sex spouses from elsewhere in Asia or from Western countries. Two key characteristics that distinguish the former from the latter are the intermarried couples' socioeconomic backgrounds and patterns of assortative mating. While intra-Asia transnational marriages are usually composed of female marriage migrants from humble backgrounds who “marry up” in a richer country (though most Taiwanese husbands are also from humble backgrounds), queer marriage migrants are more likely to be educated individuals marrying Taiwanese partners with above-average social capital. While both are considered nonconventional family forms in Taiwan, the marital power dynamics of the former conform to the traditional Asian practice of female hypergamy (or marrying a person of superior caste or class). Although most same-sex couples follow the practice of status homogamy (i.e., marrying a person of similar socioeconomic background), same-sex marriages involving an immigrant spouse pose challenges to traditional Asian family values.

In addition, Taiwan's current immigrant integration policies and programs are designed for Southeast Asian and Chinese marriage migrants, whose needs in gaining formal education in Taiwan, becoming part of the labor force, raising bicultural children, and so forth, are specifically addressed. In order to host LGBTQ immigrant spouses, the Taiwanese government will have to create an LGBTQ-friendly social, economic, cultural, and civic environment, which may involve substantial crosssectoral coordination, especially with the medical and health-care system. Taiwan will also have to establish legal processes for
surrogacy and adoption for both local heterosexual and LGBTQ couples.

Social integration among immigrants and the issue of prejudice and discrimination remain major challenges for emerging migrant-receiving societies like Taiwan. When the first waves of Southeast Asian marriage migrants and blue-collar migrant workers arrived in the 1990s, they suffered from significant prejudice and everyday discrimination in the community and in the media. It took more than two decades for the society to gradually acknowledge migrants’ contributions, especially marriage migrants who married into Taiwanese families (Chang, Chen, and Fu 2015). Research indicates that legalization of same-sex marriage in Europe is associated with positive attitudes toward the LGBTQ population, which may lead to a gayfriendly social atmosphere (Hooghe and Meeusen 2013). For the moment, we do not have sufficient evidence to predict whether such a scenario may apply to Taiwan and other East Asian migrant-receiving societies as well. It may take years before there is social acceptance of LGBTQ families, especially migrating spouses, in the region, both at the community and at the societal levels.

BIBLIOGRAPHY

The history of the struggle to legalize same-sex marriage in the countries of Argentina, Brazil, Colombia, Mexico, and Uruguay.

Despite its reputation as a highly conservative region with strict gender roles and prominent machismo, Latin America has defied stereotypes in its implementation of same-sex marriage rights. Outside North America and western Europe, it is the region of the world where this right has been expanded the furthest. In effect, by early 2018, 80 percent of Latin Americans lived in a country in which same-sex marriage was accessible to all citizens.

**Historical and Cultural Context**

A genealogy of same-sex marriage in Latin America must take into account broader cultural and historical aspects of the regulation and understandings of sexuality in the region. While generally perceived as having rigid regulatory social and legal systems, sexuality in Latin America has historically been rather fluid. The colonial enterprise attempted to impose strict ideas about sexuality that were prevalent in Europe on societies that had very fluid understandings of sexuality and what amounted to appropriate sexual behavior (Williams 1986). However, because processes of postindependence state formation in nineteenth-century Latin America were characterized by top-down dynamics that were not completely successful in transforming preexisting social relations, a gap between expected social norms and their compliance has historically survived. Most countries instituted a separation between the dominant Catholic Church and the state in the mid-nineteenth century, and while the church has continued to play an important role in dictating and upholding social mores, adherence to these norms has for the most part been limited to the public sphere. A significant degree of sexual freedom in intimate personal relations has therefore survived. Freedom in personal sexual relations has been reinforced by criminal codes that, at least in most Latin American countries, have not criminalized homosexuality since independence. With few exceptions, such as Chile, Latin American countries modeled their criminal justice systems at independence after the 1804 Napoleonic Code, which did not criminalize homosexuality.

**Sexual Rights**
Given that consensual same-sex relations in Latin America have not been criminalized, even under military rule, the politics of sexual rights, unlike elsewhere around the world, have not revolved around struggles to expand the basic negative right to practice one’s sexuality freely. Early efforts made by activists to wrest rights from the state focused on basic positive rights: the right of sexual expression. While homosexuality has not been a crime, during the late nineteenth and early twentieth centuries most countries enacted legal provisions that prohibited undertaking activities in public that would violate “morality and good customs” (Green 1999).

These provisions were generally adopted by municipalities and were systematically used by police forces to harass, detain, and extort homosexuals who violated the cultural norm of ensuring discretion in public. Within a generalized context of social mobilization in the region and abroad, Latin American homosexuals began to organize—as early as 1967 in Argentina—to demand an end to state violence and for the right to express one’s sexual and gender identity in public. Inspired by mobilization in western Europe and North America, gay and lesbian movements not only began to force national debates on the legal regulation of sexuality, but they gained, in many countries, the right to demonstrate collectively. Starting with Mexico in 1979, gay pride parades began to be held in several countries across the region (de la Dehesa 2010). Even in countries (in Central America and the Andean region) with stricter regulatory systems and higher levels of intolerance, states began to allow gays and lesbians to socialize in public and commercial places, such as restaurants and bars, as a result of pressure exerted by activists.

**Same-Sex Partnership Recognition**

The evolution of sexual rights in Latin America has most obviously varied cross-nationally. However, in several countries, the enactment of same-sex marriage rights was preceded by the extension of socioeconomic benefits to same-sex couples, a process that was counterintuitively linked to the advent of the HIV/AIDS epidemic. As the epidemic reached its climax and started to take its toll, before antiretroviral drugs became available in the mid-1990s, partners of those affected in many cases were unable to access medical services, visit their loved ones on their deathbeds, or keep the material possessions they had built together. Because most welfare systems at the time, with few exceptions, did not offer universal coverage and were based on a patriarchal logic, family members could only have access to them through heads of households. Most gays and lesbians therefore lacked coverage. As a result, as early as the mid-1990s in countries such as Argentina, Brazil, and Mexico, gay activism managed to wrest some medical, pension, and inheritance rights from the state (Díez 2015).

The logical next step, in the eyes of many activists, was to demand formal relationship recognition for same-sex couples through civil unions. After sustained mobilization in the face of stern opposition from socially conservative forces, subnational governments in
three of the four federal systems—again Argentina, Brazil, and Mexico, with the fourth being Venezuela—extended same-sex civil union rights. Federal systems provided the opportunity to press for these rights in jurisdictions in which state and nonstate conservative opposition was weaker and policy processes more accessible, such as the cities of Buenos Aires and Mexico City and the Brazilian states of Rio de Janeiro and Rio Grande do Sul. In Brazil, the extension of these rights took place through the judiciary. In Argentina and Mexico, on the other hand, the enactment of civil union laws was accomplished by local legislative assemblies, though the laws were later challenged in the courts. Several other states followed suit, and by 2018 ten countries had enacted similar legislation.

© AP IMAGES

Brazillian Gay Couple Celebrate Their Union at a Civil Registry Office in Jacarei, Brazil, in 2011. Same-sex couples in Brazil had been allowed to enter civil unions since 2004, but it was not until 2013 that they could legally marry. That year the Brazilian judiciary ruled that it was discriminatory to prevent same-sex couples from getting married and granted all civil unions marriage status.

### Same-Sex Marriage

Following the approval of civil union rights, gay and lesbian activists in Latin America began to push for same-sex marriage with some of the strongest and most visible activism occurring in Argentina and Mexico. By early 2018, same-sex marriage had been approved in five Latin American countries: Argentina, Brazil, Colombia, Mexico, and Uruguay, constituting more than 80 percent of the region’s population.
The processes by which these reforms occurred have varied and can be placed in three categories. In the first category are countries in which reform undertook a regular legislative process: Argentina (2010) and Uruguay (2012). In both countries, well-organized activists pushed for reform in national parliaments, and, after gaining support from sitting leftist presidents, reform was enacted, albeit with significant national debate. A characteristic shared by both countries is a lack of confessional parties and high levels of popular support for same-sex marriage.

Brazil and Colombia belong to the second category in which same-sex marriage rights were achieved through judicial processes. In both countries, significant opposition in national parliaments, mostly from socially conservative, religious politicians, repeatedly blocked any attempts at pursuing marriage rights through the regular legislative route. In Colombia, after the senate failed to comply with a ruling from the Constitutional Court ordering the congress to legalize same-sex marriage, the court ruled in 2016 that all Colombian couples, regardless of gender, could access marriage. Brazil’s legalization effort followed a two-step process through the judiciary. In 2011 Brazil’s supreme court ruled—based on lower-level court decisions that had granted civil union rights to same-sex couples—that marriage rights should be expanded to the entire population. Brazil’s National Justice Council (a court of cassation) followed suit and, in 2013, ruled that civil unions were discriminatory because they established an alternative system for gays and lesbians. The court thus ordered all civil unions in Brazil to be granted marriage status.

Mexico, given its unique type of federalism, represents a third, hybrid, category. Mexico is the only country in the region in which family law is administered by subnational levels of government. As a result, same-sex marriage reform has been both fragmented and judicialized. The approval of same-sex marriage in Mexico City in 2010 was followed by a strong backlash both from several states and from the federal government, which pushed the issue to the judiciary. After a complex process involving the granting of civil judicial injunctions called writs of amparo, Mexico’s supreme court issued a series of rulings on same-sex marriage. These involved the upholding of Mexico City’s reforms; the legal obligation of all states to recognize marriages performed in Mexico City; the unconstitutionality of explicit prohibitions of same-sex marriage by states; the granting of individual amparos to numerous same-sex couples, setting precedents in certain states; and, finally, in 2016, ordering all judges in the country to concede any amparo submitted by any same-sex couple.

**Explanations and Prospects**

The speed and scope with which same-sex marriage politics has unfolded have attracted a great deal of scholarly attention, most of which has focused on explanations for why same-sex marriage has been approved in some countries and not others. Political science research points to several factors. First, there appears to be an important association...
between levels of economic development and support for same-sex marriage. While public opinion does not always translate into policy, same-sex marriage has generally been approved in the countries that are most economically developed and that show the highest levels of support for such reforms (Corrales 2015). Research also shows that activism and well-organized, visible gay and lesbian social movements have been the main drivers behind reform (Encarnación 2016), and it should come as no surprise that same-sex marriage is legal in countries in which these movements are oldest. Argentina, the first country to have adopted same-sex marriage, saw the formation of the region’s first homosexual organization, Nuestro Mundo (Our World), in 1967. However, mobilization is not sufficient: the building of alliances with both state and nonstate actors has also been important (Díez 2015).

Scholarship also shows that three political institutions are important to understanding cross-national variation in same-sex marriage recognition. Federalism has allowed activists to access policy arenas in which favorable conditions exist, even when national forums are closed to them. This was the case in Brazil and Mexico (Marsiaj 2006). In addition, the existence of moderate, socially progressive political parties seems to be key in same-sex marriage recognition. In contrast to the more confrontational leftist parties found in countries such as Nicaragua and Venezuela, moderate parties like those in Brazil and Uruguay have provided important allies that have helped push for marriage reform (Corrales 2015). The third institutional factor has been the existence of strong and autonomous courts that have allowed for policy reform when legislative routes were blocked (Schulenberg 2012). In several countries in the region, socially conservative actors have gained strong political representation in national parliaments, making them what political scientists call “veto players.” These actors, associated for the most part with evangelical and Catholic groups, have been very successful in blocking legislative reform. However, these veto players have been circumvented in countries with strong judiciaries, such as Colombia and Brazil, where activists have been successful in persuading courts to declare traditional definitions of marriage unconstitutional. Same-sex marriage, then, is more likely to be approved in countries in which a combination of these factors exists.

The future of same-sex marriage in Latin America took an unprecedented turn in early 2018 when the Inter-American Court of Human Rights opined, upon a reference submitted by the Costa Rican government, that same-sex marriage is covered by the regional Convention of Human Rights and, as such, should be extended to all citizens. The ruling was binding for all twenty-four signatory countries and paved the way for making same-sex marriage a reality throughout the region. However, given the strong opposition in countries in which same-sex marriage has not yet been approved, governments are likely to ignore the ruling. As a result, a process of international judicialization is likely to unfold over the issue of same-sex marriage in Latin America.

Marriage, Same-Sex, in Taiwan

HOCHING JIANG
PhD candidate
American University, Washington, DC

The path to LGBT marriage equality in Taiwan, which became the first Asian country to recognize this right in 2017.

On 24 May 2017 the Justice of the Constitutional Court in the Judicial Yuan in Taiwan ruled that it is against the constitution to bar same-sex couples from getting married. This ruling in favor of same-sex marriage is regarded as a landmark decision for LGBT movements both regionally and globally. In the domestic sphere, the ruling not only extends the freedom to marry to nonheterosexual citizens of Taiwan but also emphasizes the equal rights of citizens regardless of sexual orientation. In the global context, media outlets often highlight the fact that Taiwan is the first country in Asia to legalize same-sex marriage because the ruling presents a historic moment for marriage equality movements across continents and encourages LGBT movements in other Asian countries.

Background of Activism on Legalizing Same-Sex Marriage

Although some social recognition of same-sex partnerships or nonheterosexual family units can be identified at various times, and among different ethnicities in Taiwan, the Civil Code recognizes marriages only between a man and a woman. This legal recognition privileging heterosexual couples rendered sexual minorities largely unseen in the governmental domain. Although the law never explicitly targeted and punished sexual minorities, the legal invisibility of sexual minorities still functioned as a kind of punishment by denying the existence and needs of sexual minorities.

In 1958 a lesbian couple first challenged the law by applying for a marriage license at the Taipei District Court, but the court rigidly decided that marriage was a union between a man and a woman. In 1986 Chia-wei Chi and his male partner also applied for a marriage license, and their case was also denied for the same reason. In response to Chi’s petition, the government maintained that “homosexuals are rare cases of abnormal deviants who mainly seek to satisfy their sexual desires against social morality” (quoted in Chien 2012, 188; translation by Hoching Jiang).

Although same-sex marriage did not become a major topic of social debate in Taiwan until the second decade of the twenty-first century, local LGBT movements and organizations
have been growing in response to various incidents related to LGBT experiences since the 1990s. Over the years, the topic of same-sex partnerships and marriage recognitions arose sporadically in public discussions. For example, the anthropologist Chi-nan Chen wrote an opinion piece in 1985 discussing the diversity of traditional marriage practices such as “ghost marriage” and arguing for the legalization of same-sex marriage (Chen 1986, 39–42). The Taiwanese filmmaker Ang Lee won several major awards for his works The Wedding Banquet (1993) and Brokeback Mountain (2005), both of which have explicit queer content. While his films did not directly address same-sex marriage, they encouraged public conversation and raised awareness of LGBT rights. In addition, an abundant number of literary works addressing same-sex sexualities have been published since the 1990s (Chi 2017), such as Eyu shouji (1994; Notes of a Crocodile [2017]) by Miaojin Qiu and Mo (1996; Membrane) by Ta-wei Chi.

The writer Yu-sheng Hsu and his same-sex partner openly held their wedding in 1996, and many celebrities and politicians attended the event to express their support. Over the following two decades, many gay and lesbian couples also made their same-sex weddings known to the public. To them, getting married was both a personal desire for recognition of their families and an activist act amounting to a demand that the government recognize their marriages and provide fair legal protection. The government, however, refused to do so. The Justice of the Constitutional Court dismissed Chia-wei Chi’s case without a further review in 2000, and the Taipei City Government also ruled against another gay couple’s petition for same-sex marriage in 2011 (Taipei City Government 2011).
Given these failures in court, local LGBT activism has been growing ever more vibrant and vocal in efforts to educate citizens about sexual minorities. Evidently, such activities have had an effect. In the 1980s the government viewed the family represented by Chia-wei Chi and his partner as a deviant sexuality, but social attitudes had shifted by the 1990s, when same-sex marriages started to be celebrated openly.

**Marriage Equality Movements in the Twenty-First Century: From Deviants to Equal Citizens**

Legalization of same-sex marriage was first proposed by the politician Bi-khim Hsiao in 2006. The Legislative Yuan, Taiwan’s parliament, quickly blocked this motion, on its first review. Yet, same-sex marriage was neither a major activist goal nor a hot topic among the public in 2006. The failure of the proposal was not regarded as a failure of the LGBT movement either.

There was, however, a growing activism to support lesbian and gay families more broadly in the first decade of the twenty-first century, leading to a more organized advocacy for the legalization of same-sex marriage. Among the major LGBT organizations, Taiwan LGBT Family Rights Advocacy took a grassroots approach to changing the social environment by representing LGBT families and educating the public about LGBT families. Another organization, Taiwan Alliance to Promote Civil Partnership Rights (TAPCPR), which comprises several LGBT and feminist organizations, focused on changing the Civil Code. The group worked with Chia-wei Chi to apply for a constitutional review for the third time in 2015, and the case finally went to the First Court in 2017. TAPCPR also worked with politicians to propose an amendment to the Civil Code in 2013. Its draft of the amendment sought to recognize various family structures, including same-sex marriage, civil partnerships, and multiple-person families ([TAPCPR 2013](#)). However, only same-sex marriage passed the first round of the bill review, and the amendment did not go further after the review.

After the victory of the Democratic Progressive Party in the 2016 elections, LGBT organizations soon began working with a few gay-friendly politicians to propose a new amendment to the Civil Code to recognize same-sex marriage. Subsequently, intense debates about same-sex marriage took place throughout Taiwan on a massive scale. Prior to this effort, same-sex marriage had been neither a major topic of the LGBT movements nor one of general public discussion in Taiwan. Same-sex marriage became the theme of
the Taipei, Taiwan, LGBT pride march only in 2013. The intense public debates happened only after the proposal of the marriage equality bill in 2016.

Since 2013, LGBT movements have followed two major approaches to achieve marriage equality in Taiwan. First, activists prompted politicians to propose the amendment to the Civil Code. Second, legal challenges were made to compel the government’s recognition of same-sex marriage, leading to the constitutional review in 2017.

Coincidentally, after the bill of marriage equality successfully passed the initial board review at the Legislative Yuan in December 2016, the Justice of the Constitutional Court took up Chia-wei Chi’s case from 2015 and issued Judicial Yuan Interpretation 748, demanding that the government recognize same-sex marriage. In this May 2017 ruling, the court not only insisted that the freedom to marry applies to same-sex couples but also recognized the socially and legally disadvantaged status of sexual minorities. More importantly, although Taiwan’s constitution does not explicitly address sexual orientation in considering the right to equality, the ruling states that “sexual orientation is an immutable characteristic” and that different legal treatments based on sexual orientation shall be governed by the right to equality in the constitution. Hence, the ruling specifies the right to equality for sexual minorities beyond the provision regarding the freedom to marry.

**Debating the Legalization of Same-Sex Marriage in Taiwan**

During the second decade of the twenty-first century, conservative Christian groups were actively campaigning against various LGBT issues (Da and Kao 2016; Huang 2017). Citizens associated with other religions tend not to take a religious stand either supporting or opposing same-sex marriage. Yet, some public figures in the Buddhist and Mazu communities emphasize the inclusiveness of their beliefs and advocate for LGBT rights (Lai 2012; Yang 2017).

However, because less than 5 percent of the population in Taiwan identify themselves as Christians (Fu et al. 2015) and most of the citizens do not share the Christian negative view of homosexuality, anti-LGBT Christian groups strategically present themselves only as concerned parents or professional elites, such as teachers and doctors, while intentionally playing down their religious backgrounds. They also form numerous groups in the name of protecting family values and a “traditional” definition of marriage. The local religious context makes the case of the same-sex marriage movement in Taiwan significantly different from those of other countries, such as the United States and South Korea, where religious texts are used literally against sexual minorities. Anti-LGBT groups in Taiwan ironically have to keep their Christian identities in the closet while appropriating cultural authorities to endorse their repressive views of sexual minorities.
Anti-LGBT groups put forward many reasons for opposing the legalization of same-sex marriage. They claim that homosexuality is unnatural, that gay men are a high-risk population for contracting HIV/AIDS, and that LGBT people cannot possibly be good parents, for example. These opposition groups object not only to acknowledging same-sex marriage but also to other policies and proposals enabling sexual minorities. To support their points, anti-LGBT groups often cite dubious research. However, the research studies they reference are either conducted by conservative religious institutions with clear biases or are obvious misinterpretations of more accepted studies. In addition, regional anti-LGBT groups in East Asia borrow discourses from North America and Europe, translating the information into Chinese to spread these ideas across borders.

The anti-LGBT attacks polarize social opinions, but they also paradoxically motivate LGBT individuals to act collectively and call out distortions of information. A common and effective strategy taken by LGBT activists is to expose how anti-LGBT groups willfully disseminate false information that directly contradicts knowledge supported by academic communities and professional associations around the world. Therefore, the global and regional circulation of LGBT information (or misinformation) also supports the pro-LGBT side.

In addition to the debates about legalizing same-sex marriage, the anti-LGBT groups also frequently attack the Gender Equality Education Act of 2004 and potential policy changes concerning conversion therapy. Their strategy is to repeatedly demonize sexual minorities with the aim of pushing the public to adopt a more conservative stand on LGBT issues. Anti-LGBT groups do not have a systematic approach, so they challenge the interests of sexual minorities on many fronts, not only same-sex marriage. Yet, across the many topics raised by the anti-LGBT groups, a central question is whether sexual minorities are equal to their heterosexual counterparts under the law. The debates do not necessarily concern the legalization of same-sex marriage but are rather about whether LGBT people are full citizens in a larger legal and civic sense. Although some LGBT individuals join the movement to legalize same-sex marriage out of a desire to get married, many participate mainly to counter the activities of anti-LGBT groups. Thanks to anti-LGBT attacks, the debate surrounding the legalization of same-sex marriage also becomes a platform for LGBT activists to educate the public about LGBT issues.

Moreover, in comparison with the same-sex marriage movements in many other countries such as the United States, where important material resources and access are closely tied to marriage licenses, Taiwan’s same-sex marriage debates have relatively few discussions of resource distribution and class inequality. Although the material aspects of marriage have been underlined by activists and scholars (Ding and Liu 2011; Taiwan Tongzhi Hotline Association 2016; Tseng 2013), the material aspect of marriage never became a focal point in the debate. A possible explanation for this omission could be that social inequality is less severe in Taiwan. For example, Taiwan has a universal health-care system in which all
citizens, regardless of their sexual orientation and marital status, have access to health care. In addition, Taiwan already has laws protecting sexual minorities from discrimination in employment and education. In other words, the oppression of sexual minorities in Taiwan is not closely associated with opportunities for class privilege and social mobility. Yet, many activists in the movement still raised issues of social inequalities in connection with sexual minorities in such areas as aging, disability, and labor. In short, it is not a distinct desire for marriage and material resources tied to marriage licenses that mobilizes LGBT communities in Taiwan to participate in the marriage equality movement; it is resistance to homophobia. The debates are more about equal citizenship for sexual minorities than about the right to get married, definitions of marriage, or ideas of romantic love embodied in marriage.

**Marriage Equality and LGBT Movements in Retrospect**

According to the Academia Sinica report *Taiwan Social Change Survey, 2012* (Chang, Liao, and Tu 2013), 52 percent of citizens supported the legalization of same-sex marriage before same-sex marriage came to the center of public discussions. This fact provides a critical reminder of the importance of looking beyond the marriage equality movement itself. One has to consider what the LGBT movements have done to change the overall social attitude that prevailed before 2013, as these efforts helped shape the debates and clearly contributed to the constitutional review in favor of LGBT rights.

It can even be argued that it is because the LGBT activists in Taiwan have been steadily working on educating the public about sexual minorities, instead of focusing on particular laws, that the marriage equality movement could obtain a 52 percent support rate before the amendment to the Civil Code was proposed in 2013. As strange as this may sound, the achievement of marriage equality in Taiwan happened because the LGBT movements in Taiwan never prioritized it. Finally, looking beyond the same-sex marriage movement and the celebration of being the first nation in Asia to recognize LGBT marriage equality, Taiwan’s LGBT movements provide a critical example of effective activism not centered on the legal domain. LGBT activists and their allies have a strong motivation to transform society, and the changes in the law that have occurred in the second decade of the twenty-first century appear to be at least a partial fulfillment of the broad goals advocated for by these movements.

Marriage, Universal, in Europe

MICHAEL STAMBOLIS-RUHSTORFER
Assistant Professor, American and Gender Studies
University of Bordeaux Montaigne, France

The legal and political landscape influencing recognition of same-sex couples, either in marriage or state-recognized partnerships.

Couples whose relationships the state officially endorses enjoy legal benefits, social recognition, and enforceable solidarity. Marriage has been the standard framework organizing these rights and responsibilities for European couples. Yet, until the late twentieth century, prevailing definitions precluded nonheterosexual couples from marrying. This left them in legal limbo and exposed them to discrimination. Before the 1980s, European same-sex couples had little, if any, possibility to organize inheritance, pension sharing, eviction protection in joint leases, foreign residency permits, joint health care, hospital visitation, child custody arrangements, shared parental authority, and hundreds of other formalities affecting their daily lives. LGBT Europeans and their allies pushed for reforms to overcome this systematic marginalization.

In 1989 Denmark became the first European country to create registered partnerships for same-sex couples providing some—but not all—of the rights and responsibilities associated with marriage. Other countries, sometimes after heated political battles, followed suit by creating regimes parallel to marriage for same-sex (and sometimes also different-sex) couples including Norway (1993), Sweden (1995), Iceland (1996), the Netherlands (1998), France (1999), and Belgium (2000). In 2001 the Netherlands became the first to open marriage to same-sex couples. Since then, the number of European countries formalizing same-sex relationships has increased rapidly. By early 2018, of the 48 countries in Europe (the 47 Council of Europe members plus Belarus), 15 (12 of which are members of the European Union) had marriage equality, and 11 others had registered partnerships. In addition, Austria had also legalized same-sex marriages, with the change taking effect at the beginning of 2019. Demographic data suggest that same-sex couples take advantage of these legal regimes to secure their relationships at different rates depending on the context (Waaldijk 2017). Table 1 provides details about the legal situation in each country.

Governments and civil society groups have resisted these advances. Opponents often argue that the state should not recognize same-sex couples because doing so would make it easier for them to raise children. Many had already, in fact, been creating families for decades
despite these hostile legal contexts. Responding to reactions against same-sex parenting, some European countries—examples include France, Germany, and Switzerland—gave same-sex couples legal recognition even as they explicitly prevented (and in some cases continue to prevent) them from adopting or having access to assisted-reproductive techniques.

**Types of Recognition**

Three legal regimes, each with decreasing levels of protection, may be available to same-sex couples depending on the jurisdiction. Marriage is typically the most expansive, internationally recognized, and symbolically charged and is therefore the most controversial. Indeed, many states developed the second type of regime, registered partnerships, precisely because they sought to distinguish marriage as uniquely limited to different-sex couples. Finally, in the most restricted way, same-sex couples may fall under the category of informal cohabitation that institutions may take into consideration when dealing with family affairs.

Each regime's content varies across national contexts. The contributors to a 2017 working paper edited by Kees Waaldijk note that, independent of the type of regime, certain policies, such as tenancy continuation and treating couples as a single fiscal unit, are more widespread than others, especially joint adoption and automatic recognition of nonbiological parents. This suggests that states are more willing to provide rights to same-sex couples but resist protecting their parent-child relationships.

**PACTE CIVIL DE SOLIDARITÉ (PACS)**

The Pacte Civil de Solidarité ([PACS; Civil Solidarity Pact; enacted November 1999](#)) is a legal provision in the French civil code (Book I, Title XIII) establishing a contract “between two adult people of the same or different sexes to organize their lives together” (Article 515-1; translation by Michael Stambolis-Ruhstorfer). Like other laws passed in various jurisdictions in the late twentieth and early twentyfirst centuries to create legal regimes for same-sex couples, the PACS provides some—but not all—of the rights and responsibilities of marriage. Specifically, it allows for the filing of joint tax returns, requires signatories to be financially responsible for each other, and secures their housing in joint leases. By default, however, it does not join their assets or guarantee inheritance unless the couple also has a will. The PACS also does not allow joint or second-parent adoption, does not offer certain retirement protections in case of death, and does not allow for spousal visas in the case of binational couples. Furthermore, the contract is easily canceled, unlike marriage, and is therefore both more flexible but also less protective.

Despite these limitations, the PACS created the first significant opportunity for French
same-sex couples to shield themselves legally before the legalization of same-sex marriage in May 2013. Some same-sex couples prefer the PACS to marriage. Indeed, according to the Institut National d’Études Démographiques (National Institute for Demographic Studies), 10,437 got married and 6,262 got PACSed in 2014. It has also proven very popular for different-sex couples. In 2014, 224,878 got married and 173,728 got PACSed. More broadly, the PACS represents a historical reconfiguration of French family law akin to the instantiation of civil marriage (1792), the legal recognition of children born out of wedlock (1972), or the possibility of shared parental authority after divorce (1978).

By the time the French parliament passed the PACS, the issue of legal recognition for same-sex couples had already roiled French politics for over a decade. Although gay and lesbian activists had been discussing options since the 1960s, the AIDS crisis laid bare the severe inequality of people whose relationships were not recognized. As gay men died of AIDS, landlords evicted their partners from shared apartments. The state and its agencies refused to acknowledge any spousal ties, prohibiting inheritance, life insurance protections, and a variety of other guarantees for spouses of the deceased. Furthermore, the Court of Cassation refused (in 1989 and 1997) to extend common-law marriages to same-sex couples. Reacting to this situation, French LGBT and some AIDS organizations made various demands, ranging from a limited-scope contract to full marriage equality, that were met with fierce opposition from politicians across the political and intellectual spectrum. Opponents denounced what they saw as a threat to children—many opponents both on the Left and Right decried parenting by same-sex couples—and warned that legal recognition would undermine heterosexual marriage and social order more broadly. The PACS emerged as a result of many compromises on and the merging of multiple competing proposals from these acrimonious, prolonged debates. Lawmakers removed its radical potential, which would have allowed any two people, including brothers and sisters, to sign a PACS. They also diminished its symbolic potential by requiring couples to register in court administrative offices rather than in public city hall ceremonies, as is done for marriages. They ensured, however, that the PACS would conform to French universalist ideals by not limiting it to same-sex couples.

**Table 1: Legal Recognition of Couples in Europe (as of 2017)**

**Notes:** *Overall score* is sum of formal recognition of same-sex couples where marriage (=100), registered partnerships (=10), informal cohabitation (=1). The specific legal rights/responsibilities of registered partnerships and informal cohabitation vary across contexts. RPs are generally more formal and have stronger protections.
Regional Differences

As Table 1 shows, legal recognition is uneven across Europe. It is higher, for example, within the European Economic Area. All but six (Latvia, Lithuania, Poland, Slovakia, Bulgaria, and Romania), which are former Communist and central and eastern European countries, have some kind of registered partnership. Countries with the lowest level of recognition, and in many cases none at all, are outside the European Economic Area and concentrated in eastern Europe. However, political past and geography are not explicit predictors of formal recognition (Waaldijk 2017). Indeed, Croatia, the Czech Republic, Slovenia, and Hungary—all former Communist central European countries—have registered partnerships. Furthermore, in contrast with their western European neighbors, Italy, Monaco, Andorra, Switzerland, and Lichtenstein have all refused to allow same-sex couples to marry.

Explaining the causes of this uneven change is complex. Social scientists point to a variety of factors, including social movement tactics, political institutions, constitutional structures, public opinion, the role of experts, and international pressure. All can shape legal outcomes in nationally specific ways (Ayoub 2016; Kollman 2013). Recognition of informal cohabitation does not appear correlated with later legalization of more formal rights (Waaldijk 2017).

Supranational European Law

International European decision-making bodies have been a key avenue through which advocates of same-sex relationships have tried to advance their cause when they have been unsuccessful in their home countries. They have attempted to leverage these bodies to put pressure on their own governments. European-level mobilization brings international scrutiny, creates awareness of lesser known situations, and links efforts between European counterparts (Tremblay, Paternotte, and Johnson 2011).

European Court of Human Rights The European Court of Human Rights (ECHR) is the court of last recourse for citizens of the forty-seven member states of the Council of Europe. These countries are signatories to the European Convention on Human Rights, which LGBT activists say guarantees their right to protect their families. They often draw on Article 8, which guarantees a person the “right to respect for his private and family life,” and Article 14, which establishes a principle of nondiscrimination. The ECHR gives signatory states a large margin of appreciation on matters relating to sexual orientation in general, and same-sex couples in particular. Nevertheless, a slowly evolving body of case law has increasingly mandated similar treatment of same-sex and different-sex couples. The court has determined, however, that states need not open marriage to same-sex couples but ought to provide them some formal recognition, especially if unmarried different-sex couples enjoy legal protections and obligations outside of marriage.
A series of judgments has led to this legal situation. After a period in which the court dismissed cases dealing with same-sex couples, in 2003, in the case of Karner v. Austria, the court found that Austria violated the rights of the plaintiff by failing to extend the legal protections of unmarried “life companions” when he was threatened with eviction from his home after his partner’s death. This failure to treat same-sex and different-sex unmarried couples equally violated the convention. Judges later reiterated this relatively limited—but important—recognition in 2010, in the case of Schalk and Kopf v. Austria. The ruling maintained that stable same-sex relationships fall within the definition of “family life” but also determined that failure to open marriage to them does not violate the convention. Part of the judges’ decision-making in Schalk was based on their perception of a lack of international “consensus” on the issue.

The ECHR later found in the case Vallianatos v. Greece (2013) that states cannot exclude same-sex couples from registered partnerships if it creates such regimes for different-sex couples. Shortly after, in the case of Oliari v. Italy (2015), the court found that Italy had violated the plaintiff’s rights by providing no formal legal alternative to marriage. Italy responded by legislating registered partnerships for same-sex couples. This ruling could significantly advance legislation in other countries because it states that all same-sex couples must have some form of recognition. In subsequent decisions, such as Taddeucci and McCall v. Italy (2016) and Pajić v. Croatia (2016), the ECHR has begun to stipulate that such partnerships, even if they take different forms, should include some key rights, such as residence permits for foreign partners.

The ECHR continues to fall short of finding marriage discrimination in violation of the convention. Indeed, in the case of Chapin and Charpentier v. France (2016), the court upheld much of its ruling in Schalk. The “specific legal framework” afforded to such relationships, therefore, can be distinct from marriage.

Some see the ECHR as a relatively slow-moving and narrow avenue for creating change. Indeed, although it has increasingly ruled in favor of same-sex couples, its tendency toward prudence and its reliance on national trends in recognition—or not—of formal rights to make decisions can lead to limited outcomes. Furthermore, states implement the ECHR’s rulings unevenly. Nevertheless, its judgments have created new rights for same-sex couples. More broadly, by applying the definition of family to same-sex couples, the court’s discourse enhances perceptions of LGBT families (Johnson 2013). In addition, the cultural and legal effects of ECHR decisions have resonated beyond Europe by serving as a reference for decision-makers considering changes to marriage laws in other parts of the world (see Chiang 2017 for the case of Hong Kong).

**European Union and Court of Justice of the European Union** The European Union (EU), through the legislative process and through the Court of Justice of the European Union (CJEU), has also played a role in shaping family law for its member states. Advocates and
lawmakers of EU countries have attempted to mobilize antidiscrimination language in fundamental EU documents to carve out recognition for same-sex couples. Article 10 of the EU's Treaty on the Functioning of the European Union (2007) specifies that in “defining and implementing its policies and activities, the Union shall aim to combat discrimination based on sex, racial or ethnic origin, religion or belief, disability, age or sexual orientation.” Furthermore, Article 21.1 of the Charter of Fundamental Rights of the European Union (2000) states that “any discrimination based on any ground such as sex, race, colour, ethnic or social origin, genetic features, language, religion or belief, political or any other opinion, membership of a national minority, property, birth, disability, age or sexual orientation shall be prohibited.”

Although this language is clear in its intent, the EU leaves much latitude to member states in how they implement its directives. That leeway has led to limited concrete equality in family rights across the EU. The CJEU has dealt with fewer cases on same-sex couples than the ECHR, and most have related to discrimination in employment, specifically pensions for same-sex partners, the movement of people within the EU, and spousal immigration rights. Their outcomes have been somewhat favorable but relatively limited in scope. For example, in the case of Jürgen Römer v. Freie und Hansestadt Hamburg (2011), the court found that same-sex spouses in registered partnerships should have the same spousal pension rights as different-sex married couples. In 2017 the CJEU first examined the issue of whether same-sex marriages legally contracted in one member state must be recognized by another when a couple moves there using their EU free movement rights, in a case brought by Adrian Coman, a Romanian citizen married to an American man, and specifically involving the effect of same-sex marriage laws on family reunification of spouses of EU citizens. The pending decision had the potential to significantly change same-sex marriage recognition in the EU.

**Advocacy and Organizing**

Marriage equality has consumed much activist energy but has not been a consensual goal within LGBT movements nationally or on the European level. Debates within and across movements have centered on whether the goal should be to redefine heteronormative institutions completely and do away with the need for marriage altogether, to make tactical gains for certain rights but not full marriage, or to prioritize other issues, such as antigay violence.

Activists fighting for LGBT families have adopted different strategies depending on the country and the specific legal, cultural, and political circumstances there (Paternotte 2011). In general, they seek to change attitudes about same-sex couples and their children by creating positive public representations. They also engage in lobbying, judicial action, street protests, media outreach, and party politics to create favorable outcomes. In many countries, especially those in western Europe, LGBT advocacy organizations established
inroads into mainstream political parties where they pushed leadership, to varying degrees of success, to adopt pro-LGBT family stances. Many parties, including those on the Left, resisted their demands. In other places, especially parts of central and eastern Europe, activists have faced a political and cultural climate that has been relatively more hostile.

LGBT activists have also created international organizations in Europe to federate their efforts, share their expertise, and advocate for same-sex couples in international institutions. Examples of these movements include the European branch of the International Lesbian, Gay, Bisexual, Trans and Intersex Association (ILGA-Europe), an international nongovernmental umbrella organization founded in 1975 that lobbies national governments, the Council of Europe, and the European Union; Rainbow Rose, an official part of the Party of European Socialists since 2006 that emerged out of European left-wing LGBT activists in the 1990s; and the European Parliament’s Intergroup on LGBT Rights.

**Resistence and Backlash**

The growing formalization of relationships between same-sex couples has led governments and social movements to try to prevent their spread. In some regions, especially in central and eastern Europe, lawmakers have sought to modify gender-neutral language in their constitutions or statutory law, which were drafted before the concept of same-sex spouses. They feared that courts would interpret this language in favor of same-sex couples. They did so either via the legislature or through referenda, hoping to mobilize negative public opinion. These include Armenia (2015), Croatia (2013), Hungary (2012), Latvia (2006), Montenegro (2007), Serbia (2006), and Slovakia (2014).

Other countries also considered statutory or constitutional bans. Romania attempted to modify its civil code (2008, 2009) and constitution (2013) to explicitly prohibit same-sex marriage. In 2015 Slovenian voters ultimately defeated a proposed same-sex marriage amendment, with 63.5 percent voting against. Some countries, such as Belarus, Bulgaria, Lithuania, Moldova, Poland, Russia, and Ukraine had already specified marriage as a heterosexual institution in their constitutions before recognition for same-sex couples was common. These constitutional hurdles will likely make future legalization of marriage for same-sex couples more difficult.

Growing marriage and relationship recognition has led activists and lawmakers to target progressive legislation on sexual orientation and gender issues across Europe. Parliaments in Russia (2013) and Lithuania (2010), for example, have passed laws that ban so-called gay propaganda, making it difficult for advocacy organizations to positively represent LGBT families. A coordinated international effort to shore up heterosexist social expectations and undermine gender and sexual equality gained momentum in the second decade of the twenty-first century and is present in all European regions, including western Europe. For
example, protests against same-sex marriage and "gender theory" in France, Italy, Russia, and other countries have strengthened the ties between conservative social movements across the continent (Kuhar and Paternotte 2017). These movements typically draw on rhetoric about protecting children, preserving the “traditional family,” and resisting the loss of national identity to make their claims. Activists opposed to LGBT families have created organizations to resist change, such as the European Center for Law and Justice.

**Measuring and Accounting**

Observing whether and how European countries and supranational institutions recognize—or not—the rights and obligations of same-sex couples is complex, so scholars have organized international efforts to keep track. Indeed, given the lack of reliable centralized information and the array of complex national and international family law frameworks, which constantly evolve, civil society actors have had to fill the gap. Notable examples include the FamiliesAndSocieties research project, ILGA-Europe, the European Commission on Sexual Orientation Law, and the Commission on European Family Law. These organizations provide valuable and timely information on legal changes at the national and European levels. Some also provide demographic and statistical data about LGBT families across Europe. Such information can be important in shaping legal outcomes, as policy makers seek to understand how same-sex couples fare in other contexts.

Institutionalized same-sex relationships between women in various African cultures.

Historically, African societies featured a great diversity of gender and sexual arrangements, including institutionalized bond friendships and woman-woman marriages (gynegamy). The large-scale introduction of Judeo-Christian and Islamic traditions has tended to reduce this variation but has not obliterated same-sex practices. Whether physical attraction and erotic intimacy played a major role in these relationships is a matter of controversy. Accounts of woman marriages have been found in 40 of the over 200 societies that have been documented in the anthropological literature. They occurred mostly in southern Sudan, Kenya, and southern Africa (including Namibia), as well as in southern Nigeria and neighboring Benin (Karsch-Haack [1911] 1975; Morgan and Wieringa 2005; Murray and Roscoe 1998; Tietmeyer 1985).
Comparing practices over such a vast area and in different periods is obviously difficult. The variety in institutions and practices is great, and the literature, though interesting, is scant. The problems are enhanced by the divergent perspectives and motivations of the authors documenting these practices. In their writings, the first wave of adventurers, traders, missionaries, and colonial administrators often voiced support for the colonial subjugation of the African communities they visited. Their exoticizing and often deeply racist perspectives are echoed in the work of the German armchair anthropologist Ferdinand Karsch-Haack (1853–1936), who collected their accounts of same-sex practices. He published his voluminous overview of same-sex life in “primitive” cultures in 1911. The number of societies for which woman-woman intimate relations are recorded may be an underestimation, as most ethnographers, missionaries, and imperial bureaucrats were men who may not have had access to the lives of women. As most of them regarded same-sex or same-gender practices negatively (as vices, perversions, or sins), women living in such unions may not have been forthcoming with details of their circumstances. Thus, Karsch-Haack wondered why he found so many fewer instances of women having sex with other women than cases of men having sex with men. It may be related, he suggested, to the fact
that women are so often pushed to the background, whereas men place themselves in the foreground, so that even those women who are “tribadically inclined” ([1911] 1975, 452) lived their lives in privacy. Nevertheless, the accounts the early writers give are full of details, and by reading them carefully, important insights about past woman-woman intimate relations can be gained (Blackwood and Wieringa 1999).

The second group of authors documenting same-sex practices, including woman marriages, were the early professional male anthropologists, such as E. E. Evans-Pritchard (working in the 1930s but publishing on woman marriages in 1970) and Melville J. Herskovits (1937). Their descriptions contain various accounts of physical intimacies. A third group of authors consists of women anthropologists working after World War II (1939–1945) until the 1980s. These mainly Western middle-class women tended to ignore or deny sexual intimacy between the partners where it may have occurred. Judith Gay, who analyzed mummy-baby relations (bond friendships between older and younger girls) in Lesotho, referred to this issue when she noted the “reticence” with which her informants discussed this topic with a “stranger whose disapproval they fear” (1979, 35).

The last group consists of African women themselves documenting their own lives (such as Nkabinde 2008) or that of women in their own societies (such as the researchers in Morgan and Wieringa 2005). Their present-day accounts of same-sex intimacies are reflexive and rich; most of them self-identify as lesbian, although they qualify that term to suit their own realities.

There is a great variety of institutionalized woman-woman relationships. This entry describes four main types: the autonomous woman-woman marriage, the dependent woman-woman marriage, bond friendships such as mummy-baby relationships, and same-sex relations based on possession by ancestral spirits.

**Independent Woman-Woman Marriages**

In several societies wealthy or powerful women who wanted to establish a compound of their own could do so. Women could gain wealth by farming, pottery making, divining and herbalism, increasing their livestock, or brewing beer. This practice of independent women marriage has been recorded for many societies all over the African continent, such as the Fon (in present-day Benin), the Nuer (in present-day South Sudan), the Nandi (in present-day Kenya), and the Igbo (in present-day Nigeria). The female husband would pay the appropriate bridewealth, and the marriage rituals would be recorded in her name. The main reason cited was the desire to get heirs to inherit her land and other forms of wealth and (ritual) power and to continue the line.

Among the Lovedu and the Venda (both in present-day South Africa), women who were traditional healers had a high prestige and could accumulate wealth accordingly (Krige
Among the Koni (in present-day Côte d’Ivoire), there are indications that a woman chief had to be a female husband. The female husband acquired status and control over the goods, money, and children her partner produced. Sometimes the female husbands were rich widows (as has been documented, for instance, in Mombasa, Kenya). In other cases, they were women who had never married. Barren Nuer women, for instance, were automatically classified as men, as Evans-Pritchard (1945) noted, and could thus easily marry other women.

Shilluk (in present-day South Sudan) princesses and the Lovedu queens should also be categorized here. Lovedu queens were barred from marrying a man; because of their high status they were seen as men themselves (Krige 1974). The Shilluk princesses were not so strictly limited, but if they married a man of lower status (possibly because of a shortage of available men of their own rank), they would lose their royal title. If they married a woman, by contrast, they could keep their title and privileges (Tietmeyer 1985).

**Dependent Woman-Woman Marriages**

In dependent woman marriages, a woman marries another woman to get heirs for a man, usually her deceased husband or son, so that their lineage can continue. Evans-Pritchard (1970) recorded such “ghost” or fictive woman marriages among the Nuer. The children in this woman marriage then belonged to that male relative of the female husband and continued his line, even though he might have died before they were conceived. Other groups such as the Lovedu, the Kikuyu (in present-day Kenya), and the Nandi also knew of ghost marriages (Tietmeyer 1985; Krige 1974). In other cases an infertile woman or a woman who had no sons herself married a younger woman who would bear sons for her husband in the name of the female husband. In this way her status in the extended family as a wife would be raised, particularly if her sons were the only sons the male husband had. The female husband could thus be wife to her husband, mother to their children, husband to her wife, and father to the children of that wife. In the latter case, she would also profit from the labor of her wife and children. In both cases the woman would exhibit the gender conduct thought proper for her role, as either wife/mother or husband/father. Denise O’Brien (1977) called this type of woman marriage “surrogate.”

**Bond Friendships**

A marriage is not the only institutionalized form in which two women can be tied. In a bond friendship, two young women express their affection for each other. These long-lasting friendships, which may exist side-by-side with a heterosexual marriage of one or both bond friends, are sealed in a particular way, either through a pledge, a ritual, or a (mostly asymmetric) gift. The partners in a bond friendship use fictive kinship or marriage terminology. The partners support each other through life and may share intimacies.
Elongation of the labia is one of the genital practices young girls in bond friendships may engage in. Not all girls who want their labia to be elongated are in a bonded relationship. Some researchers claim this is a painful practice intended only to increase the sexual pleasure of any future male partners. Others insist the practice is at least partly based on erotic intimacy between the girls. As Karsch-Haack recorded, missionaries and colonial administrators vehemently opposed these and other erotic practices girls might engage in. They were variously described as “perversities” or “a terrible vice” ([1911] 1975). A present-day form of such bond friendships is the mummy-baby relationship that schoolgirls may engage in. The “mummy,” who is usually older, ties the relationship with her “baby” with a gift. Thereafter they support each other. A “mummy” derives great status from having one or more “babies.” Sometimes these relationships break up when the girls leave school and get married. But they may also continue. Siza Khumalo (2005) found that these relationships in Swaziland were based on physical, mutual affection. But other anthropologists, such as Gay, insist that because these female relationships are compatible with heterosexuality, there is no space for the “genital pleasures of homosexuality” (1979, 43).

An early example of such a bond friendship is the oumapanga or oupanga (both terms are used) relation described by Karsch-Haack for the Dama/Namara in present-day Namibia. The girls were described as committing “bad acts” with each other such as mutual masturbation but also to “remain loyal to each other till death” ([1911] 1975, 475–476). The missionaries were vehemently opposed to this custom. Nowadays the word oumapanga is used for any kind of friendship.

Possession by Male Ancestor

Not only because she has acquired great wealth may a woman healer decide to marry a wife. It also may be that she is possessed by a male ancestor spirit who demands a wife for himself, an “ancestral wife,” as Nkunzi Zandile Nkabinde (2008) analyzes for her own Zulu culture (in present-day South Africa). Such healers, upon the request of their male ancestor, can have sex with an ancestral wife. A healer can also have an ancestral wife in a relationship that is predominantly a spiritual bond. Both roles can also be combined, so that the wife of the healer is both her lover and her spiritual wife. Among present-day Zulu woman healers, attraction to the partner is a major reason for choosing the particular wife they married. Even if it is their dominant male ancestors who indicate to them that they must marry a wife, it is they themselves who choose their wife or negotiate the choice of a wife with their ancestors. Nkabinde explicitly describes how she is able to explore aspects of her sexual identity because of relationships with both her male and female ancestors.

Characteristics of Woman-Woman Marriages

Woman marriages are mostly associated with patrilineal (following the male line of
inheritance) and patrilocal (following the husband's location after marriage) societies, in which female husbands take/took up a vacant male position. But there are also accounts of women contracting a marriage with another woman in societies characterized by matrilineal (following the female line of inheritance) or dual descent (women inherit from their mother's lineage, men from their father's lineage) rules, such as the Igbo in present-day Nigeria. There is overwhelming evidence that the main purpose of such marriages was the production of heirs, so that the wealth or position of authority of the woman who contracted the marriage (the female husband) or the person in whose name the marriage rituals were performed and the bridewealth paid (a husband or son) could be inherited. In some cases, a woman who still had a heterosexual marriage also contracted a marriage with another woman, making her a wife in one compound and a female husband in another compound that she herself set up. In such settings, the female husband also acquired a higher status as the wife in her heterosexual marriage. A very prosperous female husband might marry several wives, raising her status just as a polygynous man would. As the female husband controls the labor power of her wives and their children, polygyny allows her to become even wealthier (Tietmeyer 1985; Wieringa 2005).

A woman-woman marriage has advantages for the wife as well. Single women with children out of wedlock acquire a safe haven and enjoy greater sexual and social freedom. In general, woman-woman marriages are characterized by less domestic violence. Economic reasons also play a role. Most wives of female husbands are poorer than their partners, who often give a higher bridewealth than men would (Wieringa 2005).

As Ifi Amadiume (1987) demonstrated, the decline of this practice among the Igbo is largely the result of colonial and postcolonial leaders being unable or unwilling to deal with the dual gender system in which women have structural power. In other societies the spread of monotheistic religions and modern marriage laws has undermined the traditional woman marriages. Postcolonial laws do not recognize the customary rights of the partners; the inheritance rights of their children are often denied. They are considered to be the illegitimate offspring of the generally much poorer wives, and not the legitimate heirs of the rich female husbands. Although the institution of woman marriage is declining, it has not disappeared. In Kenya among the Kalenjin (namely, the Nandi, Kipsigis, and Keiyo), Namibia (the Damara), and southern Africa (Zulu healers), these traditional forms of woman marriages persist side-by-side with modern, generally urban, LGBTQI movements.

In a woman marriage the roles of genitor (biological father) and social father are separated. The genitor has no rights over the children that the woman he has impregnated has given birth to. In the case of a dependent marriage the genitor might be the husband (if the wife has borne no sons) or a relative to replace the deceased male. In other cases the genitor is an outsider, formally selected by the female husband. Sometimes he is awarded for his services. Usually the wife also has a say in who will become her male lover, allowing her a sexual autonomy most heterosexually married women do not enjoy.
Physical Intimacy

Several anthropologists, including Amadiume (1987), Eileen Jensen Krige (1974), Gay (1979), Elisabeth Tietmeyer (1985), and Regina Smith Oboler (1980), insist that there was no sex between the partners in woman marriages. This is contradicted by the work of other observers of those relationships. Herskovits, who conducted fieldwork among the Fon, wrote that it is not to be doubted that "occasionally homosexual women who have inherited wealth or have prospered economically establish compounds of their own and at the same time utilize the relationship in which they stand to the women whom they ‘marry’ to satisfy themselves" (1937, 338). To Karsch-Haack ([1911] 1975) it is undeniable that, for instance, the "macroclitorideae" (women with elongated labia) he describes engage in a sexual practice, particularly the "born tribads" among them. He pointed to the extensive references to the "mutual masturbation" involved in producing the "Hottentot apron" as it was called in those days (Hottentot being a commonly used name for Khoisan people to which the Nama also belong). He also gives detailed descriptions of the various kinds of dildos women used, such as the double dildos the women of Zanzibar seemed to have enjoyed playing with. The present-day accounts of African researchers also include various forms of physical intimacy.

It is clear that considerations of wealth, prestige, and inheritance were among the major factors leading to female husbands establishing their own compounds with one or more wives. However, erotic intimacy also played a role. Part of the denial of the role sexual intimacy may have played may be related to how "sex" was defined by both the partners in the woman marriage and by their anthropologists (Kendall 1999). If sex was defined only as penile penetration, the possibility of a sexual relationship between the women partners can be ruled out. Yet such practices that were observed as "grinding" described among Lesotho women, deep kissing, or mutual masturbation are considered sexual practices today, as they were by early observers.

A woman marriage was an attractive option for some rich or powerful women to establish their own compounds. In addition, in dependent woman marriages the female husband gains power and prestige. For the wives in such unions the relationships had advantages as well. Wife beating hardly seems to have occurred in woman marriages, and the social relationship between the partners was more equal and more intimate than in most heterosexual unions. Oboler observed an "atypical" degree of harmony between the partners, with the wives in these arrangements enjoying a much greater degree of (hetero) sexual autonomy and "real affection" between the partners (1980, 79), an observation affirmed by Nkabinde (2008).

Masculinity in Iranian Cinema

KAVEH BASSIRI
PhD candidate
University of Arkansas, Fayetteville

Portrayals of luti, shahid, fokoli, and other masculine archetypes from the Pahlavi era to contemporary times.

Iranian commercial cinema developed and proliferated during the Pahlavi dynasty (1925–1979), when modernization became the focus of the nation. The Pahlavis saw vulnerability in Iran’s lack of modernization, and they championed a strong Western model of hegemonic masculinity. Western knowledge became cultural capital, while traditional customs and religious knowledge were delegitimized and feminized. Reza Shah (r. 1925–1941) even banned tribal and traditional clothes. With the exception of clergy, adult men were to be clean-shaven and wear Pahlavi hats with Western-style jackets and trousers. The tension between the demands for modernity and the resilient tradition of Iranian chivalry has shaped the different masculine identities and resulted in such colorful characters as the tough-guy hero, the revolutionary martyr, and the Westernized dandy.

Although Iranian movies traffic in many types of masculinity, a persistent reaction to the hegemonic masculinity can be traced in the different archetypical male characters from before and after the Islamic Revolution of 1979. In the 1950s and 1960s, the government encouraged historical adventure films with heroes such as Rostam and Amir Arsalan, who entertained with romance, promoted a glorified past, and were loyal to the monarchy. Meanwhile, a different kind of character, a tough guy, or luti, was becoming the dominant masculine hero.

Luti

The term luti goes back to the tenth century and is related to the Persian and Arabic word lavat, meaning “sodomy.” The Qur’an identifies the citizens of Sodom as “the people of Lut.” Love for youth and pederasty were common in ancient Persia, as in ancient Greece, and historically, active dominant tough guys who engaged in sodomy were often described as lutis. Over the centuries, the term luti became more closely associated with two marginalized groups: “dervishes and entertainers” and more recently “urban Robin Hood–type bandits” (Floor 2010). Many of the attributes of these two groups—such as being an entertainer and abandoning worldly possessions, or fighting oppressors and defending the needy—are part of luti films.
Lutis are generally outsiders, on the fringe of society, either alone or in a gang. Their transgressive lives often come under attack, and they resort to fights in order to establish their masculine power and authority. They live in a homoerotic community. The luti practices wrestling in the traditional gymnasium known as the zurkhaneh (the house of strength), to become a pahlavan (hero). He follows the code of javanmardi, the ancient principles of chivalry and manliness.

Neighborhood strongmen could be protectors or bullies, friends to the poor and fighting tyrants, or thugs hired by the wealthy or the government to break rebellions. In the movies, this dual role manifests itself in distinct characters of the heroic luti and the villainous lat.

The heroic luti follows the javanmardi code of honor, works alone, defends the weak and women, and respects elders. He is merciful, stoic, humble, chaste, and truthful. Heroic lutis have an inner purity, and their cause is ennobled by spiritual righteousness. The villainous lat, by contrast, is often boisterous and brags about his strength. He leads a criminal gang, bullies the weak, and can be hired as a mercenary. The macho characters of luti and the lat become the clashing archetypal protagonist and antagonist of the tough-guy films.

Lutis, like historical adventure heroes, hark back to past traditions. But unlike historic warriors, who are meant to affirm modern progress and loyalty to the monarchy, the lutis represent the struggles of the lower class in a changing society. The “lovable rogues of the luti tradition stood for all the forgotten and alienated victims of urban growth: vagabonds, smugglers, extortionists, blackmailers, dealers, cut-throats, gamblers and pickpockets” (Sadr 2006, 117). Luti films were most popular with working-class male youth.

Lutis appeared in the 1960s melodramas derogatorily called film-e abgushti—what Hamid Naficy translates as “stewpot films” (2011–2012, 2:197). These are not tough-guy movies, but their characters exhibit javanmardi qualities. Mohammad ‘Ali Fardin (c. 1930–2000), a handsome former world-class wrestler, often played a happy-go-lucky working-class character who is chivalrous and supportive of anyone in need. In popular movies such as Aghay-e ghar-e bistom (1964; Twentieth-century man) and Ganj-e Qarun (1965; Croesus’s treasure) by Siamak Yasami (1925–1994), Fardin finds himself helping rich women in trouble—accidents that turn into romances and possibilities of breaking the class barrier. These films spoke to the dreams of the working class as well as to the working class’s economic struggles and attachments to traditional beliefs. They glorify the poor as honest and authentic while ridiculing the wealthy as materialistic and corrupt. But as with many luti films, they ascribe problems to personal weaknesses and not to sociopolitical conditions. Instead of offering a social critique, the stewpot lutis ultimately subscribe to political conformity.

Dash Mashti and Jaheli
Naficy identifies two types of films in the tough-guy genre: *dash mashti* and *jaheli*. “The *dash mashti* films concerned premodern, rural toughs from the turn of the twentieth century…. On the other hand, the *jaheli* films … dealt with the life and times of modern toughs after the Second World War” (2011–2012, 2:270). Naficy argues that “the cinematic shift from *dash mashti* to *jaheli* accompanied a gradual shift of societal paradigms within society from religious traditionalism to secularism and Western-style modernism” (2:294). He also associates the making of dash mashti films with the late 1950s and the jaheli with the early 1960s, although the timeline is not so clear cut.

Dash mashti films, such as *Dash Akol* (1971) by Masud Kimiai (1941–), have their dress code, which included a felt hat, a long coat, a large handkerchief manufactured in Yazd, a machete, a chain, and woven cotton shoes (Naficy 2011–2012). The dash mashti goes to *zurkhanah* to exercise and hangs out in traditional coffeehouses. He displays the ascetic qualities of dervishes, such as renouncing material possessions.
Jaheli films are the most popular and emblematic of the tough-guy genre. Whereas dash mashti movies are optimistic and see poverty as a virtue, jaheli films are pessimistic and see poverty as a vice. Jahels (the tough guys in the jaheli films) mimic the modern dress code of the hegemonic masculinity, but they make the Western fedora hat, jacket, and pants their own. They wear the clothes loosely, keep their mustaches thick, and never wear a tie.

Kimiai’s *Qaisar* (1969), a major box-office and critical success, is the quintessential jaheli film. The cast became the “who’s who” of tough-guy movies. The film’s opening sequence—crafted by Abbas Kiarostami (1940–2016) with tattooed images of pre-Islamic warriors from the Iranian epic *Shahnameh* and the sounds of the *zurkhaneh*—sets the tone of *javanmardi* by idealizing the past heroic tradition. The film is a reaction to modernization and an elegy for the disappearance of the traditional values of chivalry and manliness. The tension between the past and present is embodied in the protagonist Qaisar, who has to fight alone against the thugs responsible for the death of his sister and brother. Qaisar, with all his contradictions, posits *javanmardi* as an answer to the pressure of modernity and the alienation of lower-class young men in prerevolutionary times. By tapping into a manliness that is rooted in tribal identity, the martyrdom of Shi’a imams, and the mythic warriors of the pre-Islamic epics, Qaisar becomes an ideal model of masculinity. Films such as *Qaisar* constructed desires and codes of combative behavior that young men idolized, prompting them to see such films over and over again.

*Qaisar* was not made with a political message, but critics and viewers read it as a national allegory. The rebellious hero answered the anxiety and rage of men caught under the Pahlavis’ oppressive regime in the 1970s. Angry young men such as Qaisar, like the leftist Latin American hero Che Guevara (1928–1967), foreshadowed the revolution. Moreover, given the notion of *vatan* (homeland) as a female body, it is easy to see how protecting the purity of a woman can be politicized and extended to defending the motherland. Qaisar, like other luti heroes, must defend the honor of his sister. Thus, the luti working to restore the honor of his family becomes the revolutionary who restores the honor of his country violated by the oppressive regime and its Western allies.

*Shahid*

The revolution arrived in 1979, with the overthrow of the Pahlavi dynasty and the ascent of Ayatollah Ruhollah Khomeini (1902–1989), who established the Islamic Republic of Iran. Many things perceived to be “Western” were considered contrary to Islam. Even though many of the values of the tough-guy genre were similar to what the new Islamic Republic endorsed, the regime did not want to be associated with the commercial cinema. The government decided to promote an Islamic citizen and to produce revolutionary films that would be an antidote to what it regarded as the immoral films of Hollywood and the Pahlavi era. The cinema—now funded by the regime instead of the box office—was to carry a spiritual and revolutionary dimension as “sacred defense.” But it was only after the Iran-
Iraq War (1980–1988) that directors such as Ebrahim Hatamikia (1961–) in Deedehban (1990; The scout) made the exemplary fictional movies of sacred defense. By the mid-1990s, around a quarter of Iran’s films were about war.

In these films, a new masculine hero combined javanmardi with innocent youth, spirituality, and self-sacrifice. He was modeled after the real war heroes whose pictures were plastered all over, and streets, alleyways, and freeways were named after them and their honorific, shahid (martyr). Shahids were not meant to be superstars but ordinary men who were raised to a higher purpose by their Islamic calling. The martyr heroes were honest, humble, and righteous. Their dress code replaced the Western hat and clothes of earlier masculine films with a khaki military uniform, no makeup, shaggy hair, a beard, a gun, and a bandanna often emblazoned with Qur’anic text. In the Islamic Republic, the woman’s veil further differentiated the sexes. The battlefront became the zurkhaneh, as the shahids confronted a corrupt, heretical Iraqi enemy who used the latest technology and was cleanshaven and arrogant. Yet these films did not have the nationalist sentiments of the Pahlavi era.

The spiritual journey in these films is twofold. On the one hand, the films feature a communal story of a jihad to spread justice against imperialism and oppression. The martyr is to sacrifice himself for the collective subjectivity—a hypermasculine, homoerotic brotherhood of soldiers who are often volunteers in the paramilitary Basij militia. The dissolution of the hero’s ego results in his immersion in the utopian umma (the unified Muslim community). On the other hand, the movies are also spiritual journeys of self-realization—a jihad of self against internal and external temptations. To purify the soul, the soldier renounces worldly possessions and carnal desires and follows the path of love to God.

The audience is meant to witness this journey from mundane to sacred, going through the spiritual transformation with the film’s hero and crew. In fact, the word shahid is a Qur’anic word that means “to witness,” in addition to its more common meaning “martyr.” As the sacramental experience gets witnessed, as in an Islamic dhikr (remembrance), viewers are inculcated in becoming shahids.

Another transformation that started in postrevolution films was the conversion of lutis into Muslim heroes. Early on, those involved in the prerevolution commercial cinema tried to refashion themselves as pious revolutionaries and martyrs. With the biggest box-office sales up to that time, Barzakhya (1982; The imperiled) by Iraj Ghaderi (1935–2012) was a good example of a commercial movie co-opting revolutionary zeal; it featured leading prerevolution commercial actors such as Fardin. In the film, a group of convicts escape prison and try to leave the country, but they have a change of heart after Iraq’s invasion. They decide to stay and sacrifice their lives for their country. The success of the movie led to many negative reactions by the conservative press and government. Many
prerevolutionary filmmakers and actors were banned as a result.

But the idea of converting thugs to Islamic heroes did not stop. For example, *Ekhrajiha (2007: The outcasts)* by Masoud Dehnamaki (1969–), a reactionary veteran, is another successful incarnation that broke box-office records. In Dehnamaki’s comedy, a luti thug named Majid is reformed into a real man by becoming a shahid. As in many Sufi stories, the change begins with the demands of earthly love. To get his girl and prove his manliness, Majid goes to the warfront and learns the true Islamic *javanmardi* value of self-sacrifice. He also ends up with the higher love of God.

**Fokoli**

Meaning “dandy” in Persian, the word *fokoli* derives from the French term *faux-col*, as in “detached collar.” It is used pejoratively to refer to a man who is superficially pretending to be modern by wearing a tie and Western clothes. It epitomizes the criticism of artists, intellectuals, and clergy who saw the cause of Iran’s social ills in the passive reception of Western values and the loss of Iranian identity. Fokolis are usually portrayed as weak, ineffectual, and effeminate. They satirize poor imitations of Western ideas. Their “effeminacy marks the surplus homoeroticism that escaped society's heteronormative preferences” (*Naficy 2011–2012, 1:301*).

The role of the dandy has been understood by scholars in different ways. Some, such as Fakhr al-Din Shadman (see *Gheissari 2010*) and Sivan Balslev (*2014*), describe the fokoli as the negative manifestation of the authentic modern intellectual. The fokoli, then, allows the intellectual elites to divert criticism of their Westernization and Western-educated hegemonic masculinity to those who are not properly educated or really modern. Others, such as Naficy, consider the fokoli’s performative act as what the postcolonial studies scholar Homi K. Bhabha calls mimicry. Naficy differentiates mimicry as a form of resistance that “threatened the Islamic, patriarchal, secular, and heteronormal orders” from false imitation (2011–2012, 1:277). In cinema, a further challenge from this gender-bending ambivalence and hybridity can be seen in the performative behavior of cross-dressing.

Fokolis usually appear opposite lutis, as in *Jahelha va zhogoloha* (*1965; Tough guys and gigolos*) by Hossein Madani (1926–). Unlike the luti, who is usually lower class and advocates traditional values, the fokoli is often middle class and favors Western modernity. There is also a degree of latent homosexuality in their ambiguous behavior.

Fokolis are often remasculinized into a jahel through the power of love and marriage. One example is *Jooje fokoli (1974; Baby dandy)* by Reza Safai (1937–), which harks back to *Qaisar*, as if the hero is the son of Qaisar’s brother. He has studied medicine, but he has become a hippie and a rock musician who needs to be restored into a real man. By falling in love and going literally to the Jaheli Institute, he takes his rightful place as his father’s son,
reinforcing the patriarchal masculine identity. The transformation is both external and internal. He cuts his long hair, changes his beard to a jaheli moustache, wears a jaheli suit and fedora hat, and begins talking like a luti.

**The Forgotten Man**

In cinema, the jahel and shahid became the standards against which other masculinities had to be measured. But these hypermasculine films were also subject to frequent criticisms. Secular intellectuals and conservative clergy alike denigrated the luti films as trite and degenerate. Iranian war films often failed at the box office, and critics described them as formulaic and clichéd.

Around 1969, an alternative new-wave cinema was born that presented different masculinities and the complexity of Iranian men. Modernity, Westernization, and urbanization—as well as the changing role of women—destabilized the patriarchy. The traditional solutions and behaviors no longer proved adequate. Men began having a hard time adjusting to the changes both at home and in public. This situation continues to this day.

The new-wave films address this crisis. They portray a common man with his insecurities and vulnerabilities. There are subaltern men forgotten by society, men searching for their identity and place in society, men who are unable to live up to the standards of the dominant masculinity or to fulfill their patriarchal role, and men with conflicting and contradictory wishes. Examples of such prerevolutionary films include *Postchi* (1972; *The postman*) by Dariush Mehrjui (1939–), *Ragbar* (1972; *Downpour*) by Bahram Beyzaie (1938–), *Aramesh dar hozur deegaran* (1973; *Tranquility in the presence of others*) by Naser Taghvai (1941–), and *Tabiate bijan* (1974; *Still life*) by Sohrab Shahid Saless (1944–1998).

After the revolution, and especially during the Iran-Iraq War, such critical films could not be made. But by the 1990s, filmmakers again challenged the narrow discourse of masculinity that was imposed by the government and the cinema of sacred defense. Iranian men paid greatly for the devastating eight-year war with Iraq, which ended in a stalemate. After the war, and with the death of Khomeini in 1989, the country was looking for a new start. Yet there were hundreds of thousands of returning veterans who had neither accomplished their goal nor could adjust to the changing civil society that was exhausted by the war. Directors such as Hatamikia and Mohsen Makhmalbaf (1957–), who had promoted the cinema of sacred defense, turned to the problems of veterans. Their films depict not the idealistic shahids but veterans suffering from physical disabilities, posttraumatic stress disorder, or the effects of chemical warfare. They cannot find jobs or pay for their medical ailments. They are sometimes estranged from their wives and families. In films such as Makhmalbaf’s *Arousi-ye khouban* (1989; *Marriage of the blessed*), veterans become the
forgotten men, forewarning of a society that was losing its revolutionary ideals. The films render a country that is turning materialistic, corrupt, and bureaucratic. They question the war and the treatment of the soldiers—not just by the secular society but also by the government.

The secular middle-class intellectual, who during the Pahlavi era was part of the hegemonic masculinity either supporting the regime or the leftist opposition, also became a disenfranchised, forgotten man. He may have endorsed the revolution but now could not find a place for himself in the Islamic Republic. While not portrayed as a fokoli, he was still weak, incompetent, confused, oversensitive, and ineffective. Hamid Reza Sadr defines the character of intellectuals with four traits: “deep insecurity, political cynicism, personal mistrust, and self-destruction” (2006, 253). Mehrjui’s *Hamoun* (1990), a popular and influential film, was the first major movie to present an authentic representation of intellectuals after the revolution. Hamoun, the protagonist, is in a midlife crisis, caught in the conflicts between the lower and middle classes, as well as between modern and traditional values.

At the time of the election of Mohammad Khatami (1943–) as president of Iran in 1997, 68 percent of the population was under thirty. The youth, who were a major part of Khatami’s
landslide win, also came to be a new face of the Iranian cinema in such movies as *Mercedes* (1998) by Kimiai and *Nafas-e amigh* (2003; *Deep breath*) by Parviz Shahbazi (1962–). Some films portray this new generation and their demands as a threat, whereas others look for a more authentic depiction of the youth's hopes and disillusionments. In these films, the young are stuck in "Guyland" limbo, unable to become true adults or to achieve the social expectations of the patriarchal system. They cannot find jobs, leave home, or raise families. Instead, they go around aimlessly, getting involved with sex, drugs, alcohol, underground parties, or petty crime. The youths’ hopes were derailed after Khatami was not able to fulfill his promises. They became disaffected rebels who had lost hope—rebels without a cause. For them, “manliness was defined in terms of rebellion and defiance of all moral ties to others” (Sadr 2006, 250).

Throughout his career, Kimiai has depicted different masculinities. In 2000 he introduced a pro-reformist hero in *Eteraz* (The Protest), which was a response to his earlier film *Qaisar*. Amir, who has been in prison for an honor killing, represents the jaheli values of Qaisar. But in *Eteraz* these values come with terrible consequences. Amir is hired by the regime as a thug to attack students, such as his brother Reza’s friends. Reza, by contrast, is practical, compassionate, and rational. He tries to convince Amir that there is no place for such acts as honor killings in the new progressive society.

Unlike the action-driven *Qaisar*, *Eteraz* is about dialogue and reason. The college students spend a great deal of time debating the role of being a citizen and the current political situation in Iran. A new generation of men does not need to resort to the bygone traditions to define their identity. Films such as *Eteraz* show that, even with all their difficulties and uncertainties, Iranian men have a chance to refashion themselves in a world that is out of the shadow of luti, shahid, or fokoli.

**BIBLIOGRAPHY**

Established in Los Angeles in 1950, the Mattachine Society was the first major homosexual political organization founded in the United States. By the 1960s, Mattachine societies stretched from San Francisco to Chicago and from Denver to New York City. Far from constituting a uniform ideology or single organizational model, Mattachine was an elastic vehicle of the homophile movement. Mattachine's birth in Los Angeles was rooted in imaginative interconnections between Marxist philosophy, Communist Party structures, and homosexual community building. Later Mattachine societies were committed to public education, law reform, and building relationships with medical experts. In the mid-1950s a periodical called the *Mattachine Review* was launched. It functioned as an organ of homophile communication across North America, Europe, and beyond. Starting in the late 1960s, Mattachine societies increasingly collapsed with the advent of gay liberation.

**Beginnings**

Harry Hay (1912–2002) was a driving force behind the Mattachine Society's creation. Though born in England, he grew up primarily in Southern California. After attending Stanford University, Hay moved to Los Angeles, where he joined the Communist Party. Starting in the early 1930s, Hay variously worked for the party as an agitprop actor, community educator, and union organizer (*D’Emilio 1998*). In 1948, at a Communist Party event in support of Henry Wallace’s presidential campaign, Hay realized that many of the men present were gay. They joked about forming a group called “Bachelors for Wallace,” which would support the candidate in exchange for sexual privacy legislation (*Faderman 2015*). This experience inspired Hay to pursue the creation of a homosexual political organization. For nearly two years, his attempts to interest friends and acquaintances in such an endeavor were unsuccessful. In 1950, however, Hay connected with Bob Hull and Chuck Rowland, who had also been involved in the Communist Party. They had similar ideas regarding the need for homosexuals to organize themselves against oppression. Hay hosted a series of political discussions with these and several other men at his Los Angeles home that ultimately led to the formation of the Mattachine Society (*D’Emilio 1998*).
As the Mattachine Society crystallized in 1950, its structure and concerns reflected the leftism of the founding members. In organizational terms, the society was loosely modeled on the Communist Party. There were five orders of membership, each with separate cells. Power and responsibility ascended from the first order at the bottom of the pyramid to the fifth order at the top. Consisting of the founders themselves, the fifth order provided centralized leadership and set policies for Mattachine as a whole (D'Emilio 1998). The organization was highly secretive, and members of separate cells and orders were largely unknown to one another. The group’s very name referenced the Société Mattachine, a secret fraternity of unmarried men in early modern France whose membership apparently held clandestine dances, wore masks, and employed satire as a form of social critique (Faderman 2015). Given the political climate of the United States in the early 1950s, secrecy was necessary for the vast majority involved. Public exposure carried the risk of job loss—even criminal prosecution. Joseph McCarthy, a US senator from Wisconsin, was leading a movement to root out Communists and subversive elements within American political and sociocultural institutions, and efforts to purge homosexuals from the federal government were proceeding apace (Johnson 2004).

Mattachine’s founders generally conceptualized homosexuals as an oppressed cultural minority. Influenced by Marxist theory, they regarded the homosexual minority’s lack of collective consciousness as a central political problem (D’Emilio 1998). Here the organization faced difficult contradictions. How could it raise awareness among homosexuals while remaining secretive and embracing principles of anonymity? How could Mattachine foster pride in a gay, minority culture from behind a mask? While never resolving such contradictions, the early Mattachine Society did achieve a degree of success by leafleting in gay hangouts, forming discussion groups, and taking militant stances against police entrapment (Faderman 2015). Drawing members from across Southern California, the organization may have achieved a total participation of 2,000 people by 1953 (D’Emilio 1998).

**Reorganization**

Ironically, the success of Mattachine Society’s founders resulted in a coup. New members did not necessarily share the politics of the group’s leaders. While initially helpful in terms of establishing a political organization, many regarded Mattachine’s foundational connections to the Communist Party as a serious liability (D’Emilio 1998). A new cohort of members began to demand that Mattachine make anti-Communist declarations. In the face of increasingly contentious debates over the organization’s future direction, Hay, Rowland, Hull, and other leaders resigned (Faderman 2015). Starting in 1953, a new, more conservative leadership consisting of Hal Call, David Finn, Ken Burns, and Marilyn Rieger significantly reorganized Mattachine. Headed by a coordinating council, Mattachine adopted an organizational model rooted in regional area councils, which consisted of task-
oriented chapters (D'Emilio 1998). Moreover, the society’s new leaders rejected the notion that homosexuals were an oppressed cultural minority. Instead, they viewed gay people as no different from the general population except for their sexual preferences (Faderman and Timmons 2006).

In the mid-1950s Mattachine increasingly focused on education in two main ways. First, the organization sought to educate gay people regarding responsible citizenship and desirable behavior. Mattachine increasingly prescribed the conduct of its members, who were encouraged to act in accordance with hegemonic sociocultural norms and institutions. Second, Mattachine endeavored to educate the general public by participating in medical and scientific research into human sexuality. Through collaborations with experts in fields such as psychiatry and sexology, the society sought to dispel false ideas about homosexual deviancy (Meeker 2006). The organization became less interested in discussion groups and largely oriented itself toward lobbying experts. While originally including a minority of lesbians, in this period Mattachine lost many of its female members, to the extent that only a token element remained (Gallo 2006). The organization’s center of gravity also shifted northward from Southern California to San Francisco and the Bay Area (Alamilla Boyd 2003).

**Mattachine Review**

The year 1955 saw the launch of *Mattachine Review*, a monthly periodical spearheaded by Call. A journalism graduate from the University of Missouri, Call had been fired from the *Kansas City Star* on account of a homosexual morals charge (Meeker 2006). His journalistic experience was indispensable, particularly as the *Review* faced multiple challenges regarding content creation, printing services, distribution, and finance. In the mid-1950s it was no small feat for a small group of activist volunteers to regularly produce a viable periodical with national aspirations that contained possibly illegal homosexual content.

*Mattachine Review* has been a source of scholarly disagreement. Rodger Streitmatter (1995) suggests that the periodical primarily sought to aid in the assimilation of homosexuals and that its “conformist philosophy” was echoed by its “bland design.” He also emphasizes that the *Review* often denigrated homosexuals as emotionally immature, selfish, and irresponsible. Martin Meeker (2006) offers a more generous interpretation. He emphasizes the *Review*’s vital role in bringing geographically far-flung gay people into association during a repressive political era and suggests that content now interpreted as conformist was not necessarily seen this way by queer readers in the 1950s. Perhaps more salient for these readers was the *Review*’s exciting new “universe of information about sexualities” (Meeker 2006, 57).

Scholarly arguments aside, it is clear that the *Review* contained content that criticized the criminalization and pathologization of homosexuality. For example, the *Review* published
articles that drew on history and anthropology to demonstrate that homosexuality was not an aberration of Western modernity, but rather an enduring facet of the human experience. Here gay people were constructed as rights-bearing subjects, given homosexuality’s apparent status as a transhistorical, cross-cultural phenomenon (Churchill 2009). Also notable is that Mattachine Review received thousands of letters from readers across North America and abroad, which demonstrate that the publication helped many people formulate and express demands regarding their right to live gay and lesbian lives without condemnation or interference (Loftin 2012).

Dick Leitsch of the Mattachine Society, 1965. Leitsch was head of the New York chapter of the Mattachine Society during the 1960s, a time when some chapters pursued a more militant agenda. Leitsch helped organize the New York chapter’s “sip-in” to challenge discrimination against gay customers in bars in April 1966, which was one of the earliest acts of gay civil disobedience.

Expansion

Starting in the mid-1950s, the Mattachine Society spread across the United States. Chapters were formed in New York City, Washington, Chicago, Philadelphia, Boston, Detroit, and Denver (D’Emilio 1998). Mattachine also exerted at least some international influence. For example, Canada’s first homophile organization, the Vancouverbased Association for Social Knowledge, was modeled on the Mattachine Society of San Francisco (Warner 2002). Although circulating primarily within the United States, Mattachine Review was also read by Canadians, Europeans, Australians, and occasionally people living in the Global South.
The periodical facilitated interconnections between Mattachine societies in the United States, homophile organizations in western Europe, and farflung readers from the Middle East to Southeast Asia (Churchill 2009; Rupp 2011).

In 1961 Mattachine Society's national structure disintegrated. Mattachine societies on the East Coast resented the San Francisco group's national leadership and control over membership dues. Specifically, New York Mattachine began leveling accusations of financial mismanagement and misappropriation. The response of San Francisco Mattachine was to dissolve the national organization altogether, leaving local groups to fend for themselves (D'Emilio 1998). Weaker chapters that relied on national support, such as those in Boston and Denver, soon collapsed. A positive consequence was that Mattachine societies, particularly on the East Coast, were now free to pursue an independent direction.

**Renewed Militancy**

Washington Mattachine is a case in point. An early version of the organization, founded by Buell Dwight Huggins in 1956, not only pursued ambitious goals of law reform but critiqued the federal government's antigay employment policies. Huggins was scolded, however, by Mattachine's national office in San Francisco. Indeed, he was instructed to abandon such militancy and stick to research and education. The group atrophied in 1958 (Johnson 2004). In 1961, under the leadership of Frank Kameny, and without interference of a national office, Washington Mattachine was reborn. The revitalized organization militantly asserted that homosexuals deserved full US citizenship and that it would “speak on their behalf to end the injustices they experienced, particularly at the hands of the federal government” (Johnson 2004, 184). A former civil servant fired because of his homosexuality, who had unsuccessfully taken the federal government to court, Kameny conceptualized homosexuals as an oppressed minority that faced discrimination comparable to that faced by ethnic and racial minorities (Churchill 2009).

Mattachine's national dissolution also created room for the creation of the East Coast Homophile Organizations (ECHO) in 1963. Kameny and Barbara Gittings were driving forces behind this group, which sought greater coordination between homophile organizations from New England to Washington (Faderman 2015). ECHO ultimately laid the groundwork for the 1966 establishment of the North American Conference of Homophile Organizations (NACHO), which funded court cases involving bar raids, discriminatory immigration policies, and the unlawful dismissal of gay military personnel. Additionally, NACHO contested federal employment policies, demanded law reform, and encouraged the establishment of homophile organizations beyond East Coast metropolises, from Kansas to Florida (D'Emilio 1998).

**Gay Liberation**
At the close of the 1960s, gay liberation crystallized in California and the northeastern United States. This movement generally rejected homophilism and the Mattachine Society. A new wave of activists eschewed expert knowledge in favor of their own experience; spurned secrecy in favor of gay pride; renounced the legitimacy of the US nation-state; and sought revolutionary alliances with movements such as Black Power, women’s liberation, and Third World decolonization. In the radical fervor that surrounded the Stonewall riots of 1969, even the most militant Mattachine members appeared outmoded. In the 1970s Mattachine societies increasingly collapsed. Obituaries penned by gay liberationists were often condemnatory and unfair. In striving to assert the radical novelty of their movement, gay liberationists generally failed to acknowledge the courage and important political work of homophile forebearers, as well as the radical beginnings of the Mattachine Society.

Rupp, Leila J. “The Persistence of Transnational Organizing: The Case of the Homophile

Alternative therapies are conspicuous by their absence in the historiography of homosexuality, and vice versa: homosexuality is not an issue for historians of alternative medicine. It was therefore possible for American sexologist and medical historian Vern L. Bullough in 1974 to assert that “quacks,” as he called them, had contributed nothing to the sexual debate apart from anti-masturbation propaganda (102). Bullough's attitude is prevalent among sexologists, who generally view medical practice solely in terms of conventional, or orthodox, medicine—focusing on psychiatrists and other physicians who diagnose disease, conceive therapies, and fight against AIDS at the side of groups demanding emancipation. There is evidence, however, of the ascendance of complementary and alternative medicine (CAM) in the queer community in the twenty-first century (Smith et al. 2010).

CAM has a history that long predates the rise of Western orthodox medicine in the nineteenth century. Two of the oldest forms of CAM are traditional Chinese medicine and the traditional system of Indian medicine known as Ayurveda, which have been practiced for thousands of years and attempt to harmonize the mind, body, and spirit to promote overall health. The therapeutic use of water to cure illness, known as hydrotherapy, stretches back to ancient Egyptian, Greek, and Roman civilizations. German physician Samuel Hahnemann (1755–1843) created the system of alternative medicine known as homeopathy in 1810. Yet, as Western medicine developed a clinical, pharmaceutical-based approach to the treatment of illness, these long-standing traditions were brushed aside in the West as unscientific and untested. Taking its cue from legal and religious attitudes toward nonnormative sexualities, the psychiatric and medical establishments of the late nineteenth century pathologized any same-sex sexual behavior—or any non-procreative sexual behavior, such as masturbation—as evidence of mental illness. Homosexuality was considered a mental disorder by the American Psychiatric Association until 1973.

CAM in the West

CAM’s position as an outlier in Western medicine, combined with its more holistic approach, was useful to patients who feared being persecuted and pathologized by
conventional medicine because of their sexuality. The seminal works of homeopaths and hydrotherapists were produced in the decades prior to the emergence of the psychiatric or psychoanalytical definition of homosexuality. In the writings of Hahnemann and his followers and those of the trailblazers of modern hydrotherapy, discussion of nonnormative sexuality did not go beyond mention of excessive sexual desire or onanism, conditions that they recommended be treated with the help of homeopathic medicines and lifestyle changes (Hahnemann 2003; Farrington 1890; Kent 1897; Hughes 1902; Royal 1923; Kneipp 1923). Homeopaths interpreted sexual problems as being part of a larger, usually psychosomatic, issue (Nash 1907; Royal 1923) but without resorting to terms such as sodomy or homosexuality. Even injuries in the anal and genital areas were merely associated with “sexual excitement” (Clarke 1902, 1160). Women who felt no desire to participate in heterosexual intercourse were diagnosed with “exhaustion,” yet no other inferences were made about them (Clarke 1902, 583).

**CAM as a Refuge for Homosexual Patients** This unwillingness to judge their patients may have stemmed from the fact that homeopaths and naturopaths in the United States and Great Britain—whether physicians or laypeople—were themselves subjected to extensive observation and persecution by the authorities and bodies that represented the medical profession, such as the American Medical Association. Therapists who were hounded in this way constituted ideal contacts for patients who either could not express their sexual interests out of fear of persecution or could not define their interests due to their lack of awareness of modern research in psychiatry or sexual sciences. The therapies proposed by alternative medical practitioners since the 1850s mostly boiled down to physical fitness training in the guise of naturism, saunas, and sunbathing (Juette 1996; Heyll 2006). Given that these treatments may have allowed patients to contact others of similar orientation, they doubtless contributed a great deal more to the alleviation of patients’ “psychosomatic symptoms” than conventional medications or electric shocks.

The term homosexuality was not mentioned in Anglo-American homeopathic journals until the 1960s. It was only the influence of psychoanalysis (which was increasingly prevalent) that made people consider how homeopaths ought to treat patients. Besides mentioning some specific medications, “lack of emancipation” was defined by homeopaths, who were influenced by psychoanalysis, as being the main problem facing homosexuals (Tufo 1964, 33). European homeopathic physicians and lay healers worked in a similar way to their American colleagues and concentrated on what would be seen today—or from a contemporary orthodox perspective—as vague diagnoses that allowed them and their patients scope for a variety of interpretations (Hering 1889; Mittelstaedt 1902; Donner 1932). The affinity between alternative therapies and the Lebensreform (life reform) movement in Germany and Switzerland enabled homosexual patients who were wrestling with their sexuality to take refuge in naturism.

**CAM and the Sexual Reform Movement** CAM and the sexual reform movement
occasionally worked closely together in central Europe. German sexologist Magnus Hirschfeld (1868–1935) joined forces with Reinhold Gerling (1863–1930), the most important popularizer of naturopathy, to combat the criminalization of homosexual desire from the late 1890s (Herzer 2017). The alliance between sexual reform activism and naturopathy withered following the Eulenberg affair in Germany: a very public scandal, it involved accusations of homosexual conduct within Kaiser Wilhelm II’s inner circle between 1907 and 1909. The negative publicity generated by this affair caused the main players in the world of naturopathy to increasingly adopt chauvinistic and conservative political viewpoints.

**Association with the Nazi Eugenics Program** When the Nazis came to power in Germany in the 1930s, they implemented a program of eugenics in which persons who did not align with the Nazi definition of the ideal Aryan, or “master,” race were targeted for reeducation, sterilization, or extermination. While this program was primarily race-based, undesirable persons included homosexuals, the mentally ill, and those with physical disabilities. In this environment, homeopaths and naturopaths were merged with analysts who had been relegated to the position of “Aryan mental health practitioners” (arische Seelenheilkunde) to form a Nazi-oriented “labor association” (reichsarbeitsgemeinschaft), and this had a huge impact on the homeopaths’ notions of sexual therapy.

Doctors and laypeople in Nazi Germany were obliged to adhere to the Nazi eugenics philosophy, so the target of every therapeutic concept in sexuality was the creation of the perfect Aryan man or woman. To simplify daily therapeutical work, the CAM doctors and laypeople adopted a system of konstitutionsbiologie, or constitutional biology, which viewed the “body and the psyche as intimately connected and biologically pre-determined” (Frame 1997, 18). Under this system, women with small body frames were prone to sexual problems, while men with wide pelvises were prone to melancholy or “sexual inversion”—the term used at the time for homosexuals. The goal of homeopathic theory, then, was to “cure” homosexuals so that they conformed to the Aryan ideal. Even after the defeat of the Nazis in 1945, one could encounter therapists who took this approach with their homosexual patients (Gallavardin 1958, 1986; Bailey 1998; Raba 1998).

**CAM after the Depathologization of Homosexuality** As the Western medical establishment depathologized homosexual desire in the 1970s, the LGBTQ community relied less and less on CAM. Homeopathy in the realm of sexual therapy is nowadays restricted to treating impotence (Vithoulkas 1988; English 1996; Scholten 2014), while ways of thinking that are based on sexual pathology have also disappeared from classic naturopathy (Schäfgen 2010). In the 1980s, naturopaths in the United States found themselves compromised in the eyes of the gay community because of their exaggerated promises of therapies to cure AIDS (Young 1992).

A special role in alternative healing cultures in the Anglo-American world is assumed by
neo-shamanism, which influenced prominent American gay rights activist Harry Hay (1912–2002), among others (Timmons 1990). Hay and others combined pre-Columbian tribal traditions with modern Western esoterics in the founding of the Radical Faeries, a spiritualist movement that resonated with some of the undergirding principles of alternative medicine (Thompson 1987; Hennen 2008). The focus in these subcultures is on self-optimization with the aid of transcendental powers; the overcoming of gender boundaries constitutes an intrinsic part of self-perfection (Wallis 2000). This also applies to the neo-Druids in Great Britain (Wallis 2004), whose joining of spirituality with reverence for nature appealed to those in the gay community interested in new spiritual paths (Tan 2005).

**CAM Outside the West**

Beyond the Western world (in India, for example), CAM, and especially homeopathy, continues to play a major role in the health-care market, and this is where the treatment of HIV/AIDS constitutes an important area of activity (Fritts et al. 2008; Taneja et al. 2014). Homeopathic remedies are not as effective as modern drugs in clinical trials, but they serve as a valuable alternative for those who cannot afford more conventional treatments, or when they are combined with retroviral therapies. Moreover, homeopathic dietetics are seen as helpful for stabilizing the body’s defenses against HIV.

Ancient Ayurvedic texts, such as the Carakasamhita and the Susrutasamhita, describe same-sex desire as part of life (Sweet and Zwilling 1993). It only came to be pathologized in India in later centuries, particularly during the years of British colonial rule. Influenced by theosophy, the Indian national movement imported Western naturopathy from 1900 onward (Jansen 2016).

Within the context of legal decriminalization, the treatment of same-sex desire is nowadays disappearing from the repertoire of Indian homeopathy and naturopathy. Yoga, a technique exported from India to the West, is often used to optimize the muscles in the pelvic floor and is hugely popular in the gay and lesbian subculture. In traditional Chinese medicine (TCM) sources written from 200 BCE to 200 CE, sexuality is seen as a positive and health-promoting factor in human life (Chou 2000; Mann 2011).

This general view changed when Western terms and methods entered Chinese medical discourse and paved the way for the pathologization of sexual variants (Sang 1999). When Communist leader Mao Zedong established the modern People’s Republic of China in 1949, he also established a narrowed tradition of TCM that was exported to Western countries and that referred to Communist ideology in its methods and theory of science (Taylor 2005). Adherents of TCM in the United States occasionally tried to “cure” homosexuals in the years before the depathologization of homosexuality (Ng and Lau 1990). Acupuncture was commonly used in such treatment (Bivins 2000).

Meem

NISRINE CHAER
Independent scholar
Netherlands

Activist and support group for queer women and trans people in Lebanon from 2007 to 2014.

From 2007 to 2014, Meem was a support group of more than 400 lesbian, bisexual, queer, and trans people in Lebanon. “MEEM” is an acronym for “Majmouaat Mou’azara lil-Mar’a al-Mithliya” (Support Group for Lesbian Women). The word meem is also the phonetic pronunciation of the letter m in Arabic. This entry contextualizes the establishment of Meem within the history and the legal context of queer activism in Lebanon, designating its inception as an effort to acquire a safer space that centers the experiences of women and feminist issues. This entry also highlights the different components of Meem’s queer politics, its grassroots work, and its publications.

Homophobia in Lebanon’s Legal System

Homophobia in Lebanon operates partially through a state-sponsored legal imperative. Originally introduced during the colonial rule of the French Mandate (1923–1946), Article 534 of the Lebanese penal code criminalizes “unnatural sexual intercourse” with up to one year of prison. Together with the normative discourses on sexuality in the local context of Lebanon, this law shapes the current realities of queer subjects that live under the threat of homophobic oppression and police violence (see Gagné 2012). Yet, reports of police crackdowns on gay cruising areas in 2012–2014 document how Article 534 is ambiguously and discriminatorily applied because it almost exclusively targets marginalized queers from working-class, migrant, refugee, and/or transfeminine identities. Such cases of police arrests and raids reveal that homophobia in Lebanon is inseparable from the patriarchal, capitalist, racial, and sectarian violence constituting the machinery of the state (see Mikdashi and Puar 2016).
History of LGBT Organizing in Lebanon

Since the 1990s, queer organizing in Lebanon has mainly revolved around the work of two organizations, Helem (an acronym of the Arabic “Himaya Lubnaniya lil-Mithliyin” [Lebanese protection for LGBTs]; the word helem also means “dream”) and Meem, founded in 2004 and 2007, respectively. The start of a formally organized LGBT movement in Lebanon is traced to the late 1990s—the post–civil war period—which witnessed the emergence of new social identities and practices in Beirut (Gagné 2012). This period is characterized by the reconstruction of the city (particularly its city center, downtown) led by the private company Solidere, the creation of new spatial orderings, neoliberalization, increased consumption, globalization, the migration/return of people from the diaspora, and the emergence of a new body politic. As such, the landscape for queer leisure spaces in Beirut, “homosexual spheres,” and “venues of conspicuous gay consumption” emerging in the postwar period materialized with the beginning of the queer activist movement (see Merabet 2014; Gagné 2012).

The genesis of the LGBT movement began with the creation of an online mailing list on Yahoo in 1998 and the registration of a website called gaylebanon.com in 1999, which was launched by gay activists (Bareed Mista3jil 2009). Also, the hashtag #gaylebanon was used as a channel name in IRC chat rooms. A few years after, ClubFree was founded as an underground LGBT group, and its space hosted meetings, movie screenings, and, importantly, strategy discussions about lobbying and advocacy for gay rights in Lebanon. In 2002 another LGBT group, Hurriyat Khassa (Private Liberties), was founded and registered as a nongovernmental organization aiming to lobby against Article 534 of the Lebanese penal code (Makarem 2011).

In 2004 Helem was founded as the first officially registered, “aboveground” LGBT organization in the MENA (Middle East and North Africa) region. Because Helem was a rights organization, its strategic activities included advocating to abolish Article 534,
education, raising awareness about HIV/AIDS, managing a hotline and a community center in Beirut, and organizing public activities and events centered on fighting homophobia in Lebanon, such as the International Day Against Homophobia (Moussawi 2015).

The precursor to Meem originated when Helem branched out with the group Helem Girls in 2006. As a reaction to the invisibility of lesbians and the maledominated space of Helem, three female members of Helem created a women-only email list, and on 16 December 2006 they organized their first offline lesbianonly meeting in a member's house, attended by twentyeight women (Bareed Mista3jil 2009). This group also published a zine called Suhaq (a derogatory Arabic term for lesbians that denotes the act of “grinding” or crushing”). On 4 August 2007, after a few meetings, the group decided to create a grassroots organization called Meem. Meem was founded on the idea that there was a need to have a safer space that centers the experiences of women and feminist issues and that operates with less visibility and with a less hierarchical organizational structure than Helem (Moussawi 2015).

**Meem's Organizational Structure**

Meem's activism focused on community building and delivering support and a safer space for queer women in Lebanon. To protect the privacy and the anonymity of its members, the Meem collective was underground and was not officially registered. It operated under the legal support of a sponsor organization in a rented apartment in Beirut, which was the community House of Meem or the Womyn House (or simply “the House”). The House was a volunteer-run, closed and safer space open only to Meem members. It hosted meetings and various events, such as workshops, discussions, dinners, game nights, and parties. It also offered free counseling sessions.

Among the safety rules of the house was that photos were not allowed and that a screening process was obligatory for all people interested in becoming a member. The membership screening consisted of a series of steps that started with email and instant messaging, moving to a face-to-face meeting in a café, with many precautions taken to maximize security. These strict membership rules were available online for potential members, and they were aimed at safeguarding the members' confidentiality and trust. Moreover, adopting a supposedly nonhierarchical structure, Meem operated through coordination terms of around two years in which members selected one or two general coordinators through consensus.

**Meem's Queer Feminist Politics**

Meem initially endorsed a rule that banned discussions about religion and (Lebanese) politics. It centered instead on community building and serving, through social gatherings and discussion meetings, as a support group for lesbians (and to a lesser extent trans
people, given the gender-normative character of lesbian spaces). In the following years, Meem shifted its organizing strategy from the “lesbian support group” model toward the “queer activism” model. The queer critique of identity politics became increasingly prominent given some members’ experiences and knowledge of how homophobic oppression does not operate independently from sexist, classist, sectarian, white-supremacist, and transphobic violence.

While keeping its focus on members’ anonymity in its spaces, Meem produced two major publications and actively participated in public events. Meem hence operated through the spaces “infiltrated” by the Meem community in the activist scene in Lebanon, such as protests and leftist groups (Moawad and Qiblawi 2012–2013). This elucidates how Meem embraced a strategy of being “ambiguously visible” (Lynn 2010) that challenges the binary conceptions of visibility/invisibility and of coming out/being closeted (Moussawi 2015). Meem also problematized Western LGBT rights discourse, which deploys a strategy of visibility that centers the post-Stonewall model of coming out of the closet. Meem’s strategy thus did not operate within legal frameworks, and yet it did not distance itself completely from advocacy work.

In many instances, queer activists from Meem adopted an intersectional approach in their activist work with regard to the local gendered, classed, sectarian, and racist normativities. By embracing a critique of imperialist discourse as crucial for their local grassroots activism, Meem members articulated an understanding of queerness that is MENA situated and that disrupts the homogenization of sexual identities. To illustrate, some Meem members founded, in several starts from 2007 until 2009, the feminist collective Nasawiya (meaning “feminist” in Arabic). In 2012 Sawt Al Niswa (Voice of the Women), a Beirut-based, feminist online space, also emerged from some individuals in the group. Meem and Nasawiya situated their queer organizing models in their own located context and engaged in grassroots anti-racism and anti-sexism campaigns. Emerging from Nasawiya, the Anti-Racism Movement and the Migrant Community Center organized several events that challenged racism in Lebanon, including direct actions, demonstrations, dinner nights, and parades involving migrant workers in Lebanon.

The 2006 Israeli invasion of Lebanon is a noteworthy case to illustrate LGBT and feminist activists’ intersectional approaches given their involvement in the relief and humanitarian efforts in support of the displaced communities (Naber and Zaatari 2014). Moreover, Meem was decidedly involved in the BDS movement (the campaign of boycott, divestment, and sanctions against Israel) and in adopting a vocal critique of Israel’s pinkwashing, which is “the cynical promotion by Israel and its supporters of ‘free’ LGBT bodies as somehow representative of Israeli democracy, obfuscating the reality of apartheid and [the] occupation” of Palestine (Pinkwatcher 2012). For example, Meem endorsed in 2011 the call for the member organizations of the International Lesbian, Gay, Bisexual, Transgender, Queer, and Intersex Youth and Student Organisation to move their general assembly
conference out of Israel. Meem members participated in local and international conferences, and they invested in collaborations with other LGBT groups in the MENA region.

**Meem's Publications**

Meem produced two main publications. The first was *Bareed Mista3jil: True Stories* (2009; the title roughly translates to “express mail”), a collection of autobiographical stories by queer women and trans people from Lebanon that discussed sexuality in relation to several themes, such as sexism, trans identities, family, religion, emigration, class, activism, community, and relationships. Notably, Meem’s second publication, the weekly online magazine *Bekhsoos* (which translates as “concerning,” implying subcultural LGBT terms used in Lebanon, such as the verb *bi khoss* or *bit khoss* [to be concerned], which means “to be gay/lesbian”), revealed potentials for gayifying Arabic and disrupting visibility. *Bekhsoos* provided a MENA-situated platform for developing a groundbreaking queer feminist discourse. By guaranteeing the anonymity of its contributors, online spaces allow queers to forge new ways of politically engaging with the public sphere. *Bekhsoos* was hence an “ambiguous visible” place that produced knowledge about gender and sexuality and subverted lesbian invisibility (see quotes from Lynn in Moawad and Qiblawi 2012–2013). It offered a place for online discussions between different groups and complemented the offline editorial meetings in the House.

Our understanding of Arab subjectivities in the era of globalization and the digital age should be read through models that add complexity to the rigid binary of West/East. Indeed, the new generation of Arab blogger-authors who consider the internet a virtual space for staging political change relate to English (or the interplay of English and Arabic) “not as a foreign language but rather as the language that is constitutive of their cultural landscape and their subjectivities” (El-Ariss 2013, 147). Furthermore, with regard to the topic of (homo)sexuality, many queers in Lebanon--including the authors of *Bareed Mista3jil*--are more likely to feel less uneasy and less constrained when they speak about sexuality in English or French as opposed to Arabic (Mourad 2013).

*Bekhsoos* was particularly invested in translating terms from English and in creating new Arabic terms for nonnormative sexual and gender identities and practices, and hence subverting the hegemony of English. *Bekhsoos* made possible the engagement with this creative process and encouraged writing in Arabic, as Edi, a former Meem member, explains in a 2016 interview:

> **When I entered Bekhsoos our challenge was to bring Arabic to Bekhsoos and Meem, which was an English dominated space, either in how people talked or in**
Most people did not have the tools in Arabic, and a lot of people are not comfortable to call themselves suhaqiyeh [a derogatory term for lesbian in Arabic, originating from the word suhaq, which denotes the act of “grinding” or “crushing”] or shazzeh [another derogatory term for lesbian in Arabic, meaning “deviant” or “queer”] while they are comfortable to use lesbian or gay. So this is about the identitarian dimension of language and how it verbalizes identities and how you feel your identity through the linguistic terms you choose. Why is it easier to say vagina and not kess [an Arabic word for vagina] except when we are insulting or joking? We don’t have political experiences that removed the stigma and the shame and reclaimed these words ... in a world where the topic of sexuality is still a taboo ... so language is political. And Bekhsoos played that role in writing, translating and hosting from other Arab feminist platforms.

(CHAER 2016)

In this formulation, Edi clarifies how new ways of relating to Arabic were being produced in *Bekhsoos* through making people become intimate or “comfortable” with Arabic as a language for sexuality.

There were many reasons for the closing of Meem in 2014, including internal clashes surrounding issues of group dynamics and invisible power hierarchies. Yet the temporariness of the collective should not be read as the demise of the queer movement in Lebanon. Meem’s political project had an enormous impact, and many of its former members became part of an unorganized queer activist community involved in various activist projects and networks.

Metelkova Mesto (Slovenia)

ROMAN KUHAR
Professor, Department of Sociology
University of Ljubljana, Slovenia

A center for artistic subculture and queer life in Ljubljana.

Metelkova mesto (Metelkova City in Slovenian) is the autonomous social and cultural center of Ljubljana, Slovenia, and the heart of queer life in the city, with its two noncommercial gay and lesbian clubs—the Tiffany and the Monokel—and an LGBT library called Lezbična knjižnica (Lesbian Library). Spread out over 12,500 square meters (3 acres) and several run-down buildings of a former Yugoslav military barracks, Metelkova mesto draws hundreds of students, artists, and tourists to its vibrant alternative-culture nightlife.

The site of Metelkova mesto has a military history that goes back more than 100 years. It was originally commissioned by the Austro-Hungarian army in 1882. After World War II (1939–1945) the military barracks were taken over by the Yugoslav National Army. At the end of the 1980s, during the process of Yugoslavian disintegration, a strong peace movement emerged in one of its republics, Slovenia. This movement initiated the idea of transforming the military barracks into a center of alternative and independent culture. The push for such a transformation intensified after 1991, when Slovenia declared its independence and the Yugoslav army moved out of its barracks.

The gay and lesbian movement that emerged in Slovenia in 1984 was part of this initiative, known as the Mreža za Metelkovo (Network for Metelkova). While the city of Ljubljana initially discussed the possibility of turning the former military barracks into a social and cultural center, it unilaterally decided in September 1993 to demolish the place for the possible development of new shopping malls on the site. Once the news became public, the activists of Mreža jumped over the large wall around Metelkova, squatted the place, and prevented the demolition with their own bodies. “It took only a few hours,” said one of Mreža’s activists, “to turn a hundred years of repression into the most creative studio in Europe” (quoted in Velikonja and Greif 2012, 135; author’s translation). Soon Metelkova’s seven buildings turned into clubs and places where exhibitions, concerts, parties, readings, lectures, speaking engagements, and other events were organized daily. In many ways it became reminiscent of Christiania, the autonomous neighborhood in Copenhagen. At first, the city of Ljubljana reacted by cutting off the electricity, heating, and water and by filing a legal suit against Mreža za Metelkovo. For that reason, activists initially illegally siphoned
water and stole electricity from the nearby power grid, but eventually Mreža reached an agreement with the city and the suit was dropped.

By the mid-1990s Metelkova mesto had become the center of the gay and lesbian movement in Slovenia, with a vibrant mixture of queer parties, political activism, and cultural events. For many LGBT people it is a safe haven from the outside world. This does not mean, however, that outsiders have not tried to intervene—be it the neighbors, who often complain that the music in the clubs of Metelkova is too loud, or the police, who have raided the place numerous times for no apparent reason.

Yet, in recent years societal acceptance of gays and lesbians in Slovenia has increased significantly. Throughout the 1990s, about 60 percent of Slovenian citizens claimed they would not like “a homosexual” to be their neighbor; by 2016 this percentage had dropped to 28 percent (Toš 1999; 2016). Furthermore, the Registration of Same-Sex Partnerships Act from 2005 was upgraded in 2016, allowing same-sex couples to enjoy the same rights as heterosexual couples, with the exception of the right to joint adoption and artificial insemination (Kuhar and Mencin Čeplak 2016).
Today the city of Ljubljana prides itself on having such an alternative center, which is now a draw for tourists. This is also one of the reasons why Metelkova mesto is losing the radical (queer) edge it used to have in the 1990s, but it nevertheless remains “a symbol of civil disobedience in defense of the public nature of urban spaces and in combating asocial activities of the capital” (Močnik 2005; author’s translation).

Mexican Revolution and Sexuality

GABRIELA CANO
Professor, Center for Sociological Studies
El Colegio de Mexico, Mexico City

The impact of the 1910 revolution on Mexican gender norms.

The Mexican Revolution (1910–1920) brought about the downfall of a regime that had held onto power for three decades, destroyed the bases of an oligarchical state, and cemented a new government apparatus where the voices of workers and peasants could be heard. The uprising began when it became known that President Porfirio Díaz (1830–1915) intended to be reelected for a sixth time. A peaceful electoral movement was born with the aim of opposing “reelectionism” and supporting the candidacy of Francisco I. Madero (1873–1913). The state’s repression of leaders and activists turned the initially nonviolent movement into an armed revolt. With the electoral route closed off, the revolution attracted new players willing to take up arms. Urban and rural mobilization opened spaces for transgressive expressions of gender and sexuality. Sources offer scarce material centering a narrative on such transgressions, but it is possible to gain some glimpses into transmasculine identities and expressions of male homosexuality and lesbianism that developed among those who participated in the Mexican Revolution.

In central and southern Mexico’s rural areas, traditional campesinos (poor peasants) from tightly knit communities formed a people’s army under the command of Emiliano Zapata (1879–1919), demanding the return of communally owned lands that had been taken from them. In the north, mine workers and cattle herders, railway and textile employees, all joined the ranks of Francisco “Pancho” Villa (1878–1923) and other military leaders protesting against various injustices. The wide cross-section of society entering the armed struggle made the Mexican Revolution a complex military and political issue; the demand for the state to respect democratization and democratic institutions was just one of its many components.

As such, the Mexican Revolution was not a unified movement with a single program shared by different political actors but instead gave rise to agrarian protests, workers’ demands, and a mobilized middle class. Nationalism also came to the fore at various junctures. To complicate matters further, the struggle not only pitted rebels against the former government and those supporting a continuation of the regime but also gave rise to infighting among the revolutionary forces due to socioeconomic, cultural, and regional differences and, of course, for ideological and political reasons, too. War and the presence
of death on the battlefield eroded moral and social conventions, creating an atmosphere that tolerated strategic and even permanent transmasculinity. However, homosexuality and lesbianism were strongly chastised. Male homosexuality was associated with effeminacy and lack of character, and lesbianism was considered immoral.

The 1917 Constitution was passed by representatives from across Mexico showing their support for Venustiano Carranza (1859–1920), who led the triumphant faction of the revolutionary movement. It gave the new government a regulatory framework, but it did nothing to halt the armed conflict. Peace was not restored until 1920, and it was only then that a new state apparatus could be built. The reconstruction process was understandably mired by internal conflicts and resistance; nationalist economic policies, the redistribution of farmland, and clampdowns on the clergy were rejected by foreign business owners, holders of large estates, and the Catholic Church, respectively, all of whom felt that their interests were under threat.

It is relevant to note, given the subject of this entry, that liberal clubs (public social organizations) were instrumental in instigating the Mexican Revolution, having complained about politicians’ and public officials’ corruption and abuses since the turn of the century, as well as having defended workers’ rights. Newspapers critical of the government ensured that liberal clubs in cities across Mexico remained active. The liberal clubs and periodicals are known as the liberal movement, an urban mobilization that preceded the Mexican Revolution. Regeneración, one of the most influential newspapers at the time, was owned by the Flores Magón brothers. The editors and writers—both men and women—working for this newspaper and other publications took a stand against government-sponsored persecution, imprisonments, and the destruction of printing presses. Women participated actively in the movement; however, the liberal political program took a conservative stand on gender and sexual morality that upheld women’s place in the home and traditional modesty as the norm.

**Strategic and Permanent Masculinization among Revolutionary Fighters**

Studies on the Mexican Revolution have focused primarily on its ideological and political aspects, overshadowing the internecine conflicts among various factions. The war was not fought continually throughout the decade, nor was the violence all-consuming; instead, it broke out at certain times and in certain places, although the sporadic violence still left a dreadful toll of dead and injured. The majority of those who lost their lives were young men. But the violence on the battlefield was not the sole cause of death; epidemics and diseases also killed many people. The war caused immense hardships, including food shortages, enforced displacements, and family breakups.

Without a doubt, the Mexican Revolution utterly transformed Mexico’s society, economy,
and politics, but one aspect that was left intact was Mexico's rigid gender hierarchy, even though many women played an active role in every revolutionary group. Their participation varied depending on the various stages of the conflict, geography, and ideological perspectives, as well as family and community networks. Rural women often joined armies and thus made the largest contribution; female schoolteachers also became involved, albeit to a lesser extent, as political activists, drafting and distributing documents, giving talks, and spreading ideas about justice and democracy in urban and rural areas. This participation transformed many women's horizons, but changes were minimal and almost always peripheral because masculine authority in the public sphere and in family life became stronger over time during the revolutionary movement. The war exacerbated soldiers' masculine authority and normalized sexual violence against women, who tended to be perceived as spoils of war. The revolutionary state's policies later celebrated women's subordinate status in the home and as guardians of domestic harmony and well-being; legislation consolidated the authority of fathers and husbands in the home; and the idea of women's suffrage was rejected out of hand and shelved for years.

Yet, the revolution also brought about greater sexual freedoms. The social upheaval disrupted gender norms, and despite its horrors, war brought about a new flexibility in social conventions and a relaxing of moral strictures. Enforced or voluntary displacements tore apart communities and families, and although these changes were calamitous for people's day-to-day lives, they also created new opportunities. The constant specter of death spurred some people to grasp the moment and express their sexuality in defiance of traditional dictates.

First of all, the war mobilized female soldiers or soldaderas, poor women from the cities and countryside who were displaced both within and outside of their family networks and therefore attached themselves to the armies. They looked after the fighters' basic needs for food and supplies and offered emotional and sexual companionship, sharing rare moments of relaxation with the soldiers when they drank or smoked marijuana together; some also engaged in prostitution. Firsthand sources on soldaderas are very rare, and they present the point of view of reporters, writers, and photographers, who tended to portray these women as passive and sexually available to men. No register of affection or sexuality among soldaderas has emerged.

A lack of firsthand sources makes it impossible to document daily life on the battlefields. But it is true that, although the mobilization maintained the gender hierarchy and reaffirmed women's subordinate role, in some cases it broadened horizons for Mexican women. For the first time, many women left their towns and communities and were forced to confront new challenges; mobilization often began within family networks, though these did not always remain active. The death of a friend or husband led to many women being abandoned and having to fend for themselves. Josefina Bojórquez, who famously inspired Elena Poniatowska's 1969 novel ¡Hasta no verte Jesús mío! (Here's to You, Jesusa! [2002]),
left her hometown in Oaxaca alongside her father to join the guerrilla forces but soon found herself on her own. Her story as a female soldier and poor immigrant in Mexico City illustrates the sexual violence and hardscrabble life endured by rural women dragged from the countryside to the city as a result of the armed uprising. Rosa Bobadilla took a very different route after joining the armed struggle beside her husband in the ranks of Zapata’s army. On becoming a widow, she was given the rank of her deceased husband to become “Coronela Rosa Bobadilla viuda de Casas” (Colonel Rosa Bobadilla, widow of Casas) and took command over men while preserving her feminine identity, unlike other women, who disguised themselves as men during the war.

Adopting a masculine appearance was a strategy adopted by some women who joined the war to escape sexual violence and to become more proficient at using weapons and in other military duties, such as spying and transporting ammunition. As recounted in Leonor Villegas de Magnón’s memoir The Rebel (1994), María de Jesús González, a secret agent in Carranza’s armed forces in northern Mexico, passed herself off as a man to carry out certain missions; once her duties were completed, she discarded her male disguise and resumed her female identity in women’s clothes. Bojórquez—who inspired Jesusa Palancares, the main character in Poniatowska’s novel—also wore trousers to protect herself from sexual violence and harassment. Masculinity as a survival strategy at times of conflict was a temporary measure for women such as González and Bojórquez.

A notable exception to this temporary adoption of a masculine identity was the case of Amelia/o Robles, who retained his male identity and appearance throughout his life. The young Amelia Robles left her hometown to join the ranks of Zapata and, over the course of the fighting, adopted a masculine identity. When peace was restored, he chose not to revert to his previous female identity; instead, Amelio Robles continued with his masculine name, appearance, body language, and social behavior. His community and former comrades in arms recognized him as a man and helped him integrate into the new postrevolutionary state as a participant in rural organizations; he was even recognized as a veteran of the Mexican Revolution. All his official papers, identity cards, and documents confirm his existence as man and record the male version of his name.

The term transgender obviously did not exist in the revolutionary period, but it is a useful way of understanding Amelio Robles’s masculinization, a process achieved by adopting the right body language and attire. Robles did not participate in Zapata’s agrarian movement for ideological reasons; his motivation was to join the guerrilla forces and show off his excellent horsemanship and knowledge of firearms. He earned the support of his fellow guerrilla fighters, who knew about his gender shift and helped him keep his masculine identity. The change in Robles’s identity was in one sense a transgression of the established gender norms, but at the same time it reinforced the hegemonic power of masculinity: Robles behaved like a rural man of the time by being authoritarian, violent, and promiscuous, as well as the provider for a conventional family. This earned Robles respect
within the community, but the gender issue remained a source of curiosity and aggression, forcing him to defend himself stoutly, sometimes even resorting to violence.

**Condemnation of Homosexuality**

![Manuel Palafox, Adviser and Personal Secretary to Emiliano Zapata](https://c.alfam.com/paul_fearn/alamy)  
© PAUL FEARN/ALAMY

**Manuel Palafox, Adviser and Personal Secretary to Emiliano Zapata.** Palafox was rumored to be homosexual, which was used to discredit him and reduce his influence over Zapata’s political and military decisions during the Mexican Revolution.

Unlike Amelio Robles’s masculine identity, which was accepted, effeminization and homosexuality among men were repudiated, not only among Zapata’s troops but also in urban and rural society in general. This rejection of male homosexuality can be seen in the rumors about the sexual preferences of Manuel Palafox, one of Zapata’s advisers and personal secretaries. Pointing to his supposed homosexuality was a means of discrediting him to reduce his influence over Zapata’s political and military decisions. Although it is not possible to analyze Palafox’s sexual preferences, his case demonstrates that homosexuality was considered a character flaw or a personal weakness that undermined a person’s reputation. Zapatista leaders were suspicious of Palafox; his urban background was a
source of distrust, and his bad temper and ability to conduct political machinations for his personal benefit made him enemies. These factors led Palafox to break from the Zapatistas and join the federal forces.

*Homosexuality* was not a commonly used word in the early decades of the twentieth century in Mexico. Men of homosexual persuasion were derogatively called *maricones, jotos, or pederastas* (pederasts; *pederastía* could refer to homosexual activities with underage boys or adults), and *safismo* (Sapphism) was used to refer to women with lesbian tendencies. Male homosexuality was informally referred to by the number 41, in allusion to the national scandal known as El Baile de los 41 (Dance of the 41), in which a raid on a house party in Mexico City in 1901 revealed more than forty men dancing together, many dressed in women’s clothing. The press (Catholic, opposition, and one-cent publications) used various degrees of sensationalism in describing the persecution of guests who had been present at this elegant party. Newspapers focused on the effeminacy of the transvestites, their poses, clothing, and makeup, and detailed the public humiliation and punishment administered to those in attendance. The episode became notorious because one of the guests was rumored to be Ignacio de la Torre, son-in-law of Mexican president Porfirio Díaz. De la Torre’s participation was covered up, and the press omitted his name from among those listed as *maricones*. In any case, El Baile de los 41 became ingrained in the urban imaginary that consolidated the association between effeminacy and homosexuality in the narratives on sexual heterodoxy and led to the coining of this Mexicanism to refer to homosexual men.

As a colloquial urban expression, the number 41 does not appear to have been used among the predominantly rural revolutionary forces to refer to homosexual men. However, the expression was used by Ricardo Flores Magón (1874–1922), the most powerful leader of the Mexican Liberal Party, who referred disparagingly to Antonio I. Villarreal (1879–1944), his former comrade in arms, as “El Coronel 41” when he was promoted to colonel by the forces supporting Francisco I. Madero. Flores Magón and Villarreal parted ways after years spent working together to establish the Mexican Liberal Party, and on *Regeneración*, the newspaper directed by Flores Magón to which Villarreal was a regular contributor. Their activism as journalists and members of the opposition led to their persecution, imprisonment, and exile.

Villarreal and other members of the Mexican Liberal Party distanced themselves from liberalism to join Madero’s government, while Flores Magón dug in his heels, veering toward an anarchist struggle against the state, capitalism, and, of course, Madero’s government. The political rift developed into an open feud. Flores Magón and his inner circle remained in the United States, where many leaders of the Mexican Liberal Party had sought exile, and he continued as director of *Regeneración*. Villarreal, Manuel Sarabia, and other former collaborators returned to Mexico and worked with Madero’s triumphant government, a move that Flores Magón considered an act of betrayal against the liberal
cause and a personal affront. Flores Magón sought to discredit Villarreal and Sarabia by
referring to their unconventional sexual preferences in various articles published in
Regeneración, going so far as to detail the circumstances of Villarreal’s sexual relations with
another man and threatening his political foes with evidence to bring them into further
disrepute. Whatever the details of Villarreal’s and Sarabia’s sex lives, it is remarkable that
homophobia was used openly by their political enemies as a weapon to humiliate and
dishonor them.

Similarly, Flores Magón brought people’s attention to the lesbianism of Juana Belén
Gutiérrez de Mendoza (1875–1942) and her love affair with Elisa Acuña y Rosetti (1872–
1946) with the aim of humiliating these women, who were his former allies in ideological
struggles. Gutiérrez de Mendoza had been a notable opposition journalist in the early
twentieth century. She established various newspapers—printed intermittently due to
oppression and closures—in which she criticized the government’s abuses of power. When
Vésper appeared in 1901, directed by Gutiérrez de Mendoza and with Acuña y Rosetti as
editor in chief, it was received with great praise in the pages of Regeneración, which shared
a similar ideological perspective with Vésper. Gutiérrez de Mendoza and Acuña y Rosetti
were jailed, persecuted, and exiled because of their journalistic and political affiliation with
the Mexican Liberal Party. In 1903 they took political refuge in the United States and
settled in Texas, where Flores Magón and other victims of political persecution also sought
exile; the bonds between the activists and their families strengthened during this period of
daily contact. Soon after returning to Mexico, Gutiérrez de Mendoza and Acuña y Rosetti
separated from Flores Magón’s faction and joined the group led by Camilo Arriaga (1862–
1945), another cofounder of the Mexican Liberal Party. Flores Magón considered this
political switch to be a betrayal and then set about publicizing their lesbian relationship. He
stated that he had previously kept quiet about the private lives of Gutiérrez de Mendoza
and Acuña y Rosetti to avoid the risk of bringing the liberal cause into disrepute but
changed his mind when they abandoned the Mexican Liberal Party. Flores Magón objected
to how the couple flaunted their lesbian relationship. Their affair was wellknown, both in
Mexico City’s liberal circles and in the Cárcel de Belén, the jail where they were imprisoned
on political charges. Cirilo Mendoza, Gutiérrez de Mendoza’s husband, was aware of his
wife’s lesbianism, a fact that further outraged Flores Magón. The names of Gutiérrez de
Mendoza and Acuña y Rosetti had appeared for many years in the credits of numerous
publications and at the bottom of political documents. Apart from working together on
Vésper, they also published Fiat Lux, another newspaper critical of the government. The
attempt to revile these two journalists came to nothing, just as in the cases of Villarreal and
Sarabia; all four figures continued their work in journalism and politics. Gutiérrez de
Mendoza and Acuña y Rosetti were members of Hijas de Cuauhtémoc (Daughters of
Cuauhtémoc), a women’s political club that supported Madero’s movement. However,
Gutiérrez de Mendoza later distanced herself from Madero’s movement and joined Zapata’s
agrarian struggle.
The Mexican Revolution maintained the social order and gender structure with few changes, but war and disorder did bring flexibility to some areas of social behavior, opening space for more heterodox sexual expression. The postrevolutionary period, however, engendered urban modernization and social reform. Educational policies relied heavily on female teachers and educated female volunteers to carry out literacy campaigns and rural education; women's suffrage was discussed in the public arena and established (with restrictions, and mostly for short periods) in four states of the republic. Such reforms, along with urban expansion, had complex effects on gender and sexual conventions; despite some openings for women that developed in cities, male authority and heterosexual conventions continued to be the norm. Nevertheless, male homosexual identities and sociabilities discreetly pervaded Mexico City, and probably other urban centers, as nationalist postrevolutionary culture celebrated heterosexual complementarity and derided homosexual, lesbian, and transgender identities, using the number 41 as a synonym for male homosexuality.

Migrant Queer Communities, US

MARTIN F. MANALANSAN IV
Associate Professor of Anthropology and Asian American Studies
University of Illinois, Urbana-Champaign

The cultural perceptions of, and challenges facing, queer migrants to the United States historically and in the twenty-first century.

While mobility is part and parcel of the human condition, the traversing of national boundaries became more salient with the emergence of the modern nation-state, the spread of colonialism, the rise of capitalism, and the development of new communication and transportation technologies. In many ways, the modern migrant is a product of the collisions of and encounters between worlds. Crossing political boundaries for various purposes has created legislation, sociocultural practices, and imaginaries around the idea of the “migrant.” The migrant is often portrayed as a perpetual “other,” a social stranger, an outsider to the national order of things and persons, as well as an anomalous entity in relation to the normative flow of events and histories.

Since 2016, the old adage regarding the United States as a nation of immigrants has been the subject of vociferous debate and rancor. Populist attitudes and ideas have gained new currency and, therefore, have reignited long-simmering debates about “illegal” immigrants. Migrants—particularly those from Africa, Asia, and Central and South America (including the Caribbean)—have been the target of xenophobic characterization. The classification of good versus bad immigrants in popular culture and discourse has taken a racialized and racist turn with the favoring of Christian and European migrants (like those from Scandinavian countries) over Muslim and “Western” ones. Images and ideas of the unscrupulous and infectious Chinese, the criminal Mexicans, and the terrorist Muslims have always permeated the American popular imagination, with an unsettling resurgence in the post-9/11 era.

Tentatively and strategically, this entry contextualizes migrant subjects as always already queer by virtue of their anomalous position to the national order unless they are filtered through the heteronormative frames of marriage and family. The family reunification aspect of the US Immigration Act of 1965 is an example of a sexual, gendered, and racial slant on naturalizing migrants, rendering them more acceptable and more easily woven into the national fabric. The following discussion focuses on same-sex–desiring and/or gender-insubordinate transnational border-crossing subjects. Therefore, queer is used in this entry not merely as an umbrella identity category, but to characterize the
nonnormative sexual and gender practices that often fall into or are loosely, if not erroneously, translated in Western categories such as *gay*, *lesbian*, *bisexual*, and/or *transgender*. *Queer* also refers to the formation of institutionalized and informal networks between and among these subjects and their allies as they are manifested by everyday struggles and public activism. Therefore, queer migrants encounter even more extreme forms of abjection and estrangement both within their “home” community and in their place of settlement.

The deployment of *community* in this entry does not always connote physical contiguity or proximity; instead, to use the words of Benedict Anderson (2006), it is about “imagined” sense of togetherness and belonging (Manalansan 1994). The aim here is to document instances and situations where migrants—specifically, queer Latino and Asian migrants—both imagine and practice a sense of community or a coming together both in the sharing of common everyday experiences of homophobia, xenophobia, sexism, racism, and so on, and in the practices of collective action through institutional means such as activist groups and organizations.

The idea of queer migrant communities might suggest nonintegration and unassimilable qualities as well as their monolithic contained nature. However, queer migrant communities are porous and never completely cut off from their ethnic communities or the mainstream society. Queer migrant communities have messy, tenuous, and subordinate relationships to heteronormative migrant, American, and gay communities, particularly around homophobia, racism, and xenophobia. *Mainstream* here refers to the dominant features of lifestyle practices, institutions, and identities that have been labeled as generic *migrant*, *gay*, and/or *American*. It also refers to the powerful influences that dominant groups exert on marginalized groups, such as migrants, and the ways in which the mainstream itself is shaped, resisted, or integrated into migrant queer communities.

Queer migrant communities are shaped by the larger historical settlement patterns of various national migrant groups as well as shifts in immigration law, policy, and attitudes. This entry focuses on the repercussions for and unfolding of American immigration after the promulgation of the 1965 Immigration Act, which was originally designed to bring in more European migrants through family reunification but enabled unprecedented immigration from Africa, Asia, Central America, and Latin America that eventually led to what has been called an “immigration crisis.”

**Queer Migrants in US History**

Eithne Luibhéid (2002) astutely suggests that deviant sexuality (abstracted as morality) has become one of the integral nodes for disciplining and controlling the movement of bodies across national borders. The place of queer migrant subjects in US immigration law and history has gone through dramatic transformations, particularly in the late twentieth
and early twenty-first centuries. Immigration laws including a series of Chinese exclusion acts in the midto late nineteenth century and the McCarran-Walter Act of 1952 built immigration controls that weeded out aliens who were deemed undesirable for social and moral reasons that usually revolved around sexual degeneracy. The 1967 case Boutilier v. Immigration and Naturalization Service is seen as a landmark case in which homosexuality was conceived as moral turpitude and a sign of a “psychopathic personality.” The case formally codified homosexuality as a legal ground for exclusion, expulsion, and deportation of migrants, but an underlying fear of deviant sexuality has been a feature of immigration law since the nineteenth century, when the Page Act of 1875 categorized Asian women as prostitutes (Luibhéid 2002). Until 1990, applicants for visas to the United States had to sign a form testifying that they were not criminals, Communists, or homosexuals. The AIDS pandemic created an additional complicating factor, as HIV became one of the exclusionary illnesses, although provisions were made for humanitarian purposes. After 1990, due to efforts led by congressman Barney Frank (1940–), “homosexual” was struck out as a category of excludable people. The pathbreaking Supreme Court decision in Obergefell v. Hodges (2015), the so-called gay marriage decision, opened new doors for queer migrants to be admitted as spouses through family reunification.

Queer migrant communities are not always visible in actual sites of physical settlements, such as neighborhoods. They arise out of various conditions, problems, and challenges through the establishment of everyday practices, institutions, and political action. Historically, these communities emerged at the intersection of various events, processes (such as gentrification), and institutions. By the late 1970s, American society was seeing and becoming more aware of the social consequences of the civil rights movement, the sexual revolution of the 1970s, the structural consequences of the 1965 Immigration Act, and the proliferation of multiculturalism discourses, including the opening up of public debate about “gay rights.” This period saw the dramatic development of lesbian- and gay-focused public spaces and events such as bars, pride parades, organizations, clubs, media representations, and, most importantly, residential and social urban spaces that have come to be known as “gayborhoods” (e.g., Greenwich Village in New York City, the Castro in San Francisco, and Boystown in Chicago). The idea of a monolithic mainstream gay and lesbian community, particularly in the cities, acquired a physical manifestation through the gayborhood. However, such neighborhoods were seen to be largely devoted to a particular gay- and lesbian-identified group that was primarily middle-class, white, and privileged. Therefore, while this period signaled the ascendancy of a group of gays and lesbians, migrant queers were left behind in its wake.
Identity and Cultural Translation

Various scholarly works and research strongly suggest specific themes and clusters of issues that confront and beset queer migrants (Córdova Quero, Goh, and Sepidoza Campos 2014; Luibhéid 2008b; Luibhéid and Cantu 2005; Decena 2011; Di Feliciantonio and Gadelha 2016; Epstein and Carillo 2014; Hirano 2014; La Fountain-Stokes 2007; Lewis 2012; Manalansan 2003, 2006; Mai and King 2009; Peña 2007, 2013; Sharif 2015). These include issues of identity and cultural translation, including queer migrants' tenuous relationships with categories such as “gay” and “lesbian,” public visibility and recognition, access to material and cultural resources, quotidian and structural experiences of racism and xenophobia, and legal and health issues. Identity categories, particularly those from the Global South, are not easily translatable to hegemonic gay and lesbian identities. Literal translations of these categories into “gay” and “lesbian” do not adequately address the cultural and quotidian incommensurability of queer migrants of color or of non–Euro-American origins. Cultural translation and negotiation is one of the main problems that queer migrant communities face in engaging with subjects, institutions, and practices in the mainstream gay community. According to popular notions about all immigrants and their lives in the United States, queer migrants are expected to integrate or assimilate into mainstream notions, including those related to mainstream gay and lesbian culture.
However, categories do not just function as nomenclature but are markers for specific sets of cultural beliefs, ideas, practices, and histories. The clash of such identity categories and sex/gender systems among queer migrant communities is not solved with mere label changes but by analyzing the intersecting historical relations of gender, race, class, and ethnicity. In other words, it is important to see how these various hierarchical relationships and structures shape the ways queer migrants constitute themselves as individuals and as collectivities both in everyday life and in public realms.

Latinos and Asians, who constitute the largest numbers of immigrants to the United States, are also primary subjects of numerous studies about LGBT migrants (e.g., Asencio 2011; Avivi 2015; Cantú 2009; Cotten 2012). According to these studies, the tensions between racism and sex/gender systems are both major barriers to attaining social acceptance and gaining visibility and organizing forces in the creation of alliances and coalitions. In addition, there is a popular, if not insidious, construction of immigrants and immigrant communities as tethered to “traditional” practices such as religiosity and familism, which are almost always read as “backward,” “premodern,” and, therefore, homophobic. Scholarly research has shown that while migrant queers have strong family ties, they are no more homophobic or unaccepting than “all-American” families. Although space constraints do not allow for a longer discussion, it is important to note that studies have shown that the equation of migrant/foreign communities with homophobia is facile and often a misrepresentation of the complexities of culture, kinship, and family ties.

Racist tensions and the clash of sex/gender systems occur in queer migrants' everyday lives (Sharif 2015). Asian queers, for example, have to contend with and confront “Orientalist” stereotypes that feminize and/or exoticize them, even in the mainstream gay community. Such stereotypes portray these queers as premodern and unassimilable gay/lesbian subjects. With white masculine “straight-acting” gays as icons of the American mainstream gay male community, it is not surprising that lines like “No fats, femmes, or Asians” on popular gay sexual networking sites like Grindr have become ubiquitous. Asian trans women and feminine cisgender (those whose gender identity corresponds to their assigned sex at birth) lesbians are seen as epitomes of Orientalist imaginaries. Latino queer cисgender men and women are beset by a racialized ideology of machismo that locates their gender presentation sometimes at odds with their sexual practices and gender presentation (Cotten 2012; Decena 2011; Manalansan 2003). Drag culture and emergent trans women communities are often conflated. Even worse, drag queens who participate in Western camp culture are seen as modern, while trans women in migrant communities are often portrayed as the embodiment of migrant cultural lag, representing a premodern and non-Western gendered homosexuality. The tensions between racialized ideologies of gender and sexuality locate migrant queer populations in an abject place within the American LGBT landscape. This dire situation is slowly being alleviated by the rise of transgender activist movements in the United States and other parts of the world.
Migrant Queer Spaces and Organizations

As mentioned above, the emergence of migrant queer communities can be seen in terms of the creation of public spaces and events focused on specific ethnoracial groups and the establishment of activist groups, social clubs, and nonprofit organizations that cater to the social, political, and economic needs of queer migrants (DasGupta 2012; Torres 2014). Cultural incongruities, racism, and homophobia in everyday life and in public spaces became the fuel for creating coalitions and organizing politically. The need to make themselves visible in order to acquire a political voice has led queer migrants (and their allies) to form such community organizations as Amigas Latina (Latina Friends), Latina Gay Asian and Pacific Islander Men of New York, Asian/Pacific Lesbians and Gays, the National Latina/o Lesbian and Gay Organization, Kambal sa Lusog (Comrades in Arms), Trikone (Enlightenment and Balance), Khush (Happiness), and the South Asian Lesbian and Gay Association (SALGA). These queer migrant community organizations were founded as responses to specific crises and issues, such as AIDS, immigration, and social visibility and power. It is also important to note that “Asian” and “Latino” are panethnic labels, and that there have been organizations that focused on specific ethnic groups, such as Kambal sa Lusog (Filipinas/os) and SALGA (South Asians) among “Asian” gay and lesbian organizations. These various organizations disseminated information to and about their queer members and advanced more complex, sensitive, and correct representations of the lives, needs, and aspirations of their community members. Through cultural shows, pamphlets, reports, and street activism, these organizations harnessed political energy and cultural creativity in the service of queer migrants.

AIDS, Asylum, and the Future

The AIDS pandemic was a crucial historical watershed for queer migrants, particularly in the late 1980s when the tides of the disease reached the shores of communities of color, including migrants. By the mid- to late 1980s, affected populations had expanded from mostly white, middle-class gay males to the poor, immigrants, and people of color. Government agencies such as the Centers for Disease Control and Prevention that were tasked with tracking and helping prevent the spread of the disease were confronted with the disjunction between sexual practices and American sexual/gender identities (Wat 2001). The category “MSM” (men who have sex with men) was created to classify men who do not identify as gay. This was an attempt to capture a cohort of men who were mostly migrants and/or racial minorities, but it failed to specify the ethnic distinctiveness of affected populations in order to address their particular problems. At the same time, the MSM category unintentionally marginalized queer people such as migrants who are seen as living anachronously in a distant past, unable to identify as gay or lesbian.

It was precisely these contentious moments and situations that spurred the establishment
of ethnicspecific nonprofit and community organizations, such as the Asian Pacific Islander Coalition on HIV/AIDS and the Latino Commission on AIDS. These organizations were responsible for addressing the issue of the pandemic in their respective communities and were especially instrumental in delving into the complexities of the lives and practices of their queer members living in the margins of both gay and ethnic communities. The determined and vociferous collective actions of these groups compelled governmental agencies to provide resources to migrant communities.

With the election of President Donald Trump, the problems of asylum and undocumented immigrant status have galvanized collective political action in migrant gay communities. Various political gay organizations and activists such as Yasmin Nair have focused their attention on the immigration status of queer constituents. Strategies for resolving undocumented status through asylum petitions or marriage entail many difficulties. For several decades, asylum cases based on sexual orientation have been one of the conduits for queer migrants to stay in the United States, but studies have shown that there are still major restrictions and problems because of the intricacies of the legal procedure and the mercurial qualities of immigration/asylum laws (Berger 2009; Corrunker 2012; R. Lewis 2014; Murray 2014; Romero 2005; Seif 2014; Shuman and Hesford 2014; Spijkerboer 2013; Vogler 2016). Immigration via family reunification, which was previously limited to immigrants' biological kin and heterosexual spouses, was radically transformed after the Supreme Court's Obergefell decision that enabled queer migrants to attain residency, and eventually citizenship, through their same-sex spouse (Hidalgo and Bankston 2009). That said, there are formidable trials ahead.

Queer migrants' political and social gains in the late twentieth and early twenty-first centuries are now facing several crises that may severely limit, if not obliterate, them. Since the 2016 presidential election, drastic and dramatic shifts in immigration laws and eruptions of blatant racism, xenophobia, and antihomosexual rhetoric have placed migrant queer communities and queer migrant individuals in peril and may radically transform the conditions of their presence in the United States. Conversely, these untoward events and situations may be the fuel for a major revitalization of activist coalitional efforts that will enable their cultural and political survival.

Migration to Europe

JOHANNES LUKAS GARTNER
Director of Programs
Humanity in Action Germany

The history of, reasons for, and challenges to LGBT migration to Europe.

LGBT migration is understood as the forced relocation of lesbian, gay, bisexual, trans, and queer people across national borders to escape persecution, violence, or stigmatization based on their gender expression, gender identity, or sexual identity. Yet, this definition falls short in acknowledging that more often than not, queer migration is the result of a conjunction of intersecting push factors. Contributing vectors of movement may include economic well-being, educational opportunities, access to health care (including treatment for HIV/AIDS), religion, or family relations.

The migration of gender and sexual minorities is hard to measure and, in comparison to the movement of other societal groups, scarcely researched. As opposed to nationality, binary genders, or religious affiliation, LGBT identity is seldom covered in European nations’ census data. Furthermore, most authorities do not systematically collect statistics about LGBT immigration (European Union Agency for Fundamental Rights 2017a), and state policies, as well as research frameworks on migration, have historically been based on the assumption that all migrants are heterosexual cisgender people (Luibhéid 2008). Increased advocacy, media attention, and research has begun to move the plight of LGBT refugees from the margins to the center stages of Europe’s migration-related discourse. Their heightened visibility comes against the backdrop of the European refugee reception crises and growing media attention since 2015, when over 1.2 million first-time asylum applications were filed across the European Union within the space of a single year.

Historical Background

Historic LGBT migration in the European context was not a one-way street. Rather, it comprised complex patterns of migration to, away from, and within Europe. Among the earliest such phenomena studied are mideighteenth- to mid-twentieth-century movements by white privileged Western Europeans, many of whom were artists and authors, to places such as Italy in the Mediterranean European South, where same-sex intercourse was subject to fewer legal sanctions. Possibly due to the influence of literary notions of a sexual utopia in the imagined homoerotic afterglow of classical antiquity and the Renaissance, the Mediterranean became a place of homosexual pilgrimages. Often, the trip was enough to
convince such “pilgrims” to make the Mediterranean their permanent home. Against the backdrop of an industrializing North, homoerotic photos of nude young Mediterranean boys and men by visiting photographers such as German Baron Wilhelm von Gloeden (1856–1931) assisted in the Western European constructions of fetishized, exoticized, and racialized “Others” in an allegedly sexually permissive South. Among those who found legitimization for their same-sex desires by expatriating to Mediterranean homosexual subcultures, such as those on the Italian islands of Capri and Sicily and in Venice, were prominent individuals such as British politician and poet Lord Byron (1788–1824), German steel manufacturer Friedrich Krupp (1854–1902), and Irish author Oscar Wilde (1854–1900) (Aldrich 1993).

Similarly, many “Oriental” colonial territories in North Africa, the Middle East, and Asia were from “Occidental” European viewpoints regarded and consequently used as sites that, far from the moral norms imposed at home, permitted same-sex encounters and longterm relationships (e.g., Said 1978; Aldrich 2003). Examples include the French colony of Algeria in the 1830s and the French-Spanish colony of Morocco in the early to mid-twentieth century, especially the city of Tangier, which became infamous as a place of “easy” sexual encounters and of sexual exploitation for European and North American homosexual men as recently as the 1980s.

Simultaneous to these expatriations, Western European cities also became centers of LGBT life and immigration, including London in the eighteenth and nineteenth centuries until the 1895 trials and conviction of Wilde on charges of “gross indecency” generated international publicity and negatively impacted Victorian attitudes toward same-sex relationships and nonnormative gender appearances. Postrevolution Paris, comparatively liberal and infamously flamboyant, was another destination that attracted prominent foreign queer expatriates well into the twentieth century, including American writer and art collector Gertrude Stein (1874–1946) and authors James Baldwin (1924–1987) and Robert McAlmon (1895–1956). Interwar Berlin during the Weimar Republic (1919–1933), which featured a relatively visible, diverse, and decadent subculture comparable in size to today’s, became home to many LGBT expatriates, such as British American poet W. H. Auden (1907–1973) and British novelist Christopher Isherwood (1904–1986), who resided in the city from 1929 to 1933 (Tamagne 2004).

Starting in the mid-twentieth century, the rise of fascism and Communism—both hostile to nonnormative sexualities—spurred a migration of LGBT persons from European countries. Gay men targeted by the Nazi regime during the Holocaust of World War II fled to the United States and Latin America, although the number of these queer emigrants and their plights remain largely unknown. Following the conclusion of World War II and the start of the Cold War, LGBT rights were often framed in dichotomous terms of an LGBT-phobic East versus a sexually liberating West. Whereas Soviet ideology in some instances portrayed homosexuals as victims of capitalism and the embodiment of bourgeois existence, laws and
practices on homosexuality, as well as LGBT histories, varied widely across the countries of the Eastern bloc. While queer people left countries under socialist rule for reasons of discrimination, it is often not discernible whether gender or sexual identity was a prime motif. We know, however, that the migration of LGBT people from East to West, such as that of Vienna-based Polish activist Andrzej Selerowicz in the 1980s, had an influence on both the Western LGBT “liberation” and the development of LGBT cultures in the East (Szulc 2018).

During the 1970s and 1980s many European countries outside the Communist bloc started to shift toward a more liberal approach, resulting in comparatively stronger legal protections and societal acceptance of Western-conceptualized LGBT rights and identities. However, great disparities in societal acceptance of LGBT people exist in the different European regions, including within the European Union. Numerous countries in northern, western, and southern Europe are ranked highest on the Rainbow Index by the International Lesbian, Gay, Bisexual, Trans and Intersex Association (ILGA) Europe, which records European countries' legal LGBT standards; many central and eastern European countries and countries in the Caucasus ranked lowest (ILGA 2017a). Thus, most contemporary LGBT immigration from outside Europe, as well as from several countries of central and eastern Europe, is to northern, western, and southern European Union member states (e.g., Mole et al. 2014; Stella et al. 2017). Reducing this phenomenon to an East/West divide on LGBT rights, however, both inaccurately brands eastern European cultures as inherently trans- or homophobic and misleadingly presents them as homogeneous entities (Szulc 2018).

Impact of European Colonialism

Since the 1980s, LGBT-related research on European colonial history has emerged that examines the ways in which European colonialism’s mechanisms of geopolitical control featured gendered dimensions and were implicitly—in some cases also explicitly—concerned with the sexuality of colonial and colonized populations (Aldrich 2003; McClintock 1995; Stoler 2002). European colonial history is relevant for understanding contemporary LGBT migration for three main reasons.

First, though historical contexts differ for each country, European colonialism has had a significant impact on the heteronormalization of many societies that today are hostile toward LGBT people. Current laws that criminalize homosexuality in African, Middle Eastern, and Asian countries are in many cases directly rooted in the European colonial legacies of the nineteenth and twentieth centuries. For example, the British-authored Indian Penal Code of 1860, which classified homosexuality as an unnatural offense, served as the basis for the constitutional documents of many British colonies, which retained similar classifications as of 2017 (Sanders 2009). Similarly, sumptuary laws prohibiting cross-dressing are often European legacies.
Second, in European discourses and asylum procedures, trans- and homophobia are frequently portrayed as uniquely non-European phenomena (Giametta 2017; Spijkerboer 2017). In light of Europe’s history and present, however, this does not hold true. Moreover, many indigenous societies had featured comparatively fluid understandings of gender and sexual identities before imperial politics exported European cultures of patriarchy and compulsory heterosexuality. Examples are wideranging and include the kingdom of Buganda (in present-day Uganda) under Kabaka Mwanga II (1866–1901), who was known to engage in sexual relationships with male servants, which was accepted until Europeans imported Christianity (Murray and Roscoe 1998). European colonial history had highly gendered dimensions, such as heavy reliance on a constructed “masculinization” of colonizers as strong rulers and a contrasting “feminization” of nonwhite colonized populations, irrespective of their gender, as weakly submissive “Others” (e.g., Sinha 1995; Rutherford 1997). The colonial powers’ anxieties concerning colonial sexual practices prompted attempts to regulate not just the practices of colonized populations but also those between colonial officials and locals. The goal was often to maintain clearly defined and racialized hierarchies between “colonizers” and “colonized” (Stoler 2002).

Gay Refugee from Iran Awaiting Resettlement in Turkey. A refugee named Danial shows the scars from when he sold his kidney to pay for his passage to Turkey. Those who live in a climate of hostility toward LGBT persons—particularly in the Middle East, Asia, and Africa—sometimes resort to extreme measures to migrate to areas of greater tolerance in Europe and North America.
Third, today's migratory movements toward Europe are to a considerable extent the outcome of an uneven geopolitical order and world economy that European colonial history has contributed to, if not created. In the prevalent absence of critical reflections on European colonial and migration history in most European countries' educational curricula, long upheld imaginations of many European societies as ethnically, racially, religiously, linguistically, and culturally homogenous continue to persist. Especially pre-World War II immigrations to European countries and the realities of people of color have been ignored in the collective memories and national identities of most European countries. One of the results is widespread problems with social exclusion and structural racism, which significantly impact the lives of many LGBT immigrants.

**Reasons for Migration**

Over 175 million LGBT people (2.5% of the world population) are considered to live under persecutory regimes ([ORAM 2012](#)). As of 2016, over seventy countries criminalized same-sex relations; of these, fortyfive targeted both women and men, and eight were reported to impose the death penalty as punishment ([ILGA 2017b](#)). Thirty-two of these states are in Africa, twenty-three in Asia. While most legal provisions and state-sponsored human rights violations target LGB persons, several countries also have laws that penalize cross-dressing and transgenderism.

In addition to persecution based on laws with penalties that include lashing, life imprisonment, and death, LGBT individuals who do not perform their genders and sexualities in ways that are reconcilable with their environments' sociocultural master narratives frequently face various forms of physical and sexual abuse, the denial of basic human rights, and discrimination in education, employment, health care, and housing. Across all continents, a variety of methods are used in attempts to straighten or exterminate deviant genders and sexualities, including arbitrary detention, coercion, torture, so-called honor killing campaigns, and “corrective” rapes of lesbians. The Trans Murder Monitoring Project, which collects and analyzes data on transgender homicides, documented 2,343 murders of transgender persons worldwide from 2008 to 2016 ([Transrespect versus Transphobia Worldwide 2017](#)). In trans- and homophobic contexts, such injustices usually go unreported due to state officials' intentional or reckless complicity and impunity for perpetrators.

Given this climate of hostility—particularly in the Middle East, Asia, and Africa—some LGBT persons seek asylum in European countries. LGBT immigrants may also be admitted for reasons shared by other immigrants, including reunification with family members already in Europe, study at a European institution of higher learning, or because they have job skills that immigration policies deem desirable.

In post–World War II Europe, cities such as Amsterdam, Berlin, Copenhagen, Madrid,
London, and Paris that have gained international reputations for their LGBT scenes attract LGBT visitors, students, workers, and retirees from many corners of the world. Legal pathways for residing in these and other places in the European Union, however, tend to be reserved for privileged non-European citizens (“third-country nationals”) who meet the high eligibility requirements for the US-inspired EU Blue Card, who are university students or researchers, who are already long-term residents in the European Union and may consequently apply for permanent residency, or who have family ties in the European Union.

**Immigration through Asylum**

Applying for asylum is an increasingly politicized legal pathway to immigration in Europe. The legal instrument defining refuge and governing asylum internationally continues to be the 1951 Convention Relating to the Status of Refugees (Geneva Convention), an outcome of World War II. Temporally and geographically expanded through the 1967 Protocol Relating to the Status of Refugees, it defines a refugee as someone “who is unable or unwilling to return to their country of origin owing to a well-founded fear of being persecuted for reasons of race, religion, nationality, political opinion, or membership of a particular social group.” Asylum seekers are those whose petitions for protection are in process.

It is known that LGBT refugees who manage to file asylum applications across the European Union come from at least 104 countries, many of which are located in eastern Europe, Africa, and the Middle East, among them Cameroon, The Gambia, Iran, Iraq, Nigeria, Pakistan, Uganda, Russia, Senegal, and Syria (Jansen and Spijkerboer 2011). Turkey, a gateway to the continent, does not formally grant asylum to non-European citizens, but it has awarded temporary protection to almost 4 million refugees, who constitute 3 to 5 percent of its population (European Commission 2018). After Turkey, the European Union member states are the second-most-important hosts of refugees in Europe. However, the capacity to request asylum in Europe is usually dependent upon reaching its soil; ironically, in many cases this entails entering its territories illegally. In spite of widespread criticism, there are hardly any humanitarian visa or resettlement programs in place in the European Union, where less than half a percent of the total population constitutes refugees (Spijkerboer 2017).

Though gender and sexual identity were not explicitly included as grounds of persecution at the time the Geneva Convention was drafted, international jurisprudence and legislation since the 1990s has clearly established that LGBT-based persecution may fall into the category of persecution caused by belonging to a “particular social group.” European countries pioneered such an interpretation; in 1981 the Dutch Judicial Division of the Council of State deemed persecuted homosexuals a group that is worthy of protection under the Geneva Convention, and other countries such as Germany soon followed. Since
then, a solid body of LGB-related asylum case law has developed across Europe. Jurisprudence on gender identity-based asylum is more recent and frequently relies on principles that were developed through LGB asylum cases. Moreover, gender identity-related asylum is often wrongly registered as sexual identity-based requests for asylum, partly due to lack of awareness among immigration officials (Berg and Millbank 2013; Jansen and Spijkerboer 2011).

As of 2018, asylum seekers fleeing from persecution on the grounds of sexual identity (since 2004) and gender identity (since 2011) theoretically qualified for refugee status in all twenty-eight countries of the European Union (Qualification Directive 2011/95/EU). Case law of the Court of Justice of the European Union, most relevantly the cases X, Y and Z v. Minister voor Immigratie en Asiel (2013) and A, B and C v. Staatssecretaris van Veiligheid en Justitie (2014), has offered guidance in the interpretation of European Union law. In addition, the European Court of Human Rights, impacting forty-seven countries, has adjudicated on LGBT migration-related cases (most notably M.E. v. Sweden 2014 and O.M. v. Hungary 2016), primarily invoking Articles 2 (right to life), 3 (prohibition of torture), 5 (right to liberty and security), and 13 (right to an effective remedy) of the European Convention of Human Rights. Related jurisprudence is continuously pending before both courts.

In 2012 it was estimated that globally fewer than 3,000 people annually were awarded refugee status based on LGBT-based persecution (ORAM 2012). As of 2018, however, no reliable aggregate data exist in this regard. Reasons for the lack of statistics relate to the marginalization of LGBT issues in largely heterocentric state apparatuses, as well as to alleged concerns around data protection and confidentiality of sensitive information that LGBT refugees share in asylum processes (European Union Agency for Fundamental Rights 2017a). Beyond that, conclusive data on LGBT asylum can be hard to collect because LGBT asylum seekers do not necessarily cite LGBT-related grounds in the initial asylum-claiming stages; sometimes it is at a later stage, or they claim asylum on entirely different grounds.
An LGBTI Refugee Pleads for Help While Stopped at Greece's Border. The capacity to request asylum is usually dependent on reaching the host country's soil, which has prompted repeated waves of illegal migration to Europe.

However, reports by civil society institutions, lawyers, and the media indicate that the number of LGBT asylum seekers is significant and that either the frequency of claims or their prominence is steadily on the rise. Authorities in three European countries (Belgium, Norway, and the United Kingdom) and civil society organizations in many countries of the European Union collect limited statistics, which due to their great discrepancy hardly serve as good indicators for generalizations. For instance, in 2016 LGBT organizations in Poland estimated the annual number of LGBT asylum claims to be two or three, in Greece thirty-two (of whom seven were transgender applicants), and in the Netherlands up to 1,000 (FRA 2017a).

The most comprehensive study of LGBT asylum in the European Union estimated in 2011 that, in total, up to 10,000 LGBT asylum claims are annually registered in the European Union (Jansen and Spijkerboer 2011). Given that statistically a considerable share of the more than 2.5 million asylum seekers who lodged first-time asylum applications in the European Union between 2015 and 2016 must be gender and sexual minorities, many of whom originate from LGBT-hostile environments, it is likely that these numbers are much higher in 2018.

**Asylum Challenges** To qualify for protection in Europe, queer refugees need to
demonstrate through interview proceedings and the provision of documentation that they face a well-founded fear of persecution that results from their membership of a particular social group (i.e., on account of being lesbian, gay, bisexual, or transgender). In most countries in Europe, the burden of proof rests entirely on the asylum seeker.

Late disclosure of being queer, for example, has much more serious consequences than merely complicating data gathering; immigration authorities frequently interpret the late disclosure of an asylum seeker’s LGBT-based persecution as harming their credibility. In many cases, adjudicators in Europe deny asylum to LGBT refugees who fail to disclose their LGBT-related persecution at the first possible instance (Jansen and Spijkerboer 2011). Late disclosure may result from queer refugees’ lack of awareness about their asylum rights, or from their limited experiences and anxiety in articulating non-European LGBT identities to foreign, usually straight and cisgendered immigration officials or to their interpreters, who often are from LGBT refugees’ regions of origin. Lastly, fears of trans- and homophobic reactions from European asylum authorities, in some cases caused by internalized suspicion vis-à-vis authorities in general, can be a contributing factor.

Until recently, discretion reasoning, though firmly rejected by the United Nations High Commissioner for Refugees (UNHCR 2012), allowed adjudicators to reject LGB asylum applications on the basis that LGB refugees can avoid persecution by acting “discreetly” about their sexual identities if they are returned to their home countries. In 2013 such reasoning was found to be inconsistent with European law standards and is therefore illegal in the European Union (X, Yand Z v. Minister voor Immigratie en Asiel 2013). However, immigration lawyers indicate that it continues to be applied in practice, and research suggests that cultures of disbelief replace discretion reasoning (Millbank 2009).

Queer asylum claims are frequently rejected on the basis of negative credibility findings, which deem claimants insincere about their identities. In the United Kingdom, for example, civil society findings indicate that 98 to 99 percent of LGBT asylum claims from 1999 to 2009 failed, compared to 73 percent on all other grounds (Yoshida 2013). Negative credibility assessments frequently relate more to the credibility expectations and prejudices of the assessors than to the LGBT identities of asylum seekers. They particularly illustrate the uneven power structures at play in asylum proceedings, where “the decision-maker and not the applicant has the power to name, the authority to decide who the applicant ‘really’ is and what sexuality ‘really’ means” (Berg and Millbank 2009, 208).

Although European Union law stipulates that immigration officials who interview asylum seekers should be trained in LGBT refugees’ issues (Procedures Directive 2013/32/EU, Art. 153a), authorities’ credibility assessments are often based on Eurocentric sociocultural norms and heteronormative Western understandings of stereotyped LGBT belonging. European asylum realities thus often implicitly coerce queer claimants into revealing their selves and experiences in ways that are reconcilable with European immigration case
workers’ expectations about how LGBT refugees need to act, feel, and be. LGBT asylum seekers, then, to confirm their own genuineness and to consequently increase the chances of a legal immigration status, understandably perpetuate these assumptions by living up to them (Gartner 2015).

European asylum law and practice have frequently reduced gender and sexual identity to psychology and sex. Past examples of this included the use of sexual arousal tests by authorities in the Czech Republic and Slovakia in 2010 and 2012 that required LGB asylum seekers to watch pornography while machines measured their physical reactions, and the acceptance in the United Kingdom, for example, of photographic and video evidence that demonstrated queer asylum seekers’ intimate contact with persons of the same sex. Similarly, the application of forensic psychological testing to determine LGBT belonging continues to be an issue, as evidenced by case law of the European Court of Justice (F. v. Bevándorlási és Menekültügyi Hivatal 2016). Though supranational case law now imposes limits on how authorities may verify asylum seekers’ sexual orientation and makes clear that self-identification must be the starting point (A, B and C v. Staatssecretaris van Veiligheid en Justitie 2014), it remains unclear how far authorities can go to test claims. Trans refugees have been found to face comparatively fewer challenges in establishing their credibility. Reasons include the low prevalence of such claims and higher rates of success in establishing credibility in cases where trans refugees’ bodies conform to a binary visual typology (Berg and Millbank 2013).

Other common credibility challenges that queer refugees face across Europe relate to adjudicators’ expectations about coherently articulated and linear coming-out stories (irrespective of whether these are founded more on Western illusions than on LGBT refugees’ individual pasts), lack of knowledge about local queer scenes in the receiving country (irrespective of their exclusive structures or the financial burdens that preclude LGBT refugees’ participation in them), previous marriages (including forced ones), and children (Berg and Millbank 2009; Jansen and Spijkerboer 2011).

Whereas European Union law theoretically requires member states to ensure that precise and up-to-date information is obtained from various sources (Qualification Directive, 2011/95/EU), the reality of insufficient evidence impacts various aspects of LGBT asylum claims in Europe. Among them are contentious “internal flight” argumentations, which are applied across European Union countries to return LGBT refugees to their countries of origin based on the justification that LGBT-based persecution can be overcome by relocating to another part of the home country (Jansen and Spijkerboer 2011). Similarly, except for Italy, most courts and authorities in the European Union consider the nonapplication of anti-LGBT laws as an indicator that “persecution” does not take place in a given country. However, the mere existence or enforcement of laws is a very limited indicator to establish evidence for or against persecution; Brazil, for example, has the highest number of trans murders worldwide despite a comparatively progressive legal
LGBT regime. More generally, European Union member states' immigration authorities continue to rely on rudimentary, sometimes dubious, and often non-LGBT-specific country background documentation, including media reports and arbitrarily chosen online sources, rather than on substantiated research evidence. This is acknowledged by the European Asylum Support Office (EASO), which published a guidebook for European immigration authorities on researching the situation of LGB asylum seekers' countries of origin (EASO 2015).

Imperfect as the empirical data on LGBT migrants who reach the European Union is, it still far outstrips our knowledge of LGBT migrant experiences in transit countries such as Egypt, Libya, Kenya, and Turkey, where the vast majority of refugees' journeys end without reaching Europe. Often, such transit places differ insubstantially in their hostility toward LGBT migrants (Human Rights Watch 2017; Wesangula 2017; Özcan et al. 2017; Grungras et al. 2009).

**Immigration through Family Reunification**

Since the late 1970s the most common way of immigrating to the European Union with authorization has been through the use of family reunification laws. Whereas heterosexual European Union citizens and residents, though in many cases also under tight controls, are often awarded the right to have their spouses immigrate or migrate internally, the legal situation for queer couples has been particularly complex and inconsistent. For example, the European Union's freedom of movement and family reunification laws, which govern family-based immigration and internal migration, do not define the term *spouse* in terms of gender or sexuality, so individual countries in the European Union have been afforded comparatively wide discretion to determine LGB family-based immigration in accordance with their own family laws (Free Movement Directive 2004/38/EC; Family Reunification Directive 2003/86/EC). In 2018, however, the European Court of Justice in a landmark ruling shed some light on the interpretation of *spouse* in queer immigration cases (Coman and Others, C-673/16). Though limited to same-sex couples who married in a European Union country, the court held that third-country nationals who are same-sex spouses of European Union citizens cannot be refused rights of residence and free movement in the European Union, including in member states that prohibit same-sex marriage or civil partnerships. For third-country nationals who have been granted asylum in the European Union, practices differ because member states are largely left with the prerogative to allow or deny their partners the right to join them. Also at the Council of Europe level, which legally impacts forty-seven countries on the continent, a 2016 binding judgment by the European Court of Human Rights held for the first time that family member residence permits may no longer be granted exclusively to opposite-sex spouses. Thus, theoretically, all forty-seven signatory states must ensure the eligibility for family-based residence permits of binational same-sex partners, whether through marriage, civil partnerships, or
LGBT Immigrants' Reception in Europe

The reception of LGBT migrants in Europe varies tremendously depending on the sociopolitical and economic context of the host countries. Overall, however, once arrived in Europe, many LGBT migrants discover that the social discrimination they faced persists, albeit in different forms. In 2013 a survey of 93,000 LGBT persons across member states of the European Union found that over 26 percent of all respondents, and 35 percent of all trans respondents, had suffered violent attacks or threats in the previous five years, and that such incidents were rarely reported to local authorities (FRA 2013). In addition, immigrants' and their descendants' backgrounds, names, ethnicities, and religions trigger various forms of serious discrimination and exclusion, as is evidenced in a survey of over 25,000 minority respondents across the twenty-eight European Union countries (FRA 2017b).

LGBT immigrants are subject to multiple forms of intersectional discrimination based not only on their ethnic, cultural, or religious backgrounds but also on their LGBT belonging. Thus, particularly severe forms of social exclusion from the general populations of the host societies often go hand in hand with marginalization in European LGBT scenes, as well as queer migrants' diaspora communities. Research in these contexts is sporadic; it has shed light on the experiences of, for example, queer refugees in London's LGBT scenes (Giametta 2017) and queer Russians in Berlin's Russian diaspora community (Mole 2018).

Especially since 2015, however, LGBT refugees' solidarity networks have been established in several European countries. Though many of these implicitly or explicitly reproduce European "liberation" narratives, many also create comparatively safe spaces for LGBT refugees. An example is WelcomeOUT, an annual refugee-focused pride event in Uppsala, Sweden. Despite its arguably contentious (sub)title—Welcome Here, Welcome Home, Welcome Out—the initiative empowers LGBT refugees and increases their visibility with the Swedish public. Since 2016 it has enabled over 200 LGBT refugees from across Sweden to connect with and empower each other, and it has inspired the establishment of a similar project in France.

In addition to having to navigate racist and trans- or homophobic community settings in Europe, major issues that queer migrants and refugees face include language challenges, (mental) health challenges (Messih 2016), limited legal access to work opportunities during and after the often years-long asylum proceedings, which may result in poverty (Allsopp et al. 2014), and a lack of safe and appropriate housing. Due to frequent reports of trans- or homophobic abuse in reception and detention, in many European reception settings, LGBT refugees are considered a vulnerable group, which may give them access to special accommodation (FRA 2017a). LGBT-only refugee shelters, however, exist only in a
handful of European cities, including Amsterdam, Berlin, Bologna, Cologne, and Nuremberg.

The is no standard LGBT migration story. Migration, gender, and sexuality are open-ended, fluid processes, which makes the experiences of LGBT people who migrate to Europe as heterogeneous and diverse as their backgrounds and identities. Migrants' contexts of origin, ability, class, gender, race, and religious affiliation always impact their migratory decisions and realities. The sociopolitical climates in their receiving countries are equally decisive for their experiences, and these climates diverge greatly in the different regions and countries in Europe, and even within the European Union. After all, Europe consists of around fifty countries with widely heterogeneous histories, languages, politics, economic realities, and approaches to LGBT issues.

For most of history, the migration of LGBT people to Europe has taken place at the very margins of law, research, policy, and scholarship. And yet, despite their comparatively low numbers, LGBT refugees are increasingly coming to the forefront of European migration debates. Since the 1980s, European legal systems have accommodated claims by refugees who flee from persecution due to their gender and sexual identities, a minority of whom are ultimately granted asylum, most often in Western European countries. In spite of Europe's historic role in causing LGBT persecution and its present sociopolitical realities, LGBT refugees' claims are often instrumentalized in the perpetuation of dichotomous imaginaries of a “liberating West” and an “oppressive non-West.” European asylum law, too, operates on such logics, which in the asylum processes frequently causes LGBT refugees to reduce the complexity of their individual stories to confirm simplistic Western stereotypes about LGBT belonging and persecution.

Cultures of refugee victimization, xenophobia, and particularly anti-Muslim sentiments and racism seriously impact LGBT migrants’ experiences with society at large in many European countries. Simultaneously, cultures of trans- and homophobia complicate many LGBT refugees’ lives in refugee accommodations and diaspora communities. And yet, for many LGBT refugees, despite its widespread historical amnesia and the resulting structural discrimination against minority populations, Europe may provide safety from persecution on a continent that, in global perspective, has the best record of LGBT rights assurance.

Yoshida, Keina. “Missing the Mark: Decision Making on Lesbian, Gay (Bisexual, Trans and
Militarism and Sexualities in the Asia-Pacific Region

VERA MACKIE
Senior Professor of Asian Studies
University of Wollongong, Australia

The policies of various countries in Asia regarding the inclusion of LGBT individuals in their armed forces.

The Asia-Pacific region includes some of the most militarized zones on the planet, hosting the huge standing armies of India, the People's Republic of China, the Republic of Korea (South Korea), and the Democratic People's Republic of Korea (North Korea), as well as the smaller armies of Taiwan, Vietnam, and Mongolia. There are also US troops stationed throughout the region. China is second in the world in military expenditure, Japan is fifth, India is eighth, and South Korea is also in the top ten. Several countries in the region require a period of military service of their young men (including Singapore, Vietnam, Taiwan, Mongolia, North Korea, and South Korea). When societies are preoccupied with military matters, this preoccupation impinges on every aspect of government policy, civil society, and interpersonal relations—including sexuality and gender identity.

Modern nation-states have always been concerned with the sexuality and reproductive capacities of their citizens. This can involve introducing sexual hygiene measures; policing the boundaries of sex and gender; promoting heteronormative family forms that facilitate the reproduction of citizens, workers, and soldiers; regulating marriage and divorce; controlling access to the means of reproductive control; and managing the size of the population through either pronatalist policies or population limitation, also known as biopolitics (Foucault 1990; Mackie 2009; Mackie and Tanji 2015). Where a nation-state's policies have a particular focus on the military, this will also have corresponding effects on gender relations and the management of sexuality. In a militarized society, governments manage the sexuality of all citizens, not just soldiers, by promoting particular heteronormative family forms; policing the boundaries of binaristic masculine and feminine gender identities; promoting the reproduction of children (potential soldiers and supporters of the military); placing the heteronormative family at the center of national identity; and positioning women and children at the “home front” as needing to be protected by the military.

Military Management of Sexuality

Military institutions have always managed the sexuality of soldiers and civilians (Enloe
1983, 1989, 1994, 2004). Military forces manage the sexuality of soldiers in their training by (directly or indirectly) providing access to brothels, providing prophylactics, testing soldiers and sex workers for sexually transmissible diseases, regulating marriage, prohibiting same-sex sexual activity, and excluding homosexuals from service in the military. Military training fosters aggression, often expressed in misogynistic and homophobic terms. This entry presents a survey of these dynamics in selected countries in the Asia-Pacific region.

Until relatively recently, most armies were exclusively masculine institutions. Citizenship has historically been connected with military service, which originally was expected of males only. Most militaries have prohibited the participation of women or openly gay or transgender service personnel, though women have served in militaries at times, particularly during national liberation struggles, and some women have “passed” as male soldiers (Jayawardena 1986; Mackie and Tanji 2015; Crozier-De Rosa and Mackie 2019). In China the premodern legend of Hua Mulan, the cross-dressing woman warrior, has been reworked over the centuries, and has also appeared in twentieth-century Anglophone adaptations (Crozier-De Rosa and Mackie 2019; Kingston 1977; Bancroft and Cook 1998).

In places where armies are stationed, service industries develop around the bases, including entertainment and sex industries that often involved women providing sexual services to male soldiers (Mackie and Tanji 2015). While gay men could not be open about their sexuality in military institutions until recently, they may seek out gay bars or other entertainment services when off duty, as some Allied soldiers reportedly did during the occupation of Japan from 1945 to 1952 (McLelland 2005). While the presence of LGBT personnel in military institutions in many Anglophone societies is well documented, there is less known about many other parts of the world. Much more research is needed, but the existing scholarship is summarized below (Sinclair 2009; Bérubé 1990; Riseman et al. 2018).

**LGBT Military Index**

The LGBT Military Index, created by the Hague Centre for Strategic Studies, ranks countries according to their inclusion of LGBT service personnel in the armed forces, as well as related policies and best practice. The index scores countries with respect to five categories: inclusion, admission, toleration, exclusion, and persecution. For inclusion, they look at:

- the presence of an organization supporting LGBT personnel within the armed forces;
- the type of recognition same-sex unions receive from the state;
- the recognition, support, and financial benefits granted to same-sex couples;
- antidiscrimination on grounds of sexual orientation, gender identity, or expression;
- whether armed forces are represented at pride events;
whether armed forces make a political claim supporting the rights of LGBT individuals;
whether the state recognizes a legal change of gender on official documents; and
whether crimes against an individual because of his or her (perceived) sexual orientation are considered an aggravating circumstance.

The category admission considers whether individuals are permitted to serve regardless of their sexual orientation or gender identity. Tolerance looks at whether the state supports a joint statement of the UN Human Rights Council on the rights of LGBT persons and the criminalization of male or female same-sex sexual activities. The exclusion category assesses whether service is banned based on sexual orientation or gender identity, and whether the armed forces consider homosexuality, bisexuality, or transgender status to be a pathological mental disorder. Finally, the category persecution scores countries based on restrictions on expression of sexual or gender identity and on the presence of incitement to hatred by a public official. Taking all the categories into account, the index then provides a score for each country, with a higher score meaning that the country ranks well for LGBT inclusion (Polchar et al., 2014).

In the Asia-Pacific region, Australia and New Zealand score highest. The lowest scoring countries are Iran (with a score of 6), Malaysia (20), and several Central and West Asian countries—Kazakhstan (21), Bangladesh (24), Azerbaijan (30.5), Turkey (30.5), and the Russian Federation (32.5). Armenia and Iran are reported to have official incitement of hatred against LGBT people (Polchar et al., 2014).

The inclusion of LGBT people in a nation’s military may depend on whether homosexuality is legally proscribed. Several former British colonies in the Asia-Pacific region inherited the British antisodomy laws that prohibit male same-sex sexual activity; female same-sex sexual activity is seldom mentioned in these laws. The antisodomy laws were repealed in New Zealand in 1986 and in the last of the Australian states in 1997. They were repealed for a time in India but later reinstated, were ruled unconstitutional in Hong Kong in 2005, and still exist in Singapore and Malaysia (Sanders, 2015; Kirby, 2011).

**Military Bans**

Australia removed its ban on gays and lesbians in the military in 1992. Since 2003, same-sex partners of military personnel have been treated the same as heterosexual partners for most purposes. From 2010, the ban on transgender service personnel in the Australian Defence Forces was lifted, and some individuals have transitioned while in service (ABC TV, 2014). Military personnel have regularly participated in uniform in the pride parade at the Gay and Lesbian Mardi Gras in Sydney since 2013 (Riseman, 2017; Riseman et al., 2018).

Taiwan removed its prohibition on gays in the military in 2002 (Palm Center, 2002). Thailand removed its prohibition on gays and transvestites in 2005 (Immigration and...
Refugee Board of Canada 2008); transgender women can be exempted from military service on grounds of gender identity disorder (UNDP and USAID 2014b). The Philippines removed restrictions in 2010 (Polchar et al. 2014). In Vietnam, men must do military service, and women may do military service. There are no explicit laws against homosexuality in Vietnam, but in the past homosexuality has been addressed in campaigns against “social evils” (Newton 2015), and it is classified as a mental disease for the purposes of determining suitability for military service (Nguyen Thi Huyen Linh, personal communication; UNDP and USAID 2014c, annex 3).

Japan does not have any explicit ban on gays and lesbians serving in its Self-Defense Forces, and there are no laws against same-sex sexual activity in the country. Same-sex marriages are not recognized in Japan, so gay and lesbian partners would be unlikely to be able to access benefits for same-sex partners. There is no national law prohibiting discrimination on the grounds of sexual orientation in Japan, although there is some case law (Taniguchi 2006).

In 2007 two soldiers in Nepal’s army were accused of having a lesbian relationship and were discharged. The United Nations Development Programme (UNDP) reports, however, that gays and lesbians can now serve openly in Nepal (UNDP and USAID 2014a, annex 2). In May 2017 a soldier in South Korea was punished under the Military Criminal Act 92 (6), which prohibits members of the military from engaging in sexual activity with members of the same sex (Amnesty International 2017). North Korea reportedly mandates celibacy for the first ten years of military service (Hassig and Oh 2009). Currently, Australia and New Zealand are the only countries in the region that allow the service of transgender personnel. As for the trans community in South Korea, gender reassignment surgery is permitted only for individuals over twenty years old, and only if they have either completed or been exempted from military service (Young 2008; Yi and Gitzen 2018).

When evaluating policies on the inclusion of LGBT personnel in militaries, it is also necessary to consider actual practices, or how officially LGBT-friendly policies are actually implemented. In Singapore, for example, gays are prevented from going to command school or serving in sensitive units. In many other countries, even if there is no prohibition of gays and lesbians in the military, once in service they may still be subject to contradictory policies or homophobic attitudes from their peers (OutRight Action International 2009).

Military Law and Policy in the United States

TAMMY S. SCHULTZ
Professor of Strategic Studies
US Marine Corps War College, Quantico, VA

The evolution of military law and policy regarding LGBTI persons serving in the US armed forces.

LGBTI individuals have always been in the US military. Much of that history, however, has been marred by policy that has been anything but kind to those wishing to serve their country who also happen to be LGBTI. On 14 March 1778 Lieutenant Gotthold Frederick Enslin was the first person dismissed by the US military by order of George Washington. Washington’s order, drafted after Enslin was caught in his quarters in bed with another man, noted that Enslin was “to be dismiss’d with Infamy. His Excellency the Commander in Chief approves the sentence and with Abhorrence and Detestation of such Infamous Crimes [as sodomy] orders Lieutt. Enslin to be drummed out of the Camp tomorrow morning by all the Drummers and Fifers in the Army never to return” (Washington 1778). It would take more than 200 years for this policy to change for gays and lesbians, so that they could serve first under the cloak of officially sanctioned secrecy provided by the “don’t ask, don’t tell” policy of 1994, and finally as openly homosexual in 2011. In 2016 transgender people joined the ranks of those allowed to serve openly, although those rights were subject to court challenges that were ongoing as of 2018. Intersex individuals were summarily dismissed as unfit for service by military custom and policy; they remain understudied in literature on military policy. While the differences between lesbian, gay, bisexual, transgender, and intersex individuals are acknowledged, for brevity the terms gay and homosexual are used interchangeably throughout this entry, unless a particular policy targets a certain portion of the LGBTI community.

World Wars I and II

Much like the ill-fated Lieutenant Enslin, other homosexuals were discharged from the military over the next approximately 140 years, but there was no explicit US military policy of exclusion until World War I (1914–1918). Many sources report that the first military law against sodomy appeared in the 1916 Articles of War, but no mention of sodomy or any variation thereof exists in the 1916 articles. It is in Article 93, “Various Crimes,” that later revisions of the articles address the topic, but there is no mention of sodomy in the 1916 version. Nor is sodomy listed in the “Punitive Articles,” “War Offenses,” or “Miscellaneous Crimes and Offenses.” The closest one gets is Article 95, “Conduct Unbecoming an Officer
and a Gentleman,” which has been used since the time of Lieutenant Enslin.

The US military realized it had omitted sodomy almost immediately after the 1916 articles were published. The House of Representative held a hearing in June 1916 to determine if any changes needed to be made to the Articles of War. US Army Judge Advocate Brigadier General Enoch H. Crowder (1859–1932), testifying about the prisoners held at Fort Leavenworth, said the prison at that time “included men who had been convicted of unnatural crimes, sexual perverts” (Revisions of the Articles 1916, 25). Knowing that it would take a long time to revise the 1916 Articles of War, especially given that the United States entered the war in 1917, the US military found a quicker way to codify antisodomy provisions.

The first official US military policy was actually a 1917 US Army manual, with more service-wide policies to come in the 1920 Articles of War (a revision of the 1916 version). In 1917 Secretary of War Newton D. Baker (1871–1937) authorized corrections to the original 1916 Articles of War via an army manual that explicitly prohibited “assault with intent to commit sodomy” (A Manual for Courts-Martial Courts 1917, 271). Sodomy was defined as “sexual connection with any brute animal, or in sexual connection, per anum [or, byway of the anus], by a man with any man or woman.” The definition made clear that “both parties are liable as principals if each is adult and consents.” In other words, consent still meant punishment, and both heterosexual and homosexual sodomy was banned. Only the adult would be held accountable if the other actor was a “boy of tender age.” Because the military believed sodomy was such a heinous act, “the evidence should be plain and satisfactory in proportion as the crime is detestable” (271–272). The manual lumped sodomy into the same category as murder, rape, robbery, and manslaughter. The punishment for sodomy included dishonorable discharge, forfeiture of pay, and/or jail time. The military relied on the 1920 Articles of War for most of World War II (1939–1945), but there were a couple of variants in policy and implementation.

Two years after the end of World War I, a revised Articles of War was reissued in 1920, and this became the US military’s first service-wide condemnation of sodomy. Article 93 declared, “Any person subject to military law who commits ... sodomy ... shall be punished as a court-martial may direct” (March 1920, 24). The 1920 articles mirrored the army manuals, from the definition of sodomy to the punishments: dishonorable discharges, forfeiture of pay, and/or jail time. The military relied on the 1920 Articles of War for most of World War II (1939–1945), but there were a couple of variants in policy and implementation.

In 1942 the army laid out one of the most important policies, which would be used for decades to remove homosexuals from the military: Section VIII, “Inaptness or Undesirable Habits or Traits of Character” of Army Regulations No. 615-360 (Marshall 1942). According to this policy, homosexuality was both a moral failing and a potential mental disorder.
Medical officers were instructed to examine the alleged homosexual to determine if he could be made fit for service through psychiatric counseling and other procedures, assuming that no actual homosexual actions had occurred; if the soldier was found to have engaged in homosexual activity, he would be automatically dishonorably discharged per earlier War Department regulations. If the medical officers determined that the soldier could not be made fit for duty by psychiatric intervention, he would be discharged from service. Army Chief of Staff General George Marshall (1880–1959) reinforced that sodomy was a “heinous crime,” and that, at the very least, soldiers should be discharged for sodomy or “any crime involving sex perversion” (Marshall 1943, 2). As in World War I, by policy, a homosexual soldier faced dishonorable discharge and possible jail time.

Engaged in an active war, the military determined it did not have the time or manpower for hearings and medical interventions for alleged homosexuals, so another plan was hatched: what if homosexuals could be identified before they even entered the service? This would save the time and trouble of discharging them later. Thus, in 1942, active screening measures were put in place in induction station interviews. Psychiatrists believed they could spot homosexuals by “their effeminate looks or behavior,” by applying a tongue dispenser to the back of a recruit's throat (it was thought that gay men did not have a gag reflex), and by testing for higher levels of estrogen. The last technique proved “too uncertain and too expensive to try on every inductee” (“Homosexuals in Uniform” 1947). Psychologists also recited certain words from the gay vernacular and watched the recruit's reaction: “What is a 'size queen'? Define 'glory hole.' What is a 'Prince Albert'? What is a 'bird'? What are 'cookies'?” (Robinson 2011, 1326). Most detected homosexuals were sent to a general hospital for psychiatric treatment if a military board determined that they were “reclaimable.” Unsurprisingly, most homosexuals did not respond to the military’s prescribed treatment, and so were released from military service (“Homosexuals in Uniform” 1947).

World War II’s enormous manpower requirements also pushed down authority to lower levels of command to deem a soldier unfit due to homosexuality or homosexual actions. The need for bodies to fight the war on various fronts led to uneven compliance with the order against sodomy because the US military could not afford to court martial every servicemember considered unfit for duty. Accordingly, the army instituted other policies to stamp out the scourge of homosexual activity, among other unwanted behaviors, by issuing in 1942 a new regulation, AR 615-360, which recognized that “during emergency, it is essential that manpower be conserved” (Marshall 1942, 19). The regulation pushed discharge discretion and punishment down to the commander level, with “any doubtful case [being] forwarded to ‘The Adjutant General for the action of the Secretary of War’” (19). Given the monumental task of simply manning World War II, to say nothing of acquisition requirements, logistics, and the like, it is not likely that many cases, if any, reached the adjutant general or the secretary of war.
In order to speed discharges without having to push cases up the chain of command, a practice that began in World War I became quite common in World War II: issuing blue discharges, or “blue tickets” (named for the color of paper on which they were printed). Commanders could issue blue tickets to rid the service of suspected homosexuals or anyone else unfit for service. Although blue tickets were supposed to be neither honorable nor dishonorable but merely an administrative discharge, blue-ticketed military members were discriminated against after returning to civilian life. Having a blue ticket meant that a servicemember was in some way unfit to be in the military, had been discharged without the ability to rejoin, and was often stigmatized in his civilian life that followed. Not all blue-ticket discharges were issued for homosexual behavior, but the navy blue-ticketed about 4,000 sailors for homosexuality, and the army around 5,000 soldiers (Bérubé 1990, 232). The Veterans Administration did not provide benefits to blue-ticketed individuals.

The use of blue tickets ended on 1 July 1947. For the most part, however, the basic tenets followed later were set during the two world wars: homosexuality was both a character flaw and a potential psychiatric disorder. Implicitly, homosexual servicemembers characterized as unfit for service did not have the proper character and morals to be warriors and simultaneously had a psychiatric problem that made them that way. When the United States faced the Soviets in the Cold War, gays in the military faced a different kind of fire: fewer service-wide policies designed to ensure discharge, but those discharges that did occur were usually based on a particular service’s rules/commanders and were issued under a dishonorable categorization.

The Cold War

Soon after the passage of the 1947 National Security Act, which created today's military and Department of Defense (DoD), the Department decided that the entire military needed a common policy regarding homosexuals. It therefore issued a memorandum on 11 October 1949 stating that said homosexuals could not and would not be “rehabilitated” and that “homosexual personnel, irrespective of sex, should not be permitted to serve in any branch of the Armed Services in any capacity, and prompt separation of known homosexuals from the Armed Forces is mandatory” (Rand 1993, 6).

Two years later, the military issued its 1951 Uniform Code of Military Justice (UCMJ), which continued the ban on gay servicemembers and superseded other policies on the issue. Per UCMJ Article 125, sodomy was defined as “engaging in unnatural carnal copulation, either with another person of the same or opposite sex, or with an animal. Any penetration, however slight, is sufficient to complete the offense and emission is not necessary” (Manual for Courts-Martial United States 1951, 367). “It is unnatural carnal copulation,” continued Article 125, “for a person to take into his or her mouth or anus the sexual organ of another person or of an animal.” It is important to note that Article 125 did not distinguish between homosexual and heterosexual activities, although most heterosexuals prosecuted under
Article 125 were charged with "sodomy in the context of rape or child sexual abuse; charges of consensual, adult, heterosexual sodomy generally only appear in two instances: as plea bargains in cases where the original charge was rape, and when they supplement[ed] charges of adultery" (Human Rights Watch 2003, 7). A person found guilty per Article 125 might have had to forfeit all pay, face a maximum prison sentence of five years, and receive a dishonorable discharge. No branch of service can produce exact numbers for homosexuals discharged under Article 125.

The UCMJ added two more articles that were also important arguments against homosexuals serving openly. Article 133 prohibited “conduct unbecoming an officer and a gentlemen” and Article 134 prohibited behavior that could undermine good order and discipline or “bring discredit upon the armed forces” (Manual for Courts-Martial United States 1951, 449). Whereas the immorality of sodomy or oral sex could be easily inferred by lumping homosexual behavior together with murder, assault, larceny, and the like, using Article 133 and 134 against homosexuals made it explicit, and characterized homosexuality as something that could undermine unit cohesion. These military readiness and unit cohesion arguments appeared again and again, especially the 1980s.

Geopolitical events such as the Cold War and the election of a new US president made more urgent the need for a more permanent national security structure in the executive branch. In 1953 Dwight D. Eisenhower (1890–1969) had just become the president of the United States. Soviet leader Joseph Stalin (1878–1953) died that same year, leading to uncertainty or even turmoil in many places in the world. To ensure that federal national-security workers were trustworthy, President Eisenhower issued Executive Order (EO) 10450, “Security Requirements for Government Employment.” Among many other actions, the EO banned from service people who had “any criminal, infamous, dishonest, immoral, or notoriously disgraceful conduct, habitual use of intoxicants to excess, drug addiction, [or] sexual perversion” (Eisenhower 1953, 936). This put homosexuals in a catch-22 situation. One of the main purposes of a security clearance is to ensure that no one with access to sensitive information is susceptible to blackmail. Under EO 10450, if an individual disclosed that he was gay, that meant automatic forfeiture of his national security job, but if he did not disclose his sexual orientation, that was a potential security vulnerability. As was often the case, the deck was stacked against homosexuals. The number of discharges for being homosexual skyrocketed tenfold after the order (to 2,000 per year), given the force's relative size (1.4 million) as compared to World War II (Rand 1993).

In 1959 the Department of Defense reinforced President Eisenhower’s policy with Directive 1332.14, “Administrative Discharges,” which canceled previous services' policies to create a uniform DoD policy; it was reissued with various changes over the next several decades (McElroy 1959). The directive identified “homosexual tendencies” as one reason for discharge and “unsuitability” for service (McElroy 1959, 5, 6). A servicemember discharged honorably or under a general discharge “for reasons of unsuitability shall be
afford[ed] with the opportunity to make a statement in his own behalf” (8). For the first time, the 1965 Directive 1332.14 gave those ousted by the military with a less-than-honorable discharge a chance to defend themselves with the help of a lawyer (Rand 1993; McNamara 1965). (Before 1965, most just were given the discharge and left.) Just having the right to defend oneself “marked a turning point in the history of homosexuals in the services” (Rand 1993, 7). As with previous policy implementations, these procedures were unevenly followed between and within military branches.

In 1982 President Ronald Reagan's secretary of defense, Caspar Weinberger (1917–2006), reissued Directive 1332.14 and mandated that homosexuals be discharged dishonorably or “Under Other than Honorable Conditions.” One part of the directive ties together arguments that were long in the making—not only was homosexuality heinous, it also hurt morale and undermined readiness:

_Homosexuality is incompatible with military service. The presence in the military environment of persons who engage in homosexual conduct or who, by their statements, demonstrate a propensity to engage in homosexual conduct, seriously impairs the accomplishment of the military mission. The presence of such members adversely affects the ability of the Military Services to maintain discipline, good order, and morale; to foster mutual trust and confidence among servicemembers; to ensure the integrity of the system of rank and command; to facilitate assignment and worldwide deployment of servicemembers who frequently must live and work under close conditions affording minimal privacy; to recruit and retain members of the Military Services; to maintain the public acceptability of military service; and to prevent breaches of security._

_(WEINBERGER 1982, 9–10)_

Although Article 125 of the 1951 UCMJ was the primary tool used to oust homosexuals, Articles 133 (actions unbecoming an officer and gentleman) and 134 (activities that could bring discredit to the services) helped with the purging. The 1982 directive went a step further by connecting the dots between the UCMJ's Articles 125, 133, and 134.

The Reagan (1981–1989) and George H. W. Bush (1989–1993) administrations held to the view that homosexuals could not be soldiers, sailors, airmen, or Marines. The debate over whether homosexuals undermined readiness and unit cohesion continued into the Barack Obama administration (2009–2017), but not before one more big policy shift, which was meant to help homosexual servicemembers but arguably left them worse off than before.
Don't Ask, Don't Tell (DADT)

Even before Arkansas governor Bill Clinton (1946–), a Democrat, became president of the United States in 1993, the only two internal DoD studies (in 1957 and 1988) conducted on homosexuals serving openly both concluded that there was no risk to the military (GAO 1992). Furthermore, the General Accounting Office (GAO) found that between 1980 and 1990, the DoD discharged 16,919 service personnel; if the military had tried to replace those discharged just in the year 1990, it would have cost approximately $27 million. The GAO report, citing Gallup survey data, also noted that public opinion regarding gays serving in the military had changed, from only 51 percent supporting their service in 1977 to 69 percent in 1991.

During the 1992 presidential campaign, Bill Clinton promised to lift the ban on homosexuals serving openly in the military (as did all of the Democratic candidates). After the election, one of President Clinton’s first major initiatives was to fulfill this campaign promise, but a variety of forces worked against repealing the ban. First, Clinton’s reputation as a “draft dodger” during the Vietnam War did not help when he tried to garner military allies. Second, the entire Joint Chiefs of Staff opposed lifting the ban, citing military readiness and morale, among other issues. Third, probably to Clinton’s surprise, he did not have the support of many influential Democrats, including Sam Nunn of Georgia (1938–) who headed the Senate Armed Services Committee.

Yet, Clinton did receive support from an unlikely source: conservative former Republican senator and retired air force major general Barry Goldwater (1909–1998). Goldwater’s most memorable line, “You don’t need to be ‘straight’ to fight and die for your country. You just need to shoot straight,” appeared in an op-ed he penned in 1993 for the Washington Post, titled “The Gay Ban: Just Plain Un-American.” What most do not remember about that piece was his warning, “What would undermine our readiness would be a compromise policy like ‘Don’t ask, don’t tell.’ That compromise doesn’t deal with the issue—it tries to hide it” (Goldwater 1993).

Rather than heed Goldwater’s advice, in 1993 Congress passed the National Defense Authorization Act for the following fiscal year. Section 654 of Title 10 mandated that the military uphold the 1982 total ban policy and offered fifteen arguments against homosexual military service, from troop morale to military readiness and everything in between (H.R. 2401 1994). Having lost the legislative battle, Clinton issued Defense Directive 1304.26 on 21 December 1993. It was this directive combined with Section 654 of Title 10 that became known as “don’t ask, don’t tell, don’t pursue.”

Clinton created a compromise he thought would satisfy everyone. Don’t ask, don’t tell (DADT) would have prevented the military from directly questioning “recruits about their sexual orientation (‘Don’t Ask’), would have required gay and lesbian personnel to keep
their sexual orientation private (‘Don’t Tell’), and would have, at least in concept, prevented investigations from being started on an arbitrary basis (‘Don’t Pursue’)” (DoD 2010, 22). Unfortunately, personal stories and the numbers show the hollowness of Clinton’s DADT hopes (see Huffman and Schultz 2011). DoD separated from service more than 32,000 active duty gay servicemembers from 1980 through 2010, with 13,000 of these discharges occurring after DADT (DoD 2010). Toward the end of DADT, women and minorities were being discharged at rates disproportionate to their numbers (Williams Institute 2010). As one can see in Figure 1, discharges under DADT increased until the terrorist attacks on US soil on 11 September 2001, at which point the military seemed to heed Goldwater’s advice that shooting straight was more important than being straight. DADT’s uneven enforcement notwithstanding, the law remained military policy until its repeal during the Obama administration.

**Figure 1.** Number of Annual Separations for Homosexual Conduct per 100,000 Active Duty Service Members in the US Military Services by Year

### The End of “Don’t Ask, Don’t Tell”

Much like President Bill Clinton before him, Barack Obama (1961–) promised as a presidential candidate to reverse the ban on gays serving in the military. Once elected, during his first State of the Union address on 27 January 2010, President Obama reiterated his pledge. Unlike President Clinton, however, Obama faced a different landscape in at least three areas: military, public, and legislator opinion.

For the first time in US military history, some top military leaders publicly supported gays serving openly. In a 2 February 2010 Senate Armed Service Committee hearing, Chairman
of the Joint Chiefs of Staff Mike Mullen said,

> It is my personal belief that allowing gays and lesbians to serve openly would be the right thing to do. No matter how I look at this issue, I cannot escape being troubled by the fact that we have in place a policy which forces young men and women to lie about who they are in order to defend their fellow citizens. For me personally, it comes down to integrity—theirs as individuals and ours as an institution. I also believe that the great young men and women of our military can and would accommodate such a change. I never underestimate their ability to adapt.

("HEARING OF THE SENATE ARMED SERVICES COMMITTEE" 2010, 47)

Never before had the highest-ranking military official supported gays serving openly. That said, the military branch leaders did not all agree with Admiral Mullen. Marine Corps Commandant James Amos (1946–), the loudest critic, was joined by Army Chief of Staff George Casey Jr. (1948–) and Air Force Chief of Staff Norton Schwartz (1951–) in articulating that it was not the time to repeal given that the country was involved in two wars (Afghanistan and Iraq). In contrast, Chief of Naval Operations Gary Roughead (1951–) and Coast Guard Commandant Robert Papp Jr. (1953–) testified that the law should be repealed immediately ("Military Leaders” n.d.). Even those military leaders who opposed DADT’s repeal recognized the importance of a civilian-controlled military in a democracy, however, and they vowed to support whatever Congress and the president decided.
The American public's views also had shifted. By 2010 public support for allowing gays to openly serve had risen since the 1993 polling, as Figure 2 indicates. Now, a majority of Americans were in favor of allowing homosexuals not just to serve but to do so openly.

Having legislative support also proved critical. Although some wanted Obama to simply sign an executive order to mandate DADT’s demise, repealing the law required legislative action because DADT itself was a legislative act (Schultz 2010a). Being careful to not move too hastily, in December 2010 Congress passed the Don’t Ask, Don’t Tell Repeal Act (H.R. 2965, S. 4023), which President Obama signed. Instead of immediately repealing DADT, Congress mandated that the Pentagon complete a study of any potential negative effects of repeal for military effectiveness and make recommendations for a smooth repeal process. If, within sixty days of the study's completion, the president, secretary of defense, and chairman of the Joint Chiefs of Staff certified to Congress that the repeal would not negatively harm military effectiveness and could be implemented, DADT would end.

The secretary of defense in charge of the study was a Republican holdover from the George W. Bush administration, Robert Gates (1943–). He appointed army General Carter Ham (1952–) and Pentagon legal counsel Jeh Johnson (1957–) to conduct what ultimately was
the largest, most comprehensive study on personnel policy ever conducted by the US military. Overwhelmingly, the study found that the majority of servicemembers and their families felt overturning DADT would have either no effect or a positive effect on the force; “around 30 percent overall (and 40–60% in the Marine Corps and in various combat arms specialties)” felt overturning the ban would have negative effects (DoD 2010; Schultz 2010b).

Regardless, the report and implementation plan were certified by the president, the secretary, and the chairman to Congress on 22 July 2011. Per the act, sixty days later, Title 10, Section 654, which had banned gays openly serving for decades, came to an end on 20 September 2011. A study conducted one year after the repeal found that the predictions of harms to military readiness or retention because of repeal did not come to pass; only two verifiable resignations could be linked to the repeal, and both were chaplains (Belkin et al. 2012). DADT was gone, yet a professional, lethal military remained.

The Next Battleground: Intersex and Transgender Servicemembers

Most military policy, law, and focus have been directed toward the LGB of the LGBTI acronym, even though transgender and intersex individuals obviously serve. The research and verifiable data on intersex individuals is scant, but intersex individuals constitute somewhere between 0.018 percent to 1.7 percent of the general population (Marom et al. 2008). Because the military sees gender as binary (one is either male or female), military policy regarding intersex individuals is almost nonexistent, although intersex individuals often are lumped in with transsexual servicemembers (or have the same policies applied to them). When one researcher called various branch recruitment centers, none of the services said it would allow “hermaphrodites” in its service; their use of the pejorative term shows how stigmatized intersex individuals are (Witten 2007, 6). Intersex servicemembers are deemed medically unfit for service (Witten 2007).

Whereas DoD regulations barred LGB individuals based on military readiness and other reasons, “the rules barring transgender military service are, for the most part, embedded in medical regulations, and are premised on assumptions about the medical fitness of transgender personnel” (Elders et al. 2014, 2). DoD military standards listed “a history of psychosexual conditions, such as transsexualism, exhibitionism, transvestism, voyeurism, or other paraphilias” as mental health disorders disqualifying these individuals from service (National Research Council 2006, 142). Yet, around 15,500 transgender active duty, National Guard, or reserve forces serve today, and there are an additional 134,300 transgender veterans (Gates and Herman 2014). Indeed, transgender individuals “are more than twice as likely as non-transgender Americans (2.2% transgender vs. 0.9% non-transgender) to serve currently in the military” (Elders et al. 2014, 2). Because they are
deemed medically and/or psychologically unfit, transgender individuals continued to serve in the shadows, even after DADT’s repeal.

However, in 2013, the fifth edition of the *Diagnostic and Statistical Manual* (*DSM-5*), which provides the most current, evidence-based psychological conditions classifications, replaced

> gender identity disorder with gender dysphoria, a diagnostic term that refers to an incongruence between a person’s gender identity and the physical gender that they were assigned at birth, and to clinically significant distress that may follow from that incongruence. While gender identity disorder was pathologized as an all-encompassing mental illness, gender dysphoria is understood as a condition that is amenable to treatment.

*(ELDERS ET AL. 2014, 5)*

This reclassification is key because if gender dysphoria can be properly treated, much of DoD’s argument for banning transsexual servicemembers falls away. Moreover, one study found that the treatment for such servicemembers would be around “$5.6 million per year, or $438 per transgender servicemember per year, or 22 cents per member per month” *(Belkin 2015, 1092)*. Another DoD issued study contained comparable figures *(Schaefer et al. 2016)*. In other words, the cost of allowing transgender servicemembers to serve their country while receiving treatment is a rounding error in DoD budget terms *(DoD’s budget was around $685 billion in 2018)*.

Once DADT’s repeal occurred and was implemented with hardly a ripple in the water, possibilities opened up for making policy on transgender servicemembers, though intersex servicemembers were still left behind. In May 2014 Secretary of Defense Chuck Hagel *(1946–)* announced a review of DoD rules regarding transgender servicemembers. As in the DADT process, the secretary ordered a commission to study the implications for the military if the policy were changed, and to issue implementation recommendations. The study, conducted by Rand, ultimately concluded that allowing transgender servicemembers to serve openly would not negatively impact the military, and the cost would be minimal *(Schaefer et al. 2016)*. Another report’s cochairs and authors, including a former U.S. surgeon general, ultimately concluded, “We find that there is no compelling medical rationale for banning transgender military service, and that eliminating the ban would advance a number of military interests, including enabling commanders to better care for their servicemembers” *(Pollock and Minter 2014, 3)*. On 30 June 2016 Secretary of Defense Ashton Carter *(1954–)* lifted the ban on service, allowing transgender individuals to serve
openly with immediate effect.

Like many LGBTI battles, this policy change was a short-lived victory for transgender servicemembers. One year after Secretary Carter lifted the ban, President Donald Trump’s secretary of defense, James Mattis (1950–), said that more study would be conducted to determine the effect on military readiness and whether the services were ready to implement the plan. In July 2017 President Trump (1946–) wrote a series of tweets that included the message, “After consultation with my generals and military experts, please be advised that the United States government will not accept or allow transgender individuals to serve in any capacity in the US military.” Trump also tweeted that “our military must be focused on decisive and overwhelming victory and cannot be burdened with the tremendous medical costs and disruption that transgender in the military would entail.”

President Trump wrote a memo reinforcing the ban on 25 August 2017, then recanted that first memo with a second issued on 23 March 2018 in which he essentially punted the issue of transgender servicemembers to Secretary Mattis. Mattis published a DoD policy in February 2018 that allowed transgender individuals to serve if they did so “in their biological sex”; if they had undergone gender transition or were diagnosed with “gender dysphoria,” they were disqualified from service (Mattis 2018, 32, 43). As of June 2018, it is unclear how or if Mattis’s transgender policy will be implemented, or whether it will even be allowed to take effect due to numerous court challenges. What is known is that the struggle for those who wish to serve their country openly as transgender or intersex citizens remains far from over.

Military/Navy in the United Kingdom

JO STANLEY
Honorary Research Fellow, Maritime Historical Studies Centre
University of Hull, United Kingdom

The history of discrimination against LGBTQ peoples in the British armed forces and the fight for inclusion.

In the United Kingdom's regular armed forces there were 196,390 people (10% female, 90% male) as of May 2017. Women and men had, until the integration of the forces in the 1990s, lived in two separate homosocial cultures. Comradeship, loneliness, and close quarters sometimes led to contingent relationships. It was joked that in submarines eighty men went down and forty couples came back up. Much as in prisons, service members who had same-sex sex did not necessarily identify as homosexual.

The actual number of LGBTQ individuals in the service is not known, as the statistics are inadequate or absent, mainly because the Ministry of Defence (MoD) sees sexual identity as a private matter. Stonewall, a London-based LGBT rights group, made the latest estimate in 2009: up to 14,000 (8%) of the British forces were lesbian or gay. This mirrors the (very disputed) national average. The Office for National Statistics in 2016 put the UK LGBT total at 2 percent. In 2016 the MoD began asking new recruits to declare their sexual identity for monitoring purposes: just 20 of the 13,780 recruits said they were gay or lesbian; 740 said they were not; 13,020 did not reveal anything (Judd 2009; Office for National Statistics 2017; Ministry of Defence 2016).

After two decades of activists' legal struggles, the British army, navy, and air force from 2000 did a radical about-face on their previous long-standing opposition. They now strongly back LGBT diversity and inclusion. Some queer wariness and residual homophobia exist but appear to be being tackled with genuine determination.

History of LGBTQ Individuals in the British Forces

Given the history of discrimination in the British armed forces, the reluctance of LGBTQ individuals to identify themselves is not surprising. Buggery was made a hanging offense in 1533. An unknown number of servicemen were court-martialed and executed. In 1829 William Maxwell, a boatswain, was the last naval person to be executed for this offense. Punishment was often for coercive sex with minors, or for officers who had relations with social inferiors, thereby upsetting hierarchical relations. Later some were charged under
the Naval Discipline Act of 1866, the Army Act of 1881, the Air Force Act of 1917, and the Criminal Law Amendment Act of 1885, the latter of which made all homosexual acts illegal.

Historians are uncertain about the extent of homosexual identity, desire, and practice in the services. Courts-martial provide evidence that is of only limited use. On the one hand, traditionalists believe that the lack of evidence indicates that homosexuality was not very widespread, even though homosocial bonding was common and valued. On the other hand, revisionists contend that evidence is absent because men who have sex with men (MSM) was so normal that wise officers on the ground regarded it as not worth recording, let alone taking judicial action. Indeed, MSM activity usefully reduces a major labor supply problem: servicemen becoming unfit for action after heterosexual intercourse with unregulated sex-industry workers carrying sexually transmitted diseases.

**MERCHANT NAVY**

Merchant Navy (commercial) ships are crewed by civilians and are culturally more relaxed and carnivalesque than naval vessels. An out camp subculture existed on many UK passenger ships, especially in the period between 1950 and 1985. Gay men were said to be easily 75 percent of some ships’ catering departments, estimated veterans in interviews: “It was almost *de rigueur*, darling” (a head waiter quoted in Stanley 2014, 232). Shipping lines could not confirm this as they knew it only via gossip: Peninsular and Oriental (P&O), for example, penciled “SQ” (suspected queer) beside names in some personnel records. The gay mongrel language known as Polari was widely spoken in such “gay heavens.” Cross-dressing was normal; same-sex “weddings” and “divorce parties” were staged in crew bars; and crews made counterclaims that theirs was the “queerest ship afloat” (*Baker and Stanley 2003*).

Despite homosexuality at sea being illegal until 1996 in the UK merchant service, camp men (but not noncamp officers or lesbian women), particularly stewards, were welcomed by shipping operators and passengers for their excellent passenger service, wit, and glamour. They made voyages fun, especially in crew shows where cross-dressed men performed revues and versions of Broadway musicals, emulating divas such as Ethel Merman, Judy Garland, and later Dusty Springfield (*Stanley 2012*). Camp gay crew had sex with “trade” shipmates, particularly prizing butch deckhands, naval men, and dock workers. Indeed, some wives welcomed this arrangement, believing that their husbands were not truly being unfaithful if their extramarital activities were limited to other men (*Baker and Stanley 2003*).

Similarly, on ships of the Swedish America Line between the 1930s and 1970s, when its New York–bound voyages were at their height, stewards had an out-and-proud camp subculture. However, they did not put on crew shows or speak Polari (*Nilsson 2006*).
Some of the first British men to attempt to transition were seafarers, using hormone treatments obtained in foreign pharmacies (Stanley 2012). Cruise ships today still tend to have many out gay staff, especially among entertainment organizers. The British defiantly proud camp subculture is gone but is celebrated in the Hello Sailor! exhibit at Merseyside Maritime Museum (Liverpool). Oral testimony from such men is in the museum's Maritime Record Centre's Sailing Proud archive. Meanwhile, the Merchant Shipping (Homosexual Conduct) Act of 2017 tidied up obsolete laws and ensured it was completely illegal to dismiss a seafarer for homosexual conduct.

Scholars are now revealing the extensive same-sex relationships in both World War I (1914–1918) and World War II (1939–1945). Dismissals were relatively fewer than in peacetime because personnel were so needed. Some acclaimed wartime heroes are said to have been gay or bisexual, including Herbert Kitchener (1850–1916), Louis Mountbatten (1900–1979), Bernard Montgomery (1887–1976), and Orde Wingate (1903–1944). Evidence of this is predictably flimsy, and so such claims are commonly refuted. Nancy Spain (1917–1964), a broadcaster, became the best-known lesbian woman of the women’s service of the Royal Navy in World War II, although she was not out at that time.

In the second half of the twentieth century official attitudes toward LGBT service personnel
included expressing (Christianity-related) disgust or pathologizing them as sick perverts. Exposure as a homosexual led to instant dismissal, disgrace, career loss, and sometimes nervous breakdowns and suicides. Until the early 1990s it was also treated as a criminal offense. To avoid negative repercussions, those in the closet had to live a lie, even with close comrades. This caused stress, not least because of surveillance conducted by the armed forces’ own police forces.

However, many gay or bisexual people were quietly known and respected. Straight and gay men alike crossdressed in carnivalesque homegrown entertainment such as Ship’s Operatic and Dramatic Society (known popularly by its acronym “SODS”) operas. A classic quip about the rugged and often-homophobic marines (naval soldiers) makes the point: “Why do marines have such big backpacks? So they can take their bouffant frocks and their cosmetic cases with them” (anecdote told to Jo Stanley by a marine, 2012). Not all opponents were revolted by homosexuals. Some were personally tolerant but argued “logically” that homosexuality was incompatible with service life, as queer men would be national security risks in the allegedly hypermasculine services (because they could be blackmailed), and their “difference” made them likely to dilute team morale and effectiveness.

Changes in social attitudes from the 1950s onward very slowly affected the armed forces, despite the Army and Air Force Acts of 1955 reasserting homosexuality was a criminal offense in those services, as did the Navy Discipline Act of 1957. Pivotal is the Wolfenden Committee in 1957 recommended that “homosexual behaviour between consenting adults [i.e., those over 21] in private should no longer be a criminal offence” (Home Office and Scottish Home Department 1957, para 62.) This eventually resulted in the Sexual Offences Act of 1967. It partly decriminalized homosexuality, except in the armed forces and merchant navy. Between 1959 and 1962, an average of seventy-four per year were dismissed from the navy alone (representing 0.08% of the navy’s sometimes worryingly under-staffed force at the time).

**The Fight for Change in the Services**

Marginally more permissive attitudes and the 1970s rise of gay rights solidarity after the 1969 Stonewall riots in New York City slowly led to UK LGBT service personnel taking a more resistant and united attitude toward persecution and dismissal. In addition, an alarming demographic trough forced 1980s planners to accept that nontraditional members, including women and LGBT persons, had to be included if the forces were to be fully staffed. Rank Outsiders, an LGB support and campaigning organization for the armed forces, was founded in 1991, led by army nurse Elaine Chambers and army bandmaster Robert Ely. Campaigners such as Ely gave evidence about LGB servicepeople’s position to the Select Committee on the Armed Forces in 1992. Despite some political acceptance that the ban should be lifted, persecution continued.
Section 146 of the Criminal Justice and Public Order Act of 1994 extended the 1967 Sexual Offences Act to the armed forces. But that did not stop the dismissals. In December 1994, however, the MoD updated its “Armed Forces Policy and Guidelines on Homosexuality.” The MoD accepted that if civilian law deemed a homosexual activity legal, then that activity “should not constitute an offence under Service law” (Ministry of Defence 1994). Even so, the dismissals did not stop, and dismissed LGBTQ service personnel began to fight back using the judicial system, despite a lack of support from the legal world and antimilitary civilian queers. The legal campaign was begun by the Armed Forces Legal Challenge Group, created by dismissed naval officer Edmund Hall in 1994, and later backed by the rights groups Stonewall and Liberty. Dismissed naval personnel John Beckett and Duncan Lustig-Prean and the Royal Air Force’s Jeanette Smith and Graeme Grady were the cases selected by the campaign, and they fought linked cases in domestic courts starting in 1995. Finally, after several setbacks, the European Court of Human Rights made a landmark decision on 27 September 1999. In Smith and Grady v. UK the dismissals were found to be a breach of Article 8 of the European Convention on Human Rights. A linked case, Lustig-Prean and Beckett v. UK, was also successful, on 25 July 2000. With the final decisions in these court cases, official persecution of LGBTQ service personnel in the United Kingdom had to end.

**All Change: Diversity and Inclusion Begin**

Despite huge controversy, the armed forces lifted the ban in 2000 and reversed their former exclusionary stance, not least because of personnel shortages. They began working with Stonewall. MoD compensation was awarded to 93 people but not the expected 500-plus. Rank Outsiders was renamed AFLaGA (the Armed Forces Lesbian and Gay Association). It faded away, partly because the armed forces began to allow online service forums to provide support for servicepeople, and partly because that resource was not available to veterans, who were some of the main activists. Early in the first decade of the twenty-first century, the forces’ own LGBT support organizations, such as Proud2Serve and Royal Navy Compass, took up that mantle.

The MoD issued a formal apology in 2007. Manchester's Imperial War Museum North in 2008 mounted the United Kingdom’s first exhibition on LGBT service personnel, titled *Military Pride*. Princes William and Harry have publicly condemned homophobic bullying in the armed forces. Fares to pride parades were, controversially, subsidized for service members, who were finally allowed to march in uniform. Rainbow flags fly from the MoD on London’s Pride Day. Diversity awards celebrate progress. Transgender service personnel were officially well supported, beginning with Caroline Paige (starting in 1999), who became a mentor and adviser on transgender people in the services, including in the US armed forces; Hannah Winterbourne (starting in 2013) and Chloe Allen (2016) followed in her footsteps.

Throughout the first decade of the twenty-first century, discharged personnel battled the
MoD for respectful levels of compensation for loss of privacy and career, as well as for a personal apology. Residual homophobic and transphobic views are expressed (largely by ex-servicemen) on the well-used Army Rumour Service (popularly known by its acronym ARRSE), the unofficial online community. In 2016, however, the Armed Forces Act of 2006 was amended so that no one could be discharged for a homosexual act. In 2017 the government posthumously pardoned 50,000 gay and bisexual men convicted of any of the now-decriminalized sexual offenses under the ten acts that had once been used to pillory them.

This major turnaround in the United Kingdom is mirrored in other European countries, which were also affected by the 1999 European Court of Human Rights decisions on the UK cases. Other European countries allowing LGBT people to serve openly include Belgium, Denmark, Finland, Germany, Greece, Ireland (Republic of), the Netherlands, Norway, Poland, Portugal, Spain, and Switzerland.

After the services' rapid about-face in 2000, LGBT personnel were welcomed instead of criminalized. Now genuinely inclusive policies exist and are firmly enforced. Sexual identity is officially seen as an irrelevance and an entirely private matter. In 2015 James Everard, at the time a lieutenant general and the commander of UK land forces, affirmed the official position that "diverse teams, [if well led, are] far more effective than bog-standard [meaning" completely ordinary"] teams." Gays fighting in the Afghan and Iraq wars of the twenty-first century had, he said, shown "that you can be homosexual and extremely brave ... people came back saying, these guys are part of the team." He explained that "operational effectiveness is at the top of the pile" of reasons to recruit more LGBT people (Farmer 2015). All three services are usually on Stonewall's list of the top 100 of the most inclusive employers in Britain. In 2017 the navy was at number 82 (Stonewall 2017).

Mishima, Yukio (1925–1970)

M.W. SHORES
University of Colorado, Boulder

Internationally recognized Japanese writer whose body of work includes homosexually themed novels.

Yukio Mishima (born Kimitake Hiraoka) is one of the most famous Japanese writers in the world. He never received the Nobel Prize in Literature, but he was nominated for the honor three times between 1963 and 1965. These nominations came after his novels Kamen no kokuuhaku (1949; Confessions of a Mask [1958]), Shiosai (1954; The Sound of Waves [1956]), and Kinkakuji (1956; The Temple of the Golden Pavilion [1959]) had been translated into English, but before his more controversial, nationalistic work was known widely outside Japan. Mishima’s best work is overshadowed by his disconcerting final decade, when he was obsessed with violence, political terrorism, and a homebred version of right-wing politics and emperor worship. His contentious, larger-than-life macho image—and his highly publicized self-disembowelment with members of his small, private army at his side—has distracted from a more nuanced portrait. Mishima’s work is full of homosexual (and homosocial) overtones, but these too have been assigned a lower profile by critics. Most Japanese critics have written against the notion that Mishima was gay, insisting that his work is not “homosexual.” His family, too, has gone to lengths to suppress claims that he was gay, as though being gay would compromise his legacy.

Mishima’s Literary Homosexuality

J. Keith Vincent notes that “many [key figures in the gay world of postwar Japan] spoke about the impact of Mishima’s writing … on their understanding of themselves as gay men” (2012, 176). Mishima has been something of an icon to gay men in the West too, particularly following the English release of his two novels concerned primarily with male homosexuality, Confessions of a Mask and Kinjiki (1951–1953; Forbidden Colors [1968]). Mishima is included in gay literature anthologies and histories and is perennially ranked among the top gay and lesbian writers in the world. Still, there are nearly as many versions of Mishima as there are critics. If one says he is “in the tradition of [Lord] Byron, [Oscar] Wilde, [Jean] Genet and [Joe] Orton” (Lilly 1993, 127), another considers it “difficult to think of Mishima as a gay writer in the Western sense” (Woods 1998, 67). Despite these negotiations of Mishima’s iconic status, he remains a reference point for gay writers. One of the cofounders of the Gay Men’s Health Crisis, Lawrence Mass, was so moved by Mishima, because his “story was so revealing of a recurrent role played by some homosexuals in the
history of patriotism,” that he wrote a screenplay about him (1994, 171).

Mishima’s work has been adapted to film more than thirty times. It has also been adapted to modern dance works (such as Tatsumi Hijikata’s first butō performance in 1959, which drew inspiration from Kinjiki), opera, and other stage productions, as well as television, manga, and other media, in Japan and overseas. A growing number of his plays are being professionally translated and staged in the United States and Europe too. People around the world read his fiction in many languages, including four titles that were translated with support from UNESCO. Just as Mishima is read in China and countries throughout Asia, many of his novels can be found on bookstore shelves in Buenos Aires, Rio de Janeiro, Santiago, and other Latin American cities. He continues to be showcased at international symposia and Japan festivals, so it comes as no surprise that one can find titles currently unavailable in English translated into other languages.

Western scholars specializing in Japan have had various takes on Mishima. They have written that his inability to live with his homosexuality was part of what led to “a lifetime of over-compensation and ‘masculine protest’” (Starrs 1994, 177); that his “literary homosexuality is always struggling to emerge from the shadow of deviance” (Schalow 1996, 17); that he “seems to be dissatisfied with modern masculinity in general and sees
the austere tradition of *nanshoku* [male-male love, in the premodern Japanese sense] as ... an ideal for all men, irrespective of sexual orientation” (McLelland 2000, 30); that he had a unique way of “dealing with the disjunctions between the sexed body, gendered identity, and the ‘imaginary body’” (Mackie 2005, 127); and that his work (namely *Confessions of a Mask*) “manages to straddle two very different moments in the history of homosexuality in Japan: one in which male-male sexuality has not yet been cordoned off as a separate and distinct identity, and one in which the homosocial continuum has ruptured for good along the homo-hetero divide” (Vincent 2012, 180).

Modern readings, particularly those informed by queer theory, can be useful when approaching Mishima, but one must also bear in mind Japanese historical and cultural contexts. Mishima wrote about homosexuality at a time when nobody else was doing so in Japan, and traditional values—particularly those surrounding nanshoku and *shudō*, “a widely acknowledged set of cultural conventions that defined male-male sexual desire in positive terms, but only if the male object of pursuit fell into the category of ‘youth,’ or *wakashu*” (Pflugfelder 2012, 964)—naturally shaped his views on male-male relationships, sexual and otherwise.

**Forbidden Colors**

Lauded by many gay authors in the West, Mishima has been called an author that every gay man should read (Drake 1998). These comments tend to be in relation to his first novel, *Confessions of a Mask*, though there are also convincing arguments that this work should not be read as a “gay novel” (Vincent 2012, 191). This is not a question, however, when it comes to the more explicit presentation of homosexuality in *Forbidden Colors*. Still, or perhaps because of this, the work—inspired in part by Thomas Mann’s *Death in Venice* (1912)—has received comparatively rather little attention. The novel is about the matchlessly beautiful Yūichi, a college student who comes out to Shunsuke, a much older man and famous writer. Shunsuke uses his power over this “bronze sculpture of the Peloponnesus school” (Mishima 1968, 229) to encourage him to exact vengeance on the opposite sex. Mishima characteristically uses the novel to articulate his views on art, beauty, and human nature, but he also offers a striking depiction of same-sex love. If Mishima can be dark, cruel, misogynistic, and even misanthropic, in *Forbidden Colors*, he can also be light and subtle in his handling of homosexual love.

The Japanese original generated enthusiastic reviews when it was published, but the first reviewers of the English translation were less generous. They called it a disappointment (Seidensticker 1968) and literarily immature (Goodman 1969). Donald Keene, who knew Mishima personally but did not care for *Forbidden Colors*, claimed that, “there was no hint that the author approved of the world he described in the novel” (1984, 1192). This critic had probably not read Mishima’s 1956 essay on homosexuality, where he made his views rather unambiguous:
There is little research or scholarly theory on homosexuality, so it ends up being treated similarly to masturbation—people react with meaningless, unscientific responses to the tune of, quick, run away, you’re falling into a diabolical abyss…. If a young adult experiences homosexual desires, they should meet those feelings head-on…. Women should be proud of being women, men proud of being men. If one always has pride, there is no way for one to fall into a homosexuality that is twisted and grotesque. Pride in one’s true sexuality allows one to be restored to one’s natural self.

(MISHIMA 1989, 395–396; TRANSLATION BY M.W. SHORES)

Forbidden Colors may not be an “un- (or anti-) modern novel” (hikindai shōsetsu), but perhaps, as Tōru Matsumoto suggests,

it holds a position in Mishima’s canon similar to that of his critical essay Taiyō to tetsu [1968; Sun and Steel (1970)]; both stand out as boldly unusual in form and content and both deal centrally with sensibility and the body. The major difference between [these and all of] his work before and after The Temple of the Golden Pavilion is that his later work ... loses touch with reality.

(MATSUMOTO 2008, 105; TRANSLATION BY M.W. SHORES)

In Forbidden Colors, Mishima created a space, albeit fictional, in which homosexuality could be acknowledged and explored. Mishima may have been creating this space of possibility for a younger generation when writing the Adonian Yūichi, or he may have wished as much for himself, but this was not something he was able come to terms with during his lifetime. If Mishima was dealing with homosexual “shame” when writing Forbidden Colors, he was also dealing with a more nuanced and generous picture of homosexual love and desire. This fact cannot eclipse or replace his nationalist political ideology in later years, but it can allow for his work to be considered in different terms.

BIBLIOGRAPHY

The modern Arabic novel has generally lacked affirmative and textured representations of homoeroticism, particularly in comparison to the complex engagements with nonnormative sexualities and gender identities, including lesbianism, that permeated the medieval Arabic literary and cultural tradition. The deficiency of nuanced representations of homoeroticism in modern Arabic literature may be a result of various factors, including censorship, the influence of colonialism, the hegemony of Western sexual discourses, and sociopolitical and cultural changes in the contemporary Middle East (al-Samman 2008; Malti-Douglas 2001; Habib 2007; Amer 2012; Massad 2007). When female eroticism does appear in the modern Arabic novel, it is generally treated as a less desirable substitute for heterosexuality; furthermore, lesbian body politics and sexualities are often overshadowed by the text’s feminist agenda. With the exception of a few novels, such as Ilham Mansour’s And hiya anti (2000; I Am You [2008]) and Nihad Sirees’s Halet shaghaff (1998; States of Passion [2018]), most modern Arabic novels do not offer profound engagements with lesbian identities and sexualities or feature central lesbian characters. Hanan al-Shaykh’s novel Misk al-ghazal (1988; Women of Sand and Myrrh [1989]) is among the novels that offer a reductionist representation of female homosexuality, as it suggests that female homoeroticism is an unfortunate consequence of failing heterosexual relationships and societal repression. Furthermore, the novel gives voice to protagonists who associate female homoeroticism with sin, criminality, primitiveness, and deviance, while precluding counternarratives that deconstruct this dominant discourse.

**Synopsis**

*Misk al-ghazal* recounts the experiences of four women residing in an unnamed desert country that is portrayed as oil rich, repressive, and underdeveloped. The novel encompasses four first-person narratives, each told from the point of view of one of the female protagonists—namely, Suha, Nur, Suzanne, and Tamr—who navigate various challenges, as well as opportunities for resistance. Suha has accompanied her husband in pursuit of safety and a more lucrative business opportunity than those available in war-torn Lebanon. However, Suha feels disempowered for not being able to fully put her
education to use or even enjoy the simple pleasures in life, such as wearing the clothing of her choice, taking walks, or going to the cinema. She attempts to alleviate her boredom by busying herself with raising her son, making puppet costumes, and spending time with the other female protagonists, but she remains unfulfilled. At one point, Suha engages in a sexual relationship with a local woman named Nur. Her relationship with Nur initially offers a pleasant distraction, but it also engenders feelings of shame and confusion. Exasperated by life in the desert, Suha ultimately returns with her son to Lebanon.

Like Suha, Nur is married and has a child, and she similarly feels stifled by the strict customs. Nur fills the void in her life by immersing herself in international travel and sexual escapades with men and women. Whereas Nur and Suha find the desert intolerable, the American blond Suzanne thrives in her adopted home. The desert becomes her oasis away from the pressures of modern life in the United States. Suzanne is smitten by the exotic, chivalrous Arab men who reciprocate her admiration because of her “foreign” looks and sexual availability. Twice divorced, the fourth narrator, Tamr, fights for her education and starts her own business, thus devising solutions from within the fabric of her society. The
novel includes subplots about dysfunctional familial and romantic relationships, including the same-sex relationship between Suha and Nur, the focus of this entry.

**Lesbian Encounter between Suha and Nur**

Suha and Nur’s first sexual encounter occurs at Nur’s house. Suha had accepted Nur’s invitation because she desperately needed to leave the house after being stuck indoors because of the rain. Because Suha was not in “the mood for [Nur’s] complaining,” she attempts to distract Nur by telling her that she had seen her husband, Saleh, on television and found him very charming (al-Shaykh [1989] 2010, 50–51). Suha’s mention of Saleh agitates Nur, and she responds by saying that the man “is not worth an onion” and that she does not wish to see him again (51). Nur is so shaken by the mention of Saleh’s name that she starts to beat herself violently, which prompts Suha to grab hold of her arms in an attempt to restrain her. Responding to Suha’s touch, Nur rests her head on Suha’s shoulder and appears to calm down. Suha admits that she “couldn’t bring [herself] to pat her shoulder or hold her to comfort her” and that she felt “embarrassed” and hoped that Nur would show some selfrestraint (52). However, Nur proceeds to press her face against Suha’s neck, causing her to shiver with pleasurable sensations. Suha ultimately surrenders to Nur’s kiss, despite her conviction that “a kiss is between a man and a woman,” and she quickly finds herself lying on the bed and enjoying the “beautiful purely instinctual rhythm” of their bodies (53). Shortly thereafter, Suha seems to awaken from her trance. She experiences “a sudden nausea, then disgust, and wished [she] could disappear through the cracks in the ceiling” (53). As she pulls her skirt down, she proclaims that she would never “feel the same liking” for her legs (53). Shocked by the unexpected sexual contact, the speechless Suha bolts out of Nur’s house, eager to return to her home.

The first sexual encounter between Nur and Suha, as well as the backdrop against which it takes place, are revealing. Suha’s complaints about Nur’s never-ending drama and her apathy regarding Nur’s predicament indicate that she does not genuinely care about Nur. Bored of living in the desert country and feeling distant from her workaholic husband, Suha sees Nur as someone who could potentially offer yet another diversion from the humdrums of daily life, or even the dullness of the heterosexual lifestyle. By the same token, the encounter happens immediately after Nur expresses her resentment of her absent husband. Lesbianism is presented as a “substitute for unfulfilled heterosexual desires” because it gives frustrated heterosexual women an opportunity for rebelling against the heterosexual system by “turn[ing] towards women in the harem” (al-Ghafari 2002–2003, 89). The women’s erotic encounter is also portrayed as almost coercive and predatory in nature. The unwitting Suha resembles a victim who has fallen prey to Nur’s magical touch, rather than a desiring woman who craves a homoerotic connection with someone to whom she is attracted. As soon as Suha recovers her docile body from Nur’s grasp, she feels disgusted and even wishes her body away. Her description of her altered relationship with
her legs suggests that her body had become a liability—uncontrollable, tarnished, and depraved. Suha’s negative visceral reaction and her disavowal of her body reflect her internalized homophobia regarding the unnaturalness and sinfulness of same-sex desires. Her immediate reaction is to flee Nur’s bedroom, which has become akin to a crime scene, and to rush to her home, where she may recuperate her now questionable body, morality, and sexual identity.

**Reaffirmation of Heterosexuality as a Homophobic Reaction**

At home, when Suha’s husband inquires about her discombobulated demeanor, a pale-looking Suha concocts a story about Nur’s driver hitting another car and startling her. Suha’s spontaneous lie reaffirms her perception of her sexual encounter with Nur as a minor accident, one that momentarily unsettles her but that will ultimately pass. In bed, Suha asserts: “I am Suha. I am twenty-five-years old. My mother is Sitt Widad and my father is Dr. Adnan. I’m not bent like Sahar…. I’m normal” (al-Shaykh [1989] 2010, 55). Suha’s reference to her parents is significant, particularly because she includes their formal titles. The Arabic title *Sitt* is generally used to describe a respectable woman of a prominent social class, and the self-evident title “Dr.” highlights the addressee’s esteemed qualifications as an academic or medical professional. Suha is “able to calm herself and restore her sense of identity to avert an existential crisis through a solemn and conscious declaration of identity” (Massad 2007, 339). She must remind herself that she is the daughter of two respectable parents while denying any resemblance to Sahar, a lesbian whom she must have known in Lebanon. By juxtaposing her respectable (and heteronormative) parents with the lesbian Sahar, Suha implies that Sahar is not respectable because of her sexual orientation. Having engaged in a same-sex encounter with Nur, the “modern” and “refined” Suha dreads and denies becoming just like Sahar, the uncouth lesbian woman.

More importantly, in the original Arabic text, Suha refers to Sahar as *shadhda*, a term that may be translated as “pervert,” “deviant,” or “against the norm,” and which is often used in a derogatory manner in reference to unnatural sexualities and gender identities. Suha opts for the negative term *shadhda* over the more neutral Arabic term *suhaqiyya*, to mean “lesbian.” The term *suhaqiyya* is derived from the Arabic root *shq*, which denotes crushing, grinding, rubbing, or pulverizing, and it has been used in past and present times in Arab cultures to reference woman-to-woman sexual acts (Habib 2007; al-Samman 2008; Amer 2012). The term *shadhda*, which emphasizes a “moral deviation,” is a remnant of the colonial influence in the Middle East, because the European rule engendered the propagation of rigid values, including those relating to sexual conduct perceived as pathological (al-Samman 2008; Massad 2007). The Victorian-style rigid social and sexual norms—which were not inherent to the medieval Arabo-Islamic tradition—were
ultimately espoused by Arab elites who bought into Europe’s “civilizing” projects and attempted to distance themselves from nonnormative sexual practices deemed “primitive.” Not only does Suha deny any resemblance to the lesbian/pervert Sahar, but she also vividly recounts her heterosexual encounter with her friend Aida’s boyfriend, when the three of them were lying in bed after a long day of drinking and partying. Suha must recall this old encounter as if to persuade herself—and the reader—that the one time she had found herself literally situated between a man and a woman, she engaged in amorous behavior with the man, not the woman. Her relationship with Nur is presented as an anomaly associated with the “primordial” desert to which she had been dragged.

Contemplating her relationship with Nur, Suha proclaims that she “no longer noticed how slowly the time crawled by in the desert” (al-Shaykh [1989] 2010, 60), thus reiterating that the lesbian affair primarily serves to combat the tedium of life in the desert. As the novel progresses, Suha becomes increasingly frustrated with Nur’s selfcenteredness and with her own inability to take back control of her life. When Nur visits Suha in the latter’s home, Suha feels irritated that her private safe haven has been encroached on and robbed of its heteronormativity. Whereas in Nur’s bedroom, she had felt like a “visitor” or “onlooker,” she now feels disturbed by the familiar sight of her son’s drawings and her husband’s ironed shirts (61), which seem incongruent with her erotic relationship with Nur. No longer confined to Nur’s lavish bedroom, which reeks of incense and food, the relationship becomes too real for Suha to deny or even dismiss as an adventure.

**Condemnation of Female Homosexuality**

Suha’s agitation with both Nur and the desert reaches its peak at a women-only concert that she attends with Nur. There, the women dance freely to the loud beats of Bedouin music, played by Ghusun, whom Suha refers to as “a heroic female warrior from an African tribe” (al-Shaykh [1989] 2010, 64). When Jaleela, one of the attendees, starts dancing brazenly on stage and challenges Ghusun in a local dance that entails pulling a ring from each other’s mouths, the atmosphere becomes charged, and the dance is interrupted. When Suha asks Nur why the dance ended abruptly, Nur replies that Ghusun ended the dance with Jaleela because the latter is “awful” and “must be gay” (68). In the Arabic text, Nur uses harsher words to describe Jaleela, referring to her as *mukhifa* (terrifying) and *shadhdha* (perverted). Nur’s description of Jaleela as a dreadful deviant further enhances the novel’s negative representation of female homosexuality as pathological monstrosity. Like Suha, Nur uses the term *shadhdha* to refer to and condemn the allegedly lesbian Jaleela, which indicates that while Nur engages in homoerotic behavior, she does not consider herself a “lesbian/pervert.” When Nur invites Suha to her home, Suha vehemently refuses because she is convinced that Nur’s invitation is prompted by Nur’s arousal at the sight of the women’s sensual dance. Suha’s prior feelings of anger at Nur’s disruptive presence in her bedroom resurge at the concert, and she concludes that her relationship
with Nur has become increasingly “furtive” and “unwholesome” (69). The dancers' homoerotic contact reawakens her feeling of homophobia and repulsion. She smiles upon finding her oblivious husband waiting to pick her up, but she remains haunted by the image of Jaleela, the “lust-crazed old woman” flirting with the other girls (71). Following the concert, Suha avoids Nur. However, Nur does not retreat, even after Suha calls her “spoilt” and “thoughtless” (77) and refuses to take her phone calls. At this point in the novel, Suha seeks to end her relationship with Nur, who incessantly pursues her. Nur’s mother, Kawkab, finally intervenes and attempts to reunite the women.

Kawkab appears unexpectedly at Suha’s house and insists that Suha accompany her to Nur’s house so they may reconcile. In Nur’s room, Suha confronts Nur about unleashing Kawkab on her, which causes Nur to scream. In response to Nur's shriek, Kawkab reappears and threatens to deport Suha and her entire family. During this encounter, Suha compares Nur and her mother to “vampires,” and she refers to herself as “their prey” (78). Once again, the novel does not shy away from depicting Nur as a bloodthirsty predator, while casting Suha as an innocent victim who has been lured into a dangerous liaison. This incident frames same-sex relationships within the realm of criminality, as Suha is depicted as a hostage, held against her will by Nur and her menacing mother.

Assuming that Kawkab is oblivious to the sexual nature of her relationship with Nur, Suha discloses that her relationship with Nur is “forbidden” and “illicit,” thus invoking religious taboos in an attempt to persuade Kawkab to retreat. Suha’s statements regarding the sinful nature of female homosexuality are not self-evident, however, despite the dominant cultural norms that deem it as such. Whereas male homosexuality is mentioned in reference to Lot’s people in the Qur’an, the Qur’an does not allude to female homosexuality or address any punishments pertaining to the practice of male or female homosexuality (al-Samman 2008; Kugle 2003). Consequently, Muslim jurists have varied in their interpretations of the Qur’an’s position on homosexuality and the penalties befitting those who engage in same-sex acts, particularly in the case of women. Kawkab responds to Suha: “That’s wrong ... but adultery with a man is worse” (al-Shaykh [1989] 2010, 79). Kawkab argues that committing adultery with a man is more haram (taboo) than having an extramarital affair with a woman, perhaps because the Qur’an explicitly addresses zina, which is typically assumed to refer to unlawful sexual intercourse between a man and a woman but does not address sexual acts committed between two women. The exchange between Suha and Kawkab reveals the complex reality of female homosexuality as a lived experience, regardless of religious prescription (or the lack thereof). Kawkab is less concerned with the “sinfulness” of female homosexuality than she is with Nur’s happiness. Kawkab even attempts to bribe Suha with a gold coin, which prompts Suha to recognize that no argument, religious or otherwise, will dissuade Kawkab from her goal. Suha leaves Nur’s house after resolving never to see Nur and her mother again. She also decides to return to Lebanon.
English Translation and Its Reception

The 1989 English translation of al-Shaykh’s Arabic novel, *Women of Sand and Myrrh*, has been a subject of exploration among scholars of Arabic literature. Most notably, Michelle Hartman (2012) argues that the English translation strategies are “domesticating” because the translation choices suggest privileging issues of accessibility and marketability over ensuring that the complexities of the Arabic text are faithfully rendered.

One of the most impactful changes is the reordering of the chapters in *Women of Sand and Myrrh*. The Arabic novel presents each of the women’s narratives in its entirety. The English translation, however, splits Suha’s narrative into two parts, which open and close the novel, thus framing the entire novel and valorizing her voice over the other women’s (Hartman 2012). Moreover, the English translation situates Tamr’s story in the middle even though it occurs at the end of the Arabic text. By ending with an epilogue that features Suha’s eager departure from the desert, *Women of Sand and Myrrh* highlights the act of “fleeing” traditional society, while de-emphasizing Tamr’s story of local empowerment (Hartman 2012).

The reordering of the chapters also influences the representation of Suha and Nur’s sexual relationship. Because Nur’s story and Suha’s epilogue appear at the end of the translated novel, the English text suggests that the lesbian affair is the main reason Suha flees the desert (Hartman 2012). Furthermore, the translation of the Arabic title *Misk al-ghazal*, which literally means “the gazelle’s musk,” into *Women of Sand and Myrrh* “highlight[s] women’s oppression and the exotic location of the work,” because it represents four different women as one homogeneous entity, united by a timeless and nameless desert (Hartman 2012, 41). The English title also excludes the figure of the “gazelle,” which features significantly in Tamr’s narrative and is often associated with both masculine and feminine qualities in the Arabic literary tradition. The reordering of the chapters, along with the clichéd title, have contributed to framing *Women of Sand and Myrrh* as a mere account of an allegedly exotic, mysterious, and oppressive Arab world, as evidenced by reviews of the novel.

Moche Pottery

ANDREW D. TURNER
Postdoctoral Associate in the Art of the Ancient Americas, Department of Ancient Art
Yale University Art Gallery, New Haven, CT

The ceramic tradition of the Moche culture of the Central Andes between 200 and 900 CE, and debates about examples depicting “homosexual” acts.

Moche (also called Mochica) is the name of a Central Andean archaeological culture that is perhaps best known for its distinctive ceramics, produced between roughly 200 and 900 CE. The Moche built elaborate ceremonial centers in the fertile river valleys that punctuate the otherwise arid and inhospitable North Coast of Peru between the Chira and Huarmey Valleys. In the intervening centuries after the Moche collapse, the North Coast was controlled by a succession of other pre-Hispanic groups, including the Chimú (c. 900–1470 CE) and, ultimately, the Inca Empire (1438–1533 CE). By the time Spanish colonizers arrived in 1532, Moche sites had stood abandoned for more than 600 years. After Peru gained independence from Spain following the decisive Battle of Ayacucho (1824), the construction of a Peruvian national identity fostered interest in the pre-Hispanic past, but the Moche culture was not actively studied until the end of the nineteenth century. Moche studies gained traction in the mid-twentieth century through the prolific work of Rafael Larco Hoyle (1901–1966), an amateur archaeologist and collector of antiquities. Larco made detailed studies of Moche ceramics, and his extensive collection forms the core of the Museo Larco in Lima, Peru, which holds the largest collection of Moche ceramics in the world. Currently, the Moche are among the most studied cultures of the ancient Central Andes.

Moche ceramics constitute one of the most compelling artistic traditions of the ancient New World. While Moche vessels for everyday use such as cooking are coarse and sparsely decorated, vessels intended for ceremonial activities are sculpted and painted with careful attention to detail, inventiveness, and technical proficiency. Although most Central Andean artistic traditions favored stylization and geometric abstraction, Moche artists portrayed a broad range of subject matter—including portraits, supernatural beings and events, animals and plants, warriors engaged in combat, war captives, and architectural structures—in a naturalistic style that has few parallels in the ancient Americas. An unfortunate consequence of the aesthetic appeal, quality, and visual legibility of Moche ceramics is that they became popular among twentieth-century collectors, which fueled the illegal looting and destruction of archaeological remains. Of the more than 100,000 Moche ceramic vessels in museums and private collections around the world, fewer than 5 percent,
estimates suggest, were encountered in controlled excavations in which their archaeological contexts can be examined. In addition to looting, market demands also promoted the production of forgeries and pastiches made from fragmentary vessels, as well as replicas manufactured as souvenirs.

**Sex Pots**

Vessels that portray couples or individuals engaged in sexual acts, often called “sex pots,” are among the most intriguing Moche ceramics (see Figure 1). The Museo Larco’s Sala Erótica (Erotic Room), one of the most popular tourist destinations in Peru, offers visitors what they perceive as a glimpse into the putative sex lives of ancient peoples who were uninhibited by modern sensibilities. Animals and deities are portrayed engaged in sex, and in some instances, fleshy humans appear to have sexual contact with skeletal beings. Most Moche examples, however, portray malefemale human pairs that are represented as three-dimensional sculpted or mold-made figures situated on top of vessel chambers. The genitalia of both sexes are typically rendered in careful anatomical detail, although frequently exaggerated in scale. Depending on how they are classified, estimates of the number of known Moche sex pots range from 500 to 800. While the quantity of Moche sex pots is high compared to that of other Central Andean traditions that produced them (including Vicús, Salinar, Gallinazo, Recuay, Nasca, Lima, Casma, Lambayeque, Wari, and Chimú), they constitute less than 1 percent of known Moche ceramics. Tourist literature, websites, and popular science publications have cast the Moche as an ancient hypersexualized Other (Wołoszyn and Piwowar 2015), even though the relative percentage of sexual imagery in Moche pottery is probably lower than, for example, that of ancient Greek pottery.
The question of what motivated Moche artists to portray figures engaged in sex acts on ceramic vessels is compelling and defies straightforward interpretation. Although the vast majority of Moche sex pots entered collections through the illicit antiquities market, almost all nonlooted examples were recovered in funerary contexts (Gebhard 1970). In these cases, the relationship of the vessel’s subject matter to the identity of the deceased is unclear; neither the age nor the sex of the tomb’s occupant(s) seems to have dictated the presence of sex pots as funerary offerings in Moche graves (Gebhard 1970; Larco Hoyle 1965). The issue of artistic motivation is further complicated by the types of sexual acts that are most often represented. Couples engage in a variety of acts and positions, but vaginal sex is notably rare. Instead, methods that do not lead to biological conception—including oral sex, manual stimulation, and anal sex, as well as images that appear to represent sex between the living and dead—are most often represented by Moche artists. Although *erotic* is an adjective frequently used to describe these vessels, the term is misleading, as it is by no means clear that their purpose was to titillate the viewer. In fact, the usual expressionless gazes of the participants show little indication of pleasure.

Scholarly interpretations of sex pots, though few, have varied and are often shaped by investigators’ attitudes toward sexuality and the nature of Moche art. The American
sexologist Alfred Kinsey (1894–1956), enticed by the prospect of documenting (and idealizing) the sexual practices of people unencumbered by Christian morality, traveled to Peru in the 1950s to work with Larco but died before a collaborative publication materialized. In 1965 Larco published his own volume in which he separated sex pots into thematic categories. He believed that some, in particular those that portray skeletons that appear to masturbate, represent individuals who are morally and physically depleted and that certain mutilated or slain nude figures portray punishment for sexual transgressions (Larco Hoyle 1965). Paul H. Gebhard (1970), working with Kinsey's extensive photographic archive and perpetuating his legacy, presented Moche sex pots as a visual catalog of the range of Moche sexual practices. Given the relative lack of representations of vaginal intercourse, others have viewed sex pots as instructional objects that demonstrate methods of contraception (Kauffmann Doig 1979; Larco Hoyle 1965). Moralizing, documentary, and didactic interpretations are problematic, however, because Moche artists seldom represented daily activities (Donnan 1976), and because these interpretations do not explain why sex pots appear alongside the deceased in graves.

Other studies have focused on possible symbolic or religious aspects of Moche sex pots. Several scholars suggest that some of the vessels may have been intended to be humorous (Benson 1972; Bergh 1993; Gebhard 1970; Kauffmann Doig 1979; Larco Hoyle 1965). Others believe that they portray ritualized or ceremonial sex acts (Benson 1972; Bourget 2006; Donnan 1976; Gero 2004). Frequently cited passages by the Augustinian friar Antonio de la Calancha (1584–1654) and the Spanish conquistador Pedro Cieza de León (c. 1520–1554) describe ritual “sodomy” undertaken by priests and acolytes in the service of pagan idols on the North Coast, but, given the dramatic chronological and cultural changes that occurred on Peru's North Coast between Moche times and the early colonial period, as well as the potential biases, agendas, and limited vantage points of Spanish chroniclers, these sources must be used cautiously.

The form and function of Moche vessels may hold important clues to their symbolism and clarify the artistic choices that determined appropriate subject matter. The stirrup-spout vessel (Figure 1), which takes its name from the two tubes that attach to the vessel chamber and conjoin to make a single spout, is a form that was particularly favored by Moche artists. The symbolic importance of the conjoining of two streams of fluid or other opposed forces, referred to by the Quechua term tinkuy, is widespread in the Andes. Liquid poured from a stirrup-spout vessel may have been understood as such a convergence (Quilter 2010). Sex may have likewise been conceptualized as a form of tinkuy, characterized by the intermingling of fluids from two opposed bodies (Quilter 2010). In sex pots of the Recuay culture, highland neighbors of the Moche, a male chamber is often the side used for pouring and the female chamber is used for filling the vessel (Gero 2004). Moche stirrup-spout vessels frequently portray a female figure nursing an infant while she is anally penetrated by a male figure (see Figure 1). While some scholars have argued that this scene portrays taboos concerning vaginal sex while breastfeeding (e.g., Kauffmann...
Doig 1979, Mary Weisman (2004) offers the compelling suggestion that it may instead show the transfer of vital bodily fluids from father to mother to infant. Similarly, Moche vessels that portray women holding the erect phalli of skeletons or skeletal figures that appear to masturbate may relate to Andean notions of ancestors as sources of power and fertility and the transference of vital essences across generations and through reproductive cycles of life and death (Turner 2015; Weisman 2004).

DRAWING BY ANDREW D. TURNER AFTER A DRAWING BY JORGE SACHÚN

Figure 2: Rollout Drawing of Low-Relief Copulation Scene on a Moche Jar. Although some have claimed that this scene depicts anal copulation between two male figures, most scholars agree that this scene portrays vaginal intercourse between a woman and a male deity or deity impersonator.

“Homosexual” and Third-Gender Representations

The question of whether “homosexuality” is represented in Moche ceramics has been complicated by scholarly and political agendas, questionable interpretations, issues of national identity, and modern forgeries. Some scholars argue that Moche artists made representations of same-sex intercourse (e.g., Arboleda 1981; Gebhard 1970; Kauffmann Doig 1979), whereas others adamantly deny that notion (e.g., Larco Hoyle 1965). All purported examples portray sex between men, and none shows sexual contact between women. Some believe that vessels considered to portray aberrant sexual behavior, such as male-male sex and bestiality, were destroyed or hidden in the interest of preserving a heteronormative Peruvian national identity (Kauffmann Doig 1979; Wołoszyn and Piwowar 2015). A fragmentary example that clearly depicts two men engaging in anal sex has, for instance, never been displayed publicly (see Arboleda 1981, Figure 5; Kauffmann Doig 1979, Figure 64; Wołoszyn and Piwowar 2015), and some question its authenticity (Gero 2004). Other examples that are displayed in smaller museums as curiosities are clearly fake, often lacking subtle nuances and appearing more as cartoonish caricatures of Moche pottery.

Manuel Arboleda published a provocative scholarly article that argued that a series of similar Moche scenes on pottery depict anal copulation between a masked male figure and another male who adopts “the role of the opposite gender” (1981, 102). While other scholars who have made detailed iconographic studies of this particular set of images (see
Figure 2) interpret them as either scenes of ritual copulation (Bourget 2006; Donnan 1976) or portrayals of a mythical narrative involving deities (Benson 2012; Turner 2015), all agree that the supine figure is biologically female based on consistent Moche iconographic conventions. Some authors (e.g., Campuzano 2006; Horswell 2003, 2005; Trexler 1995) have selectively deployed Arboleda’s argument in order to make broad claims about male-male sexual relations and third-gender identities in the pre-Hispanic Andes, while ignoring the otherwise complete consensus among specialists that the scenes portray male-female vaginal intercourse.

Other Moche vessels challenge modern projections of heteronormativity onto the past. Some Moche vessels, such as the example shown in Figure 3 from the Museo Larco, take the form of a male figure with an erect penis. Regularly spaced perforations around the mouth of the jar would make effective pouring difficult, thus forcing the user to pour or drink directly from the phallus, which serves as a spout (Larco Hoyle 1965). These vessels have generally been interpreted as humorous, but, if the drinker is assumed to be male, they may allude to male-male sexual contact. Unfortunately, it is difficult to unravel the social implications of these vessels, given the lack of a sophisticated understanding of the cultural contexts in which they were made and used. Janusz Z. Wołoszyn and Katarzyna Piwowar (2015), for example, draw attention to another such vessel that shows a male Recuay figure anally penetrated by a Moche male. Given the complex relationship between the neighboring Moche and Recuay cultures, which was at times peaceful and at others resulted in armed conflict, the Moche artist’s intentions are unclear.
Figure 3: Drawing of a Moche Jar with a Phallic Spout. Regularly spaced perforations around the mouth of this jar makes effective pouring difficult, thus forcing the user to pour or drink directly from the phallus, which serves as a spout. While generally interpreted as humorous, such vessels could carry homosexual connotations if the drinker was male.

As struggles over LGBTQ rights in the face of a heteronormative Peruvian national identity continue, the importance of archaeology as a tool to justify modern standpoints becomes apparent. What is particularly fascinating is that Moche sex pots have been used by both sides of this struggle: they have been championed by some LGBTQ activists as physical “proof” that “homo-sexuality” existed in Moche society, but at the same time, those in the opposite camp have claimed that the Moche understood representations of same-sex intercourse as morally objectionable, and still others deny the existence of such vessels altogether (Weismantel 2012; Wołoszyn and Piwowar 2015). In regard to the question of whether “homosexuality” and third-gender identities existed in Moche society, modern understandings of human sexuality and gender expression across cultures lead to an unquestionable “yes,” regardless of how one interprets Moche ceramics. No matter how one looks at them, Moche sex pots resist efforts to categorize them because Moche conceptions of gender and sexuality differed from those of today, and, contrary to the views of early investigators, Moche artists did not attempt to create an encyclopedic corpus of their cultural sexual norms in ceramic for posterity. Furthermore, it is unlikely that their conceptions were homogenous throughout the Moche region or remained unchanged during the 700-year duration of the Moche phenomenon. At present, the fascination with
sex pots seems to reveal more about modern attitudes toward sexuality than about those of the Moche. Moche sex pots may become less enigmatic with continued investigations of Moche culture and as the complexity of how sexuality and gender identity were expressed in past societies becomes better recognized.

**BIBLIOGRAPHY**

One of the key topics in the history of sexuality is the growth, in the early eighteenth century, of a well-organized homosexual subculture in the city of London, England. This was patronized by homosexual men who used gay slang, frequented homosexual cruising areas, and engaged in camp or effeminate behavior among themselves. During this period, men who habitually enjoyed sex with other men not only were labeled “sodomites” but also were called “mollies,” a colloquial term used both by mollies (whose modern equivalents are “fairy” or “queer”) themselves and by the public. Such men frequented a network of “molly houses,” where they socialized with one another, singing and dancing together and otherwise behaving in a disorderly fashion. This is documented by a substantial body of historical data, especially the records of the Old Bailey (London’s central criminal court), but also trial records in other courts, hundreds of newspaper reports, a score of satires, and some journals and letters. Testimony given during the trials includes many circumstantial details beyond sexual activity, revealing an interesting glimpse into the social life of the sodomite.

Illustration from the 1707 Broadside Ballad “The Women-Hater’s Lamentation.” This illustration shows the aftermath of the arrests of at least forty “mollies” in London for homosexual activity in 1707. Four of the accused committed suicide, three were hanged at Tyburn, and many were placed in the pillory.
The existence of the molly houses establishes the existence of homosexual communities well before the French philosopher Michel Foucault's (1978) paradigm for modern homosexual identities, which allegedly did not arise until the medical/sexological discourse of the late nineteenth century. Contrary to the “constructionist” views of the British historian and activist Alan Bray (1982), more recent work on early modern homosexuality has emphasized the continuity of a homosexual identity (Betteridge 2002; Borris and Rousseau 2008; Hergemöller 2001; Robinson 2006; Young 2016). Even David M. Halperin (2002, 2003), a strong proponent of queer theory, has acknowledged that the hypotheses in his early work did not sufficiently recognize the continuities between premodern and modern homosexual identities and conceptions. Research by Randolph Trumbach (e.g., 1985, 1989, 2007) and Rictor Norton (1997, 2005, 2006, 2017) has documented that the homosexual is not a “modern invention”; instead, many salient features of modern homosexual subcultures, social behaviors, and self-understandings are recognizable in early eighteenth century England, suggesting strong analogies and close resemblances between gay men today and men earlier labeled sodomites and mollies.

In Georgian London (1714–1830), such men regularly picked up other men for sex, which they called “picking up trade,” in what they called the “molly markets”: cruising areas, such as “the Sodomites’ Walk” across Moorfields and Bird Cage Alley in St. James’s Park, and public latrines, especially those in Lincoln’s Inn Fields and the Savoy precinct. Some areas were used so regularly that it is clear the kind of men who went there aimed to make contact with one another, rather than simply to pick up passing errand boys. Gay sex was not casual or incidental but was deliberately sought out by men who went to specific places where they knew they could find other men with similar inclinations. In addition to picking up soldiers, mollies used a system of signals or coded gestures to indicate their desires to one another, such as waving a white handkerchief between the tails of their frock coats.

The molly houses in particular are important indicators of a collective homosexual identity. Seventeen were investigated by the police during the 1720s, and about thirty in total over the eighteenth century. They ranged from private lodgings where men met for drag parties to public alehouses and coffeehouses where fifty to sixty men would regularly gather. Some of these houses had a “chapel” or “marrying room” where the men “married” one another in elaborate mock “weddings.” They catered not to elite libertines but to working-class tradesmen and artisans who enjoyed sex with other men. The most popular molly house was a coffeehouse in Holborn owned by John Clap and his wife, Margaret Clap. Every night of the week thirty men would come to “Mother Clap’s” establishment, which operated for at least ten years before it was raided in 1726. On Sunday nights, forty or fifty homosexual
men would come to her house, sometimes from 30 or 40 miles (around 50 to 65 km) outside London, demonstrating it was known to a network of homosexual men. Two other molly houses were kept by married men and women, but the rest were kept by men best described as “queens,” such as John Towleton, who kept a molly house near Moorfields, and who gave his name as “Mary Magdalen” when he was arrested for soliciting. Robert Whale and York Horner, who kept a molly pub in Westminster, were known to their friends as Peggy and Pru; they had lived together for at least three years before their pub was raided in 1726.

The molly houses were frequented by men who possessed a collective sociocultural identity, not just a sexual identity. In these houses, men let their hair down; they would dance country jigs together while one of them played on the fiddle, and they sang bawdy songs together. They engaged in camp behavior, mimicking the voices and mannerisms of women, and sometimes engaged in “bitch” fights. They sometimes had what they called “festival nights,” when they masqueraded as women. Sometimes they performed elaborate mock births, one man pretending to give birth (to a wooden doll), with all the ceremony of a christening. Some long-term couples frequented the molly houses; some were recognized as “special sweethearts,” and some marked their relationship with a formal “wedding.”

When a man first joined a molly club, he would be christened with a “maiden name” as a glass of gin was thrown in his face in a mock baptism ritual that initiated him into the molly subculture. Molly nicknames functioned to cement relations and consolidate identities within a tightly knit community. The widespread use of maiden names is prima facie evidence of both group identity and personal identity, centered on sexual and gender identity.

Even outside the organized subculture, it is clear that many of the men prosecuted for soliciting were driven by a powerful and clearly focused homosexual orientation and that Georgian society held a binary understanding of heterosexual/homosexual orientations. Today, debates between “constructionists” and “essentialists” continue to rage, but the theory-laden histories of sexuality of the 1980s and 1990s are giving way to more nuanced understandings as more empirical data are collected. Although molly houses were superseded by out-and-out male brothels by the beginning of the nineteenth century, when the commodification of sex rather than community socializing became the driving force, the molly subculture continues to be a touchstone in arguments about homosexual community and identity.

Mongolia

OTGONBAATAR TSEDENDEMBEREL
Former executive director
LGBT Centre, Mongolia

The state of LGBTQI rights in this landlocked East Asian country historically and in the twenty-first century.

Mongolia has been actively participating in the globalization and democratization process, embracing newfound ideas and concepts such as democracy, human rights, and gender, sexuality, and LGBTQI rights ever since it staged a democratic movement in 1989. During the socialist regime (1924–1990) that preceded this movement, the discussion of erotic intimacy and sexuality was not widely sanctioned, thus making swift generalizations about gender and sexual minority issues difficult in retrospect (UNDP and USAID 2014). Mongolia decriminalized consensual homosexual sex between adults in 2002; in other words, homosexuality has been legal ever since (Aumakhan et al. 2014).

There was no prohibition of homosexual acts in the first Mongolian criminal code, adopted in 1926. However, after the Union of Soviet Socialist Republics (USSR) criminalized homosexuality in 1933, Mongolia did the same a year later but then decriminalized it again in 1961. Scholars argue that the 1986 code implicitly semi-recriminalized homosexuality through Article 113, a provision using the vague term of “satisfying one’s sexual desire perversely/immorally,” which could be used against LGBTQI community members. Hence, the process of criminalizing and decriminalizing homosexual acts in the code and the fact that issues surrounding sexuality during the socialist era were taboo topics clearly suggest that there was a strong influence from the USSR on Mongolian political, ideological, legislative, and social matters. Nevertheless, on 1 July 2017, a revised criminal code took effect, with hate crimes, hate speeches, and discrimination based on sexual orientation and gender identity (SOGI) criminalized for the first time.

Soviet influence was crucial for Mongolia, given that the latter's 1921 revolution was realized thanks to the Soviet Red Army driving out the Chinese occupation forces and that until 1946 the Mongolian People's Republic was acknowledged only by its protector, the Soviet Union (Batbayar 1998). After a long diplomatic struggle and several attempts after 1946, Mongolia finally became a member of the United Nations in 1961. As Mongols would argue, without Russia, Mongolia would not have been able to retain its independence and would have become part of China (Billé 2010). However, Mongolian LGBTQI activists have mixed feelings and opinions about the Soviet influence when it comes to SOGI issues, and
they would rather refer to the documented history of homoerotic behaviors and homosexuality in ancient China, as well as current developments, such as PFLAG China (an LGBTQI nongovernmental organization) and queer film initiatives in China.

Buddhism and Shamanism have influenced the spiritual and social life of Mongols for centuries, and both seem to tacitly accept homosexuality (UNDP and USAID 2014). As of 2017, there have been no public statements or actions against homosexuality by the country’s publicly recognized religious leaders. However, there have been implicit “denials” by religious leaders with regard to how young people should adopt or interpret Western notions of gender and human rights. The “Science and Buddhism Discussion” held in 2015 at the Mongolian University of Science and Technology featured the Hamba Lama (chief abbot) of the Gandan Monastery, who warned Mongolians to pay attention to how young people are internalizing gender issues and Western ideas without being aware of it.

The 1992 democratic constitution guarantees basic human rights and freedoms, but it does not explicitly address discrimination based on SOGI. Whereas freedoms of expression and of press permit public discourse on LGBTQI rights, there is no broad-based antidiscrimination law to protect LGBTQI Mongolians. The twelfth annual status report on human rights and freedoms by the National Human Rights Commission of Mongolia (NHRCM) addresses rights violations against LGBTQI individuals. It concludes that lack of information or knowledge about and negative public perceptions of SOGI prevents LGBTQI people from enjoying their rights to a healthy and safe environment, to labor, to education, and to health, and the ability of LGBTQI individuals to participate in and benefit from social and cultural life is still not guaranteed (NHRCM 2013). Furthermore, a 2014 poverty study on the LGBTQI community revealed that the unemployment rate of survey participants was 10.4 percent—higher than the official rate of 7.8 percent among the general population—and approximately 22 percent lived below the national poverty line (Aumakhan et al. 2014). The study concludes that a legal environment ensuring equal access to education and employment must be implemented and that public perceptions and attitudes must be changed.

Mainstreaming SOGI Issues and Development of LGBTQI Rights Organizations

The 1997 Law on Non-Governmental Organizations allows freedoms of association and of peaceful assembly. In 1999 a group of men founded Tavilan (Destiny), the first queer organization serving gay men, with others following its example in the twenty-first century. Most of them continued to be active as of 2017, but a number of them had to dissolve because of funding issues or because the overall project under which they had operated ended. Given the need for Mongolia’s civil society organizations to be more diverse and inclusive by adopting rights-based approaches and intersectional analyses in their work,
women’s rights and other rights-based organizations such as the Open Society Forum, the National Center Against Violence, and MONFEMNET National Network played a crucial role in mainstreaming LGBTQI rights (Undarya 2013).

After Tavilan ceased to exist on account of a lack of funding, the Mongolian Lesbian Information and Community Center was initiated in 2004 as a project-implementing unit under the Mongolian Women’s Fund, but it also ended operations with the termination of its project. As was the case in many countries, in the early twenty-first century LGBTQI rights in Mongolia were closely linked with sexual health promotion targeting men who have sex with men (MSM). Three MSM organizations—Youth for Health Center, Together Center, and Human Rights-Youth-Health Support Centre—“merged” in 2015 as the MSM and Transgender Community Center to implement a Global Fund project to reduce HIV/AIDS prevalence. The LGBT Centre, the first explicitly pro-LGBTQI advocacy and human rights organization, was formed in 2007 but was officially registered only in 2009 owing to procedural challenges. The Sayanaa Welfare Association was founded in 2014 to work on transgender sexual and reproductive health and rights.

The most prominent organization, the LGBT Centre, championed the LGBTQI rights movement by successfully conducting advocacy at the United Nations level. Following recommendations from the Universal Periodic Review process, the Committee against Torture, and the Committee on Civil and Political Rights, the Mongolian government is obligated to protect LGBTQI rights at home. In addition, these recommendations led to public attention regarding LGBTQI rights issues nationwide, the inclusion of LGBTQI rights in the annual NHRCM report, subsequent parliamentary discussions on the subject matter for the first time, and, eventually, an amendment to the nation’s criminal code to prohibit SOGI-based discrimination, which was adopted in 2015 (but did not go into effect until two years later).

Pride at a Price

The path to “building a human, civil, and democratic society,” as proclaimed in the 1992 constitution, has not always been smooth. Key events triggered by the rapid social changes of the 1990s and increased openness to the external world have enriched the history of the Mongolian LGBTQI movement. These events include the registration process of the LGBT Centre; a 2009 amendment to the civil registration law allowing document changes for transsexuals; the rise of a “neo-Nazi” opposition; the Universal Periodic Review and NHRCM reports; the first Pride Week, held in September 2013; the 2014 report titled “Being LGBT in Asia: Mongolia Country Report”; and the 2015 criminal law reform.

The nongovernmental organization registration issue has attracted public attention to LGBTQI rights in Mongolia. The LGBT Centre began its efforts toward official registration in March 2007. This struggle continued for almost three years, during which LGBTQI activists
persistently knocked on the doors of the relevant authorities. In June 2009 the Legal Entities Registration Agency stated that the name “Lesbian, Gay, Bisexual and Transgender Centre” has a meaning that conflicts with Mongolian customs and traditions and has the potential to set a wrong example for youth and adolescents (“LGBT Centre 2010”). To pressure the government to register the organization, the LGBT Centre involved various international stakeholders, including OutRight Action International (formerly the International Gay and Lesbian Human Rights Commission), Human Rights Watch, and the Asian Forum for Human Rights and Development. This international mobilization triggered domestic policy makers to push the agenda, finally leading to the registration of the LGBT Centre in December 2009, thanks to the personal involvement of Oyungerel Tsedevdamba, the first human rights and civic participation adviser to the president of Mongolia, and the NHRCM’s commissioner, Oyunchimeg Purev.

Another barrier to equality and nondiscrimination for Mongolia’s LGBTQI community is a matter of nationalism. Ultranationalists, or the so-called neo-Nazis, believe that LGBTQI identities are Western imports. Thus, those who are perceived to be LGBTQI may become targets of more organized abuse, including by neo-Nazis and extreme nationalists (“United Nations High Commissioner for Human Rights 2011”). In 2009 three transgender girls were allegedly kidnapped and brought to a graveyard, where they were sexually assaulted, tortured, and beaten. Because of the inclusion of interviews with them in the LGBT Centre’s documentary *The Lies of Liberty* (2010), they became subject to death threats, and eventually two of them fled Mongolia with the assistance of the center.

**Enabling Laws, Weak Enforcement**

Mongolia prohibits SOGI-based discrimination by law. On 3 December 2015, the State Great Khural (the parliament of Mongolia) adopted the much-awaited, revised draft of the criminal code in a legislative package along with other relevant laws. This meant that for the first time SOGI was included as one of the nondiscriminatory prohibited grounds in the code. Even though the parliament had adopted the revised code, a socially conservative ruling party, the Mongolian People’s Party, which gained power through the June 2016 elections, delayed enforcement of the new law until 1 July 2017, whereas the initial date was 1 September 2016. This indicates that despite the laudable political will on SOGI issues from certain members of the Democratic Party (the ruling party in 2015 when the reforms were enacted) and persistent advocacy efforts by rights-based nongovernmental organizations, the process of protecting and promoting LGBTQI rights in Mongolia has been stagnant as a result of systemic inconsistency fueled by changing political powers, negative public perceptions, and a lack of understanding about SOGI issues at the policy making level.

On a positive note, the 2009 civil registration law allows transgender, transsexual, and intersex individuals to change their preferred sex and name on the national identification
card based on a medical certification, and an increasing number of transsexual people have been doing so. As a result of bureaucratic administrative processes and the derogatory attitudes of public officials, this process can be time consuming and emotionally exhausting for those transgender, transsexual, and intersex individuals involved.

**LGBTQI Representation in Arts and Literature**

As a result of the increasing visibility of the LGBTQI community, the legal reform banning SOGI-based discrimination, and the need to study social and cultural connotations regarding LGBTQI issues, various media sources and journalists started to explore how arts and literature portrayed sexual minorities in Mongolia before and after the 1990s. In 2013, for example, *Undestnii Toim* (National review) magazine dedicated its whole edition to the first-ever Pride Week in Mongolia, focusing on the rights of sexual minorities. These attempts and future research involving similar projects would most likely prove that homosexuality and gender identity are not “Western imports” and are inherent and inborn to Mongolian cultural and social lives. One of the journalists keenly observed the masterpiece *Mongoliin neg udur* (One day in Mongolia) painted in the early twentieth century by Sharav Balduu (1869–1939) in which two men are depicted having sex; the journalist concluded that “this could well be an answer to those who believe that same-sex relations were imported from the West along with democracy” (*Undestnii Toim* 2013, 32, translation by Otgonbaatar Tsedendemberel).

Following the democratic movement, Mongolian intellectuals, including playwrights and poets, explored themes of homosexuality and homoeroticism. In 1997 a play titled *Íjil khuisten* (Homosexuals), originally written by the Russian playwright Nikolai Kolyada, was staged by the Mongolian producer Naidandorj Choinkhor at the National Academic Drama Theatre. The story is about two young Russian men who start out as friends and later fall in love. One of them is indecisive about his sexual orientation, which leads to the death of the other. The play briefly brought attention to the issue of homosexuality at that time. Similarly, a 2004 play by the Mongolian poet and playwright Batregzedmaa Bayartogtokh titled *Taichigch khuvguud ba saaral gudamj* (Stripping boys and Gray Street) addressed a similar topic. Although some LGBTQI community members denounced the play as being negative about SOGI issues, critics valued the playwright’s contradictory, philosophical characters.

Because homosexuality and homoerotic behavior were taboo topics during the socialist era, scholars during that period hardly studied these themes. However, the increasing attention to the topic since the 1990s triggered journalists and emerging scholars to bring into the light the historical truths on SOGI. One example is the novel *Uuriin tuya* (1952; *Ray of dawn*), by the prominent writer Byambyn Rinchen (1905–1977), which illustrates a boy with feminine qualities, lightly hinting at homoeroticism: “the young boy with flabby pink cheeks and red plum lips has effeminate qualities” (*Rinchen 1952*). Furthermore, another
famous writer, Lodoidamba Chadraabal (1917–1970), depicts bandi (boys who have sex with men) and shuumar (men who have sex with boys) in the context of monastery settings in the novel Tungalag Tamir (1967; the novel’s title refers to the Tamir River) (Undestnii Toim 2013). The term bandi shuumriin yos (same-sex sexual relations between boys and men) refers to homosexual relationships between boys and adults during the period when Buddhist monks were not allowed to get married, thus depriving them of sexual pleasures and activities.

In Mongolia today, homosexuality and sexual behaviors continue to be misconstrued in the sense that prisons, the military, and monasteries are men-only environments, which encourage boys and men to engage in same-sex sexual practices to satisfy their sexual desires and needs. In this context, Mongolians often use the term bandidah (a verb form of the noun bandi, meaning for men “to have sex with men”). The important arts and literature pieces mentioned above suggest not only that artists and writers thought about SOGI issues but also that historically there were terminologies such as bandi shuumar. Also with regard to terminology, the words lesbian, gay, bisexual, and transgender have been directly translated into the Mongolian language in transliterated form. However, the word intersex has its own Mongolian equivalents, manin and khiosgon, as defined officially in the Mongolian language dictionary, implying that Mongols have had their own ways of expressing and naming gender identity and/or sex characteristics.

FILMOGRAPHY

The history and current status of LGBTI persons in this East African country.

While homophobia is present in many African countries, Mozambique can be considered an example of inclusion and protection of sexual minorities. According to a study conducted by Afrobarometer, the country has one of the most tolerant social and political environments for LGBTI people in Africa, surpassed only by Cabo Verde and South Africa (Dulani, Sambo, and Dionne 2016). There are historical and cultural reasons to be considered in explaining this situation, although it must also be stressed that there is a long path to go for full citizenship of LGBTI people in the country.

Legal and Cultural Landscape: From Colonial to Contemporary Times

Mozambique was a Portuguese overseas territory until 1975 and was under the legal framework that governed the whole empire. Until the beginning of the nineteenth century, those convicted of sodomy by the Roman Catholic Inquisition in Portugal were sent to the African territories, in particular Angola, Cabo Verde, and São Tomé and Príncipe. During these early stages of Portuguese colonialism in Africa there are references to marriages between young men in Mozambique among the Shangaan people, in which they lived as man and wife (Mott 2005). These homosexual partnerships occurred among Shangaan workers in the South African mines. In the early twentieth century, there was a diversity of sexual behaviors in the mines, such as bukhontxana (defined as “mine marriages”), similar to other initiatory homosexual acts and spread and accepted among the workers, who created protective relationships among young men and elders. The South African authorities associated the Shangaan with the practice of “unnatural offenses,” stating that the institution of the mine marriage was extended to and adopted by other groups (Harries 1994).
The Portuguese penal code (PPC) of 16 September 1886 criminalized consensual same-sex activity, imposing punitive measures for "those who usually engage in practices of vices against nature." These measures included forced internment, forced labor, probation, and other provisions. The sodomy law in the PPC is much different from that found in the British penal code, considered the most severe in comparison with other colonial powers (Han and O'Mahoney 2014), which strictly defined "unnatural" sexual intercourse as an offense punishable by up to fourteen years in prison. Different from other contexts, the Portuguese colonial law criminalized only the behavior, and this colonial legacy must be stressed, because the PPC of 1886 was active in Mozambique until 2014.

Mozambique reformed its penal code in 2014, and the criminalization of same-sex acts was dropped. Meanwhile, the new penal code does not provide further measures for the protection of sexual minorities against hate crimes, honor crimes, and other human rights violations involving sexual minorities. However, the labor code (Law 21/2007), in its Article 180, specifies sexual orientation as a nondiscriminatory factor in access to work, as well as the right to a salary and access to the same benefits as other workers. This is the only reference to sexual minorities as a vulnerable group in Mozambican domestic legislation. The Constitution of the Republic of Mozambique guarantees same treatment under the law for all citizens, without any discrimination, although sexual orientation is not referenced directly. In spite of the constitutional principle of equality between citizens, the country’s family law prohibits marriage between individuals of the same sex. It defines marriage as a "voluntary and singular union between a man and a woman for the purpose of constituting a family" (Article 7, Law 10/2004).

Concerning international human rights law, the most relevant treaties are the international covenants of the United Nations and the African Union’s African Charter on Human and Peoples’ Rights (1981). Concerning the African Charter, sexual orientation does not figure as a prohibited ground of discrimination. The African Commission on Human and Peoples’ Rights, however, has shown great concern for human rights violations involving LGBTI people in Africa and has taken specific steps to protect their rights. Specifically, the adoption of the Guidelines and Principles on Economic, Social and Cultural Rights in the African Charter on Human and Peoples’ Rights, in which the commission considers sexual orientation as a prohibited ground of discrimination, as well as lesbians, gays, bisexuals, and transgender and intersex people as vulnerable groups. The commission adopted, in 2014, Resolution 275, which prohibits violence and other human rights violations against persons on the basis of their real or imputed sexual orientation or gender identity, which is a landmark statement concerning the situation of LGBTI people in Africa, although it is not binding on the continent’s nations.

Mozambique is very diverse in terms of both culture and religion. There are a plurality of churches and other religious movements, with the Roman Catholic Church, Christian Pentecostal churches, and Islam predominating. These institutions instill a conservative
agenda in Mozambican society that upholds the immorality of homosexuality. Religious leaders specially oppose political changes that benefit sexual minorities, such as access to civil marriage or child adoption by homosexuals, but there is no violent hostility against LGBTI people or reported cases of violence by leaders of churches (Nota 2013). This may be explained by the legal colonial heritage, less punitive compared with the British legal heritage, as well as a more permissive social environment, in which political and religious leaders tolerate sexual difference if it remains in the private sphere or less visible in public space. The actions of local associations (such as LAMBDA Mozambique) in creating awareness for sexual diversity and difference cannot be ignored as a variable that helps explain this tolerance.

Civil Society and Homosexuality

In Mozambique, the debate concerning homosexuality is not new but has intensified in the twenty-first century, when a more public debate on sexualities became associated with the need for an open discussion on HIV/AIDS (Gune and Manuel 2011). The negative image of homosexuality, linked to conservative and moral views, is also related to the perception that power, wealth, and poverty are key factors in such relations—in particular, the sexual satisfaction of wealthy men who take advantage of the vulnerability of poor and homeless young boys (Nota 2013). Considering the social inequalities in the country, Maria José Arthur (2004) questions the necessity of an antigay perspective based on morality and defense of family, repositioning the focus on sexual minorities toward the human rights debate.

In the African Portuguese-speaking context, Mozambique is highlighted for hosting the oldest and best-organized nongovernmental organization (NGO) devoted to LGBT rights: LAMBDA Mozambique. Created in 2006, the association describes itself on its website as “an organization of Mozambican citizens who advocate for the recognition of the human rights of LGBT people” (LAMBDA Mozambique 2018; translation by Rui Garrido). The main activities of LAMBDA are advocacy for public policies concerning LGBT protection, which also resulted in the decriminalization of homosexuality in the 2014 penal code; education and public-awareness campaigns for sexual diversity, sexual and reproductive health rights, and HIV/AIDS and human rights; research into LGBT issues and the production of materials; training of public services personnel (e.g., health-care workers, police forces) to deal with LGBT people; and legal assistance for LGBT people (LAMBDA Mozambique 2018; Taimo 2014). Although it is the only association in Mozambique working specifically with the LGBT population, LAMBDA is also involved in a vast network with local NGOs, including Women and Law in Southern Africa Research and Educational Trust, HOPEM (Men for Change) Network, Ordem dos Advogados de Moçambique (Mozambican Bar Association), Fundação para o Desenvolvimento da Comunidade (Foundation for Community Development), and the US-based FHI 360.
Based in Maputo, LAMBDA Mozambique works in several provinces, engaging civil society and international organizations in its advocacy campaigns. The communication strategy of the association is very effective, taking into consideration that, for an LGBT African association, LAMBDA gained, and still has, a strong presence in media channels in Mozambique (Taimo 2014). It works to form and inform public opinion through the use of social networks and the production of short films related to homosexuality and the acceptance of sexual minorities. These films are available on LAMBDA’s YouTube channel and include interviews, in particular, with young students in Maputo, who show great tolerance for homosexuality and awareness of LGBT issues. This stands in contrast to the discriminatory behaviors that still persist in some social strata; a study found a very different reality at Maputo-based Universidade Pedagógica (Pedagogical University), where a group of biology students showed intolerance toward and low understanding about homosexuality (Nota 2013).

LAMBDA has sought legal recognition by the Republic of Mozambique since 2008. By refusing such recognition of the association, the Mozambican state not only has failed to guarantee the fundamental rights of these citizens, in particular their right to association, but also has placed LAMBDA in legal limbo, which hampers the NGO in its activities (Taimo 2014). The association has appealed to several legal institutions inside and outside the country without success, in particular to the Ombudsman. The later appealed to the Constitutional Council, which decided that the nonrecognition is unconstitutional, due to Article 1, Law n. 8/91, which regulates the right to association and to Articles 35, 44, and 52, n. 3 of the Constitution of the Republic of Mozambique (Aórđão n. 07/CC/2017, of 31 October 2017).

During the universal periodic review (UPR) process of the Human Rights Council of the United Nations, in 2011, some countries (in particular, France, Spain, and the Netherlands) asked for Mozambique to respect the constitutional principle of equality and register the associations working with sexual minorities (UN 2011). In the second cycle of the UPR concerning Mozambique, in 2015, the case of LAMBDA and the refusal of registration by the Mozambican state was, again, the subject of concern (UN 2015). There are no other national NGOs or associations working on LGBTI issues. Thus, the Mozambican state has yet to legally recognize an LGBTI association, a move that could lead to greater acceptance of sexual minorities among different levels of Mozambican society.

MSM (Men Who Have Sex with Men) in Asia

SAYAN BHATTACHARYA
PhD candidate
University of Minnesota, Minneapolis

An umbrella term used for men who have sex with men, regardless of whether they identify as “gay,” and its complex usage in Asia.

The 2006 report of the Joint United Nations Programme on HIV/AIDS (UNAIDS) titled *HIV and Men Who Have Sex with Men in Asia and the Pacific* states that most men who have sex with men (MSM) outside of the West are not identifiable as such. They may be living a heterosexual lifestyle that includes marriage to a woman and fatherhood, yet because of social stigma, cultural taboos, and laws against homosexual activity, many Asian men choose to hide their engagement in same-sex sexual activity. Their decision to hide their behavior, coupled with a lack of knowledge about how HIV/AIDS is spread, makes them more vulnerable to contracting HIV/AIDS. Within such a context, the term *MSM* describes a behavioral phenomenon rather than a sexual identity, used primarily to highlight risky behavior. Hence, MSM would include not only self-identified gay and bisexual men but also self-identified heterosexual men who have sex with other men. MSM is an umbrella term for advocacy initiatives against the spread of HIV/AIDS.

The UNAIDS report goes on to state that there is a socioeconomic divide between various groups of MSMs. Educated upper- and middle-class men are more likely to identify with Western countries’ gay movements and ideologies as part of their sexual identity, whereas working-class men are more likely to view their homosexual behavior as purely an act, not an identity (*UNAIDS 2006*). Therefore, HIV interventions need to be framed in a way that targets both identities and acts. According to this report, the use of MSM as a term supports this dual focus. Shivananda Khan, the founder of Naz Foundation International and the Asia Pacific Coalition for Male Sexual Health, has advocated this approach. In the context of male sexual health in Asia, Khan argued in a 2001 article that the term *gay* flattened out the sexual diversity in the region. To him, this term was a Western imposition that did not speak to the varied sociocultural contexts of the region. According to Khan, when members of the South Asian diasporic gay and lesbian communities traveled to India and other parts of Asia, they brought with them their experiences of organizing around gay and lesbian rights, which South Asians living in the region then tried to emulate. Hence, these terms circulated only in elite spaces in the region.

However, feminist scholar Nivedita Menon (*2007*) argues that Khan’s assertions about
MSM are self-contradictory. First, his notions of the West and authentic notions of local culture are essentialist in the sense that he perceives them as compact units without any kind of flows and exchanges among them. Second, if “gay” as an identity marker is solely used in the West, then why is it that not all homosexual men in the West use this term to identify themselves? Yet MSM is also an English term that originated in Western health discourses and that would require translations into several cultural and linguistic contexts, as nobody would automatically identify as MSM. Then how is it different from “gay”? Identities are “socially, culturally, politically and historically contingent” (Menon 2007, 17); they are relational in the sense that they derive their meaning from what they are not (“black” means “not white”) and their formation is a process, not frozen in time.

Local Contexts

In this regard, the UNAIDS report cautions that HIV programs for MSM in Asia also need to be tailored to local contexts, given the cultural, political, and sexual diversity in the region. For instance, in Indonesia transgender women are commonly known as waria. They are more visible and thus somewhat recognized in Indonesian culture. There are also working-class men known as laki-laki or laki asli who often have sex with the warias without necessarily considering themselves gay or homosexual. Another term used is kucing, for male sex workers who may have both male and female clients (UNAIDS 2006). UNAIDS (2006) lists four categories of MSM in the Philippines: parlorista bakla (effeminate men who may cross-dress and use makeup and are often employed in beauty parlors), straight-acting gay men, lalake (who identify as heterosexual and have sex with men for pleasure), and male sex workers. In Hong Kong and many Chinese-speaking communities, tongzhi is a common descriptor for MSM.

In the context of HIV prevention campaigns in India, Ashok Row Kavi (1947–), India’s first openly gay activist and a founding member of the Humsafar Trust, which works for HIV/AIDS awareness in Mumbai, presented a series of subcategories under the umbrella category, MSM. Included in this scheme are subgroups classified around gender identity, such as trans women and hijras (mostly transfeminine individuals, women, and intersex people with their own religious practices who dance at weddings, beg at traffic signals and on trains, and also perform sex work), and around sexual behavior, such as kothis (feminine men who are generally penetrated), panthis (the penetrating partner of kothis, although sometimes panthis and kothis switch positions), and gay men (Kavi 2007). These are only a few examples of varied terms that circulate in Asia around sexual identity and behavior. It would be wrong to assume, however, that these terms are simply benign local variations of the umbrella category, MSM. It would also be problematic to assume that MSM subsumes all these local variations. There are many points of conflict and tension between globally and locally circulating terms such that the very categories of “global” and “local” get disrupted. The following section summarizes how these points of tension arise and how the
global and local trouble each other.

Young Men Frequent an Area Known to Be Popular with Men Seeking Sex with Men in the Cambodian Capital of Phnom Penh, 2007. One of the strategies of HIV/AIDS prevention programs in Asia has been to differentiate between sexual behavior and sexual identity. The category MSM (men who have sex with men) has been largely deployed as an umbrella term to reach out to not only gay men but also those who do not identify as gay but still have sex with other male-bodied people.

**Relation and Interaction between the Global and Local**

Inderpal Grewal and Caren Kaplan problematize the binary of the local as the space of oppositional consciousness and resistance and the global as an “oppressive network of dominant power structures” to argue that the categories “local” and “global” are themselves heavily mediated by transnational flows of capital, technology, media, migrations, and travels that create and perpetuate not only forms of asymmetries and governmental regimes but also “conditions of possibility of new subjects” (2001, 671). For instance, in the context of his research on gender and sexual subjectivities in Indonesia, Tom Boellstorff (2005) uses the concept of “dubbing” to study how Western terms such as *gay* and *lesbian* acquire meanings that are apposite with local contexts. Dubbing is different from mimicking in the sense that there is no original that is then copied. Instead, by failing to sync with the movement of lips, dubbing gestures toward how failure is imbricated in any work of translation such that it is always incomplete and approximate, but at the same time, by not being exact, the translation itself produces newer meanings (Boellstorff 2005).
Thus, gay and lesbi (a term commonly used by queer women and even some trans men in Indonesia) subjectivities in Indonesia are neither a translation of an authentic cultural form nor a copy of a foreign form (Sinnott 2010).

Martin F. Manalansan (2003) argues on similar lines in the context of gay subjectivities in the Philippines, where the term bakla is not simply a premodern antecedent of the modern gay Filipino. Bakla (a very approximate translation of which would be “gay,” but it can also refer to feminine men and transgender women) becomes a placeholder of home, memory, and history in the queer diaspora to hold onto one’s cultural distinctiveness in the face of assimilation; there is no teleology from the bakla of premodern times to the modern emancipated gay subjectivities of global Manila (Manalansan 2003). Bobby Benedicto (2008) takes this argument further to show how the production of the global gay identity in the Philippines rests on the abjection of the bakla. Without the disavowal of the bakla, the modern Filipino gay subject cannot be produced. Thus, what one notices is a constant troubling of binaries and borders between identity markers and labels.

In Pakistan, the term khwaja sira, which dates back to the Mughal era (early sixteenth to early eighteenth centuries), regained its currency when gender-nonconforming people started using it instead of the term hijra, which they deemed pejorative. Khwaja sira now serves as an umbrella term for feminine men, intersex individuals, those who cross-dress, and those who undergo castration to take on a more feminine role. Thus, if one were to follow Kavi’s diagram, khwaja sira could be a Pakistani equivalent of the more generic MSM. In a 2016 essay on their activisms, Faris A. Khan argues that the usage of the category “transgender” for khwaja sira may be an imperialist imposition that does not fully reflect the experiences of gender-nonconforming Pakistani. Instead, Khan offers the framework of genderqueer feminism to read such lives, signaling how gender ambiguity and a state of flux gesture toward radical modes of being and becoming that question the fixity of identity categories. Yet, the term queer was generated by Western academia, and Khan himself acknowledges that even though he reads feminist praxis in khwaja sira activisms, they need not necessarily identify as feminist. This brings the discussion back to the conundrum of reading the local and the global as compact sites that Menon and many others problematize.

What needs to be reiterated here is that the flow between categories is not unidirectional. Yet, critiques of universal categories often assume that the universal colonizes or even produces the local. For example, Akshay Khanna (2009) argues that the HIV/AIDS industry configures MSM as a high-risk population. So, then its subcategories are eventually produced as epidemiological categories whose movements need to be mapped for surveillance. Khanna claims that transnational HIV awareness campaigns create identity categories such as kothi to bring more and more people under their purview. Such arguments, however, have also been refuted on the grounds that they elide how gender operates as an organizing rubric around how sexual behaviors are marked onto bodies.
While masculine men can afford some degree of sexual transgression under the guise of their normative gender, gender-variant bodies are already marked as homosexual (Dutta and Roy 2014). Given that gender performance does not allow some forms of bodies to remain discreet, there have always been forms of collectivizing around shared gender identities that predate HIV interventions or the circulation of MSM in Asia.

**Gendered Dimension of MSM**

Finally, one of the major critiques of the circulation of MSM has been that in underlining male sexual behavior, the gendered dimension of MSM is not interrogated enough. Do women have the same freedom as men in exploring their sexual selves outside marriage with other men and women (Menon 2007)? So, while the gay rights movements have been largely enabled by the proliferation of the HIV industry in Asia, queer women's movements have grown out of the women's movements. In questioning compulsory heterosexuality, marriage, and the family, queer feminists not only have brought sexuality to the center of feminist movements but have also shown how sexuality needs to be thought about beyond the frameworks of marriage and sexual violence, thus challenging the heteronormativity of feminist movements (Sukthankar 1999; Shah 2005; Dave 2012). Yet, a complete dissociation from the HIV/AIDS initiatives in Asia produces another elision. The aforementioned 2006 UNAIDS report notes several times that MSMs often have female partners. For example, it mentions a survey of 800 MSMs in China, more than half of whom admitted to having unprotected sex with women. It also mentions how *panthis* in India and Bangladesh are often married men or have female partners. If these are indeed at-risk populations, then so are the women they have sex with. Yet, the report does not mention any advocacy initiatives for women vulnerable to HIV exposure. In other words, even though the implications of MSMs and HIV for women are underlined, in the final analysis, women slip through.

**BIBLIOGRAPHY**

Mufākharat al-Jawārī wa-al-Ghilmān (al-Jāḥiẓ)

WILLIAM MAYNARD HUTCHINS
Department of Philosophy and Religion
Appalachian State University, Boone, NC

Ninth-century CE work by the famous Abbasid polymath in which two characters debate the pleasures of sex with men versus sex with women.

Mufākharat al-jawārī wa-al-ghilmān (Boasting match over maids and youths) is a ninth-century CE Arabic-language literary debate between a fictional male character who enjoys sex with adolescent males and one who favors intercourse with women. It was written by Abu ʿUthman ʿAmr ibn Bahr (d. c. 868 CE), commonly known as al-Jāḥiẓ, or the man with protruding eyes. A Muslim polymath who lived in Basra and Baghdad during the early Abbasid era (750–1258), al-Jāḥiẓ wrote elegant Arabic books and epistles, some of which were dedicated to Abbasid officials. Mufākharat al-jawārī wa-al-ghilmān is one of his epistles, although it could be considered a play, given that it is written as a dialogue between two characters who trade insults, recite snatches of verse, and tell anecdotes—except that there was no medieval Sunni Muslim theater tradition apart from shadow puppets. The work is instead an example of adab, a medieval Arabic prose genre pioneered by al-Jāḥiẓ.

Al-Jāḥiẓ and Adab

Adab works are typically anthologies of quotes, stories, and stanzas of poetry. Al-Jāḥiẓ is often seen as one of the most important authors for this genre. Charles Pellat (1990, 83), a major authority on al-Jāḥiẓ, explained that he “had two main fields of activity; firstly, theology and politics, and secondly, adab.” His adab strove “to educate his readers” in an “attractive” fashion. The historian Marshall G. S. Hodgson pointed out that al-Jāḥīẓ “wrote innumerable tracts attacking or defending almost every party or group with memorable effect” (1974, 467). Various works by al-Jāḥīẓ, for example, made fun of misers, devoted extensive space to the physically disabled, and covered moral subjects such as the differences between enmity and envy as well as earnestness and jesting (al-Jāḥīẓ 1989, 33–53, 93–121). Pellat points out that Mufākharat al-jawārī wa-al-ghilmān belongs to a literary genre of debates between advocates of various opposites. If al-Jāḥīẓ wrote an essay praising government clerks and one disparaging them, this vacillation “can be explained both in terms of literary convention and of Jāḥīẓ’s idiosyncratic ability to see the good and bad in everything” (Pellat 1990, 92). Pellat wrote that al-Jāḥīẓ “urges the acquisition of good qualities and the suppression of bad ones, but without the tone of moral censure normally
considered *de rigueur* among Mu'tazilites* (1969, 24). About al-Jāḥīz's work on misers, for instance, translator Jim Colville noted, “The book's purpose is not simply to entertain; it seeks to alert the man of honour ... that his own character is flawed by a streak of avarice” (1999, xi). “Yet Jāḥiẓ is never mean-spirited towards these misers. Bemused by their antics, he pokes fun and ridicules but his laughter has no trace of malice” (xii). In discussing the respective merits of dogs and cocks, for example, al-Jāḥīz explained as follows:

*It is not the intrinsic worth of the dog and the cock, their price, their looks or the place they occupy in the hearts of common people that led us to write ... rather are we thinking about the proofs of His existence that God put into these creatures ... the mysteries He implanted in them ... thus demonstrating that He ... wishes us to think on these two creatures and take them for an object lesson and a reason for praising God.*

(1969, 141–142)

**Outline of the *Mufākharat***

From the beginning of the *Mufākharat*, al-Jāḥīz clearly states that he intends to amuse the reader. He claims that no habitual “ally of critical examination” will be “harmed by consideration of any type of subject” and advocates that both authors and readers should alternate between humorous and serious subjects. While acknowledging that prudes “are uneasy and embarrassed when the vagina, penis, and copulation are mentioned,” al-Jāḥīz labels such embarrassment an “affectation.” He argues further that Arabic sexual terms were coined for native speakers of Arabic to use— otherwise they serve no purpose (*al-Jāḥīz 1989, 140*).

The debate between the two nameless characters of the *Mufākharat* begins with the youths' patron claiming that beautiful women are often described as “just like a boy” (141). The maids' patron retorts that poets praise the lovely damsels in paradise even more frequently. The youths' patron responds that men enter paradise as beardless youths (142). The debate continues, as anecdotes and lines of verse from various sources are exchanged.

The debate includes mention of severe Islamic penalties for sex outside of marriage with male versus female partners; the prophet Muhammad's son-in-law and first cousin ʿAli ibn Abi Talib, for example, is said to have ordered a pederast thrown from the top of a minaret (143). Once some penalties for fornication have been discussed, the debate resumes with more poems, arguments, and anecdotes. The youths' patron calls women, including wives, “snares of Satan” (144), and the maids' patron claims, “We do not hear of a single
passionate lover slain by love of a boy,” although a swarm of poets died from love for a woman (145–146). Shameless youths pluck their beards when these begin to mar their appeal, whereas the worst a woman may do is dye her hair (155–156). Consideration of the eunuch as “neither man nor woman” follows the debate proper but soon concludes with the comment that eunuchs have “so many defects, it would take a long time to mention them” (156–157). The debate appears to end in a draw, with neither side able to prove the superiority of its claim. Instead, the epistle concludes with a set of raunchy jokes and some sexual advice. Of the thirty jokes, there are at least eight about men who seek sex only with males, two about young men who pluck or cut their beards to appeal to older men, two about adulterous women, and one about a woman who provides anal sex to a man with a dildo (157–165).

Al-Jāḥiẓ also wrote a shorter, related work titled *Tafdil al-batn ʿala al-zahr* (Superiority of the belly over the back), in which he did advocate a heterosexual position. The work argued for the sexual attractions of the belly over the back, literarily and figuratively, and ranged from aesthetic to legal and linguistic concerns: “The back in most of its states is ugly while the belly in most ... is handsome.... The belly at all times is hospitable and friendly” (al-Jāḥiẓ 1989, 171). “A woman is said to be slender-bellied. She is not said to be slender-backed” (169). It ends with a typical—for this author—theological endorsement of free will: “God the Exalted has afflicted with desire only one He has found straying” (173).

**Social-Sexual Dynamic of the Abbasid Era**

Although al-Jāḥiẓ felt the need for a disclaimer as to the explicit sexual nature of his work, his warning did not extend to the homosexuality implicit in the arguments by the patron advocating for the youths in it. The society in which al-Jāḥiẓ composed this work was one in which “the male-female gender binary did not exist in its modern form, [and] neither did the sexual identities based on it, such as hetero- and homosexuality,” according to David Selim Sayers, a contemporary scholar of Turkish culture. “Consequently, it was not considered abnormal per se for an individual to be sexually active with members of both sexes” (2017, 216). In this sociosexual construct, displays of “affection between friends and neighbors” tend to be more physical than in the West, and “same-sex sexual behavior is rigidly classified into active and passive roles,” according to the anthropologist William O. Beeman (2014, 157). Even today, men who play the active role may not think of their sexual activities as being homosexual, at least not until they visit the West (Beeman 2014).

This sexual dynamic in Abbasid society most often concerned relations between a master and his slaves. In the *Mufākharat al-jawārī wa-al-ghilmān*, the words *jawari* and *ghilman* literally mean “slave women” and “slave boys,” respectively. The British scholar Julia Bray has pointed out that “the reality of Abbasid casual sexual relations with slaves” was “often brutal, consumerist, and callous” (2017, 144). Al-Jāḥiẓ, as “a uniquely acute and well-placed observer of society” (Bray 2004, 137n44), was very much aware of this dynamic. Al-Jāḥiẓ
referred to both genders when describing sex objects—for example, to display his wealth a man may buy “mettlesome steeds and beautiful slaves of both sexes” (1969, 141). When discussing grammatical mistakes, he suggested that these will be excused when made by “refined young women, adolescents, handsome youths, and chubby-cheeked little girls” (105).

In addition to the imbalance of power inherent in a master-slave relationship, homosexual relationships in medieval Middle Eastern society almost always involved an age difference, according to Geert Jan van Gelder, a scholar of classical Arabic literature. “In medieval Middle Eastern society it is taken for granted that a homoerotic or homosexual relationship involves an age difference; affairs between coevals do occur but are rare, or at least rarely mentioned” (2005, 217n165). While acknowledging that “adolescent boys … [were] considered sexually attractive to normal men” (107) in medieval Middle Eastern society, van Gelder went on to stipulate that “it [was] understood, of course, that copulation humiliates and abases only the one who is penetrated, not the penetrator; the same is valid for homosexual intercourse as it appears in Abbasid invective poetry” (115). Al-Jáhiz made this same distinction: “What a difference there is in epithets between … the active and the passive sex partner, the rider and the mount, the actor and the action’s recipient, one who comes and the one on whom he comes, the lower and the upper, the visitor and the visited, the victor and the vanquished” (1989, 170).

Reception

Al-Jáhiz’s Mufākharat was popular enough to inspire a later debate between two ninth-century CE literary figures: Ibn Abi Tahir Tayfur and Ahmad ibn al-Tayyib al-Sarakhsi. The noted Arabist Franz Rosenthal’s evaluation of this debate also applies to al-Jáhiz’s: “As befits a work not meant to be an earnest debate on moot points of religion or philosophy but a literary entertainment … the stress is on how poets as the secular keepers of the Muslim social conscience, expressed themselves” (1997, 29). Scott Siraj al-Haqq Kugle, an authority on queer Islam, wrote the following of Mufākharat al-jawārī wa-al-ghilmān: “Many ‘Abbasid-era writers penned witty debates about whether romance or sex with a male slave (ghulam) was more pleasurable than with a female slave (jariya)—such as the famous literary debate penned by al-Jáhiz” (2010, 87). Rosenthal referred to the work as exemplifying “an age-old intellectual game” in which advocates of “two objects or concepts” compete. He observed that by “pointing out the … good and bad inherent in almost everything” such debates “furnished a much-needed outlet for a relativist view of life” that competed with more dogmatic approaches (1997, 24). Van Gelder similarly described al-Jáhiz as “a rationalist normally eager to explain things or to discuss rival explanations” (2005, 113). The British Arabist A. F. L. Beeston summed up al-Jáhiz in this manner: “He was constitutionally incapable of seeing only one side of a question” (1980, 1). Lois Anita Giffen, an authority on Islamic love, made a comparable point: “Jáhiz, the man of letters,
individualist, and Muʿtazili rationalist, displays a latitudinarian, pleasure-loving, 'live and let live' attitude" (1971, 123).

Pellat, though, also wrote that the Mufākharat is “shocking" and described it as “an anthology on natural and unnatural love ... in which Jāḥiẓ displays a marked hostility to homosexuality” (1990, 92). He characterized most of the “dialogue between the champions of girls and of pretty boys” as a text that “decency forbids us to translate.” Pellat called the jokes at the end “equally scabrous anecdotes” (1969, 271). He faulted this work, which dealt “with a delicate subject,” as “marred by obscenity” (1965, 386). Pellat wrote too that the oeuvre of al-Jāḥiẓ does not overlook “homosexuality, a vice common among the Arabs” (1969, 27).

Mufākharat al-jawārī wa-al-ghilmān by al-Jāḥiẓ is a culturally Islamic adab work in which the author expressed his bemused wonderment at variations in human sexual preference as part of his boundless fascination with all facets of God’s creation.

Mukhannath

EVERETT K. ROWSON
Professor, Middle Eastern and Islamic Studies New York University

A male person who displays feminine traits in the Islamic world during the era of the caliphates.

In classical Arabic sources, a mukhannath (plural: mukhannathin) is defined as a male person who displays feminine traits, either "naturally" or "voluntarily"; what those traits are is not spelled out very specifically, but they certainly include feminine ornaments, including decorating the hands with henna, and, at least in many cases, the adoption of some or all feminine attire, a form of crossdressing that does not intend to go so far as to "pass" as female. Mukhannathin also plucked their beards. The available evidence strongly suggests that in the time of the prophet Muhammad (c. 570–632) men who identified as mukhannathin were a recognized, and accepted, component of society and that that has continued to be the case in most Islamic societies from the seventh century down to modern times, although the nature and role of the mukhannath has varied over time and place.

Anecdotes about Muhammad reveal that in the gender-segregated society of seventh-century Arabia mukhannathin were admitted to women's quarters because of their assumed lack of sexual interest in women; the Prophet is reported to have banished a mukhannath because on one occasion he described a woman voluptuously to a man as a potential marriage partner, indicating an understanding of women's sexual charms. Other anecdotes support the supposition that mukhannathin acted as matchmakers and, more problematically, go-betweens. Perhaps surprisingly, their indifference to women sexually is not matched by any explicit indication of sexual interest in men or boys.

A number of traditions from the prophet Muhammad (known as hadith) indicate that he cursed effeminate men and mannish women, but if so, this did not prevent the mukhannathin from continuing to occupy a conspicuous position in society. Indeed, Arabic sources offer a rich picture of the mukhannathin of Mecca and, especially, Medina in the first century of Islam, focusing especially on their role as singers. One anecdote in particular describes a Woodstock-like music festival in Medina around the year 700, at which three consecutive days were devoted to highlighting the talents of male singers, mukhannath singers, and female singers, respectively. (That the mukhannath singers sang in falsetto is an obvious, but speculative, assumption.) Some of these singers are identified as mature men seeking out the receptive role in anal intercourse, whereas others are
reported to be married. Various anecdotes indicate societal conflict over whether the mukhannath lifestyle is to be looked down on or simply accepted (and their musical talents, wit, and sophistication rejoiced in), but some sort of crisis over this occurred around the year 717, when a constellation of reports indicates that there was a crackdown on the mukhannathin of Medina, which may or may not have involved mass castration (a singularly inappropriate punishment, given the charge of encouraging female licentiousness through their singing and go-between activity, not their own sexual behavior) but in any case is reflected in silence about the mukhannathin over the following fifty years (Rowson 1997).

After the Abbasid revolution of 750, which inaugurated a new dynasty of caliphs ruling the Islamic empire from the new capital of Baghdad, the mukhannathin reappear in the existing sources, no longer primarily as musicians but rather as court jesters. About one of them, ‘Abbada, in the mid-ninth century, particularly rich accounts exist, as s/he audaciously mocked the Prophet’s cousin ‘Ali, as well as basing much of her humor on her desire to be sexually penetrated by other men: in contrast to the earlier period, mukhannathin are henceforth assumed to be pursuers of the receptive role in homosexual intercourse, and in some sources that becomes virtually the definition of the term mukhannath. Other sources, however, draw a clear distinction between the two, the mukhannathin being identified by their gender role, not their sexual one, whereas passive sodomites are identified exclusively by their sexual role.

While the history of the mukhannathin in the Islamic world from the tenth to the nineteenth centuries remains to be seriously explored by scholars, there is abundant evidence for it in Arabic, Persian, and Turkish sources, indicating a continuing institutionalized role for crossdressers as musicians, matchmakers, and jesters, as well as for their being available as performers of mockery for disgraced political actors, which suggests their useful but less than respectable role in their societies. They do seem to have been targets of occasional, but rare, persecution because of their defiance of gender norms. For early modern times, post-1500, the best available evidence seems to be that concerning “dancing boys” in the Ottoman Empire (called çengi or köçek), who were mostly from religious minorities (specifically Christians) and who, after their cross-dressing and dancing career, presumably gave up what was not a lifelong lifestyle. As these dancers fell increasingly into disfavor in nineteenth-century Istanbul (their performances being banned altogether in 1857), many of them moved to Egypt, where they were known as ginks (presumably from çengi) or khawals (which in the twentieth century shifted in meaning to become a standard derogatory term for passive sodomites). The vestiges of this tradition were still observable in Cairo in the 1970s and are perhaps perceptible as well in the contemporary tolerance in Turkey of wildly popular (adult) transgender singers.

The one place in the contemporary Islamic world where the mukhannath tradition is still maintained seems to be Oman, with its society-sanctioned role for the khanith, a cross-
dressing, matchmaking male prostitute figure of high visibility. Oman as an obvious conduit of cultural influence between the Middle East and South Asia raises the obvious question, in this context, of the historical connection between the Middle Eastern mukhannath and the South Asian *hijra*. Indian and Pakistani *hijras*—transgender communities with complex roles in their societies (recently recognized officially as a third sex by the Indian government)—have been subject to intense scholarly exploration, but their presumed historical connections with the Middle Eastern (and specifically Islamic) mukhannathin remain to be investigated.

**BIBLIOGRAPHY**

The Museo Travesti del Perú (Transvestite Museum of Peru) is not a typical museum but rather an itinerant, ephemeral counter-museum created by Peruvian trans artist, philosopher, and drag queen Giuseppe Campuzano (1969–2013). It was borne out of his personal experience as a Peruvian travesti (transvestite) as well as his desire to see his own history and to queer mainstream conceptions of national identity and national history. Given the heteronormative construct of national identity as well as the absence of histories of travestismo (transvestism), the Museo Travesti del Perú is the first to offer a comprehensive history of cross-dressing, queerness, and gender-bending in Peru. The museum chronicles forms of travestismo from the pre-Incan period (before 1438), the colonial era (1532–1824), and modern-day Peru, which essentially began with Peruvian independence in 1824. A miscegenation of genres, the Museo Travesti del Perú showcases gender-bending and sexual dissidence in popular culture and visual and performance art, while also basing its archive of travestismo in newspaper clippings, colonial ordinances, and literary and scholarly works.

The museum has taken many forms, appearing at different moments throughout the first decade of the twenty-first century and after Campuzano’s death in 2013. In each version, it offers a critical rewriting of Peruvian history that rejects chronological, linear renderings of the national past. Over the years, the exhibits have organized individual sections to juxtapose instances of travestismo from various time periods; for example, they have placed the third-gender shamans painted on the indigenous pottery of Moche and pre-Incan cultures from before 600 CE alongside the cross-dressed dancers who appear each year in Peru’s contemporary Andean festivals. The exhibits contain the image of a black homosexual from the nineteenth-century artwork of Peru’s famous costumbrista artist Pancho Fierro (1807–1879), photographs of crossdressed opera singers from the Chinese community of the 1870s, queer kitsch objects of Peru’s contemporary art scene such as a cross-dressed Barbie Ken doll, and ritual artifacts such as the indigenous ritual mask worn in Andean festivals. Merging literary, visual, and scholarly works, they also include excerpts of writings by queer literary icons such as Cuban writer Severo Sarduy (1937–1993),
verses from religious scripture, and colonial ordinances outlawing gender-bending, as well as snippets of scholarly writing about third-gender shamans and the place of ambiguity in Andean cosmology. Campuzano defiantly conceptualized his counter-museum as a looting of official archives that excavated a suppressed sexual history and that challenged mainstream narratives of national identity.

**Peruvian Trans Artist Giuseppe Campuzano as La Virgen Dolorosa.** Campuzano, the founder of the Museo Travesti del Perú, used his work to offer a critical rewriting of Peruvian history from the perspective of a mixed-race, indigenous transvestite.

## Travestismo and Peruvian Identity

While the exhibits present queerness across disparate epochs, they consistently ground travestismo in the Andean cosmovision. Prior to the arrival of the Spanish in 1532, the Inca Empire and its Moche predecessors revered and celebrated third-gender subjectivity. The Incas organized society around an Andean cosmovision based in the notion of complementary dualism, which designated spaces for masculine and feminine ambiguity. Throughout the colonial era, the Spanish violently suppressed the Andean worldview, targeting the thirdgender shamans who operated as mediators of Andean ritual practice. The museum recuperates this suppressed worldview as it links the ambiguity in Andean cosmology to contemporary representations of travesti sex workers, gender benders, and drag queens. In Campuzano's rewriting of national history, indigenous and trans peoples
appear as central protagonists of the nation-state. The Museo Travesti del Perú is a counter-museum that queers mainstream conceptualizations of a national museum. In his queer archive, Campuzano uses transvestism as a metaphor for national identity, as a methodological approach, and as a historiographical practice. Affirming the relationship between travestismo and national identity, in the opening pages of a book version of the museum, Campuzano writes, “Toda peruanidad es un travestismo” (All Peruvianness is an act of transvestism) (2008, 8). In this juxtaposition he imagines national identity not as a fixed, neutral entity but as an assemblage that, like a gender bender or drag queen, is in a constant state of metamorphosis and transfiguration (Campuzano 2009a). Travestismo functions as a metaphor for a national identity that has no essence. Campuzano targets the museum as the site of sanctification and nationalist dogma to subvert the discursive and institutional symbols around which national identity coheres. Just as he crossdresses national identity, so too does the artist dress the museum in drag. He writes: “A false museum—like the term ‘false woman’ with which this Manichean language describes us. A disguised museum whose masks—crafts, photocopies, … banners, all those systems of mass production—do not conceal but rather reveal. They do not camouflage. They enact transvestism” (quoted in “El Museo Travesti: The Transvestite Museum”).

Just as the gender performance of a trans, androgynous drag queen unmasks gender as artifice—a copy with no original—so too does this museum seek to undress national identity and expose official history as mere fantasy. Campuzano reveals museology and the formation of national identity to be an act of transvestism—hermeneutical projects grounded not in fact, but in fiction. His museum is a historiographic rendering of the Peruvian nation forged through falsity and disguise. It is a historical collection made up not of originals, but of copies of objects, images, and historical documents. This is true for the museum as a material object and for the objects of its exhibit.

**Iterations and Reiterations**

The Museo Travesti del Perú is an ephemeral object that has been reinvented over time. It is a reproduction of previous iterations, an object whose ontology is under constant renovation. It first appeared in 2004 as a temporary exhibit at the site museum of the Battle of Miraflores in Lima. The site museum is one of the municipal galleries whose exposition commemorates the famous War of the Pacific—a war fought by Peru, Chile, and Bolivia during the nineteenth century. The Museo Travesti del Perú was staged in the rooms typically used to commemorate contemporary art and to celebrate the war heroes of the nation. In this iteration, the exhibit was a beauty pageant comprising objects, photographs, crafts, and other paraphernalia showcasing travesti beauty queens, androgynous shamans, and hairdressers. It placed images of these beauty queens alongside androgynous ritual figures in indigenous pottery of the Moche culture. In the pageant’s celebration of travesti heroines, it offered a queer reimagining of the fallen war hero and disrupted the
heteronormative masculinity that underwrites constructs of heroism and bravery in the national museum. This pageant was a counter-historical project that juxtaposed the nationalist rhetoric and military symbolism of the nation-state to present a travesti ready to fight for the sash of citizenship (Campuzano 2009a).

In its second iteration, the Museo Travesti del Perú presented newspaper coverage of the murders of travestis in Peru in the 1980s and 1990s for an exhibit at the Museo de Arte de San Marcos in Lima in 2004. Campuzano titled the exhibit Identikit: Un archivo travesti (Identikit: a travesti archive), and he used a set of enlarged newspaper clippings to highlight the systemic violence enacted against travestis in Peru. The exhibit denaturalized the sensationalist coverage of their murders in the press to pay homage to fallen travestis. Campuzano’s engagement with the history of violence against travestis would remain a feature of future iterations of the museum.

In reaction to the outcome of Peru’s general elections in 2006, the Museo Travesti del Perú reappeared as a street protest at a central location in the district of San Isidro in Lima. The protestors were a group of travestis, activists, artists, and sex workers. The museum, organized as a sit-in, was a direct response to the homophobia and patriarchal discourse in the rhetoric of the two front-runners in the presidential race: Ollanta Humala, whose mother called for the deaths of homosexuals, and Lourdes Flores, a staunch antiabortion candidate. Amid Peru’s transition from a dictatorship to a democracy, these protestors sought to draw attention to the murders of sex workers and persecution of travestis that had been documented in the final report of Peru’s Truth and Reconciliation Commission (2001–2003) about the atrocities, forced disappearances, human rights violations, and mass murders that occurred during Peru’s internal conflict from the 1980s to 2000. During the conflict, many travestis died at the hands of leftist paramilitary groups Sendero Luminoso (Shining Path) and Movimiento Revolucionario Túpac Amaru (Túpac Amaru Revolutionary Movement), the armed forces, law enforcement, and right-wing paramilitary groups. The protestors denounced the impunity for perpetrators of hate crimes against travestis. The sit-in took place on the corner of Javier Prado and los Pinos on the borders of the districts of San Isidro and Lince. The site was a popular location for sex work that boasted a famous mural adorned with photographs and quotes celebrating the influence of women in contemporary Peruvian society. Campuzano reproduced the newspaper clippings of the previous iteration of the museum and titled the exhibit Cubrir para mostrar (To cover in order to show). The protesters wrapped themselves in newspaper clippings detailing the murders of trans people and, with their bodies, they blocked the images and quotations on the mural. This intervention served to highlight the scant regard for the lives of trans people and sex workers across the political class and in society at large. They also sought to expose and critique the shared commitment of the institutional Left, the Right, and even the feminist movement to notions of womanhood that were grounded in biological essentialism. The museum combined both embodied practice and visual art and sought to position the travesti body in relation to political rituals and figures of the state.
In its fourth iteration, the museum reappeared as the performance and visual exhibit *Cortapelo* in Arequipa in 2006. Campuzano participated in a choreographed performance of the province’s traditional dance “El Wititi” with a local dance troupe. This part-performance, part-visual exhibit entailed the cutting of the artist’s hair as a ritual offering for the Virgin and as recognition of the centrality of cross-dressing and travestismo in Andean ritual dance. In combining the cross-dressing and ritual performance in Andean tradition with Catholicism, the museum indexed processes of syncretism. It also situated travestismo within genealogies of Andean sacred practice recuperating the place of gender ambiguity in the Andean cosmovision.

After *Cortapelo*, Campuzano organized the museum as a series of smaller portable exhibits in various public parks and plazas in Lima to raise awareness about travestismo. In these iterations that took place in 2006, the Museo Travesti del Perú appeared as a mobile shop, a pink kiosk in the working-class district of Olivos, in the district of Miraflores, and in the center of Lima. Campuzano also set up the mobile kiosk behind Lima’s Palacio de Gobierno (state house). The kiosk featured the clippings and objects of earlier versions of the museum. Situating itself on the margins an official state institution, the museum indexed the relationship of travestismo to imaginations of official history and affirmed its place as a historical and artistic project operating on the margins of official institutional spaces. Dressed as a mobile shop, the Museo Travesti del Perú asked how, and from what position, is official history constructed. Appearing as a small booth of sexual history, this version of the museum played with conceptualizations of official space that are underwritten by notions of inside-outside, copy and original.

In 2008 Campuzano and art curator Sophia Durand published a book version of the museum, or what he described as *un objeto de bolsillo* (an object to be carried in one’s pockets). He designed it to stage the nonnormative body of the travesti subject; for instance, the pages of the travesti book included both glossy paper and newspaper, enabling the material object to change in various sections. In this version, the travesti museum masquerades as a catalog, exhibit, history book, and newspaper, and like the gender bender, it defied rigid systems of classification. The museum sought to unfix official history from its reliance on linear, heteronormative conceptions of time. The pocketbook version boasts an exhibit titled *Muestrario* (collection of samples), which is divided into sections and organized under one-word themes. Each section strings together a set of queer objects, images, and texts taken from different historical epochs. One section is titled *Plumaria*, the name for the colonial and pre-Hispanic art form in which certain feathers were markers of social status. It showcases images of the thirteenth-century Inca leader Manco Cápac adorned with feathers, taken from Guamán Poma’s *El primer nueva crónica y buen gobierno* (1615; The first new chronicle and good government)—a 1,200-page letter written to the Spanish king recounting the injustices of Spanish colonial rule in Peru—and places it alongside images of archangel soldiers adorned with feathers, typical of Christian
iconography in the viceroy of the seventeenth century. Following these images is Jaime Romero’s contemporary art piece Ken-el (2002), which features a queer Ken doll dressed as an archangel soldier. In this section Campuzano crafts a genealogy of transvestism through feathers, excavating a queer royalty across epochs. This section exemplifies a museum in which there is no real temporal guide throughout, so the present is the past and the past is the present; the seventeenth, fifteenth, and twenty-first centuries and the pre-Hispanic era all occur simultaneously. The teleology of official history is ripped apart and time is cross-dressed, made nonlinear, nonnormative. Here feathers are deployed as artifacts and celebrated as historical relics upon which official history is forged. This museum queers time to reject the heteronormativity of official history. In its embrace of queer artifacts, it generates new archaeological tools for rewriting history.

International Iterations of the Museum

Prior to his death in 2013, Campuzano created various iterations of his travesti museum for international audiences. In 2008 he organized the first international exhibit of the museum in Havana, Cuba, and another at Colombia’s Universidad Nacional (National University) in Bogotá in 2009. Each version of the museum was adapted according to the locale, situating travestismo in Peru in relation to acts and forms of sexual dissidence in the region. In the exhibit in Bogotá, for example, the museum showcased performances of travestismo in traditional Colombian dances, uncovering connections between travestismo in Peru and Colombia. The museum then appeared as “línea de vida” (life-line) in 2009 as part of a collective exhibit titled Lo impuro y lo contaminado II: pulsiones (neo) barrocas en las rutas de Micromuseo (Impurity and contamination II: neo-barroque impulses in the routes of the Micromuseo) exhibited at the Museo de Arte Contemporáneo (Museum of Contemporary Art) in Santiago, Chile. In these iterations, the artist sought to use these museums’ exposés of transvestism in Peru and parts of Latin America to disrupt official historiographies and to represent national histories of sexual dissidence and political insurgency. This was a museum that intended to intervene in regional imaginations of national identity and sexual history.

After Campuzano’s death, sections of the book museum were republished alongside a collection of his short stories and other writings in the 2013 edited volume Saturday night thriller y otros escritos (1998–2013) (Saturday night thriller and other writings). The Museo Travesti del Perú undoubtedly offers a scathing critique of “official” history and of the historiographic process, revealing both to be ostensibly heteronormative projects. It offers an exploration of the friction between sexual subjectivity and history. In rewriting a national history that centers the trans, the androgynous, and the drag queen, the museum makes visible the privileging of heterosexual subjectivity in the formation of official history and in the imagination of national identity. In a cowritten piece with the art curator Miguel López, Campuzano describes the museum as “a deliberately artificial device that
dramatizes the official histories and fractures the privileged site of heterosexual subjectivity which turns all difference into an object of study, while rendering invisible its own contingent and socially constructed sexual condition” (2013, 4). This museum not only presents Western history as a sexual project grounded in heteronormative discourse, but in its queering of the canonical figures and sacred and religious icons of the Peruvian nation, it also explores the contingency of heteronormativity itself. The museum queers Peruvian history, literature, cultures, and historiographic practice, and defiantly insists that all official history, all national identities, and all hegemonic systems of classification are relative, fabricated inventions.

**Impact of the Museum**

Peruvian art curators Gustavo Buntinx and Sophia Durand, and the performance artist Germaín Machuca paid homage to the Museo Travesti del Perú in micro-museo, an online catalog of various forms of transvestism in Peru and in local and international art exhibits. In the years leading up to Campuzano’s death, the Museo Travesti del Perú received critical acclaim and was exhibited in Cuba, Canada, Colombia, Spain, and the United Kingdom, and featured in academic journals such as *e-misférica* in the United States. Since the artist’s passing in 2013, the Peruvian art historian Miguel López, a friend of Campuzano, has overseen the archives and all business relating to the museum. Soon after Campuzano’s death, López curated new versions of the museum such as the exhibit *Make an effort to remember. Or, failing that, invent* in Paris in 2013 and another in Lima in 2014, titled *Cuerpo-presente: foto-video-performance*. He has since curated several new exhibits in Brussels (Belgium), Medellín (Colombia), and São Paulo (Brazil) that commemorate the museum and Campuzano’s life. Recently, the museum has proven to be influential in queer performance and visual art in the artistic scene referenced in contemporary art exhibits in Peru such as *Chuquichinchay* (2017) by local Peruvian artist Javi Nefando, whose stage name invokes the *pecado nefando* (nefarious sin) of sodomy during the colonial period. The Museo Travesti del Perú remains a singular and groundbreaking historical treatment of travestismo. It not only celebrates queerness, genderbending, and sexual insurgency in Peru but also queers historiographic practices to undermine the notion of an objective or neutral national history. Through its crossdressing of the national museum and its queering of revered, sacred emblems and figures of the nation, it reveals Peruvian history and Peruvian national identity to be deeply political projects.

Roper, Danielle M. Conversation with Susana Torres. 1 June 2018.
The global museum and heritage sector is characterized by extraordinary diversity. There are vast numbers of museums on every continent, with tremendous variety in scale, scope, and mission. Some have an official status granted by various professional bodies and are largely funded centrally or locally via government. Others have been founded by individuals operating on a not-for-profit basis and are reliant on private funding or commercial income. This makes it difficult to generalize, but it is beyond doubt that LGBTQ+ histories and communities have long been marginalized by the mainstream museum profession and the heritage sector. The extent to which museums and heritage sites today meaningfully represent LGBTQ histories and people varies considerably from country to country. The criminalization of homosexuality has been, and still is, a significant factor in the omission and marginalization of LGBTQ histories. There were few major exhibitions and displays that included LGBTQ perspectives in mainstream, publicly funded museums, galleries, libraries, and archives around the world before 2000. Likewise, relevant LGBTQ biographies have traditionally been omitted from the interpretation of historic houses and heritage sites, even where this was a central part of the property’s story. Largely since the late 1990s, there has been significant change and progress, although not evenly around the world. Due to restrictions of space, the emphasis here is on displays where LGBTQ themes have been the main focus of the exhibit.

**LGBTQ Museums, Libraries, and Archives**

Mainstream museums have only begun to actively collect and exhibit LGBTQ histories and experiences from around 2000 onward. Fortunately, numerous individuals took matters into their own hands, assembling private LGBTQ collections, and in some notable instances ultimately founding their own institutions to ensure these histories were captured and preserved for future generations. Largely from the 1980s onward, a number of important LGBTQ museums and archives were founded, although their collections often draw upon sustained activity over a significant period, sometimes decades. The Australian Lesbian and Gay Archives (Melbourne), the GLBT History Museum (San Francisco), the Leslie-Lohman Museum of Gay and Lesbian Art (New York), the Schwules Museum* (Berlin), and the Stonewall National Museum (Florida) are among the most notable examples. For reasons of
space, it is not possible to explore all of these in any depth, but the Schwules Museum* is discussed here at slightly greater length as a case study.

The Australian Lesbian and Gay Archives (ALGA) in Melbourne was established in 1978 at the Fourth National Homosexual Conference. ALGA is currently the only community-driven initiative in Australia that actively collects and preserves LGBTQ material from across the country and makes it readily accessible to students, historians, and the public. The GLBT Historical Society in San Francisco was founded in 1985 and is registered as an educational nonprofit organization. Its museum and archive are separate entities, but as an organization it collects, preserves, exhibits, and makes accessible to the public materials to support and promote knowledge and understanding of LGBTQ history, culture, and art. The Leslie-Lohman Museum of Gay and Lesbian Art in New York is a dedicated LGBTQ art museum with a mission to exhibit and preserve LGBTQ art and foster the artists who create it. The museum has over 30,000 objects in its collections, spanning more than three centuries of queer art. Its vision is to preserve LGBTQ identity, build community, and explore the relationship between queer art and social justice. It has been at its current location in New York's SoHo since 2006. The Stonewall Library and Archives in Florida was founded in 1973 by Mark N. Silber. In 2014 the Stonewall Gallery opened in a separate building located in Wilton Manors, Florida. The organization, now known as the Stonewall National Museum and Archives, promotes understanding through preserving and sharing the culture of LGBTQ people in American society. The archives contains more than 5,000 items, and the library over 26,000 books and other resources.

The origins of Berlin’s Schwules Museum* can be traced to Eldorado—the History, Everyday Life, and Culture of Homosexual Women and Men, 1850–1950, a groundbreaking special exhibition that ran over the summer of 1984. The desire to create a permanent legacy led to the founding of the Schwules Museum*, with its first special exhibition taking place during 1986. In 1988 the museum moved locations. The growth of its collections, archive, and library meant that it outgrew its site; during 2013 the museum moved into its current home in Berlin’s Tiergarten district. The strength of the museum’s holdings means that, in addition to staging regular special exhibitions itself, it has received international loan requests from institutions such as the Imperial War Museum in London and the US Holocaust Memorial Museum in Washington, DC. During 2015 the Schwules Museum* and the Deutsches Historisches Museum (German Historical Museum, also in Berlin) collaborated on the major exhibition Homosexuality_ies, which took place at both institutions simultaneously (Bosold 2015). Neither the Deutsches Historisches Museum nor the Schwules Museum* could have curated and delivered the Homosexuality_ies exhibition so successfully, reaching such a large audience, without the other’s collections, knowledge, networks, and expertise. This collaboration exemplifies the vital role that specialist LGBTQ museums, libraries, and archives have in collecting, preserving, and researching LGBTQ histories and sharing them with larger audiences as well as their own more local communities.
During 2013 the National Gay and Lesbian Sports Hall of Fame in Chicago was established to honor LGBTQ personalities and bodies “whose achievements and efforts have enhanced sports and athletics for the gay and lesbian community,” as noted on the organization’s website. It was established shortly after Jason Collins (1978–) became the first openly gay National Basketball Association (NBA) player. The Hall of Fame aims to preserve the history of LGBT individuals who have influenced professional and amateur sports and to provide support, so that young LGBT people in the United States feel welcome and safe in participating in sports and related activities.
The origins of this museum can be traced to Eldorado—the History, Everyday Life, and Culture of Homosexual Women and Men, 1850–1950, a groundbreaking special exhibition that ran over the summer of 1984. The desire to create a permanent legacy led to the founding of the Schwules Museum*, with its first special exhibition taking place during 1986.

It seems likely that the number of LGBTQ museums will increase in the years ahead. As of 2018, the Queer Britain organization was working to establish the United Kingdom’s first national LGBTQ museum. Alternative models to collecting, preserving, and interpreting LGBTQ histories are also likely to continue to emerge. The Sweden-based, online-only Unstraight Museum was founded in 2011 as “a non-profit organization working to draw attention to LGBTQI-related questions within the museum and exhibition context. The purpose is to make non-normative and unstraight stories and history visible through cultural projects” (Unstraight Museum 2015). The US-based Pop-Up Museum of Queer History also offers a different approach to established LGBTQ museums by transforming various spaces into temporary installations related to LGBTQ histories. This approach reflects a desire or need for spaces that are free of traditional institutional culture and pressures, creating greater freedom to develop community-created displays that arguably better serve the needs of LGBTQ audiences. The Museo Travesti del Perú (Transvestite Museum of Peru), created by trans artist Giuseppe Campuzano (1969–2013), also broke the mold of traditional museums as an itinerant, ephemeral countermuseum that provided a comprehensive history of cross-dressing, queerness, and gender-bending in Peru via a mash-up of genres.
Mainstream Museums

The British Museum in London has an exceptionally long history and therefore offers a particularly useful case study for exploring the changing ways major Western museums have engaged with LGBTQ histories. The British Museum was founded in 1753, and for most of its history homosexuality was illegal, so it is not surprising that it is only from around 1999 that it (and many other institutions) has begun to proactively collect, research, and exhibit LGBTQ histories. Like some other museums and libraries, it had a restricted collection, the Museum Secretum (Secret Museum), which operated at the British Museum from at least 1830 until the 1950s. The Museum Secretum contained sexually explicit material from around the world—mostly phallic in nature—and other items that challenged the sensibility of the era. Although the Museum Secretum ceased to actively operate in the 1950s—and the objects within were gradually dispersed to the relevant curatorial departments—little changed in terms of public displays. Sex and sexuality were still generally omitted, and the past was presented in a way that reinforced heteronormativity. The decriminalization of homosexuality in 1967 appears to have had little short- or medium-term impact. Meaningful discussion of sex, sexuality, and gender diversity was lacking for most of the second half of the twentieth century.

Arguably, the first significant high-profile public shift was the museum's acquisition in 1999 of a Roman silver cup that has been on permanent display ever since. The vessel, known as the Warren Cup, is decorated with two explicit scenes of male-male lovemaking, and its acquisition was an important moment and a catalyst for change. In 2006 the cup was the focus of a small exhibition that led to the museum being approached by an external organization to write an LGBTQ tour of its collection. The request came to Professor Richard B. Parkinson, who wrote an online article that highlighted objects on display that visitors to the British Museum could see. He subsequently expanded his research and in 2013 published *A Little Gay History—Desire and Diversity around the World*. The book highlighted forty objects from the museum's collection drawn from across the globe and dating from around 10,000 BCE to the twenty-first century. In essence, the central theme of Parkinson's book was that same-sex love and desire—and gender diversity—are integral to human experience, but that the way they have been expressed varies widely culturally.

The fiftieth anniversary of the partial decriminalization of homosexuality in England and Wales happened during July 2017 and was marked by many UK museums, galleries, and heritage sites. More LGBTQ-themed projects probably took place during 2017 than in any preceding year. Some of the higher profile ones were *Queer British Art, 1861–1967* (Tate Britain, London), *Gay UK: Love, Law, and Liberty* (British Library, London), *Speak Its Name!* (National Portrait Gallery, London), *Coming Out: Sexuality, Gender, and Identity* (Walker Art Gallery, Liverpool), *Never Going Underground—The Fight for LGBT+ Rights* (Peoples' History Museum, Manchester), *Prejudice and Pride* (National Trust), and *Desire, Love,
Identity: Exploring LGBTQ Histories (British Museum). Due to restrictions of space it is not possible to discuss all of these initiatives here, although some are subsequently explored in more depth.

Queer British Art, 1861–1967 (5 April–1 October 2017) at Tate Britain in London was the first major special, admission-charging exhibition dedicated to queer British art. The chronological scope of the show was set by the abolition of the death penalty in 1861 and the partial decriminalization of male homosexuality in England and Wales in 1967. The show explored how artists expressed themselves during an era when homosexuality was illegal, when modern LGBTQ terminology was largely unrecognized, but also established assumptions about how gender and sexuality were being interrogated and evolving. It featured paintings, drawings, and other items from such artists as Simeon Solomon (1840–1905), Dora Carrington (1893–1932), Gluck (1895–1978), Duncan Grant (1885–1978), and David Hockney (1937–). It was accompanied by a paper-based trail that highlighted a small number of works with LGBTQ connections in the Tate Britain’s free-admission permanent displays.

The British Museum’s primary focus for the anniversary was two free displays: David Hockney: Fourteen Poems from CP Cavafy (17 March–24 May 2017) and Desire, Love, Identity: Exploring LGBTQ Histories (11 May–15 October 2017). The former display showcased a series of etchings by Hockney, published in 1967, that were inspired by C. P. Cavafy’s (1863–1933) poems about love and desire between men. The etchings were published around the time of the passing of the UK Sexual Offences Act, which partially decriminalized homosexuality; Hockney was living as an openly gay artist throughout the 1960s, but it would probably have been impossible to publish the etchings before 1967. Desire, Love, Identity: Exploring LGBTQ Histories was inspired by Parkinson’s A Little Gay History. It consisted of a small display highlighting objects not previously exhibited and an integrated trail that highlighted fourteen key pieces on permanent display throughout the museum’s free admission galleries. It was distinct from other 2017 anniversary displays in taking a wide view and exploring LGBTQ histories around the world from ancient history to the present day, rather than focusing entirely on the modern and contemporary period. (It did include recent work by Indian artist Bhupen Khakhar [1934–2003], Japanese artist Ōtsuka Takashi [1948–], and Australian artist and activist David McDiarmid [1952–1995].)

Representation of LGBTQ perspectives in museums and galleries is uneven, and not all perspectives are present equally. White male viewpoints tend to dominate. The Museum of London Docklands exhibition Outside Edge (7 February–4 April 2008) provides one notable exception. This small exhibition examined the history of black LGBTQ communities in London from the 1970s to the present. The display was cocurated with a member of rukus! Federation, a community-based group that actively records and collects the experiences of black LGBT communities. The rukus! Black Lesbian Gay Bisexual Transgender Cultural Archive is kept at the London Metropolitan Archives, which launched a catalog of this
resource in 2015. More recently, the work of South African Zanele Muholi (1972–), a visual activist who represents the lives of black LGBTQ people and communities, has been exhibited internationally, including at a solo show at the Brooklyn Museum in New York. Her work has also been shown at the Victoria and Albert Museum and the Wellcome Collection (both London). In 2015 Muholi’s *Faces and Phases 2006–2014* was nominated for the prestigious Deutsche Börse Photography Prize and exhibited at London’s Photography Gallery.

LGBTQ-themed exhibitions in North America and Europe have tended to be “Western” in focus, with some exceptions. From around 2013 onward, there have been a number of major international exhibitions of *shunga*, sexually explicit works on paper produced in vast quantities in Japan between 1600 and 1900. Some of these shows, such as the British Museum’s *Shunga: Sex and Pleasure in Japanese Art* (3 October 2013–5 January 2014), included works depicting male-male relationships, reflecting the prevalence of these images in Japan at the time. The Royal Ontario Museum’s exhibition, *A Third Gender: Beautiful Youths in Japanese Prints* (7 May 2016–27 November 2016), focused exclusively on male youths desired by both men and women, although in this instance sexually explicit prints were confined to the catalog. *Secret Love* was a contemporary art exhibition about LGBTQ identities in China shown at the National Museums of World Culture in Sweden (21 September 2012–31 March 2013). It has subsequently toured other venues, including the Tropenmuseum in the Netherlands (2 May 2015–8 May 2016). The exhibition featured around forty-five works by ten contemporary Chinese artists, all related to the theme of LGBTQ identities in China today. A recent exhibition of the work of the Indian artist Bhupen Khakhar at Tate Modern—*Bhupen Khakhar: You Can’t Please All* (1 June–6 November 2016)—was the first international retrospective of his work since his death in 2003. The show acknowledged, discussed, and explored Khakhar’s identity as a gay man.

Trans histories and experiences remain particularly underrepresented, although there have recently been some high-profile exceptions. *April Ashley: Portrait of a Lady* (27 September 2013–1 March 2015) at the Museum of Liverpool focused on the life of a former *Vogue* model and actress who was one of the first people in the world to undergo gender-reassignment surgery. The exhibition drew on material from Ashley’s own archive and explored the wider impact of changing social and legal conditions for all LGBTQ people from 1935 to the twenty-first century. Members of local trans and gender-diverse communities also shared their own experiences. The project was a collaboration between the Museum of Liverpool and Homotopia, an international festival of queer arts and culture.

The United Kingdom’s *Museum of Transology* is also a high-profile exhibition with a trans focus and another example of a project driven by an individual rather than a publicly funded institution. The *Museum of Transology*, curated by E-J Scott, comprises over 120 objects, each donated by an individual with a label handwritten by the donor explaining its personal significance to the donor. The exhibit seeks to redress the absence of trans
histories from museums. The *Museum of Transology* was first exhibited at the London College of Fashion (20 January–22 April 2017), and then at the Brighton Museum and Art Gallery (starting 20 July 2017). It is now the largest collection representing trans people in the United Kingdom, but as of 2018 it was still seeking a permanent home in a museum.

The exhibitions listed in the preceding paragraphs are primarily British, but many examples could be cited from elsewhere in Europe, Australia, and North America. The Harvard Art Museums’ exhibition *ACT UP New York: Activism, Art, and the AIDS Crisis, 1987–1993* (15 October–23 December 2009) at the Carpenter Center for the Visual Arts is particularly noteworthy in terms of addressing more recent events and histories. The exhibit focused on the New York chapter of the AIDS Coalition to Unleash Power (ACT UP) through works produced by the group’s various artist collectives. It featured the ACT UP Oral History Project—over 100 video interviews with surviving members of ACT UP–New York that offer unique insights into a profoundly important period in US history.

Beyond North America, Europe, and Australia, there have been some significant recent contemporary LGBTQ-themed art exhibitions in Asia. *Fault-Lines: Disparate and Desperate Intimacies* (13 February 2016–13 April 2016) at the Institute of Contemporary Arts in Singapore was curated by Wong Binghao and featured work by six artists from Singapore, South Korea, Hong Kong, the United States, and Australia that addressed LGBTQ experience. During the exhibition, visitors were invited to participate in a series of informal conversations with invited activists, poets, and others (events called “Pillow Talk”) designed to explore and expand the exhibition’s themes. However, the exhibit did not pass without incident, because the institute removed two sex toys from Loo Zihan’s eighty-one-piece installation *Queer Objects: An Archive for the Future* out of concern that they violated laws against the display of obscene objects. The artist replaced these objects with black vinyl stickers outlining their shapes (Lee 2016). *Spectrosynthesis—Asian LGBTQ Issues and Art Now* (9 September 2017–5 November 2017) at the Museum of Contemporary Art in Taipei was a larger survey. The groundbreaking show featured fifty-one artworks by twenty-two artists from Taiwan, China, Hong Kong, and Singapore, and was also intended to provide a focus for discussion and debate about diversity and human rights in Asia.

LGBTQ exhibitions and displays, particularly those that feature modern and contemporary art, have generated significant media controversy occasionally, and sometimes still do. The *Queermuseu: Cartografias da Diferença na Arte Brasileira* (Queer museum: cartographies of difference in Brazilian art) exhibition at Santander Cultural in Porto Alegre, Brazil, closed a month ahead of schedule on 10 September 2017. The exhibition, which featured over 200 art works by Brazilian artists, drew protests from Christian groups who accused the show of promoting blasphemy, among other charges. Protestors from the Movimento Brasil Livre (Free Brazil Movement), a libertarian movement, picketed the show and accused some works of endorsing child prostitution and pedophilia. Santander, which had approved all of the works, closed the exhibition early and apologized to anyone “who felt offended by any
work that was part of the exhibition” (Phillips 2017). Tens of thousands of supporters of the exhibition signed a petition unsuccessfully demanding that the show reopen.

**Historic Houses and Heritage**

There are countless independent historic houses and heritage sites of great significance to LGBTQ people and communities. A few notable examples include the Cavafy Museum in Alexandria, Egypt, home to the poet C. P. Cavafy; Firefly, the Jamaican home of the gay British playwright Noel Coward (1899–1973), where he was buried; Langston Hughes’s (1902–1967) house in Harlem, New York City; the Lunuganga Estate in Sri Lanka of gay architect Geoffrey Bawa (1919–2003); Plas Newydd in Llangollen, North Wales, home to Lady Eleanor Butler (1739–1829) and Sarah Ponsonby (1755–1831), known popularly as the Ladies of Llangollen; and Shibden Hall in Halifax, England, home to Anne Lister (1791–1840), whose code-written diaries document her lesbian relationships.

As with museums and galleries, historic houses and heritage sites have for the most part largely omitted LGBTQ histories until comparatively recently. Leighton House Museum in London, home of the artist Frederick Lord Leighton (1830–1896), is a case in point. The museum was criticized in the late 1990s for its failure to discuss Leighton’s sexuality. Thanks to a redisplay of the house in 2010, the interpretation now acknowledges, albeit in only a few words, that Leighton may have been homosexual. The Walt Whitman Birthplace, in Huntington, Long Island, New York, has attracted similar criticism. Whitman (1819–1892) is regarded as one of America’s greatest poets. On 31 May 1997 the opening ceremony of a new interpretive center at the birthplace was upstaged by protestors angered by the lack of a clear and direct acknowledgment of Whitman’s homosexuality (Sandell 2017).

The National Trust, founded in 1895, preserves heritage, historic houses, and open spaces in England, Wales, and Northern Ireland for the public. Throughout 2017—to mark the fiftieth anniversary of the passing of the Sexual Offences Act—the trust ran a program titled *Prejudice and Pride*, exploring LGBTQ histories at a small number of selected properties from the vast total of buildings in its care (Cook and Oram 2017). During March 2017 the trust—working in collaboration with the National Archives—imaginatively temporarily re-created the Caravan, a queer-friendly London club of 1934, and used it as a venue for events programming (Hillel and Houlbrook 2017). The re-creation took place at Freud Café-Bar, close to the Caravan’s original location. Photographs, legal reports, papers, and witness statements resulting from police raids on the Caravan, all held in the National Archives’ records, were used to re-create the club’s interior and to generate information that was pasted to the building’s windows for passers-by. National Trust volunteers led daytime tours of London’s Soho area focused on LGBTQ heritage and club culture, ending with a visit to the Caravan. On select evenings, visitors could become club “members” and enjoy a cocktail menu with drinks of the era served by the Freud Café-Bar’s bartenders.
Most of the *Prejudice and Pride* program focused on the reinterpretation of a small number of existing historic properties in the National Trust’s care in more rural locations around the country. At Felbrigg Hall, Norwich, for example, the focus was on its last owner, Robert Wyndham Ketton-Cremer. The trust argued that previous biographies of Ketton-Cremer failed to acknowledge his homosexuality; they used new research about his life to create a short film, *The Unfinished Portrait*, to address this omission. The trust also produced an LGBTQ guidebook and a series of six podcasts.

*Prejudice and Pride* was well received, but it did generate some national media controversy during 2017. With regard to Felbrigg Hall, the press reported that Ketton-Cremer’s godsons felt it was inappropriate for the trust to publicly highlight his sexuality because this was something that he had chosen to keep private. Additionally, some volunteers refused to wear the *Prejudice and Pride* badges and lanyards designed for them to wear in support of the program because they also felt the trust’s “outing” of Ketton-Cremer was inappropriate, or for other personal reasons ([Grierson 2017](#)). The project was rigorously evaluated as a whole by the academic partner, Leicester University.

English Heritage is a charity that cares for over 400 historic buildings, monuments, and sites, from prehistoric sites to twentieth-century Cold War constructions. Its sites are visited by over 10 million people each year. On 1 April 2015 English Heritage separated into two parts: a charity, English Heritage, that looks after the sites, buildings, and collections, and Historic England, a publicly funded body that champions the nation’s wider heritage, running the listing system, dealing with planning matters, and giving grants. Both English Heritage and Historic England have begun to address LGBTQ histories proactively.

Historic England is a “public body that helps people care for, enjoy, and celebrate England’s spectacular historic environment,” according to its website. In 2015 it ran *Pride of Place: England’s LGBTQ Heritage*, an initiative led by a team of historians and scholars at Leeds Beckett University’s Centre for Culture and the Arts ([Historic England 2018](#)). The project aimed to identify the locations and landscapes associated with England’s LGBTQ heritage by engaging community members and academics, and it resulted in a series of publications and other resources available online. A particularly important aspect of the project is to identify key LGBTQ heritage sites for consideration for inclusion on the National Heritage List for England, and to nominate buildings or landscapes for consideration for local heritage listing on the basis of their significance to LGBTQ histories.

English Heritage runs a scheme in London where blue ceramic plaques are fixed to the exteriors of London buildings, with brief details about a previous famous occupant. The scheme was started in 1866 and is thought to be the oldest of its kind in the world. There are over 900 plaques across the city, at least twenty of which have an LGBTQ focus, referencing, for example, Oscar Wilde, the Bloomsbury Group, Radclyffe Hall, E. M. Forster, Siegfried Sassoon, Virginia Woolf and Vita Sackville-West, Alan Turing, Sir John Gielgud,
and Kenneth Williams. Throughout 2017 and 2018, English Heritage promoted these plaques on their website along with other LGBTQ resources.

**Memorials**

The Homomonument memorial in Amsterdam commemorates all gay men and lesbians subjected to persecution because of their sexuality. It is regarded as the first monument in the world to commemorate gays and lesbians who were killed by the Nazi regime. The memorial consists of three large pink triangles made of granite, set into the ground to form a larger triangle. It opened on 5 September 1987 with the intention to “inspire and support lesbians and gays in their struggle against denial, oppression, and discrimination,” according to its website.

The origins of the NAMES Project AIDS Memorial Quilt can be traced back to 1985, and to a meeting held in San Francisco during June 1987 to create a memorial for those who had died of AIDS and to help foster greater public understanding. Public response to the quilt was remarkable, with panels from US cities affected by AIDS sent to San Francisco. As of 2018, the quilt consisted of more than 48,000 individual 3-by-6-foot memorial panels. Most of these commemorate the life of someone who has died of AIDS and have been created by friends, lovers, and family members. The quilt has been displayed in its entirety in Washington, DC, on five occasions (in 1987, 1988, 1989, 1992, and 1996). The AIDS Memorial Quilt Archive Project ensures that all of the quilt’s panels are professionally photographed, creating a permanent visual record that is available online. The idea of the AIDS Memorial Quilt has spread internationally. Quilt blocks have been displayed or collected by museums around the world. The Amsterdam Museum, for example, has two quilt blocks related to the Dutch AIDS Memorial Quilt.

Stonewall National Monument was designated on 24 June 2016 by US president Barack Obama. Located in the West Village neighborhood of Greenwich Village in Lower Manhattan, New York, it is the first US national monument dedicated to LGBTQ rights and histories. The designated area includes Christopher Park, which is opposite the Stonewall Inn, the site of the Stonewall riots of 28 June 1969 that inspired the global LGBT rights movement. In October 2017 a rainbow flag was raised on the monument, making it the first such flag to be officially maintained at a federal monument. The US National Park Service (NPS) recognizes the site of the Stonewall uprisings as a national historic landmark. There are currently nine other LGBTQ sites designated as a National Historic Landmark or listed on the National Register of Historic Places. The NPS is a body that has addressed LGBTQ histories more proactively, for example, publishing *LGBTQ America: A Theme Study of Lesbian, Gay, Bisexual, Transgender, and Queer History* in October 2016.

Muxes

ALFREDO MIRANDÉ
Distinguished Professor of Sociology and Ethnic Studies
University of California, Riverside

An indigenous “third gender” in a Mexican Zapotec community.

In Juchitán, a Zapotec community on the Isthmus of Tehuantepec, there is a popular myth used to explain the prevalence of indigenous men who are defined as a hybrid third gender, muxe. According to one variation of the myth,

God entrusted San Vicente [the patron saint of Juchitán] with three sacks: one with women, one with men, and one with a third mixed gender. San Vicente was supposed to distribute all three around the world. But when he got to Juchitán, the sack containing the third gender ripped open, and Juchitán received many more than its allotment as third-gender people got out.

(QUOTED IN MIRANDÉ 2017, 3)

Known as los muxes or mushes (pronounced “moo-shey”), they reside in one of the most purely indigenous communities in Mexico (Keller 2007). Many muxes of Juchitán—individuals who were born as cis men—dress in colorful traditional female Zapotec attire, assume feminine roles, and play an important part in the traditional velas, or community festivals. Described as a hybrid gender analogous to the institutionalized third gender found among some Native American groups (Lang 1998; Whitehead 1981; Williams 1986), muxes lack the traditional spiritual significance associated with the Two-Spirit persons, although they may have had such significance in the past (Chiñas 1992).

Acceptance of muxes is so widespread that some have described Juchitán as a “queer paradise” (Henríquez 2003), which challenges the dominant depiction of Mexican society as male dominant, homophobic, patriarchal, and driven by the cult of machismo. Although discrimination still exists (Campbell 1994, 230), ambiguously gendered persons appear to be not only tolerated but accepted and, in some instances, thoroughly respected and admired.
While a history of Juchitán is beyond the scope of this entry, it should be noted that gender equality and acceptance of the muxes are consistent with the history of resistance in the Isthmus in general, and Juchitán in particular, to both colonial rule and national control (Mirandé 2017; Campbell 1994, xv–xvi). The phenomenon of the muxe is thus a vestige of pre-colonial indigenous practices and identities that is nonetheless simultaneously hybrid in its constitution and cultural construction.

Most of what we know about the muxes is derived either from historical works focusing on the post-Conquest colonial rule (Campbell et al. 1993; Campbell 1994) or from contemporary ethnographic accounts. The extant literature on the muxes has been largely compiled by outsiders. American anthropologist Beverly Newbold Chiñas (1992), for example, studied the Isthmus Zapotecs and devoted a scant four pages near the end of her slim book to the muxes. A team of German anthropologists headed by Veronika Bennholdt-Thomsen (1997) focused mostly on women in Zapotec society, but the penultimate chapter of their book presents an excellent overview of the muxes. Italian anthropologist Marinella Miano Borruso also carried out field research on Isthmus Zapotec society. Her excellent book Hombre, mujer y muxe’ en el Istmo de Tehuantepec (2002; Man, woman, and muxe on the Isthmus of Tehuantepec) focuses on the life history of a Zapotec woman from birth to death. An insider account is provided in a short photo journal of the well-known muxe organization Las Intrépidas, Las otras hijas de San Vicente (The other daughters of San Vicente), published in Oaxaca by Elí Valentín Bartolo Marcial in 2010. One of the most extensive studies of the muxes to date is sociologist Alfredo Mirandé’s 2017 ethnography Behind the Mask: Gender Hybridity in a Zapotec Community.

**Historical Context: Gender and Sexuality in Pre-Columbian Society**

Unfortunately, our understanding of sexuality in pre-Columbian society is based on archival research on precolonial Nahua, Maya, and Huastec sexuality rather than on sexuality among Isthmus Zapotecs. As noted by Victoria Burnett, “a mixed-gender way of life was accepted in several pre-Columbian communities across Mexico, according to anthropologists and colonial accounts” (2016), but the origins of the muxe tradition are unclear.

Contemporary scholars also disagree as to how sexuality was viewed among the Nahua, or people who spoke the Nahuatl language (Sigal 2011), both before and after the conquest of Mexico, which began with the Spanish domination of Mexico-Tenochtitlán (1519–1521) and continued throughout the many centuries of colonial and nationalist rule. Alfredo López Austin (1988) contends that the preconquest Nahua (of Central Mexico) had an extremely negative view of “homosexuality” and that the death penalty was imposed on both male and female homosexuals, whether active or passive, and on persons who wore
clothing of the opposite sex. It was also believed that homosexual relations harmed the participants. One of the ways the cause of “the disease” was tested, for example, was to throw kernels of corn on a blanket that was spread on the ground; based on the position in which the kernels fell, one could determine the nature and prognosis of the disease. “When a kernel fell onto and was held by another one, it was proof that the sick person owed his condition to homosexual practices” (López Austin 1988, 1:306).

Such assertions are, however, problematic since so much of what we know about the precolonial native peoples comes to us from postconquest, hybrid, colonial texts (written in indigenous languages but with the Roman alphabet). An additional concern is that discrete modern categories such as “heterosexual” and “homosexual” did not exist in preconquest or early colonial Nahua society (Sigal 2011). According to French social theorist Michel Foucault and other social constructionists (Sigal 2011), these categories did not exist prior to the modern period in Europe, which occurred between the late eighteenth and late nineteenth centuries. Because modern conceptions of homosexual identity did not yet exist, Nahuas instead believed that individuals tended to have certain types of sexual characteristics.

Although there is very little information on sexuality among the early Isthmus Zapotecs, homoerotic behavior among men appears to have been widespread throughout the “New World.” Sodomy was widely condemned by the Catholic Spanish conquistadores, and virtually all chroniclers of the time commented on its existence (Bennholdt-Thomsen 1997). Pete Sigal notes that, “at the time of the conquest, same-sex eroticism existed in many, perhaps all, of the indigenous societies of Latin America” (2003, 1), although it remains unclear to what extent sodomy functioned as a trope of alterity for the Europeans and affected their descriptions. In Yucatan, for example, ritualized transvestitism existed among one of the last Mayan societies to be conquered (Sigal 2003). A letter from a priest in seventeenth-century Yucatán reported that “next to one of their principal temples they had a walled-around large house of very decorous construction … into which entered all of those who wished to have their sodomitic copulations, especially those who are very young, so that they could learn there, these ministers of the Demon wearing women’s skirts” (Sigal 2003, 10). The Spaniards thus demonized what may have been sacred rites for indigenous peoples, imposing their own categories of “sodomy” and “sin” onto native peoples.

Bennholdt-Thomsen (1997) maintains that male homosexuality was socially visible in most, if not all, the communities in the Americas when the Europeans arrived in the fifteenth century. In fact, there is virtually no chronicler of the conquest who does not mention the practice of sodomy among the native population. However, “sexuality among men, which generally entailed anal sex (‘sodomy’) was the abominable sin for the Spaniards” (Bennholdt-Thomsen 1997, 295).
Muxe: Gay or Transgender?

Isthmus Zapotec society today recognizes three elements that make up the gender order: los hombres (men), las mujeres (women), and los muxe (muxes) (Miano and Gómez Suárez 2009; Miano Borruso 2002). While the terms gay, transgender, and muxe are often conflated, they are not synonymous. Transgender (or travesti) is generally not used, and muxes tend to distinguish themselves from the gays and travestis of Mexican LGBT culture. Gay men are even more emphatic in distinguishing themselves from muxes, even though both are attracted to men. As one gay man from Juchitán stated, “For me a muxe is a man who identifies as a woman and likes to dress like a woman. I am not muxe. I am gay because I have never wanted to dress like a woman or to be one. And they do women’s work. I know that I am a man” (Mirandé 2017, 88–89).

Complicating such simple formulations, however, is the fact that not all muxes dress in female attire. Those who do are vestidas (dressed up), whereas those who wear male attire but use makeup or jewelry are pintadas (made up). There is a further distinction between vestidas tradicionales (who wear traditional Zapotec dress) and vestidas modernas (who dress in “modern” feminine attire) (Mirandé 2017). Finally, some muxes dress in traditional male Zapotec attire but often wear brightly colored guayaberas (traditional tropical shirts) and gold jewelry to highlight their own conceptions of gender. However, defining oneself as muxe is a question of identity that extends beyond external things like dress or appearance. A number of Las Intrépidas noted that many of the members want to protect Zapotec traditions, dress, and language (Mirandé 2017). Biiniza, one of the Intrépida leaders, was perhaps most eloquent when she noted that, “being muxe is not something you put on and take off like a dress. It’s a way of being that includes not only dressing like a traditional Teca [Juchiteca] but also maintaining, incorporating, and respecting Zapotec language, customs, and traditions” (Mirandé 2017, 185).

Although muxes generally assume the pasivo (passive or penetrated) role in sex, they are not simply gay men conforming to the Mexican active/passive sexual binary. A major distinction is that gay men have sex with one another, whereas the sexual partners of muxes are generally hombres, or “ordinary” (i.e., straight) men. The common name for men who have sex with muxes is mayate, especially those who get paid by muxes for their sexual services.

Gay men are generally more “inter” (internacional) in that they alternately assume the passive and active sexual positions, come from a higher socioeconomic stratum, are more masculine, are less visible publicly, and tend to remain in the closet. In contrast, muxes tend to be out, visible, and committed to “maintaining, Zapotec culture, traditions, and language” (Mirandé 2017, 184). Many muxes also avoid mainstream occupations because these jobs require gendered clothing, and muxes generally seek to dress in traditional Zapotec attire. While muxes are found in all economic strata, most come from workingclass backgrounds.
and from the poorer and more indigenous sections of the city, like the seventh district of Juchitán (Mirandé 2017, 11).

Muxes also tend to come from families with muxe relatives. For example, Coni, a thirty-nine-year-old Intrépida who had a maternal great-grandfather and uncles who were muxe, noted, "In my family we are accepted because there is a long tradition of muxes entre mis antepasados" (among my ancestors) (Mirandé 2017, 119). It has been estimated that 60 percent of the families in Juchitán have one or more muxe family members (Mirandé 2017, 119). Having a muxe son in Isthmus Zapotec society was traditionally seen as a “blessing from God,” because they could provide extra help for Zapotec women. Muxes are also the children who typically support the family in adulthood, take care of elderly parents, and, in some cases, become heads of households. Like women, they have a well-deserved reputation for being hard workers, skilled artisans, and successful merchants (Bennholdt-Thomsen 1997; Mirandé 2017). Familial acceptance is not universal, however, as a number of muxes report having negative and traumatic childhood experiences, not being readily accepted by their parents, and having faced prejudice in their everyday lives. Some fathers, in particular, have been reported to be especially punitive and resistant to having a muxe son (Mirandé 2017, 105, 109).

The Importance of the Vela in Zapotec Culture

Festivals known as velas are an important tradition in Zapotec culture. The Intrépida Vela and other muxe velas are relatively recent additions to a year-round tradition of velas in Juchitán and Isthmus Zapotec society. Velas are organized by hermandades (brotherhoods) or societies dedicated to a saint, a location or sección (neighborhood), an occupation, or a family (Holzer 1997, 81). These associations, or societies, are sanctioned by the Catholic Church and work for an entire year to organize a four-day event, which includes a mass; regada de frutas (tossing of fruit); the vela, or all-night dance; and the lavada de ollas (washing the pots), an afternoon event held the day after the vela.

Muxes often assume an important economic role in the family and in the community at large. They are actively involved in the festival system as artisans who create the colorful regional feminine dresses worn at fiestas and who make decorations for the velas and floats for parades. The economic boost the velas provide are part of what has been described as a “prestige economy,” in which the highest esteem is accorded not to “the one who owns most, but the one who gives most” in the community. More specifically, “one earns one’s merits in the community through the festivals” (Bennholdt-Thomsen 2005). To sponsor a vela is the dream of every juchiteca (or woman from Juchitán), since they fall within the sphere of women. It is through sponsorship that they gain prestige, not only for themselves but also for their families (Mirandé 2017, 11).

The major vela season starts in April and culminates with the Velas Grandes in the last two
weeks of May, concluding with the two for San Vicente. Each vela offers a mass in honor of its patron saint. The Intrépida Vela is held in the third week of November. The creation of the Intrépida-sponsored vela and other muxe velas are, therefore, an extension of a much larger tradition. Muxes also participate in, and support other velas, and also serve in various capacities, sometimes assuming the *mayordomo* role.

**Las Auténticas Intrépidas Buscadoras del Peligro**

Las Auténticas Intrépidas Buscadoras del Peligro (The Authentic Intrepid Seekers of Danger) is the oldest and best-known muxe organization ([Bartolo Marcial 2010, 16](#)). Popularly known as Las Intrépidas, the group, originally known as Las Panteras Negras (Black Panthers), was formed around 1975 in Comitancillo, a small town where they were welcomed. The founders consisted of Néstor Santiago, Óscar Cazorla, and several muxes who met at a local bar. Cazorla opened Salón Cazorla in Juchitán, where the first Intrépida dance was held and which evolved into a major vela for the entire community.

*Muxes Preparing for the Regada de Frutas during the Intrépida Vela in Juchitán, Mexico, November 2014.* The Intrépida vela is a three-day festival important to Zapotec culture. The vela is hosted by the oldest muxe organization in Juchitán and includes the Regada de Frutas (Tossing of the Fruit) on the first day.
The longevity of the group is testimony to its public acceptance and its integration into the community by political and civic leaders and by the Catholic Church. Las Intrépidas come from all walks of life and include accountants, lawyers, teachers, social workers, and merchants. As of 2017, about ninety muxes were loosely associated with the organization, but the group has only about thirty-six socias (associates), defined as those who have the funds and resources to sponsor a puesto (place or designated area for muxes and their guests) at the annual vela (Mirandé 2017). Felina, one of the key Intrépida leaders, owner of a successful hair salon, and former director of sexual diversity for the Municipio of Juchitán, pointed out that Las Intrépidas have a good relationship with the Catholic Church and other political entities. She believes that “Las Intrépidas have to demonstrate to the community that they are responsible citizens and involved in civic affairs” (Mirandé 2017, 128).

Being selected as queen of the Intrépida Vela is a great honor and brings prestige to the person selected. Mayté, a socia and former Intrépida queen, explained that in order to be a member, you must finance your own puesto, which could require several thousand dollars for a dress, a band, and dancers (Mirandé 2017, 39).

A local teacher familiar with the organization noted that Las Intrépidas were more in demand and made more money than other muxes because they have a higher status and people take their business to them for weddings and quinceañeras (the important celebration of a girl’s fifteenth birthday) (Mirandé 2017). For quinceañeras, for example, Las Intrépidas do the girl’s hair and makeup and even coordinate dancing for the event (Mirandé 2017). One of the major missions of Las Intrépidas is to raise HIV/AIDS and safe-sex awareness in the community. To this end, they work closely with local youth and with the schools on relevant and pressing contemporary issues, such as sex education, domestic violence, and HIV/AIDS awareness (Bartolo Marcial 2010; Miano Borruso 2002; Mirandé 2017).

The Intrépida Vela has become an annual tourist attraction, with the crowning of a queen being the apex of the festival. It has a political base and has historically been supported by the ruling political party, the Partido Revolucionario Institucional (PRI, or Institutional Revolutionary Party), and the municipal government. Class differences are evident, as the mayordomo (grand marshal) is typically a person from the higher economic classes. That said, several muxes over the years have been mayordomos at other velas, which attests to their upward mobility and to their complex role in Juchitán.

Las Intrépidas have gained national and international attention as thousands of persons from various countries attend their vela. Numerous documentaries have been made about the muxes, including one by Alejandra Islas (2005) and another by Patricio Henríquez (2003). Their success has, perhaps paradoxically, resulted in the commodification and exploitation of the muxe experience by local leaders, cultural brokers among their ranks,
and corporate sponsorship of the vela by a major beer company (Mirandé 2017; Bartolo Marcial 2010).

Muxes are highly respected in Zapotec society. A muxe community does not exist because muxes are integrated into the entire community, including the ceremonial vela system. In short, the muxes transcend the gender binary as persons born with male bodies who identify as neither male nor female but as a hybrid third gender. To the people in southern Oaxaca, “the existence of a third gender is as much a part of life as the ancient Zapotec language they speak and the huge, spiny iguanas that laze in the trees” (Burnett 2016, 1).

A historical and contemporary look at LGBTQ issues in this southern African nation.

Namibia, formerly South-West Africa, was a German settler colony (1884–1915) and afterward a South African settler colony (until 1990). Its 2.5 million inhabitants— which include an overwhelming African majority and small populations of European, coloured (of mixed European and African descent), and, more recently, Chinese background—display diverse ethnic, cultural, and linguistic backgrounds, as well as flourishing Christian denominations. Since the country's independence on 21 March 1990, its population has enjoyed constitutionally enshrined democratic and universal human rights formerly denied to them. Its civil society, including tiny LGBTQ organizations, grew out of anticolonial liberation movements and actively guards these rights. Legacies of colonialism, such as racism and heterosexual paternalism, extreme class relations, and widespread poverty, continue to haunt postindependence society. Its rich LGBTQ history has been and continues to be shaped by these factors and developments.

Precolonial Homo- and Bisexualities

Namibia’s precolonial African societies maintained diverse homoerotic, homosexual, and bisexual practices and relationships, attesting to their flexible approaches toward gender relations and sexuality. A critical reading of the limited, ethnically framed observations by colonial male researchers reveals African homo- and bisexualities across gender, ethnic, cultural, and linguistic backgrounds and points to sanctioned or tolerated and established practices and relations. Homoerotic relations among men, for example, have been encapsulated in oupanga (singular epanga; literally meaning “friendship”) relations among Otjiherero-speaking herders of northwestern and central Namibia, these having been age-based relations between young Herero men that could entail homosexual practices. These relations could continue after epanga partners entered into heterosexual marriages and in situations when men had to move with their livestock away from family settlements and were temporarily living among themselves. As with most other Namibian societies then (and often today), such relations were sanctioned but not spoken about “especially when members of the other sex are present” (Falk 1925–1926, 207). Khoekhoegowab-speaking societies (Damara and Nama), who were also predominantly herders, managed similar
relations, and they all display histories of individual men having remained unmarried and at times living with a male companion. Such exclusive same-sex relations seem to have been rare among women, although oupanga relations between Herero women and similar extramarital female same-sex relations among Damara and Nama women were tolerated within the limits of social and cultural norms. As all these societies were shaped by polygyny (a form of polygamy involving a man marrying more than one woman), women, in contrast to men, nearly always entered into a heterosexual marriage. At the same time, flexible inheritance rights concerning both men and women provided spaces for negotiating more independent gender relations, including degrees of alternative lifestyles, for example, among Damara women.

Importantly, this limited sketch points to diverse erotic and complex bisexual experiences of and roles between African men and women of different ages before and during early colonialism. These seem to have been more restrictive among the patriarchal organized Oshiwambo-speaking societies of northern Namibia. However, some of the latter societies saw individual men maintaining lifelong roles as transgender persons engaging in cross-dressing and living normative female (economic) roles.

**Colonial Homo- and Bisexualities and Apartheid**

European colonialism as an essentially heterosexual, racializing, capitalist, and Christian project of European settler rule and African exploitation deeply affected the LGBTQ history of Namibia. On the one hand, the so-called white settler society from Germany and, after World War I (1914–1918), South Africa framed itself as a normative heterosexual society and as such criminalized “white” homosexuality in general and male homosexuality in particular. Numerous court cases attest to the existence of male settler homosexuality among white soldiers, farmers, and high-ranking professionals. Of particular relevance to the colonial state was the policing of European-African (sexual) relations in the wake of rapidly growing numbers of so-called Baster and coloured children from African-European unions and, during South Africa’s racial apartheid (1948–1991), between “Whites” and “non-Whites.” Sexual relations between European and African men were integral to state policing, and South African laws against sexual practices between men were regularly enforced.

A prominent strand of historical homosexuality in Namibia relates to the African migrant labor system that was established after the colonial genocides in central and southern Namibia (1904–1908) when the settler farming and the mining economy grew rapidly and required large contingents of male African labor. The colonial state targeted the male population of northern Namibia in particular and forced thousands of men to take up migrant labor on a contract basis for long periods of time on farms, in mines, and in towns of central and southern Namibia. Male dormitories (“compounds”) as the common form of accommodation gave rise to diverse male-centered relationships and (sexual) experiences.
As a result of long absences by men from their home communities, northern Namibian women and families managed their households and economies with women-centered support networks, no doubt giving rise to changing female roles and experiences. As with the southern African migrant labor system in general, affected men and women developed various strategies of bonding and sexual dependency. In the early twentieth century, migrant laborers from northern Namibia would often live in the compounds together with younger boys from their home villages, the latter often having been selected by the men’s female partners “to keep the men faithful to them” (Falk 1925–1926, 203). The extent to which these relations (which later were forbidden by the state) originated from historically established local practices remains unclear. In towns, individual contract laborers did at times maintain clandestine sexual relationships with African townsmen, while both African and European African male prostitution was also practiced (and criminalized) (Lorway 2015).

These varied histories show again the importance of bisexual experiences and roles as being prevalent and shaped anew by men and women of different ages alike and under changing colonial and discriminatory circumstances. Yet the strong heterosexual repression of alternative sexual practices both legally and socially drove these practices underground. Consequently, and under the simultaneously strong influence of heterosexual ideologies of the Christian mission churches, African societies themselves, converting rapidly to Christianity during the first half of the twentieth century, viewed same-sex and bisexual relations and practices with increasing hostility. The consequences of such modern homophobia for African same-sex and bisexual relations, as well as the repeated forced resettlements of African communities by the apartheid state, warrant research into the sustainability and fragility of LGB relationships under colonialism. The Namibian liberation movements, in turn, which starting in the late 1950s emerged from among migrant laborers and mobilized against the South African occupation while championing democratic and universal human rights and actively supporting women’s rights, likewise maintained a staunch heterosexual policy framework, with pronounced consequences for Namibia’s postcolonial nation building.

**Postcolonial Nation Building and the Limits of Social Justice**

Since independence in 1990, Namibia has been governed by the SWAPO Party of Namibia, a political party that emerged out of the liberation movement SWAPO (South West Africa People’s Organization). While repealing various laws relating to gender-based discrimination, the government has resisted repeated calls from advocacy groups to enshrine sexual orientation rights in the constitutional Bill of Rights and refused to repeal colonial laws criminalizing consensual homosexual practices between adult men.
Gay Pride Celebration in Swakopmund, Namibia, 2016. Madam Jholerina Timbo (right), a trans rights activist and founder of the Wings to Transcend organization in the capital of Windhoek, gives a speech at the gay pride celebration in the coastal city of Swakopmund, held on 4 June 2016.

The LGBTQ scenes in larger urban spaces such as Windhoek, Rehoboth, Swakopmund, and Oshakati have seen a publicly visible proliferation of activities and organizations since independence, with pride marches and Mr. Gay competitions being held and outspoken public debates and interventions being initiated. Instrumental in all this were and are advocacy nongovernmental organizations (NGOs) such as Sister Namibia, LGBT organizations such as the Rainbow Project and LGBT Network Namibia, and the youth education organization Ombetja Yehinga. Much of their critical work since the mid-1990s has been geared, on the one hand, toward addressing rising political homophobia, and, on the other hand, toward the necessity of establishing health and sexuality awareness programs in the wake of the severe AIDS pandemic. Various SWAPO politicians, including Sam Nujoma, who served as Namibia’s president from 1990 to 2005, repeated highly discriminatory statements against gays and lesbians between 1995 and 2005, thereby creating a climate of political homophobia and leading to the exclusion of LGBTQ members from the nation-building project. The awareness programs, in turn, took up and continue to advocate sexual minority rights while at the same time initiating a substantial research and law-reform output on same-sex, bisexual, and transgender practices and lifestyles among Namibians across class and racial divides. On the one hand, such advocacy work reflects the global frame (Lorway 2015) in which LGBTQ desires, behaviors, and relationships have been forged since independence. On the other hand, this has given rise to some severe local
backlashes, not only in terms of political homophobia but also in the form of outright harassment and repression. The degree of home-based violence toward gays and, in particular, lesbians (often in the context of rape by heterosexual men), along with the structural violence embedded in the police and in prisons, has been a major concern of local and international advocacy groups for years.

These contradictory postcolonial developments are profoundly shaping current LGBTQ relations. Despite having achieved more visibility in (urban) public spheres and being acknowledged more positively in most Namibian media, the LGBTQ community, if it can be regarded as such, continues to display and grapple with marked class and race divisions, with life stories by notable African members reflecting the entrenched contexts of violence and poverty that plague Namibian society at large. Out-Right Namibia (established in 2010) has noted “that around Namibia, people who are gay, lesbian, bisexual, transgender and intersex, or seen as such still face stigma, discrimination and violence … [which] takes place at homes, in schools, in hospitals, and other public places” (Kayunde 2017). It has to be stressed that the Namibian NGOs of and for the LGBTQ community continue to work under challenging conditions toward social justice for sexual minorities and the creation of an inclusive, antidiscriminatory, and culturally sensitive Namibian citizenship, a project that the postcolonial state and a larger civil society in Namibia regard as having been accomplished by and large.

Nationalism and Sexuality in Europe

ANDREW WACKERFUSS
Adjunct Professor
Georgetown University, Washington, DC

The impact of nationalism on nonnormative expressions of sexuality in Europe, from the French Revolution to the twenty-first century.

As modern nationalism emerged in Europe at the end of the eighteenth century, it created a gendered vision of citizenship that persists to the present day. This nationalism sought to simultaneously exploit and contain sexual passion and gender identities, capturing both normative and dissident sexualities into a larger project of imposing hierarchical political, racial, gendered, and class identities on all members of society. After this system’s birth during the French Revolution (1789–1799), nationalists continued to theorize about and elaborate on these connections over the course of the nineteenth century, culminating in the final decades into overt struggles over political rights for women, homosexuals, and others who did not fit the nationalists’ masculine mold. In the twentieth century, these conflicts reached a peak in the overwhelming ambitions of revolutionary and authoritarian ideologies that violently sought to impose a single, approved form of sexual and gender behavior on all citizens. While both fascism and Communism fell out of power by the century’s end, the sexual and gendered dynamics of modern nationalism continued to persist across the continent, and have indeed reemerged in the twenty-first century.

French Revolution

Historians often trace the origins of modern European nationalism to the French Revolution. This revolution overthrew the old regime and sought to destroy the lingering social and economic power of its leading institutions. It was not just destructive; it simultaneously created new forms of national consciousness and participation in public life, centering on concepts of citizenship and public virtue that the eighteenth-century Enlightenment had first explored. In this new relationship between individuals and their state, nationalism obligated each person not only to obey the law, but to affirmatively participate in common national projects. This participation legitimized the state by creating a sense of ownership, investment, and common destiny among members of the national community.

Historians often cite military mobilization as one key example of this trend, such as the famous \textit{levee en masse}, which conscripted all able-bodied single men between the ages of
eighteen and twenty-five. Although less well known, this mobilization affected women as well, as seen in the National Convention’s decree of 23 August 1793:

> From this moment until that in which the enemy shall have been driven from the soil of the Republic, all Frenchmen are in permanent requisition for the service of the armies. The young men shall go to battle; the married men shall forge arms and transport provisions; the women shall make tents and clothing, and shall serve in the hospitals; the children shall turn old linen into lint; the aged shall betake themselves to the public places in order to arouse the courage of the warriors and preach the hatred of kings and the unity of the Republic.

*(QUOTED IN ANDERSON 1908, 184–185)*

As this passage shows, nationalism’s claims on individual lives applied to all members of society, no matter their age, gender, or social class. But while nationalism demanded universal responsibility, the specific tasks it required varied according to one’s place in a gender hierarchy. Men served in public roles, women in private spheres. Men forged weapons and fought foreign enemies, while women turned their handicrafts to national goals and embodied the national purity that had to be defended. All citizens had to play their identified role.

The revolution’s most prominent painter, Jacques-Louis David (1748–1825), visualized this rhetoric in several of his most famous works. On the eve of the revolution, his *Oath of the Horatii* (1784) and *The Lictors Bring to Brutus the Bodies of His Sons* (1789) mobilized Roman citizenship myths to inspire civic virtue, using a visually gendered composition to teach separate lessons to men and women. Both works depict the men of a family on the painting’s left side, either pledging to or having already sacrificed for the body politic, while the family’s women mourn their private loss on the painting’s right side. David thus developed a gendered system of republican nationalism that separated the male sphere of self-sacrifice and civic virtue from the private female realm of family and emotion. He argued definitively for the former’s superiority—for a revolutionary nationalist masculinity that must transform society despite feminine hesitation.
As the French Revolution's most prominent painter, David developed a gendered system of republican nationalism that separated the male sphere of self-sacrifice and civic virtue, versus a private female realm of family and emotion. In this painting, he depicts a Roman legend about three brothers from the Horatii family as they prepare to defend Rome during a civil war. The men embody masculine patriotism while the female family members are consumed with private feelings.

The revolution's rigid gender ideology was not inevitable. In fact, the revolution began with idealistic debates on the possibility of allowing political roles to women, emancipating slaves, ending anti-Semitism, and establishing the equality of all citizens. Early years saw women don the revolutionary cap, arm themselves, and march in the streets either alongside men or with their own political groups. One of the most important events in the revolution's early phase featured working-class women marching on Versailles and spearheading the capture of the royal family. The symbol of the revolution, Marianne, initially appeared topless and triumphant, a symbol of politically active femininity in the new revolutionary society.

These stirrings of equality soon ended, however, in the face of a reactionary drive to impose order on an increasingly chaotic situation. Not for the last time in European history, opponents of the revolution decried it as chaos and anarchy, as an overturning of traditional moral values. They interpreted the revolution's halting sympathy to gender equality as evidence of a moral decay that caused political destruction. It was not just
staunch monarchists across Europe who held this view; more politically neutral French citizens also felt this way, having simply grown tired of disruption, food shortages, conscription, and revolutionary Terror. Revolutionary leaders, therefore, took a socially reactionary turn, seeking to put women back into a passive place and thereby prove the new regime’s legitimacy and discipline. The Constitution of 1791 denied women citizenship, and their political clubs were dissolved in 1793. After Napoleon Bonaparte (1769–1821) took power in a military coup, he eventually established his Napoleonic Code, which in some ways preserved the gains of the revolution, but also formally established the principle that women were subordinate to men.

In the end, the French Revolution established two important trends in modern nationalism’s relationship to sexuality and gender, both of which repeated throughout the following centuries. First, it solidified a form of revolutionary nationalism based around concepts of male action, valor, and virility that made possible a common nation-state. Women, in turn, embodied the nation’s vulnerability and virtue—its timeless continuity that men used their abilities to defend. This pattern of defining masculine and feminine political virtues became a template across Europe, both in states that sought to imitate the revolution and in those that opposed it, and merged with growing efforts to police citizens’ sexuality for supposed reasons of state security.

The revolution’s changing stance on its own promises of gender and sexual liberalization also established a second pattern that reoccurred in future nationalist and revolutionary movements. These ideologies often hinted at embracing sweeping disruptions of gender and sexual norms during their early years as they worked to gain support and overthrow an existing system, only to abandon their promises after taking power. They then legitimized their revolution by enforcing reactionary definitions of gender and sexuality. In both these trends, gendered nationalism and social control of citizens’ sexuality became cornerstones of the European political system.

**Postrevolutionary Conservative Period**

Over the course of the next hundred years, from the establishment of the postrevolutionary conservative order in 1815 to the final destruction of that order in 1918, nineteenth-century nationalists developed an increasingly detailed vision of masculinity as the supreme political virtue and male relationships as the cornerstone of the nation-state. They created a form of normative masculinity and male behavior that scholars sometimes call “hegemonic masculinity”—a form of socially approved male behavior that granted political and social authority to those who followed it, while subordinating women and those men who fell outside it, whether because of sexual nonconformity, gender, ethnicity, or social class.

Nationalist masculinity prized values of respectability, obedience, hierarchy, authority, and
discipline. In this way, it reflected and created lines of authority in politics and class, as well as racial and gender distinctions. Nationalist men had to display both strength and restraint, self-will and self-control, obedience and authority. Various nations emphasized various sides of these dualities, with northern and western peoples (Germanic and British) generally valuing discipline and restraint, whereas southern and eastern men (Romantic and Slavic) stereotypically encouraged passion and more open sexuality. In all places, the best men sought to effectively balance these polar energies, thereby harnessing their virile capacity into nationally productive channels.

Masculine icons of the nineteenth century included above all the ancient Greeks, admired for their combination of Apollonian discipline and Dionysian passion. A revival of gymnastics, led by German nationalists, repurposed classical models of Greek male beauty, which promoted strength through discipline. Practitioners earned control of society by controlling themselves.

Men brought these values into reality through an array of politicized social clubs, veterans groups, student fraternities, sports teams, and other male-only organizations. Membership in these groups helped form appropriate masculine virtues in each generation, while also building social networks among the limited set of men allowed to access masculine authority. Male friendship was one of the century’s foremost values, especially in places such as Germany with energetic nationalist discourse. Male friendships modeled how two independent and virile men could combine their fates into an equal partnership and a common will—therefore modeling the exact dynamics of nationalism itself.

In Germany, dueling fraternities, neighborhood associations, veterans groups, and “friendship societies” taught German men to channel the homoeroticism of their male friendships into a collective love of the nation, a more productive use of this masculine energy. These groups taught them to first conquer and control their own passions, after which the groups promised them the ability to control the nation and, eventually, to subjugate other nations. In Britain, the educational system served the same purpose as the German social groups. British upperclass men spent their formative years in boarding schools marked by intense male relationships, frequent homo-erotic and even homosexual passions, and a disciplinary system in which older students exercised tyrannical power over younger ones. This artificial and homosocial society taught each rising generation of British leaders how to both accept and wield authority, as well as how to channel virile male passions into common purpose. The relationships they made and the structures of masculine authority they learned continued into their adult lives as political, economic, and imperial hegemons. After all, the imperial world was often a homosocial realm of men, a frontier that Western women could not enter until it had been tamed by masculine virtue and male cooperation.

The practice of nationalist masculinity not only relied on institutions and ideologies to
model proper behavior; it needed negative countertypes to discourage dissent. Nationalist philosophers and social scientists, thus, fearfully worried about an array of negative masculinities in the form of threatening outsiders who had to be controlled for a nation to truly rise. They did not often concern themselves with women, who to them played little formal role in a state, but they displayed great fear of men who supposedly acted like women. These types included working-class men, who were supposedly poor because of their lack of discipline, as well as racial minorities, such as Jews, Africans, Turks, and Asians, all of whom in the masculinist imagination possessed both feminine passivity and animalistic sexual depravity. Northern and western Europeans even held these views about southern and eastern European men.

But perhaps the foremost villain to nationalist masculinity was the figure of the male homosexual—the man who could have fit the authoritative type, but instead succumbed to depraved and uncontrollable passion for fellow men. German scientists had coined the term *homosexuality* in the late 1860s. By the time the concept became more commonly known in the 1890s, nationalist discourse associated homosexual men with feminine passion, a criminal underworld, a threat to natural order and, therefore, a threat to society. Homosexuals allegedly undermined masculine efforts to channel their passions to social ends, instead wasting their energies on selfish pursuits and aesthetic, unprofitable, unproductive frivolities.

While centering on men, this discourse sought to control all citizens, whether normative men and women or gender and sexual nonconformists. Gendered nationalism required all residents of a state to adhere to their assigned place: men and women, elite or working class, dominant ethnicity or persecuted minority, hegemonic man or dissident homosexual. Nationalists measured the health of the nation by whether a society enforced these categories, and they viewed with skepticism and hatred those that did not. Whereas in the eighteenth century many Enlightenment figures looked to the figure of the “androgyne” as a symbol of human unity, the nineteenth century saw the figure as a monster that threatened society.

By the end of the century, as social scientists increasingly merged biology with sociology, the existence of sexual dissidents, intersex persons, and gender nonconformists of any type posed a social problem that had to be solved. The 1886 work *Psychopathia sexualis*, by the Austro-German psychiatrist Richard von Krafft-Ebing (1840–1902), practically founded the field. In the following decades there were further works by the Englishman Havelock Ellis (1859–1939) and an array of German-speaking sociologists, psychologists, and psychiatrists as these disciplines emerged. These scientific developments did not occur in isolation, and in contrast to scientists who sought to understand dissident sexualities and gender identities for the progressive or liberal purposes of increasing the range of individual freedom, others worked with governments or industrial elites with ambitions to shape societies by controlling populations. In an 1883 work titled *Inquiries into Human
Faculty and Its Development, the English scientist Francis Galton (1822–1911) proposed the term *eugenics* for the purposeful attempt to improve human societies through selective breeding and the encouraging of approved traits, while discouraging behaviors and eradicating traits deemed defective. Galton proposed that families be monitored for their success, intelligence, or other adaptive traits. Societies should then encourage families with such traits to marry each other (“positive eugenics”). Members of approved classes should try to reduce “dysgenic” social behaviors, such as marrying late, having fewer children, or engaging in nonprocreative sex. Meanwhile, the lesser classes, or those with family histories of alcoholism, crime, or other disruptive behaviors would be subjected to “negative eugenics” discouraging their reproduction. Galton and his followers claimed idealistic and utopian justifications for this plan, envisioning a world in which the increased ability of each generation created a stable, prosperous, and meritocratic society enjoying all the benefits of a population of geniuses. But the science behind eugenics was dubious from the start; the English naturalist Charles Darwin (1809–1882) himself disagreed with his half-cousin Galton’s views that desirable traits were inherited. And even worse, in practice eugenics and social Darwinism generally behaved as a way to entrench the existing power hierarchies of race and class.

The social Darwinism advocated by industrial elites saw sexual and gender dissidents of all types as a problem to be solved. If only the fittest states survived and thrived, each state had to eradicate vices that sapped masculine virility, caused illness, weakened wills, or prompted allegedly feminine passions in areas of life unrelated to industry and war. As the art movements of aestheticism and decadence gained steam in the century’s final decades, a discourse of degeneration also gained strength. Nationalists conjured images of the fall of Rome, a coming calamity, or the slow decay of the nation into hedonism, weakness, and illness caused by the latest generation’s failure to command masculine virility. In this way, several public scandals functioned as disciplining events, through which society warned young men of the costs of defying the vision of masculine nationalism. The most famous, the British trial of the Irish writer Oscar Wilde (1854–1900) for gross indecency in 1895, showed that even one of a nation’s most famous and celebrated cultural figures could be destroyed for his failure to be a proper man.

These trials and scandals had the secondary effect of reinforcing cultural stereotypes of homosexuality as an upper-class vice, in which aristocratic men preyed on and corrupted lower-class youths. From the 1890s onward, many great European powers experienced scandals that exposed or risked exposing members of the governing elite as homosexuals. In Britain, the Cleveland Street scandal (1889–1890) expanded the powers of police and government inspectors to pursue rumors of homosexual prostitution between telegraph boys and elite men—one of whom, rumor had it, was second in line to the British throne. In Russia, several prominent political leaders and writers, and even members of the royal family, engaged in the Russian tradition of interclass homosexuality. Centered around public bathhouses and private parties, upperclass men (*tetki* [aunties]) could arrange trysts
with working-class youths, men newly arrived from the countryside, or soldiers and sailors on leave and looking to supplement their income. The police showed little interest in monitoring homosexuality in the two capitals of Saint Petersburg and Moscow, although in non-Russian areas of the empire, especially Central Asia, the government saw it as part of a primitive society that should be stamped out through Russification policies. Homosexual scandals and open secrets were the natural product of how masculinist nationalism had constructed male friendship as the dominant force of political life. Everyone knew male relationships held great importance for government, national values, and overseas expansion. It was only natural that they feared some men might take male same-sex eroticism to its seemingly natural end point: outright homosexuality.

In Germany, the Sozialdemokratische Partei Deutschlands (SPD; Social Democratic Party of Germany) made accusations of homosexuality a key tactic in its campaign against the government’s policies of militarism and nationalism. In 1902 the SPD’s main newspaper published details of the industrialist Friedrich Alfred Krupp’s (1854–1902) same-sex escapades in his Italian vacation home. Krupp enjoyed the friendship and protection of Kaiser Wilhelm II (1859–1941) and had proven a key figure in the nationalist expansion of the German navy in this era. His death from an apparent suicide confirmed how potent a weapon homophobic antinationalism could be in the leftist arsenal. A few years later, many more members of the military and governing elite became ensnared in a graphic scandal known as the Eulenburg affair (1907–1909), named after its central figure, Philipp, Prince of Eulenburg. Although neither side of the affair was entirely nationalist or antinationalist, it became a proxy battle that many saw as a chance to weaken the kaiser’s militant milieu. Some of the accused men retired from public life, and dozens of military officers were convicted by courts martial or killed themselves. But German militarism marched on.

In the context of growing nationalist tension, eugenic policies first took institutional form. In Britain, a 1903 commission began studying eugenic policies out of fear that racial degeneration would deny the army an effective pool of recruits. Many of the British eugenicists’ efforts came to naught, however, and the movement was in fact most pronounced in such countries as the United States and Canada, the German colonial lands, and the Scandinavian countries. In the United States, most states adopted laws allowing compulsory sterilization of certain disabled persons, ignoring the racial implications in the question of whom they deemed disabled in an era of great fear over immigration of “lesser races.” In most cases, women were more likely to fall victim to these programs, and their bodies became key sites through which countries sought to improve their industrial or military capabilities.

Turn-of-the-century France showed special concern about women’s reproduction in the context of a falling birth rate. Many of the leading industrial powers experienced a similar decline in birth rates in this era, but France perceived the supposed crisis early and intensely given its traditional status as one of the most populous and powerful nations in
western Europe. French leaders had interpreted the nation's loss in the Franco-Prussian War (1870–1871) as a testament to the power of population and its cousin, the mass industrial army. During a time in which French women, like their British and German counterparts, argued for their political equality and right to vote, many French leaders feared that this supposed masculinization of women would only exacerbate the population problem by distracting French women from their core task of creating male citizens. Therefore, as feminists and liberal republicans debated women's rights in traditional legal and political journals, a parallel discourse focused on birth rates, and women's labor participation exerted just as great an influence. This biomedical and pronatalist view became entrenched among nationalistic anti-republicans, who blamed French women for Germany's rising power. While France experienced a particularly acute debate over these issues, many other European nations at this time accepted the fundamental logic of associating population decline, social degeneracy, and national decline. Many of these states then pursued countervailing forces of eugenics, pronatalism, and militarism as part of a social push to be ready for the systemic war they believed imminent.

**World War Period**

Beginning in 1914, the European international system consumed itself in a thirty-year crisis of masculinist nationalism. At first, the outbreak of World War I seemed to smash what had been growing resistance to the cult of heroic nationalism. War and manliness were synonymous, and in 1914 many men celebrated its long-awaited arrival as a chance to display valor, embrace a man's natural role, cast off the shackles of feminine restrictions, flee from the confusing modern world into a primal experience of manliness, and renew the world through cleansing violence. This view of World War I, although by no means universal, became a “myth of the war experience” that grew stronger even though the mechanized reality of the war undermined its ideology of individual heroism. The German theorist of masculinity Hans Blüher (1888–1955) wrote an infamous tract praising the war's solidification of male camaraderie, homoeroticism, and even homosexuality as essential virtues of a German state. Synthesizing decades of veneration of the Greeks, he believed the war veterans formed a new Sacred Band (referring to the Sacred Band of Thebes, the ancient Greek battalion supposedly consisting of pairs of male lovers) whose erotic connections to each other were necessary to creating a cohesive state. Ancient values and modern warfare combined when the German veteran and writer Ernst Jünger (1895–1998) proclaimed that industrial combat would create a new race of man, purified in a “storm of steel” (the title of his 1920 memoir *In Stahlgewittern*, about his experiences on the Western front during World War I) and ready to lead the nation.

By 1918, however, the mechanized nature of war and its totalizing destruction had fatally undermined many of its founding ideologies. In contrast to the right-wing myth, which blamed losses in the war on society's alleged failure to adhere to masculinist values, left-
wing and revolutionary ideologies claimed that the war experience legitimized their challenge to the existing political, social, class, and gender systems that had caused this most destructive conflict. In the ensuing ideological struggle that consumed the twentieth century, gender, nationalism, and sexuality became key battlegrounds through which the new ideologies of fascism and Communism challenged democratic liberalism in a bid to remake European society.

In Russia, the ongoing privations of war had brought down its 300-year monarchy and created a short-lived democracy that soon fell to a Communist coup. The new Soviet state consciously agitated for revolution in all areas of life: in government, industry and agriculture, religion, racial attitudes, and even gender. Women had played a key role both in the revolution and in the Communist Party’s leading intellectual circles, and the party now seemed poised to advocate for their equality. It liberalized divorce laws and provided contraceptives to women. It decriminalized male sodomy during its overhauling of czarist legal codes in 1922. (True to form in a state that had acknowledged a public role only for men, female homosexuality was far less a concern and in fact had not been a legal category in the first place.) Soviet representatives traveled west to meet with the most famous German crusaders for homosexual emancipation, giving speeches at Magnus Hirschfeld’s (1868–1935) Institut für Sexualwissenschaft (Institute for Sexual Science) and approvingly viewing the progressive film *Anders als die Andern* (1919; Different from the others), the first film to sympathetically portray male homosexuality. In the Soviet Union, said Health Commissar Nikolai Semashko (1874–1949), the film would not be scandalous at all and would instead well suit the new revolutionary liberation (Healey 2001). If the old national system had been based in strict hierarchies of gender, race, class, and religion, the new Soviet system promised to smash all these ideologies of control and to create a single, collective equality of all persons: international, ungendered, of all races, and knowing no social class.

It soon abandoned these promises, however. Vladimir Lenin (1870–1924), the revolution’s leader and foremost theorist, had never been comfortable with sexual freedom as a socialist value, and despite his close work with several prominent women Communists, he resisted their attempts to organize prostitutes. While socialist concern for sexual matters had at one time been “healthy” as part of the “rebellion against the virtuous hypocrisy of the respectable bourgeois,” he saw it as a distraction from the core struggle of class revolution. Lenin thought that sex should be serious and productive. Accepting existing stereotypes of homosexuality and sexual liberation generally as part of upper-class vices, he saw both homo-and heterosexual efforts at liberation as a “need to justify personal abnormality” and, therefore, “really quite bourgeois” rather than revolutionary (quoted in Healey 2001, 113). Homosexuals should instead focus on the main task of the revolution rather than advocate for their private vices. Although some of these statements are not to be fully trusted, given their publication in a later Stalinist context, they accurately convey the sense most Communists had about sexual matters in the revolutionary context: sexual
morality was a side issue that would work itself out once the main revolution removed capitalism's unfair allocation of resources and its consequent warping of natural human morality.

After Lenin’s death in 1924, Joseph Stalin (1878–1953) installed a system of brutal repression both inside the party and outside it. Internal party struggles, the social disruption of rapid industrialization and its brutal consequences, and Stalin's views favoring a Russified “socialism in one country” all combined into a renewal of masculinist nationalism. The Stalinist state viewed its people as objects to be controlled or problems to be solved. It developed a biosocial model of personal behavior, which viewed homosexuality, divorce, abortion, prostitution, drug abuse, alcoholism, and criminality as unproductive illnesses that the Soviet state had to cure in order to survive.

Meanwhile, in Germany and Italy, right-wing myths blamed those nations' losses in World War I and the problems of the postwar years on society’s failure to uphold traditional values of masculine nationalism. The new Weimar Republic in Germany had become a symbol of new possibilities in divorce, birth control, sexual freedom, gender dissent,
homosexuality, transvestitism, and cabaret drag shows. Right-wing nationalists saw this as weakness, decadence, feminization, racial degeneration, and betrayal. They proposed a solution: the violent and totalitarian ideology of fascism. Fascism sought to control all members of society according to their place in rigid national, racial, and gendered hierarchies, in which the military man of dominant ethnicity ruled society without challenge and conquered the nation’s enemies abroad. Fascism, therefore, in many ways represented the apex of masculinist nationalism as developed over the previous century, including its reliance on a medicalized and pseudoscientific biosocial discourse of control. Its similarities also included the paradoxical practice of both hating open homosexuality as evidence of weakness and feminization and prizing homoerotic male relationships as the highest political value.

Both Italian and German fascists centered their politics on male paramilitary groups, who cultivated close male relationships as the key to their political unity and paramilitary efficacy. The Italian squadristi, or Blackshirts, prized a hypersexual, macho masculinity that mirrored the exaggerated posturing of Fascist leader Benito Mussolini (1883–1945). The National Socialist (Nazi) storm troopers, or Brownshirts, drew on their own traditions of German Romantic male friendship and eroticism, which at times drifted into open homosexuality. Ernst Röhm (1887–1934), the most important leader of the storm troopers and one of Nazi leader Adolf Hitler’s (1889–1945) few close friends, was an open homosexual who had used his connections in male military circles to legitimize the Nazi movement in its early years. Several storm trooper units in Berlin and Hamburg met in known gay bars. Although the number of homosexual men in the Nazi paramilitaries was tiny compared to the millions of heterosexuals in the ranks, they saw themselves as the best representatives of this movement of masculine supremacy. This remained true even as Nazi speakers decried the Weimar Republic’s relative tolerance for sexual and gender dissent as a primary source of national woes.

Allegations of Nazi homosexuality became a key tool in that era’s antifascist discourse. Drawing on past scandals that had established an alleged connection between homosexuality and elite nationalist militarism, socialists and liberals alike weaponized this discourse against their political enemies—even while at the same time they advocated for sexual toleration as part of their own political program. The hypocrisy worried some socialists, who feared that playing to homophobia only made it more powerful. But the weapon was too tempting to sheathe. Social Democratic newspapers repeatedly exposed Röhm’s private letters and personal affairs, highlighted allegations of homosexuality among rank-and-file storm troopers, and alluded to old conspiracy tropes of homosexual cliques secretly dominating political life. Nationalists, however, seemed indifferent to charges of hypocrisy. Hitler defended Röhm by declaring that he was building a troop of revolutionaries, not a bourgeois debating society, and that he would use any men with fighting strength. In their paradoxical simultaneous embrace and rejection of sexual dissidents, both authoritarian systems reproduced the dynamic established from the
French Revolution onward: during the drive for power, they accepted all who would join the cause and promised to win their freedom. After taking power, however, they turned the outsiders into scapegoats that the regime could purge in order to demonstrate its morality.

**FEDERICO GARCÍA LORCA AND THE SPANISH CIVIL WAR**

Federico García Lorca (1898–1936) was one of the most important modern Spanish poets and playwrights. He embodied a new style in Spanish literature that incorporated cutting-edge movements such as symbolism, surrealism, futurism, and the modernist literary project to reinfuse elements from the classical European canon with new psychological meaning. Lorca grew up in privileged circumstances as the son of a landowner and sugar baron. His education took him to several universities and allowed him introductions to important cultural figures. In 1919–1920 Lorca wrote his first play, a symbolist work titled *El maleficio de la mariposa* (*The Butterfly’s Evil Spell* [1970]), which told the story of a cockroach in love with a beautiful but ultimately elusive butterfly. The audience booed, but the play previewed several elements that would endure throughout Lorca’s work and life: avant-garde staging, a fascination with transformation and death, and the concept of forbidden love.

Lorca felt this last emotion keenly in his own life. In 1923 he began an intense friendship with the Spanish artist and surrealist Salvador Dalí (1904–1989), on whom Lorca became romantically fixated. As Lorca developed into one of Spain’s foremost writers, his works displayed increasingly homoerotic overtones. He wrote odes to Dalí and the American poet Walt Whitman (1819–1892) and continually depicted characters frustrated in love, tormented by their desires, and longing for lives they cannot lead.

These themes of longing matched the political mood of a nation in turmoil. A three-way struggle between democracy, Communism, and fascism broke out into open civil war in 1936, beginning with a wave of assassinations and militia activity. In August of that year, Lorca’s brother-in-law was killed by a fascist militia just days after becoming the socialist mayor of Granada, Spain. The fascists assassinated Lorca as well. One of his killers claimed to have shot him in the buttocks as punishment for his homosexuality. Whether he was killed for his family associations, his political leftism, or his homosexuality, the roots of fascist distaste for him were clear. Here was a poet who celebrated Spanish traditions, wrote muscular and virile prose linked to political action, and valued male camaraderie and even eros—the same values on which the fascists themselves claimed a monopoly.

After Lorca’s death, Francisco Franco’s fascist regime suppressed his work, and Lorca’s own family suppressed evidence of his homosexuality for many years. His grave site has never been found, even after excavations carried out in 2009 and succeeding
The Soviets displayed this trend both in their antifascist discourse and in their own domestic social policy. Although their revolution had begun with promises of liberation from conventional sex and gender roles, they soon fixated on gender dissidence as the very cause of fascism. Antifascist homophobia became the official Soviet line soon after Hitler’s appointment in January 1933 as chancellor of Germany, when the Reichstag fire (February 1933) provided the Nazis with the opportunity to seize emergency powers. The Nazis blamed the fire on the Dutch Communist Marinus van der Lubbe (1909–1934), who they claimed had started the blaze as a signal to revolution. But the Communists had another theory: van der Lubbe was a patsy, a simpleminded homosexual puppet of Röhm. Röhm’s perverted cabal had tricked this youth into lighting the fire in order to obtain an excuse to destroy the Communist Party and take total power. Communist propagandists elaborated this theory in the factually dubious Brown Book of the Reichstag Fire and the Hitler Terror (1933), which was translated into twenty-four languages, became a worldwide best seller, and inspired a mock trial in London in which the Communists claimed to expose evidence of Nazi homosexual depravity.

Domestically, the Soviet state persecuted homosexuality more thoroughly than the czarist regime had ever done. Although it did not engage in the flamboyant homophobic violence the Nazis showed when they smashed Hirschfeld’s institute and burned its archive, the Soviet state in late 1933 began the quiet internal process of recriminalizing male homosexuality. While the precise reasons for recriminalization remain sealed in state archives, the timing and the larger context suggest a role for antifascist paranoia. The infamous Genrikh Grigoryevich Yagoda (1891–1938), then deputy leader of the secret police, declared himself eager to wipe out supposed organized cliques of fascist homosexuals as a direct threat to state security. There seems to be no evidence of actual fascist activity among homosexual groups in the two main cities, but the regime had
already shown that it did not need specific laws to persecute any dissident groups it could accuse of counterrevolutionary attitudes. Nevertheless, propagandists now declared the regime opposed to homosexuality as a counterrevolutionary degradation of the nation's fighting youth. Here too, the Stalinist state increasingly abandoned socialism's internationalism in favor of Russian nationalism, deploying old myths of Russia's elemental purity in the face of a decadent and overcivilized West. In Soviet rhetoric, Western capitalism had now created fascism as its chief enforcer, with homosexuality the ultimate sign of its moral decay. The rhetoric reached its climax in the Soviet call “Destroy the homosexuals—fascism will disappear!” (quoted in Chatterjee, Kirschenbaum, and Field 2016, 113).

The Soviet turn toward gender and sexual normativity had other sources as well. The first Five-Year Plan (1928–1932) was ending in failure and misery, with any gains in capital industries offset by massive social problems, famine, overpopulated and seething cities, and internal party struggles that encouraged patterns of scapegoating and accusation. In this context, the party turned against “social anomalies” such as homosexuals, class enemies, criminal elements, urban dissidents, and so-called primitive societies in the empire inherited from the czar. All these groups had to be wiped out by Soviet science, creating a unified state that could crush capitalism in Europe and the world.

This conservative turn in Soviet gender, sexual, and family policies has been called the “great retreat.” It did not seek to re-create the prerevolutionary gender system, but instead to create a new national image of modern, disciplined citizens all contributing to national productivity. For men, this meant avoiding accusations of counterrevolutionary homosexuality and becoming the patriarch of a working family. These patriarchs had to display sexual purity and family values and resist “free love” as a bourgeois immorality.

Women's public roles faded from the regime's early promises, when images of working women—aviators, tractor drivers, mechanics, and collective farm workers—were celebrated in socialist realist art. Starting in 1936, the regime instead celebrated the wives of government, military, and industrial leaders who served in social and emotional support roles to the dominant men, rather than contributing directly themselves. The state banned abortion, made divorce harder to obtain, curtailed birth control, and created penalties and incentives to compel women to simultaneously be mothers and workers. “Masculine women” who had lived as men and in some cases even married other women became subjects of biosocial research to encourage motherhood, which the Soviet state thought presented a natural cure for lesbianism and women's gender nonconformity. Pregnancy would correct any deviant sexuality. In general, Stalinist social and governing conventions held that a Communist state had no need to publicly discuss sexual relationships or identities; socialism had created “healthy conditions” under which a natural and universal heterosexuality could proceed. Those few deviants who continued to display sickness and perversion could be sent to the gulag, or later to the psychiatric clinic, and be cured, or at
least kept away from the rest of society.

On the supposed opposite end of the ideological spectrum, the Nazi state engaged in quite similar practices. Röhm’s hopes for a living space within National Socialism came to a fatal end in June 1934, when internal power struggles within the Nazi Party led to a violent purge. The Night of the Long Knives decapitated the storm trooper leadership and ended its leading role in the state, also giving the Nazis the opportunity to murder dozens of other political opponents. In a dramatic speech, Hitler revealed the supposed reason for his purge: he had acted to secure the party and the nation from a clique of homosexual conspirators who sought to corrupt the German people and overthrow the party. Hitler, thus, justified his assassinations as protective measures to secure national sexual purity and create a strong society, mobilizing nationalist respectability politics to gain support for a disreputable regime. He repeated this approach in the following years. Military, industrial, and religious leaders who resisted the Nazis’ total control over their fields were accused of homosexuality or sexual impropriety and removed from key positions.

The Nazis’ brutal reign over Germany and much of Europe also attempted to impose population control—a biosocial program of increasing their own birth rates and eradicating other ethnicities. This meant, at heart, a system of controlling reproduction and, therefore, controlling gender and sexual behavior. They sought to outright murder people of other nationalities, especially Jews, Slavs, Sinti, and Roma, all of whom they interpreted as displaying degenerate patterns of masculine identities that supposedly competed with a naturally pure Aryan family life. Heinrich Himmler (1900–1945), leader of the Schutzstaffel (SS; a major Nazi paramilitary organization) and one of the key figures behind the Röhm purge, became the state’s chief homophobe while simultaneously promoting heterosexual promiscuity among men and women of approved bloodlines. He opened a series of brothels for SS men and soldiers and instituted systems to reward mothers who produced Aryan babies. Within Germany, the Nazis posed as moral crusaders determined to wipe out homosexuality, gender dissident behavior, cultural degeneracy, and hereditary illnesses, whether physical handicaps or supposedly inherited criminality. Nazi laws broadened the definition of male homosexuality so far that even nonsexual acts could be prosecuted if the state determined a sexual intent. They arrested around 100,000 German men, of whom perhaps 10,000 to 15,000 died in concentration camps. Lesbians found themselves more able to hide, although some were sent to camps as “asocials.”

The similarities with the Soviets’ modernist attempts to engineer a race of superior productivity are clear. In both cases, inherently or increasingly nationalistic revolutionary movements used promises of sexual liberation as part of a rhetoric of gaining power, and then scapegoated sexual minorities in an attempt to legitimize their extralegal regime by appealing to their people’s supposedly natural morality. At the same time, they embarked on bioengineering projects of unprecedented scale, combining murderous genocide of dissidents with eugenic social and biological engineering to create their own versions of a
superior race that would defeat their ideological enemies and conquer the world.

**Postwar Period into the Twenty-First Century**

The fascist plan came to naught by 1945, defeated in the war it had begun, but the Soviet system remained. Its threat to liberal democracy in the ensuing Cold War drove liberal democracies to harden their own stances on gender and sexual freedom. A conservative and nationalistic turn began in the 1950s, marked by purges of homosexual men from government and a retrenchment of regressive gender roles for men and women alike. Women who had worked in factories during the war were now exiled back to kitchens so that they would not compete with men who claimed naturalistic rights to productive work and social leadership. States purged homosexuals from the ranks of government service, either in such targeted actions as the Lavender Scare (the persecution and mass firings of homosexual people from the US government in the 1950s), or through criminal law such as that which led to the death of the pioneering World War II code-breaker Alan Turing (1912–1954). In the German lands, the Nazi strengthening of antigay laws remained on the books, and homosexuals imprisoned in concentration camps—alone among the victim groups—could not seek reparations because the state considered their sentences criminal, not political. Meanwhile, a discourse of anti-totalitarian gender conformity arose in popular culture, interpreting Nazi political depravity as a consequence of its alleged sexual impropriety. Films such as *Notorious* (1946) and *The Boys from Brazil* (1978), as well as sensationalistic pulp movies such as *The Damned* (1969) and *Ilsa: She Wolf of the SS* (1975), emphasized Nazi depravity in contrast with a healthy democratic sexuality and gender order. Democratic rhetoric against “totalitarianism” attempted to mobilize these antifascist sentiments against Communism as well, and religious leaders especially claimed that Communism sought to destroy a healthy family life. In this way, even the liberal democracies reinforced hierarchical nationalist masculinity.

In the century's final decades, the social revolutions begun in the late 1960s established an opposition between nationalism and gender or sexual freedom. Crusaders for women's emancipation, gay rights, sexual freedom, and tolerance for gender nonconformity saw their struggle as an antinationalist, universal drive for freedom. They accused democracies of not living up to their promises, resisted Communist systems as oppressive police states, and integrated fascist persecution of gender nonconformists into powerful symbols advancing their agendas. Activists resurrected the pink triangle icon, transforming it from a Nazi badge for homosexual men in concentration camps into a symbol of gay rights.

After the Soviet state disintegrated in 1989, social activists greeted the rise of a new “gay nineties,” in which the totalitarian oppressors of gender dissent had fallen, leaving only the still-powerful conservative parties in democratic states as the enemies of progress. With the Cold War over and “the end of history” nigh, they hoped that decreased nationalism and militarism would help democratic societies embrace gay men and lesbians, women seeking
equality, transgender and intersex individuals, and all others who resisted assimilation into a single, hegemonic gender order of militant nationalism. Gay activists began making strides through a new era of respectability politics, emphasizing that gay men and lesbians sought to join normative society, not undermine it. Indeed, the most successful and popular gay and lesbian demands in this era worked in agreement with the democratic gender order. Gay men and lesbians sought to join the military, get married, and have children. It seemed for a time that two centuries of violent nationalism and the oppressive gender order that enforced it would be consigned to history.

In the twenty-first century, however, masculinist nationalism, and even outright fascism, have come roaring back in the context of the wars on terrorism, the global economic crisis that followed the 2008 stock market crash, and growing long-term inequality. Russian nationalists and their allies in the United States have been among the most prominent weaponizers of sexual and gender politics, reviving the slur of homosexual Nazism in order to undermine democratic politics throughout the world. In some ways, European states now offer more progressive spaces than ever before for gender nonconformity, sexual freedom, and women’s equality. At the same time, however, antidemocratic and nationalist forces have revived all their oldest and most powerful social weapons. Understood in the long history of modern nationalism, these topics seem sure to continue to play a central role in debates over national identity and politics.

Mosse, George L. Nationalism and Sexuality: Respectability and Abnormal Sexuality in

Since the late 1980s within South Asia, India has provided a global model for LGBT advocacy and social activism toward the legalization of homosexuality and third-gender identity. In particular, the Naz Foundation International, a nongovernmental advocacy organization, has been key in generating public movement toward the recognition of LGBT identities and behavior, as well as in providing HIV/AIDS health-care outreach. Its efforts to mobilize for the repeal of Section 377 of the Indian Penal Code—a colonial era (1861) sodomy law that criminalized homosexuality in India until it was ruled invalid by India's Supreme Court in September 2018—have helped advance LGBT rights discourse in India. This law criminalized a range of sexual acts considered to be “against the order of nature,” meaning nonprocreative acts, such as anal intercourse, oral sex, bestiality, and pederasty. However, the Indian police used Section 377 to harass and persecute gender nonnormative individuals, such as hijras (third gender) and sex workers, in the context of their public visibility. As a result, the distinction between nonnormative sexual acts—the object of legal criminalization—and sexual identities, including LGBT persons and MSM (men who have sex with men) who do not necessarily identify as homosexual, were blurred in activist and popular discourses that framed the law as primarily criminalizing homosexual identities.

The Naz Foundation International has provided counseling support, HIV health care, and other services to a wide cross section of vulnerable groups of diverse gender and sexual identities from all socioeconomic strata. The creation of this organization occurred in the context of India’s response to the HIV/AIDS epidemic, following the first reported case in the country in 1986. The legal criminalization of same-sex sexual activity, coupled with the strong cultural pressure to marry and have children, drove those who engaged in nonnormative sexual practices underground. Due to a lack of knowledge around risky sexual behavior and the fear of stigma regarding same-sex sexual conduct, HIV rates rose, particularly among MSM, a public health category comprising married men in mobile occupations from lower socioeconomic strata. The legal criminalization of their sexual practices, considered unsafe by public health workers, prevented them from coming forward to seek treatment for HIV/AIDS under government programs.
HUMSAFAR TRUST: INDIA’S OLDEST LGBT ORGANIZATION

The need to bridge the gap between men who have sex with men (MSM) in India and HIV/AIDS programs led to the establishment of the Humsafar Trust in 1994, making it the oldest LGBT organization in India. Prominent Indian journalist Ashok Row Kavi established the organization in Mumbai with a view to reaching out to MSM in the city. He was inspired to do so after his return from Montreal, Canada, where he got a firsthand view into the struggle of Western HIV/AIDS activists to bring attention to the epidemic’s impact on gay communities. Seeing how hard it was for even such well-organized Western groups as ACT UP (AIDS Coalition to Unleash Power) to increase government funding for HIV/AIDS programs targeting Western gay communities, Row Kavi noted in an interview with TREAT (Therapeutics Research, Education, and AIDS Training) Asia that he wondered at the time, “What would happen in Asia where there were no gay communities but only large networks of men having sex with other men?” (TREAT Asia Report, n.d.).

Inspired by the social and economic disparities of resources in Asia, Row Kavi, along with a few others, decided to set up a support system for gay men who primarily identified themselves as homosexual, among a range of other local and regional identities, such as kothi (an effeminate man with a receptive role), panthi (insertive male partner), and hijra (third gender identity), who are vulnerable to HIV. With an official policy of electing unmarried gay men as board directors—because it was felt that married gay men could divide the group politically—the Humsafar Trust began its operations in Mumbai. The policy was an important one, given the need at the time to foster open discourse about gay identity in the Indian context, where homosexual men, regardless of whether they identify as gay or not, often face social pressures to marry. Over time, the Humsafar Trust became the only gay organization to be given space by the city government of Mumbai, where it caters to people living in poorer sections, some with alternative gender and behavioral identities, such as MSM.

The World Bank noted in a 2012 report on HIV/AIDS in India that "stigma and denial
undermine efforts to increase the coverage of effective interventions among key populations such as men having sex with men. Harassment by police and ostracism by family and community drives the epidemic underground and decreases the reach and effectiveness of prevention efforts” (World Bank 2012). However, given the broader cultural climate of stigmatization around alternative gender and sexual identities, the efforts of activists within the Indian LGBT movement to legalize homosexuality go beyond the HIV/AIDS crisis among MSM to demand full recognition for those who identify as gay and lesbian.

Origins

The Naz Foundation International began in London with the formation in 1991 of the Naz Project by activists Shivananda Khan and Poulomi Desai. The Naz Project was named for a friend of Khan’s, Nazir, who was the first South Asian HIV-positive gay man Khan had met. The group provided services related to sexual health and HIV prevention to the city’s black, Asian, and minority ethnic communities. The Naz Foundation (India) Trust (Naz India) was established in 1994 in Delhi by Khan and activist Anjali Gopalan, who became the executive director of the organization, to provide HIV-related services to stigmatized communities in India.

Khan was inspired to establish Naz Foundation International, South Asia’s first MSM-focused organization, after conducting a study on HIV in Bangladesh in 1996. There, he learned about the complex social landscape of male-to-male sexuality, which was radically different from the Western notion of a gay identity and sexual orientation. In Bangladesh, people’s sexual behavior is based on gender performance; insertive behavior implies male, not homosexual, identity, with traditional expectations around heterosexual marriage, not just in Bangladesh but also in India, Pakistan, Nepal, and Bhutan. Khan realized the need for an approach to MSM work that looked at genders and sexualities as plural formations.

In 2013 Shivananda Khan died. However, his legacy continues through Naz India’s sexual health outreach activities and counseling services for LGBT ethnic minority groups.

Naz in a Global Context

The Naz Foundation’s operations in South Asia have had a significant impact in terms of outreach to HIV-vulnerable populations and advocacy for greater public health funding. Naz has received funding from a number of international donor agencies that support the foundation’s outreach, advocacy, and education efforts. The Gere Foundation, along with its public charity, Healing the Divide, worked with Naz to establish the AIDS Care Home, the first residential facility in India dedicated to serving women and children with AIDS.

The Naz Foundation in Delhi has supported the health and livelihoods of the MSM and
transgender communities through its Milan Project, the first intervention effort in India to target these groups. The Milan Project has transformed the lives of underprivileged transgender individuals, who often run away from home due to persecution and stigma. Because of a lack of viable employment opportunities, they often end up in sex work. By employing them as health outreach workers who undertake safe-sex advocacy, Naz has offered them alternative employment that frees them from sex work, which is a criminalized and socially stigmatized way of earning money in India (Agarwala 2012).

In another example of Naz’s support of transgender individuals, the foundation partnered with Delhi’s Ramjas College to launch TransCreations, a line of jewelry designed exclusively by transgender people who were trained in jewelry design by students from Ramjas College. The jewelry is sold at leading retail outlets in India (Agarwala 2012). Such initiatives highlight Naz’s holistic approach to health, which goes beyond physical and psychological aspects to create sustainable structures of support for marginalized, gender nonconforming individuals.
**Section 377 of the Indian Penal Code**

Naz has played a pivotal role in addressing HIV/AIDS through a rights-based approach. Part of this approach included a legal challenge to India's colonial-era sodomy law, Section 377 of the Indian Penal Code. In 2001 Naz filed the first public interest litigation in the Delhi High Court to challenge the constitutional validity of the law. The organization was represented by Anand Grover of the Lawyers Collective, a Delhi-based legal organization that focuses on human rights issues. The challenge was dismissed by the court as merely academic, without any real cause for action, in 2004. With support from Voices against 377—a coalition of gender and child rights groups—as well as from the National AIDS Control Organization (NACO) under the Ministry of Health and Family Welfare, Naz's petition was reinstated in the Delhi High Court through a special petition in the Supreme Court. The concern that Section 377 was impeding HIV-related health outreach was seen as grounds for entertaining the petition as a public interest matter.

The story of Naz's contribution to fostering the acceptance of homosexuality and recognition of LGBT rights has not been merely a legal one or necessarily confined to metropolitan centers. Naz's public health advocacy has also played a critical role in smaller cities, where conservative sexual norms prevailed and any public representation of sexuality remained fraught with the risk of being interpreted as obscenity and moral corruption. Such a dynamic was evident when Naz's public health work was intercepted in the north Indian city of Lucknow. In 2001, acting on the complaint of a man who was allegedly sodomized, the Lucknow police raided a park frequented by MSM and where, at the time of the raid, nongovernmental organization (NGO) representatives were undertaking a safe-sex practices demonstration. Those arrested included an activist from Bharosa Trust, an NGO promoting safe sex and conducting HIV outreach to MSM. The offices of both Bharosa and Naz Foundation International were subsequently raided, with police seizing safe-sex advocacy materials (Narrain 2004). The police framed the raids as the busting of a “gay club” and an “international sex racket.” Arrested employees were charged with indulging in and propagating “unnatural sex” under the broad purview of Section 377. Charges were also filed under Section 292 (sale of obscene books), Section 120b (criminal conspiracy), and Section 109 (abetment to unnatural sexual activity) of the Indian Penal Code. The array of educational materials seized included condoms, lubricants, videocassettes, photographs, and a dildo used to demonstrate proper condom use. This collection of items was reported in the media in pornographic terms, despite NGO documents and papers evidencing their use for education and advocacy (Kole 2007). As a result, Naz's Lucknow offices were sealed and its director, Arif Jafar, and another employee were detained without bail.

On 2 July 2009, the Delhi High Court handed down a landmark judgment in *Naz Foundation v. Government of NCT of Delhi and Others* to amend Section 377 by excluding consensual
same-sex behavior in private from the purview of the law. This amendment (a reading
down of the legal code) effectively decriminalized homosexuality in India. However, the
ruling remained provisional until the Indian Supreme Court approved it. The battle against
Section 377 was led by prominent LGBT rights groups based out of Bangalore, New Delhi,
and Mumbai that had worked arduously over almost two decades to legalize homosexuality
in India. For instance, in addition to a number of urban support groups and counseling
centers, queer pride marches had been organized in major metropolitan cities in India,
including Kolkata, Mumbai, Bangalore, and Delhi, quickly proliferating to less cosmopolitan
cities, such as Ahmedabad, Hyderabad, Chennai, and Bhubaneshwar. The 2009 ruling was
celebrated among LGBT groups and allies across metropolitan India as a watershed
moment of national uncloteting (Liang 2009). But backlash from civil society, as well as
religious and conservative groups, led to another legal challenge in the Indian Supreme
Court.

Backlash to the Naz Ruling and Recognition of LGBT
Rights

An astrologer, a prominent yoga guru, and child rights groups, among others, filed a
petition in the Supreme Court of India challenging the High Court judgment with the claim
that homosexuality was against Indian culture and that Section 377 prevented HIV/AIDS by
criminalizing same-sex behavior. In December 2013 the Indian Supreme Court, based on
these petitions, overruled the 2009 Naz judgment with the rationale that the law pertained
not to any specific identity, but to “unnatural” sexual behavior—that is, nonprocreative
behavior. Between 2009 and 2013, numerous English-language television news channels
aired debates among the supporters and opponents of the law who discussed
homosexuality, colonial morality, and Indian culture in relation to the legal reform of
Section 377. This period was significant owing to the heightened visibility of LGBT rights
on the one hand, and backlash and controversy in various social and cultural contexts on
the other. However, the rights discourse remained confined to mostly urban and a few
semiurban centers in India.

The Supreme Court judgment was welcomed by conservative groups who had warned of
consequences like the moral breakdown of society and a potential rise in rates of HIV/AIDS
if homosexuality were legalized. One of the petitioners, Baba Ramdev, a popular spiritual
guru, also claimed that yoga could cure homosexuality, a statement that was decried by
various LGBT activists and public health workers (Deccan Naz Foundation International
Chronicle 2013). In 2016 an online media group, the Quint, conducted a sting operation on
Ramdev’s Ayurvedic clinics in Delhi, which were selling for $18 energy tonics to cure the
“mental disorder” of homosexuality (Agarwal and Dam 2017). The 2013 judgment that
reinstated Section 377 led to a series of protests by Indian and Western activists globally.
This event, called the Global Day of Rage, took place on 15 December 2013 across such
major metropolitan centers as Delhi, Kolkata, Chennai, London, Toronto, Los Angeles, and Sydney, as well as smaller cities like Lucknow; Ann Arbor, Michigan; and Philadelphia. In early 2018, in response to a series of review petitions, a five-judge panel in the Indian Supreme Court began examining the recriminalization judgment. On 6 September 2018, the Supreme Court ruled that same-sex sexual activity could no longer be prosecuted under Section 377, effectively decriminalizing homosexuality.

**Naz's Viability**

The return to power in 2014 of the Hindu right-wing National Democratic Alliance (NDA), led by Prime Minister Narendra Modi, has dramatically altered South Asia’s cultural and political landscape. During its tenure, the militant-minded NDA has been escalating conflicts with its neighbors, Pakistan and China, causing geopolitical instability. In India, the NDA’s nationalist, anti-intellectual approach to governance has created an environment hostile to social movements, free speech, dissent, and minority rights. For instance, in 2016 the NDA government revoked the licenses of twenty-five foreign-funded NGOs based on allegations of “antinational” and terrorist activities. Some of these NGOs were engaged in advocacy around issues of caste discrimination, the environment, and human rights—issues that the NDA sees as adversely affecting India’s international reputation.

The NDA government’s effort to curb dissent by shutting down NGOs promoting social, environmental, and political causes, combined with the NDA’s longstanding anti-LGBT position and its opposition to the legal reform of Section 377, makes it imperative for an organization like Naz Foundation to continue its work in the areas of public health and sexuality rights. The foundation’s partner organization, Lawyers Collective, was targeted in the NDA’s NGO sweep, given the organization’s work in pursuing justice for the victims of riots in Gujarat, a state once ruled by Modi. In 2017 the NDA also blocked the funding of the Public Health Foundation of India, a public-private partnership supported by the Bill and Melinda Gates Foundation. The government alleged that the Gates Foundation had an agenda to promote the interests of Western pharmaceutical companies in India through the partnership’s immunization program (Najar 2017).

Given these political developments, the role of the Naz Foundation becomes even more crucial. Deeply entrenched and widely prevalent social, religious, and cultural attitudes that regard homosexuality as anathema to Indian society, along with the NDA’s anti-LGBT rights agenda, make it imperative that the Naz Foundation continue to provide support to such vulnerable groups as MSM, sex workers, and transgender people. The foundation’s grassroots role goes beyond legal empowerment. Its viability may be at stake in the face of ascendant Hindu right-wing politics, but given the Naz Foundation’s international visibility, the strength of India’s social movements, and India’s rapidly changing political landscape, Naz will remain a leading force in securing justice for gender and sexual minorities in India.

Neoliberalism in Africa

S. N. NYECK
Senior Research Fellow, Canterbury Christ Church University, United Kingdom
Research Fellow, University of Amsterdam, Netherlands

The impact of neoliberal policies on the African LGBTQI rights movement.

Neoliberalism, a set of economic policies that have become widespread since the 1980s, has elicited controversial reactions around the globe. Some see neoliberalism as the logical evolution of liberalism, whereas others contend that it is a distortion of classical liberal ideas for the sole purpose of corporate enrichment. These classical liberal ideas stemming from the seventeenth- and eighteenth-century European Enlightenment transformed the way the modern world structures itself economically and politically. In its classical form, promoted by thinkers such as John Locke (1632–1704) and Adam Smith (1723–1790), liberalism advocated the abolition of government intervention and corporate monopolies in favor of free-market-based competition and enterprise. Economically and politically, individuals and their self-interest provided the theoretical foundations of freedom as an outcome of market-based transactional processes between specialized assets regulated by the law of supply and demand (Brown 2005). For example, a country that specializes in the production of wine finds reason to trade with another country with expertise in the production of shoes. Unhindered supply and demand in this sense rewards all parties with just prices at equilibrium. Politically speaking, self-informed individuals are seen as the vectors of freedom presented as choice, and democracy as an outcome of a deliberative process where optimal ideas and policies are arrived at through general consensus. Institutions of consent (the state, the law), in this sense, become the backbones of democracy, which is supposed to first and foremost protect individuals from the abuse of corporate power—that is, state sovereign prerogatives and special interest groups. With the ascension of Ronald Reagan (1911–2004) and Margaret Thatcher (1925–2013) to power in the 1980s in the United States and the United Kingdom, respectively, two features of classical economic and political liberalism, individual self-interest and resistance against state intervention, acquired a new momentum in global politics with devastating effect on developing countries in general and the African continent in particular.

Neoliberalism is distinct from its predecessor, classical liberalism, in three ways: First is the way it uncritically hails the market as the sole rationale and organizing principle of economic, political, and social life. Second is its aggressive determination to dismantle any other demand that is not marketized/marketizable a priori. Third is its uncritical reliance on corporate yet migrant power, as capital crosses national borders faster than people in a
globalized economy. Economic liberalization provided a foundation for globalization, and global finance has become the straitjacket for disciplining states. While individuals may find themselves on different streams of supply and demand, the individual entrepreneur who supplies “solutions” is hailed above the person who demands social justice, equal pay, clean air, gender equality, and so on. Thus, in the neoliberal market, not all demands are equal. Furthermore, where demands are formulated, the individuals and society are told that the state alone no longer provides the solution.

Neoliberal economic policies introduced since the Reagan and Thatcher eras have negatively affected Africa. In particular, the structural adjustment programs devised in the 1980s and rolled out by the Bretton Woods institutions (the World Bank and the International Monetary Fund) used conditional financial assistance to force neoliberalism into Africa. The mantra then was that developing countries could grow and reduce poverty only if they borrowed from the market while cutting government intervention in the economy. Privatization and deregulation that divest state responsibility to the private profit-making sector was sold to African countries in the name of free trade, and price mechanisms became the only diktats of progress. Consequently, in most countries food and education subsidies were eliminated, wages were cut, national currencies were devalued, long-term lucrative contracts were signed with corporate extractive industries with no significant national tax windfall (Ayangafac, Bulcha, and Bekele 2016), and land grabbing for agribusiness displaced small farmers. As the Ugandan economist Yash Tandon (2015) puts it, neoliberalism in Africa has all the features of neocolonialism functioning through development aid that corrupts state policies. Thus, Tandon argues that trade is not always a manifestation of cooperative interest, as liberals and neoliberals would have it, but is sometimes also a strategy within a kind of war that is not a one-sided story. Capitulation and resistance therefore characterize African responses to neoliberal economic policies.

Through privatization—including all sorts of public-private partnerships as the new conditionality of transnational trade agreements—the state has relinquished its power to regulate, to provide social services, and to effectively monitor its new corporate neoliberal contractors. Trade unions have been squashed almost everywhere, social services have been privatized, market deregulation has leveled the playing field between domestic and foreign entrepreneurs in public procurement, wages have gone down with the increased availability of global capital, inequality has increased between the 1 percent owners of great wealth and the 99 percent left out of neoliberal economic policies (Piketty 2014), and the revolving door of economic hit men (Perkins 2004) has fueled bankruptcy and wars in Africa. The flow of money in electoral politics has undermined political institutions (Mkandawire 2001) everywhere, and there has been a rise in conservative parties, the alt-right, and neo-Nazi parties, which find allies in Africa in the neoliberal religiosity of depoliticized “prosperity gospel” (Carney 2016). Radical Islamists have burned entire villages in northern Nigeria, and young girls there have been caught in the crossfire as if in a real war zone. Unchecked concessions to big fishing companies have decimated the coast
of Somali, resulting in traditional fishermen turning to piracy to survive. While many still talk about “ethnic wars” in Africa, the arms industry is booming there and the merchants of death remain invisible. In sum, the highest bidder takes all, including traditional spaces for democratic contestation. Even if one concedes that early structural adjustments were mainly imposed on one-party regimes, the new faces of neoliberalism are hard to detect in part because economic liberalism has shifted the focus from states to self-empowered individuals. The rise of nongovernmental organizations is a testimony to this shift in Africa—a turn in global policy that spares none, not even LGBTQI activism.

In postapartheid South Africa, neoliberal policies have induced the casualization of labor (that is, part-time employment or employment without any benefit or real wages) in the public sector and at the local government level, making privatization and outsourcing conflict laden, especially in waste-collection services in a city such as Cape Town (Miraftab 2004). In 2001 Ghanaian civil society mounted a campaign against the World Bank–backed water privatization scheme (Amenga-Etugo and Grusky 2005), highlighting the new faces of neoliberal conditionalities after the implementation of structural adjustment programs. Neoliberal reforms at Makerere University have created distortions, led to fee hikes, and undermined higher education in Uganda (Mamdani 2007), as has happened elsewhere on the continent. High external debt fueled corruption and led to a high cost of living and low quality of public services in Nigeria (Igwe, Abdullah, and Sherko 2016). Gender roles in Africa were also transformed under neoliberal economic policies. Thomas Hendricks (2015) notes that hyperphallic performances became even more important in the performance of masculinity, as male self-esteem deriving from men’s traditional role of being family breadwinners was threatened under the high levels of unemployment in Africa that the structural adjustment programs induced. In Mozambique, the devastation of structural adjustment programs led to the rise of Pentecostal churches. Unable to get efficient delivery of public health services, Mozambican women turned to Pentecostal churches to seek spiritual help for reproductive health, while men turned to traditional healers to manage the stress of unemployment (Pfeiffer, Gimbel-Sherr, and Augusto 2007). In the wake of government retrenchment in the late 1990s in Kenya, local villages on the southeastern border turned to Tanzanian witch finders to provide an explanation for what they termed “an alarming increase in uncontrollable and deadly forms of witchcraft” (Smith 2005, 141)—an example of a local community working to counter and appropriate global market forces. By and large, men in Africa are seen as the interpreters of global economic liberalization either as church leaders or as witch doctors.

**LGBTQI Activism in Neoliberal Africa**

If neoliberal ideology is primarily rooted in economic thinking, it is also a cultural trend that reorders social relations through the devolution of responsibility. Thus, as demands for rights—and more specifically LGBTQI rights—emerge globally and in Africa, it becomes
interesting to interrogate the dis/connections between identity discourse and global neoliberalism in its cultural and political applications. These dis/connections are important to understand in order to respond to antiqueer criticism in Africa. One of the criticisms of queer rights in Africa is that it fosters cultural warfare between Western and African values. Culture and values under contestation are certainly linked to sexual mores but also extend to the deployment of political recognition, which, “albeit important, is being used by queer activists in Africa to submerge an all-encompassing socio-economic struggle” (Ossome 2013, 33). That is, the politics of recognition that accompanies LGBTQI politics is inscribed in liberal and neoliberal agendas that participate in the erasure of conversations on the broad-based distribution concerns of traditional social justice movements worldwide and in Africa. “The tendency in some queer theory [and practice] to separate rather than complicate the relationship between economic politics and identity politics, and between market, state, and family, ironically can serve to reinforce the rigid identity conventions and intimacy regulations this queer theory aims to unsettle,” the legal scholar Martha T. McCluskey warns (2009, 115). Thus, it becomes politically and socioeconomically relevant to ascertain where the ideological and institutional architectures of current queer activism and scholarship in Africa fall in the spectrum of capitulation-resistance to a neoliberal order. The focus here is not on African queer resistance against the use of aid (Abbas 2012) to induce change in laws regarding LGBTQI persons in Africa. The emphasis is more generally on the silence regarding development practices that, though not targeting the LGBTQI community in particular, weaken society as a whole.
Despite its focus on transnational human rights institutions (Thoreson 2014), queer scholarship in Africa has yet to unpack the relationship between LGBTQI activism and global economic trends and class analysis. This oversight and neglect of macroeconomic factors on LGBTQI existence is not peculiar to Africa. It is one that is articulated as a critique of a certain kind of queer rights and the “equality discourse” that, while promoting gay mainstreaming and what Lisa Duggan (2003) calls “homonormativity,” simultaneously perpetuates indifference to dominant heteronormative assumptions and institutions. This fundamental indifference is neoliberal in essence, as the “gay movement” favors “public recognition of a domesticated, depoliticized privacy,” Duggan argues. Furthermore, this neoliberal “homonormativity comes equipped with a rhetorical recoding of key terms in the history of gay politics: ‘equality’ becomes narrow, formal access to a few conservatizing institutions, ‘freedom’ becomes impunity for bigotry and vast inequalities in commercial life and civil society, the ‘right to privacy’ becomes domestic confinement, and democratic politics itself becomes something to be escaped” (Duggan 2003, 65–66).

To understand what this critique means for Africa, one has to unpack what heteronormative assumptions and institutions are, as well as how they are intertwined with a neoliberal ideology. The qualifier “heteronormative” here is meant to capture a hegemonic system of belief, not sexuality per se. Thus, ideas of equality and freedom, while inoffensive on the surface, become hegemonic capitulation discourses in neoliberal ideology because they encircle individuals with nothing else but themselves subject to a market rating based on consumption alone. These types of freedom and equality are atomized, selfcentered, and depoliticized because they are no longer relational but depend solely on extracted bits and pieces of the self, easily marketized. One implication of this is that solidarity rarely cuts across single issues. LGBTQI groups may demand access to better health services as an entitlement, but they will not interrogate the international trade policies that make such services unavailable, onerous, or no longer provided by the state but only through its proxies/contractors in the first place. LGBTQI groups may demand political rights while remaining unaware of, or silent about, policies that privatize education, access to clean water, and other key social services in the neoliberal state.

In neoliberal thinking, the ethics of responsibility never rises beyond the self. Groups that compete for funding try to devalue each other as much as possible in the eyes of funders whose modes of acquisition of wealth are never questioned. In the neoliberal model, LGBTQI persons see themselves as self-organizing and autonomous from society if the conversation is not revolving around sexual orientation, rights, and identity. In the words of the geographer Gavin Brown (2012), these “specific (neoliberal) techniques of the self”
mean that “people consume products and experiences that confirm their identity as ‘gay.’
This investment in [identity] consumption means that people no longer relate to each other
as active participants in the creation of society, but as the owners (or not) of things that are
divorced from the processes by which they came into being.” Thus, radical sexual politics,
not gay neoliberalism, renders possible linkages that embed LGBTQI concerns in broader
social communities while resisting a hegemonic approach to identity. One should therefore
be wary of the liberatory conflict in neoliberal ideology and the disciplining nature of its
tenets, including conflict manifested in one’s understanding of identity politics. Imagining
creative ways of belonging and decolonizing sexualities in Africa is important in
interrogating hegemonic modes of appropriation and presentation of the self that partake
in a neoliberal order as a possible cause of divorce, beyond homophobia, between queers
and society.

The political theorist Wendy Brown (2005) notes that not enough attention has been paid
to the “political rationality” of neoliberal policies beyond the market. What interests Brown
is neoliberalism as a form of governmentality (how one thinks about the broader meanings
of government and administration beyond the state) and practice of empire that
foregrounds social relations and actions in market rationality even if the market itself
remains a distinctive institution. Thus, politically speaking, neoliberalism assaults citizens
with market values that mediate and transform social analysis. Human action, from
Brown’s perspective, is subject to the law of profitability and production (human and
institutional) seen as resulting from “rational entrepreneurial action” following the logic of
scarcity and “moral valueneutrality” (2005, 40). For activism, one consequence of the
neoliberal model is that it produces citizens “who strategize for [themselves] among
various social, political, and economic options, not one[s] who strive with others to alter or
organize these options” (43). The fact remains, however, that there is no such thing as a
value-free regime of freedom. This recognition leads one not just to consider personal
freedom but also to engage in radical thinking about who/what else is subjugated as a
result/necessity of one’s freedom.

As Brown further elaborates, “Neoliberal subjects are controlled through their freedom—
not simply, as thinkers from the Frankfurt School through [Michel] Foucault have argued,
because freedom within an order of domination can be an instrument of that domination,
but because of neoliberalism’s moralization of the consequences of this freedom” (44). That
is, neoliberalism has ceased to self-interrogate about the meaning and values of its
rationality but instead focuses on profitability and efficiency. With regard to Africa, to
conjecture that the processes of presentation and representation of LGBTQI issues is
embedded in neoliberal thinking is not to suggest that queer persons benefit from queer
activism in the same way corporations do with economic liberalization. It is rather to
recognize the need to articulate options that are value laden and value driven in ways that
speak to the broad recognition of Africa and its struggle as the foil without which African
queerness cannot exist. It is further to incite or provoke reflection on the ways in which the
death of the state in neoliberal thinking and policies mirrors the death of society in market-based organizational approaches to identities. The term market-based refers to the kinds of interventions that barely leave the boardrooms—those that produce more reports and memos than conscious subjects who speak about community liberation as if it were personal and of individual freedom as if survival were predicated on the community’s cooperation.

Put differently, African queer subjectivities should be as concerned about the weakening of collective human and public institutions as about the values that this failing imposes on society. The maximization of wealth and rights can, indeed, become the token of democracy, but it can hardly center “on developing and enhancing the capacity of citizens to share power and hence to collaboratively govern themselves” (Brown 2005, 59). This is not a renunciation of rights but rather a recognition of the entrapment and alienation of the global neoliberal order against which Africa wrestles. Queer scholars and the queer movement are not insulated from this global dynamic and its ideology and values. A 2016 critique by activists is revealing about important stories and feelings that do not make headline news.

In an op-ed, Liesl Theron, John McAllister, and Mariam Armisen (2016) wrote at length about the challenges of LGBTQI activism in Africa. They pointed to competition and antagonism between individual activists, mismanagement, and outright corruption that prevent sustained collaboration. Also cited were structural problems, such as an organizational model and managerialism more accountable to boards of directors and sometimes detrimental to grassroots preferences. A donordriven agenda was highlighted as sometimes obstructing strategic and tactical maneuvering at the street level.

Obviously, not everything that goes on in queer activism in Africa is bleak. But, as the political scientist Hakima Abbas (2012) explains, what is hidden from the metaphoric light of grand narratives about donors’ “progressive” engagement in LGBTQI rights in Africa can be revealing about the North-South liberal managerial mind-set. Interestingly, one recognizes in the account by Theron, McAllister, and Armisen the signature of neoliberal performance based on competition (sometimes ethical and other times unethical), and the erosion of nonmonetized solidarities. In fact, some have come to unthink LGBTQI activism outside monetized transactions mediated by donor finance. Furthermore, one cannot help but note a similarity between the critique of international queer managerialism and the development managerialism that scholars and policy makers throughout the developing world have denounced as amounting to neoliberal trade war. Managerialism as an ideology is premised on the idea that “both capitalism and society should mirror the way corporations are managed” (Klikauer 2013, 5). Although it shares ideological affinities with neoliberalism, managerialism is fundamentally antidemocratic and pervades both the profit and nonprofit world. At the core of managerialism is the problem of control and the increased alienation of society and nonmanagerial functions.
Here then appears the intersection and similarities of experiences between the African state as an entity that is often viewed and treated as a policy taker rather than a policy maker within global international financial institutions, and queer activism in its relation to global philanthropy. Thus, it matters less whether the focus is on the profit or the nonprofit sector; Africa in its relation with the world, queer or not, cannot be understood outside of the political economy of neoliberal prescriptions. In the United States, archives such as Against Equality have not just connected the dots between the rise of neoliberalism, “the privatization of everyday life[,] and the formation of a state that increasingly places the burden of care upon the family as a unit as opposed to the state” (Chávez, Conrad, and Nair 2016, 216). Against Equality also critiques the nonprofit mode of organizing for queer activism as participating in the machinery of the neoliberal state and sees this model as, by and large, indifferent to the economic and class value that accrue to those who are already well-off at the expense of the rest. The take-home point for Africa here is to reflect on the trade-offs of mainstreaming LGBTQI rights without simultaneously attending to the complex structures of oppression that affect African people, cultures, and institutions.

**An Ethics of Resistance and Engagement**

Similarity in feelings of alienation between activists and the African state leads one to imagine an ethics of engagement with social justice under different terms. Here again, the voices of activists lead the reflection. Admittedly, corporate organizing may breed “a ‘perfect storm’ of pressures that stifle the potential to create or maintain genuine, strong relationships between activism and the lived realities of the grassroots” (Theron, McAllister, and Armisen 2016).

Beyond the individual and institutional irrationalities of neoliberalism, Abbas outlines the urgency and possible contours of a new kind of queer movement in Africa when she writes that conversations need to start not

> from the point of view of “gay rights” but from a framework of queer liberation ... [and seek] not to separate LGBTI issues from the broad spectrum of issues that affect all Africans including Queer Africans. This implies that what affects Africans negatively is indeed bad for Queer Africans but also, and critically, that the reverse holds strong.

(2012)

Radical politics of inclusion of queer persons in Africa therefore necessitates a critical reassessment of frames of presentation and recognition to deal with their hegemonic
aspects. Radical politics of liberation entails coming to terms with the realization that “in negotiating their citizenship claims [LGBTQI individuals also] adopt economic mechanisms which appear paradoxically to eschew active participation within broader political and social rights paradigms that most legitimately represent their claims as citizens” (Ossome 2013, 36). Radical liberation will be nonhegemonic or will not be at all.

The impact of neoliberal policies on Latin America's LGBTI communities.

While Latin America and the Caribbean have, throughout the course of the twentieth and early twenty-first centuries, become global laboratories for neoliberal policies (often stemming from state and corporate policies emanating from the Global North), this entry centers on how the focus on the economy has affected LGBTI communities with varying degrees of violence, particularly because neoliberalism depolarizes societies by producing a decline in interest groups while leaving social policies in the hands of international institutions, banks, and nongovernmental organizations (NGOs). In this way, the LGBTI policy reforms that took place in the region have had a range of impacts on individuals, favoring those who participate in the activities dictated by mainstream ways of life driven by consumption, such as marriage. This entry starts by introducing the politics and history behind neoliberalism and then focuses on how this ideology translates to the life of LGBTI communities in the region.

Political and Historical Background

Economic neoliberalism is an ideology that emphasizes the importance of free-market competition with minimal government interference; when applied to governance, it results in policies that seeks to constrain intervention by the government to redistribute wealth or influence the economic market. Critics of neoliberalism argue that it produces a form of government that targets the welfare reforms advanced by social democracies: a participatory state acting as a redistributor of wealth is, for this ideology, a threat. This has very much been the case throughout Latin America, where in places such as Chile, Peru, and Colombia it has translated into a decrease in the funding available for public health, education, and social security; it has also weakened regulations on labor, financial trading, and commodity production. According to the 1975 report Crisis of Democracy, produced by the Trilateral Commission (formed in 1973 by world and business leaders to address the challenges of globalization), one of the central justifications for neoliberalism is that "too much democracy" works against that very democracy as states become unstable and ungovernable, as theorists such as Milton Friedman, Gary S. Becker, and George Gilder argue. In other words, "too much democracy" means reversing safety regulations and antipoverty programs (Crozier, Huntington, and Watanuki 1975). For this reason,
neoliberalism proposes that the state pull back from its role as social intermediary and delegate its authority to the market, emphasizing the benefits of a laissez-faire economy in a return to liberal ideals.

Yet, what results is not an explicit return to the classic ideas promoted by thinkers such as the influential Scottish economist Adam Smith (1723–1790), famous for creating the first comprehensive system of political economy in his 1776 book *An Inquiry into the Nature and Causes of the Wealth of Nations*. While the free market of nineteenth-century liberalism had its gaze fixed on the unrestricted exchange that would occur in the absence of government intervention, the principal organizer of neoliberalism is competition between individuals (and, increasingly, corporations) as a driving force itself. The market ceases to be the natural and spontaneous space that Smith argues for and instead becomes something deliberately created to shape appetites and rivalries between individuals. Competition, in this sense, emerges as a guiding principle of the relationships among the members of a community (*Foucault 2008*). Here, individuals responsible for their own destiny shoulder the risks that the state was previously responsible for reducing when it protected its members from the vicissitudes inherent in the unequal system that capital promotes. The politics behind neoliberal ideology, as Maurizio Lazzarato explains, “promote insecurity, inequality, and individualization as part of ensuring the conditions for power to exercise a hold over conduct” (*2009, 110*).

As the market becomes the arbiter of human life, not all individuals are assigned the same worth. A lifestyle that the market deems “meritorious” provides tools to achieve “success” in society. On the contrary, those who do not participate in these *mainstream* forms of living are subordinated, blamed, and even criminalized by that very same market (*Lazzarato 2009*). In other words, neoliberalism brings to light the question of who is worthy of protection: that is, who is able to enter into forms of protected citizenship and who is deprived of this protection.

This anti-interventionist cocktail based on a vision of “too much democracy” has been particularly devastating for the many Latin American countries that have applied these policies with differing degrees of fanaticism and violence. According to David Harvey, neoliberalism had as its first laboratory Chile during the dictatorship of Augusto Pinochet (r. 1973–1989), which came about from the ousting of democratically elected Salvador Allende in 1973 with the support of the CIA (Central Intelligence Agency). The torture, execution, and “disappearance” (i.e., extrajudicial killing) of individuals had as its parallel the application of economic policies that promoted the indiscriminate opening of the country’s markets to international trade, the reduction of public spending, and the financial liberalization and sale of state companies (*Harvey 2005*). In Argentina, the implementation of neoliberal policies also occurred against the backdrop of state terror with the military junta that governed from 1976 to 1983. The 1976 coup d’état annulled social movements and dismantled the presence of trade unions, which fulfilled the dual objective of
depoliticizing civil society and destroying domestic industry, while increasing unemployment and the precarization of work (e.g., the increase of short-term contractual work and repeal of employee termination regulations). It also eradicated LGBTI movements such as the Frente de Liberación Homosexual (Homosexual Liberation Front), which had been established in 1971 and was composed mainly of union members from different sectors. Many of its participants were kidnapped and later disappeared by the Junta (Jáuregui 1987).

From the 1980s on, neoliberalism would be strengthened as a dual process in which the recession of the state as guarantor of social security coexisted with the advancing democratization of countries in the region. On the one hand, political and economic violence wreaks havoc on the most vulnerable sectors of the population, including an increase in systemic unemployment in indigenous and Afro-Latino populations that were forced to emigrate to cities across the region, land appropriation by large landowners, and an expansion of state surveillance of LGBTI people of color, particularly sex workers. In Peru, for example, the neoliberal policies of Alberto Fujimori’s government (1990–2000) were combined with the state’s fight against insurgent groups, serving as an opportunity to criminalize the peasant population and, consequently, to justify state terror and social cleansing. The displacement of rural communities to the city informalized employment by forcing migrants into street work (from street selling to sex work) and exposing them to police control. The similarities here with the case of Colombia are astonishing. The government of Álvaro Uribe (r. 2002–2010) generated an unprecedented transfer of state resources to the fight against the leftist rebel group Fuerzas Armadas Revolucionarias de Colombia (FARC; Revolutionary Armed Forces of Colombia) with disastrous consequences for farmers. During Uribe’s administration, informal repression of the rural working class increased considerably and involved the countless summary executions of farmers falsely identified as insurgents, known as the “false positives” scandal, which came to light in 2008. The violence in the countryside not only forced the emigration of hundreds of thousands of people of color but also dismantled resistance against industries fueled by neoliberal ideology, including oil, forestry, and precious metals such as gold.

While neoliberalism continues to dismantle social protections for marginalized peoples throughout Latin America and the Caribbean (as it does elsewhere around the world, especially in the Global South), at the same time, countries in the region have sought to increase citizen participation and to protect individual rights and guarantees: examples include the constitutional reforms in Brazil (1988), Chile (1989), Colombia (1991), Peru (1993), Argentina (1994), Venezuela (1999), Ecuador (2008), and Bolivia (2009), which in most cases made the justice system more accessible and less complex so as to facilitate its use. These reforms have extended acknowledgment of the rights of persons with nonnormative identities, including ethnic minorities and those with dissident sexualities. As Leticia Sabsay argues when discussing queer politics in neoliberal times, “It has been precisely through the politics of difference and the multiplication of (sexual, cultural,
ethnic, religious) identities that the liberal constitution of the citizen-subject has expanded” (2014, 101).

The coexistence of neoliberalism and democracy in Latin America has created a contradictory reality in which the former strives for economic liberty and the self-sufficiency of the individual, while the latter works for political equality and the common good. This is why the recognition of sexual rights has not unfolded in the same way for all people, as can be seen, for example, with the unequal treatment of the members of LGBTI communities. Sabsay speaks of these new paradigms of acceptance as central to the construction of a public space that imagines a

new sexual respectability, namely one that is reinscribing sexual attachments within the horizon of hetero and homonormative values associated with coupledom and marriage as the model that continues to be hegemonic in the configuration of national discourses. Although the politics of sexual diversity is leading to a more inclusive frame, it is re-inscribing the boundaries of citizenship across moral frontiers. (SABSAy 2013, 177)

**Marriage**

Marriage, for instance, may easily become a way of reframing a set of hierarchies used by the oppressed to oppress one another. Lisa Duggan (2003) calls this reframing “homonormative,” and it appears, under neoliberalism, as part of an agenda that on the one hand fosters heterosexual mimicking and on the other minimizes LGBTI demands tied to transgender discrimination, police brutality, and fair access to jobs. In a way, expanding the boundaries of citizenship translates into economic reforms that tend to increase the number of consumers by enforcing policies permeated by dominant heteronormative assumptions and institutions, as is discussed in more detail below.

In Latin America, it could be said that marriage as a patriarchal institution par excellence has played an important role when sexual minorities in the neoliberal era start being recognized by the law. In effect, the legalization of same-sex marriage in countries such as Argentina (2010), Brazil (2013), Uruguay (2013), and Colombia (2016) is the result of a long process that began with the equity debates of the 1980s and that recognizes the rights of LGBTI communities in relation to the distinct social and economic benefits provided by the state that previously were enjoyed only by those in heteropatriarchal marriages. Having said this, it is also valid to affirm that marriage is an institution that not only facilitates access to social benefits, such as the pension system, but also grants access to
imaginaries of consumption that rely on the promotion of heteropatriarchal models of the family and marriage. In this way, neoliberalism is a flagship institution of “new household economics” (Cooper 2014, 44), as Gary Becker calls the new social contract that has as its objective protection from risks previously mitigated by the political institutions of welfare states now using the logic of the market itself. In a way, according to the Canadian economist Jean-Luc Migué (1933–), the household replicates a “unit of production in the same way as the classical firm” (Cooper 2014, 41). Up to a certain point, then, the emphasis on marriage forms one of the counterforces that restores disintegrating social relations that are behind the individualist ideology of neoliberalism that in various countries of the region has transcended the heteronormative domain.

Nevertheless, it is also fair to suggest that same-sex marriage has reduced the scope of LGBTI demands. Some call attention to this process, viewing it as a way in which neoliberalism—and its obsessive focus on institutional and legal recognition around issues such as marriage and adoption—depoliticizes certain communities, particularly the LGBTI community and especially members of the trans community (Richardson 2005). It is worth remembering that neoliberalism channels social struggles through the individual by disarticulating collective practices that would crystallize patterns of solidarity among members of groups that come together through shared needs. For instance, in the 1990s, while the city of Buenos Aires decriminalized transvestism by changing its code of statutes, transgender sex workers became the focus of a national debate because “the new code said nothing regarding the practice of prostitution” (Modarelli 2010, 304). As a result, fueled by the mainstream media, panic broke out over transgender women, who were depicted as “monsters to be sacrificed, [as] the goal was to preserve a violent, corrupt order in opposition to a few attempts at political liberalism” (305). And it turned out that “only a few human rights organizations and gay and lesbian organizations came to support the transgendered” (305).

Transgender People

It is important to remember that neoliberalism in countries such as Argentina, Chile, Colombia, and Peru has informalized the economy and labor relations, which has a particular impact on LGBTI communities, particularly on transgender people, for whom the formal labor market generally becomes less accessible (Fernández 2010). If one considers that unemployment, for neoliberalism, is not a failure of the market but rather the fault of the worker for being “unqualified,” or for not conforming to the kind of work that the market needs, sexual labor becomes one of the few possible jobs for transgender women. As unions are weakened amid the increasing flexibility of labor regulations, there is no real positive action in place to protect transgender people, and more so when they do not conform to traditional gender roles mandated by the workplace. Today, Maurizio Lazzarato suggests, “to be employable, one must conduct oneself and have a lifestyle which is in
harmony with the market. Risk now relates to a combination of the unpredictable events and events that are calculable because they depend on individual's characteristics and conduct” (2009, 126), which are mainly based on cis- and heterosexual ideals.

Thus, it does not seem paradoxical that the decriminalization of transvestism in Latin America arising from democratizing processes has had as a counterpart more acute control over transgender sexual workers because today they pass through an ambiguous zone over which the police may exercise a wider legal range of action (Modarelli 2010). This increased policing of trans individuals, largely in urban spaces, coincides with an increase in migration (for various reasons) from countryside to city. The fact that transgender people are more likely to be forced to abandon their homes, especially because of household homophobia, must be considered alongside other types of violence that create this exodus, such as rural terrorism, the appropriation of farmed land, and environmental crises—all problems that bring trans individuals to urban spaces, many with no possible source of income other than that offered by work on the street exposed to police control (Prada Prada et al. 2012). So it is that trans women are exposed to the surveillance and control of public space and its logics of violence, including assault, extortion, rape, and even murder (Green 2010; Fernández 2010; Santamaría Fundación 2013). Here it can be seen that displacement as a political tool reinforces certain aspects of a patriarchy that reorders bodies through violence in terms of gender, race, and class, and normalizes that configuration, trapping individuals in a low-paying trade. For instance, in cities such as Cali, Colombia, which has been the forced destination for an increasing number of displaced transgender women, as of 2012, around 80 percent of them worked in the sex market at some point in their lives (Colombia Diversa 2012).

**Limited Progress but Some Clear Achievements**

Thus, the progress achieved in some countries in the region in the neoliberal era is limited, as Sabsay critiques, to a “universalization of individualized free will, rationality, and moral autonomy as the conditions of possibility of sexual politics within the field of sexual citizenship,” a position that “restrict[s] our ideas of political subjectivity to a specific cultural tradition, namely that of liberalism” (2014, 106). The universal subject, far from truly being so, has come to be associated with a certain European view of the citizen, an abstract condition that is recognized as such, as stated previously, in judicial institutions. From there one can observe that the acknowledgment of rights that protect queer individuals in daily life depends on actions of guardianship or protection, as in Colombia, Peru, or Argentina, and that the burden of putting them into practice usually falls to NGOs. In fact, this process of democratization influenced by neoliberalism has delegated the implementation and management of public policies to NGOs in order to transfer the responsibilities of the state to the private sector, filtering demands according to the logics of the market in the customer service relationship (Dagnino, Olvera, and Panfichi 2006).
For example, in Colombia, setting aside their important role in counseling transgender women who have been assaulted mostly by the military and the police, NGOs have narrowed LGBTI demands through the scope of *acción de tutela*, which is a kind of lawsuit instituted by the constitutional reform of 1991 as a way to make judicial proceedings easier to file. This is why, to a certain extent, common needs such as fair labor conditions or access to public health care are addressed only if claimed by the individual—precluding those individuals from coming together to make demands as a group. In this sense, by channeling social struggles through NGOs, the state has depoliticized them by dismantling to some degree collective practices such as social protests (*Lopes de Souza 2013*).

Still, there have been clear advancements, even for queer communities that do not align with nonmainstream lifestyles and for whom same-sex marriage does not provide increased benefits. For example, as of 2018, there have been laws implemented that make gender change on IDs more flexible, as in Argentina (*2012*), Ecuador (*2016*), Bolivia (*2016*), and Chile (*2018*), something that has facilitated access to benefits and social protections that until recently were unthinkable. The majority of advancements such as these have taken place as part of what is called the “pink tide,” a changeover in several Latin American governments from neoliberal administrations to socialism from the late 1990s to the beginning of 2010, thus destabilizing the free-market project. The end of this wave, however, also reveals how fragile advancements remain, as can be seen with the rise of center-right governments in countries such as Argentina, where President Mauricio Macri has promoted the Law of Religious Freedom, which grants the freedom to discriminate against the LGBTI community in innumerable ways under the guise of religious belief, or Brazil, where the administration of President Michel Temer has eliminated all federal resources that financed LGBTI organizations.

New Media in Asia

JAMIE J. ZHAO
PhD candidate
University of Warwick, United Kingdom

The impact of digital technologies on LGBT populations in Asia.

In the mid-1990s the popular adoption of digital technologies by the general public gradually became evident in non-English-speaking regions, especially non–South Asian countries. The internet was first introduced to mainland China in 1994, to Singapore in 1994, and to Malaysia in 1995 (Berry, Martin, and Yue 2003). By 2002 Japanese was the third-most-used language on the internet after Chinese and English (McLelland 2003). In 2010 approximately onehalf of Vietnam’s urban population had used the internet (Justumus et al. 2013). Furthermore, by 2016, the number of internet users in the Philippines had reached 44 million, which represented more than 40 percent of the country’s population. Meanwhile, India witnessed its internet and cellular mobile phone booms early in the twenty-first century (Shahani 2008). The popular use of digital tools in making short videos and circulating these media materials (either online or in the VCD or DVD formats) for sociopolitical and/or entertainment purposes has also been widespread in Asian media markets since 2000.

These emerging cyber communities and digital practices demonstrate the surge in the use of new media in Asia since the late 1990s. During about the same period, the significant increase in the public visibility, activity, and knowledge of LGBT cultures accompanied the rise of late capitalism in some parts of Asia, including Taiwan, Hong Kong, South Korea, Singapore, and Thailand (Berry and Martin 2003; Jackson 2011). Furthermore, rising along with the entangled technological, economic, and communicative transformations and progress were information flows within and about LGBT groups online and offline that transgressed geographical and linguistic boundaries. For example, the first South Asian cyber LGBT community—the Khush email list— was founded as early as 1992 (Shahani 2008). Thai LGBT cultures and markets have further expanded in the internet and digital age via “Thai-language queer web sites, chat rooms, web boards, and e-mail lists, along with the use of SMS texting and mobile phones” (Jackson 2011, 28). Digital technologies have also contributed to the knowledge production, identity formation, and political and cultural movements of Asian LGBT people. Take, for example, the Beijing-based queer film director Zi’en Cui’s influential theory of digital video activism, which understands Chinese digital filmmaking and screening as appropriated forms of arts and activism that can help form a historical archiving and presentation of LGBT cultures and construct nonmainstream
identities and spaces in performative ways (Bao 2015). In this vein, digital videos facilitate the building of Chinese-specific queer theory. These local, inter-Asian, and global digital communication and cultural flows eventually led not only to amplified, diversified articulations of nonnormative gender and sexual identities in Asia but also to Asian LGBT-identified people’s transcultural queer memories, imaginations, and mobilization (Martin 2009).

Nevertheless, the concurrent advent of a queer Asia in the age of new media does not substantiate the problematic theory of “global gays” (Altman 1997), which homogenizes the development of modern public discourses on Asian LGBT cultures as a direct product of the facilitated gender and sexual information flows from nonAsian, particularly Western, cultures in the globalist age. For example, as Peter A. Jackson (2009) revealed, the highly commercialized information published in nationally distributed Thai print media (such as the images in popular magazines) in the 1960s, 1970s, and 1980s has heavily shaped modern Thai lesbian, gay, and transgender cultures and identities. Therefore, against the backdrop of the still largely heteronormative mainstream societies in Asia today (whether for legal, historical, or religious reasons), the convergence of new media and LGBT cultures has brought about neither a simple borrowing of Western models in gender and sexual identifications nor a pure highlighting of local gender and sexual traditions and legacies (Boellstorff 2003). Instead, the queer Asia blossoming in this digital age features a promising, intricate proliferation of unique queer identification, representation, and subjugation in digitized mass communication and sociocultural productions. During this process, queer practices, positions, and logics function together as a powerful disruptive force in the digitized normative society of contemporary Asia.

The conjunctive force of queer and new	media has been operating as an indispensable constitutive element of Asian LGBT sociocultural manifestations and identifications. The negotiative alliance between the two designates a ubiquitous, though often uncomfortable and sometimes fleeting, intersection and transgression that works along, within, and against local, transcultural, and global mainstream public discourses. The collaborative manifestation of queer and new media in Asian history can be seen in two general, intertwined ways: the queering of communication in which mainstream media content and platforms have been queerly intervened with and appropriated for LGBT groups' communication and entertainment, on the one hand, and the digitized mediation of queer cultures and products in which LGBT-targeted or LGBT-themed cultural productions, which used to largely be contained underground, have been widely produced, distributed, and circulated through new media venues, on the other.

**The Asian Queering of New Media Communication**

In the past several decades, the arrival of wired, computerbased, and internet-mediated communication has enabled the multiplication of dating sites, location-based mobile apps,
online journals and magazines, email lists, and online forums in multiple Asian languages, as well as their popularization among local and diasporic Asian communities worldwide. Notable examples include the numerous Chinese-language cyber communicative platforms that have been proliferating, enabling ethnic Chinese people all over the world to connect since the first years of the twenty-first century (Martin 2009), and the online spaces that have been taken up by South Asian, especially Indian, diasporic groups since the late 1990s (Dasgupta 2017). These digital communicative platforms, gadgets, and formats have also significantly shaped Asian LGBT people’s social, sexual, and political lives in unexpected ways.

© IMAGINECHINA/AP IMAGES

**Chinese Gay Dating App Blued.** Gay Asian men have appropriated Western-originated dating apps, such as Jack’d and Grindr, while also embracing local versions, such as Blued.

Since the use of the internet in Taiwan was popularized in the 1990s, various means of online communication, publication, and circulation—such as the Chinese BBS (bulletin board system) and the online feminist and lesbian activist journal *G-zine*—have not only enhanced mass media communications surrounding lesbian, gay, feminist, and homosexual topics but also carved out a “transnational public sphere” online and developed waves of radical lesbian and feminist movements (Sang 2003). Later, in 2005, *Les+*, the only online lesbian magazine published in Mandarin in mainland China, was being issued and circulated online. This Beijing-based lesbian magazine eventually made possible and visible the vibrant local lesbian scene of the later years of the first decade of the twenty-first century. Meanwhile, during the first two decades of the twenty-first century, with “more than 43 million [internet] users” in India, online communication has enabled various spaces of “queer sextopia” for young gay and lesbian Indians (Shah 2016, 277). Malaysian lesbians have also been empowered to voice in cyberspace their political responses to the local official culture, which still deems sodomy to be an Islamic crime (Khoo 2003). In Singapore, where sodomy is also considered illegal in official and mainstream cultural discourses, the pager (beeper)—a technology that may not be considered “new” in the West—helped connect local lower-class lesbians in the 1990s (Yue 2003). In Hong Kong—a region with one of the highest rates of networked mobile phone use across the world (Tang 2016)—the local phone app Butterfly, which was designed for Hong Kong lesbian groups’
mobile social networking and dating, was launched in 2013. Since then, it has been extremely popular among Mandarin, Cantonese, and English users in sinophone communities, which have created online queer intimacies by conquering time and space restrictions (Tang 2016). Moreover, gay Asian men have actively appropriated the Western-originated dating apps Jack’d and Grindr. Local versions of such gay social networking apps—for instance, Blued, which originated in China—have been popularized among sinophone gay men around the world.

Furthermore, inter-Asian queer information flows and media communication have experienced a surprising upsurge in the digital age. Predominantly through music videos, movies circulated online, performances, images, and cross-national fan sites, androgynous male idols and hyperfeminine girl bands from Korea have inspired gay and lesbian Thais and Indonesians to perform transgressive and hybrid gender identities and looks (Käng 2014; Jung 2011). Some of this nonnormatively gendered and sexualized information in inter-Asian entertainment media and pop culture has even influenced the cultural and capital flows within local media and celebrity industries. The most sensational and intriguing example is the mobile phone text-message (SMS) voting activity that the Chinese audience of the Idol-style Chinese reality singing competition show Super Girl (2004–2006, 2009, 2011, 2016; Hunan Satellite Television) engaged in to support the transgender female (and potentially lesbian) singer Yuchun Li. The voting of Li’s fans not only generated enormous economic success for the show in 2005 but also helped to raise the profile of images and performances of nonnormative female genders (with lesbian connotations) in mainstream Chinese media. It was believed that the show, as a form of democratic entertainment, stimulated the largest grassroots voting movement within a pseudopublic sphere in modern Chinese history and carved out a feminist and queer space within Chinese society. This entertainment-focused, participatory practice ultimately points to the possibility of democratic social and political participation, autonomy, and articulation by the grassroots public under the authoritarian control and information blackout of the contemporary Chinese Communist Party/state, although monetary investment in SMS voting made it possible.

Later, other Asian-based reality television shows that manufacture queer idols and performances have adopted formats and voting styles similar to those of Super Girl. One notable example comprises the 2014 special segments of the Philippine daytime variety show It’s Showtime (2009–; ABS-CBN), titled “I Am PoGay” and “That’s My Tomboy.” These segments of the show allowed participants with nontraditionally gendered personas, some of whom were publicly out LGBT people, to perform and compete onstage for audience support. This explicit promotion of queer images, performances, and desires through collaboration and cooptation among the shows’ producers, performers, and audiences, facilitated by digital means of communication and participation, has discursively, yet tremendously, contributed to the acceptance and visibility of LGBT cultures in certain areas of Asia.
The Asian Mediation of Queer Cultural Productions

The employment of digital technologies in the cultural production, circulation, and consumption for, by, and about LGBT-identified groups has also been a common practice in this new media in Asia. Pirated versions of Taiwanese and Japanese homoerotic comics and literature; lesbian and gay television shows from the United Kingdom and the United States; and LGBT movies from Thailand, the United States, and Europe are often imported (e.g., to Taiwan, China, Indonesia, Vietnam, and Korea), and online Asian fans and audiences translate them, circulate them, and queerly rewrite them. These digitized grassroots practices, though often legally questionable, forcefully challenge both local media regulations on cultural and political content and the heteronormative structure of mainstream societies. For example, the Indonesian queer dubbing culture, which added local soundtracks to foreign media texts, not only enabled culturally specific LGBT subject positions but also worked as a pejorative force that countered local bans on and discrimination against LGBT cultures in the 1990s (Boellstorff 2003). Some of the pirated queer images from and media about developed global gay cities in the West that have been made available online to Asian audiences have even encouraged transnational queer imaginaries, escapism, and tourism among Asian media consumers (Zhao 2017).

This Asian mediation of LGBT-themed media and cultures also manifests itself in the media content that Asian LGBT organizations produce and circulate for social and political purposes. For instance, Vietnamese and Indian LGBT groups have used online platforms and social media for sexual health preventions (Dasgupta 2012; Justumus et al. 2013). Chinese Lala Alliance, a sinophone grassroots organization for lesbian, bisexual, transsexual, and intersex people founded in 2008, has actively employed online platforms and digital media to develop transnational networks, run queer fund-raising and internship projects, and publish online articles and reports on topics pertaining to the legislative and sociocultural struggles that LGBT groups face while dodging local government crackdowns and censorship. The use of digital video technologies has been common in grassroots Asian LGBT communities’ indie filmmaking, queer parades and protests, and other forms of sociopolitical activism. For example, nongovernmental queer film organizations in China have actively organized and supported film festivals, documentary training camps, screenings, competitions, and workshops for LGBT film practitioners and audiences since 2012 (Bao 2015).

In addition, since late in the first decade of the twentyfirst century, globally accessible video-streaming websites, such as YouTube, have been queerly deployed as handy channels for distributing indie LGBT films made in Asian regions where homosexuality-themed media has been banned from mainstream distribution venues, such as China and Singapore. A large number of Thai, Chinese, and Taiwanese LGBT-themed indie and commercial movies and television programs, such as the well-known Thai lesbian movie Yes or No
(2010; directed by Saratsawadee Wongsomphet), have been subtitled in diverse Asian languages and circulated on YouTube and other English-language videosharing websites. Moreover, various kinds of apps and downloading software, such as VPNs (virtual private networks) and eMule, have emerged to break the political information blackout and geoblocking on LGBT and feminist media content in a few Asian countries.

Meanwhile, LGBT-themed cultural products have been adapted and distributed across diverse media venues. For instance, online gay literature produced by grassroots, sometimes anonymous, writers and published in Chinese cyberspace are often adapted into films and online TV shows and thus available for sinophone and global audiences. Notable cases include the originally internetbased gay novel Beijing Story, which was made into the 2001 internationally renowned film Lan Yu by the Hong Kong director Stanley Kwan, and the online Chinese TV drama Addicted (2016; iQiyi platform), which was well received in sinophone communities, having been adapted from the popular gay novel Are You Addicted? (2013; by Chai Jidan), which was, in turn, first published on the famous Chinese fiction website Liancheng Read.

These digital tools and platforms have made online LGBT media productions more accessible across various media platforms and to a large number of LGBT-identified or queer-friendly audiences around the world. The digitized queer images and the queering of digital technologies in Asia have ultimately built up visualcultural sites for LGBT groups’ subject making, transnational political mobilization, and desire articulation.

**Paradoxes of the New Media in a Queer Asia**

The promising and intriguing digital queer phenomena in Asian sociopolitical arenas have allowed LGBT people to actively imagine and participate in a larger, globalized community and empowered LGBT parades and movements for equal rights and against discrimination, and they have even made the global mobility and public appearance of same-sex intimacy possible. Yet, problems and concerns regarding these queer uses of new media have also been prevalent in Asia.

A worrying digital divide affecting young, educated, urban people involves the exclusion of classed minorities within LGBT groups. This phenomenon has been prevalent transnationally. It can also be found within a single country (even developed nations such as Japan) or within communities with members of a wide socioeconomic demographic distribution (e.g., South Asian gay men groups) (Dasgupta 2017; Goggin and McLelland 2009; Shah 2016). Take, for example, a single sinophone LGBT group whose members are in diverse locales around the world. The use of different Chinese characters by the mainland Chinese and the Taiwanese, as well as the translinguistic differences in understanding “gay” and “queer,” may cause miscommunication and disharmony online (He 2009; Martin 2009).
Moreover, during the second decade of the twenty-first century, a globally networked pink economy has been emerging alongside the intertwined desiring voices of neoliberalism and cosmopolitanism in many Asian countries with local economic prosperity, such as Singapore, India, Korea, Japan, and China (Shah 2016). Misogynistic, homophobic, Occidentalist (stereotypical representations and/or imaginations about the West), and racist expressions, as well as online bullying and silencing, especially toward bisexual and transgender people and classed and ethnic minorities, have not been uncommon, even within digitized queer activist groups and spaces. For instance, a number of online social networking, communicative, and video-streaming sites, such as Facebook, have been viewed as free and convenient queer venues for the self-promotion of some gender nonnormative public figures, including the neutrosexual (zhongxing) girl band MissTER in Taiwan in 2011, the Singaporean SMZ Tomboy Crew in 2012, and the Chinese “boy band” FFC-Acrush, which consists of cross-dressing girls, in 2016. These online sites facilitate the distribution, circulation, and appreciation of queer performances, images, and interpretations. Yet, on the one hand, homonormativity, ageism, and lookism have been prevalent in these queer spaces, and, on the other hand, persistent debates surrounding the difference between onstage queer images/performances and real-life lesbianism/transgenderism, which have eventually catalyzed the self-distancing and self-silencing of real-world LGBT voices, have also dominated these sites.

Although the emergence of new media has enabled transcultural imaginaries and representations of LGBT communities both online and offline, these queer spaces and imaginations sometimes reflect the more severe invisibility and self-regulation of LGBT people in nonvirtual public spaces. For example, although the increasing popularity of mobile phone apps can be identified in Hong Kong, the diminishing of lesbian and gay public social spaces, such as lesbian bars and gay saunas, has been particularly evident in the same region in the twenty-first century (Kong 2011; Tang 2011). Additionally, although online queer sociocultural spaces have proliferated across Asia since the late 1990s, cyber spaces for queer cultural productions often serve either as “digital closets” or same-sex fantasy heterotopias: rather than directly confronting normative cultures, they sometimes help to sustain the offline heteronormative system of the real world by confining queerness to the unrealistic virtual world (Dasgupta 2017; Shah 2016).

These multifarious, disturbing aspects and problems of online and digital cultures in a seemingly burgeoning queer Asia serve to caution future scholarship against making simplistic and optimistic assumptions about the role of new media in the growth of Asian LGBT populations. For one thing, the contribution of digital technologies to the development and expansion of contemporary Asian LGBT groups, particularly in ways of knowledge formation and communication facilitation, has been tremendous. For another, the convergent force of queer and new media has inevitably been shaped by multiple sociopolitical factors, co-opted by capitalist and normative cultures and complicated by struggles within and about LGBT identities and politics. In this sense, the generative
alliance between queer and new media cultures does not necessarily herald a democratic, queer-friendly society in the near future. It certainly does, however, open up spaces for continuing negotiations and contestations between LGBT groups and mainstream sociocultural forces within a still largely heteronormative Asia.

The Nicaraguan Revolution

EMILY K. HOBSON
Assistant Professor of History and Gender, Race, and Identity
University of Nevada, Reno

LGBTI activism in Nicaragua from the 1960s to 1990, during the civil war and the Sandinista government that followed.

In July 1979 the military forces of the Frente Sandinista de Liberación Nacional (FSLN; Sandinista National Liberation Front) overthrew Nicaragua's Somoza dictatorship, which had been backed for decades by the United States. The Sandinistas instituted socialist reforms and confronted US-sponsored war before losing power in 1990 elections. The terms Nicaraguan Revolution and Sandinista Revolution refer both to the efforts to oust the Somoza regime in the 1960s and 1970s and to the programs of the Sandinista government from 1979 through 1990.

The Nicaraguan Revolution is significant to LGBTQ history for two key reasons. Most principally, gay and lesbian activism first developed extensively in Nicaragua in the 1980s, and it was both fostered and constrained by the revolution. In addition, gay and lesbian radicals played important roles in the Nicaraguan solidarity movement. Both phenomena revealed the ways that interconnections between socialist, feminist, and gay and lesbian politics energized the transnational gay and lesbian left.

Forming the FSLN and Ousting Somoza

The FSLN took its name from Augusto Sandino (c. 1893–1934), who in 1933 led a peasant militia in liberating Nicaragua from a decades-long occupation by the US Marines. Soon after Sandino's victory, the rightwing Nicaraguan general Anastasio Somoza García (1896–1956) ordered Sandino assassinated and took the presidency by coup. Under Somoza, the majority of Nicaraguans lived in deep poverty, and dissidents suffered violence from Nicaragua's National Guard. Somoza's rule became a family dynasty: in 1967 the general's second son, Anastasio Somoza Debayle (1925–1980), assumed power following a campaign that included assassinations of protesters by the National Guard.

Radicals founded the FSLN in 1961 and made it the central means of opposing the dictatorship. The FSLN was Marxist-Leninist and nationalist in orientation, and many of its leaders worked from exile in Cuba, Mexico, and the United States. In December 1972 a massive earthquake hit Managua, the Nicaraguan capital, killing roughly 20,000. Yet
Somoza sold international aid for profit rather than directing it to people in need. In response, popular support for the Sandinista cause grew. At the same time, the FSLN split into distinct "tendencies," with the "third tendency" favoring coalition with other leftists and with moderates. This tendency won leadership and power.

By 1977 prominent Nicaraguan leaders were demanding that Somoza resign, and the FSLN that year launched intensive military attacks. In 1978 the country entered all-out war: Somoza’s forces escalated reprisals, the FSLN seized the National Palace, and Managuans carried out a general strike. Somoza resigned on 17 July 1979, fleeing to Paraguay, where he was later assassinated. The FSLN entered Managua and fully seized control on 19 July 1979. Approximately 50,000 people had died in the war that led up to this point.

**In Power and under Attack, 1979–1990**

The Somoza regime had concentrated personal wealth while keeping the majority of the Nicaraguan population landless and illiterate. In response, the Sandinista government nationalized and redistributed land, established workers’ and women’s rights, and created education and public health programs. Starting in 1980, thousands of young Nicaraguans joined the Ejército Popular de Alfabetización (People’s Literacy Army), also known as the “literacy brigades.” Vaccination programs operated on a similar model, leading the World Health Organization to designate Nicaragua as a model of primary health care. The literacy and vaccination brigades brought urban Nicaraguans into rural areas and shifted the operation of the revolution from armed resistance to everyday life.

The Sandinista government and Nicaraguan people quickly faced attacks by *contras* (counterrevolutionaries) who were backed by Somoza loyalists and the United States. Contra opposition began immediately after July 1979 but expanded after US president Ronald Reagan (1911–2004) assumed office in January 1981. US support operated both aboveground and secretly. CIA operatives trained contras and passed them resources, and by 1983 the United States was mining Nicaraguan harbors and guiding air bombings of Managua. The US Congress moved to limit intervention in 1982 and 1984 but granted approvals in 1986. The Reagan administration also funded the contras secretly through arms sales to Iran and by collaborating with cocaine traffickers; the first of these networks was exposed in the 1987 hearings into the Iran-Contra scandal, and the latter by the journalist Gary Webb (1955–2004) and by a Senate subcommittee. Throughout the 1980s the United States also imposed economic sanctions that led to rapid inflation and shortages of food.

The Sandinistas responded to the contras through military conflict and by consolidating political power. From 1982 through 1988, they instituted a “state of emergency” that restricted civil liberties, including by allowing the government to detain contras without trial and restricting organizing outside the FSLN. Though this generated international
criticism, activists in the Central American solidarity movement largely overlooked the revolution’s human rights abuses, including those that subjugated indigenous and black Nicaraguans on the Atlantic coast. Solidarity activism grew when the Sandinistas asked global supporters to assist with the coffee harvest in 1983 and when the government held an internationally monitored national election in 1984. Daniel Ortega (1945–), already leader of the national junta, won the presidential election that year.

The violence of the contra war, the stresses of economic sanctions, and internal political debate led to the FSLN losing national elections in 1990. Violeta Chamorro (1929–), an ally of the United States and the widow of a journalist killed by Somoza’s forces in 1978, won the presidency. Nicaragua entered the 1990s with 30,000 dead from the contra war.

Gender and Sexuality in the Revolution and in the Solidarity Movement

Women played strong roles in the Nicaraguan Revolution; nearly a third of Sandinista military forces were women, and a number of women served as military leaders. Their prominence produced some progressive Sandinista policies in regard to women, and a significant number of lesbians came out during the era of the Sandinista Revolution.
some other anti-imperialist struggles. In the 1970s nearly a third of Sandinista military forces were women, and a number of women held military leadership. For example, Dora María Téllez (1955–) served as second in command in the seizure of the National Palace and later captured the city of León. In the 1980s women composed about a quarter of the army, and some women held government leadership; Tellez became the minister of health. The Sandinistas overturned a law that granted men property rights over women and children, and they instituted laws for equal wages and paid maternity leave. They also helped to shift gender and sexual politics by recognizing common-law marriages, ending legal distinctions for children born outside marriage, and banning sexist advertising. Sandinista women formed the Asociación de Mujeres Nicaragüenses Luisa Amanda Espinoza (AMNLAE; Luisa Amanda Espinoza Association of Nicaraguan Women), although as a formal party organization this group was more beholden to the government than independent.

In contrast with revolutionary Cuba, the Sandinista government did not develop clear policies regulating lesbians or gay men. Gay and lesbian people experienced persecution, but it was uneven rather than systematic. In the early years of the revolution, the Sandinista government closed some gay bars and heterosexual brothels; as in Bautista-era Cuba, same-sex culture had been associated with prostitution under Somoza. A significant number of lesbian women came out in the settings of newfound independence fostered by the FSLN militia and brigades. At the same time, the Sandinista army ejected some gay and lesbian people. Opponents of the FSLN described the Sandinistas as unmaking family norms and sought to discredit women leaders through rumors that they were lesbian.

A strong international movement grew in solidarity with Nicaragua, and many solidarity activists praised the revolution’s apparent feminist gains. Nicaraguan solidarity became important in gay and lesbian politics around the world. In the United States, gay and lesbian leftists saw themselves and Central Americans as holding a common enemy in the Reagan administration. In San Francisco, Central American immigrants settled next door to gay and lesbian communities, and this made solidarity an important venue for Latinx and anti-racist gay and lesbian organizing. (Latinx is a gender-neutral term to refer to Latino and Latina people.) Solidarity activists were divided, however, over how to understand sexual politics in Nicaragua. Some assumed that homosexuality was foreign to Nicaragua and therefore remained silent about gay and lesbian politics. Others sought to foster transnational gay and lesbian activism.

The Nicaraguan Gay and Lesbian Movement

Lesbian and gay organizing in Nicaragua developed in the midst of the Nicaraguan Revolution and met a complex response, including both repression by Sandinista State Security and support from the Sandinista Ministry of Health. The first known lesbian and gay organization in Nicaragua was known simply as el grupo de homosexuales y lesbianas
(the gay and lesbian group; also referred to in English-language sources as “the Nicaraguan gay movement”). It began with a group of friends from two Managua neighborhoods, Máximo Jerez and Centroamérica. Key leaders included Joel Zúñiga Traña, Lupita Sequeira, and Martha Sacasa. These individuals were actively involved as Sandinistas and sought to advance lesbian and gay recognition within the revolution. In addition, they tied gay and lesbian politics to a socialist agenda of national and personal liberation. The group began to meet purposefully in early 1985 and formalized themselves as an organization by fall 1986. Although they violated the state of emergency by organizing outside the FSLN, they aligned themselves with the revolution and required all members to be involved in a Sandinista council, militia, or government agency. Initial activities revolved around consciousness-raising, including exchanges with international solidarity activists. Meetings were typically held at a house in which both Nicaraguans and US-born solidarity activists lived.

Soon after forming their group, the leaders of the Nicaraguan gay movement came under surveillance by Sandinista State Security. By February 1987, they had been questioned and verbally intimidated by State Security officials, who expressed concern over possible infiltration by the revolution’s opponents. On 13 March 1987 the group’s members received a collective subpoena and were told to suspend their activism. This day is recalled in Nicaraguan LGBTI history as the *quiebre,* meaning “breakup.” (*LGBTI* is the preferred term in Nicaragua today, with activists also referring to *diversidad sexual,* or sexual diversity.)

Although the group disbanded after the *quiebre,* Nicaraguan gay and lesbian activists did not report Sandinista harassment to supporters outside their own country. Instead, they purposefully kept the *quiebre* quiet in order to not undermine gay and lesbian participation in the solidarity movement. They also found a different path to activism through the creation of an HIV/AIDS outreach program.

**AIDS Activism in the Revolution**

AIDS work in Nicaragua held origins in three sources: the Nicaraguan gay movement; the Ministerio de Salud (MINSA; Ministry of Health), which was headed at the time by Dora María Téllez; and the nongovernmental organization Centro de Información y Servicios de Asesoría en Salud (CISAS; Center for Health Information and Counseling). The epidemiologist Leonel Argüello led MINSA's AIDS work and sought out information on the epidemic starting in 1985. The following year, CISAS invited several solidarity activists from San Francisco to make a presentation on HIV/AIDS at an international health colloquium in Managua. Soon after, Argüello created a national AIDS commission and a national plan for testing and prevention.

HIV/AIDS activism became a way not only to address sexual health but also to resolve the status of gay and lesbian people within the Nicaraguan Revolution. Both State Security and
gay and lesbian activists had kept the *quiebre* silent. Because of this, Argüello remained unaware of the *quiebre* until fall 1987, when he asked activists who had been part of the Nicaraguan gay movement if they would lead AIDS outreach. The activists met with Tellez to inform her of the *quiebre* and to secure letters of approval in case the police questioned them. After this, they established a nongovernmental organization that was supported by MINSA and called the Colectivo de Educación Popular contra el SIDA (CEP-SIDA; Popular Education Collective against AIDS).

CEP-SIDA built on networks initiated by the Nicaraguan gay movement, but as an officially approved organization, it was able to be more public than the earlier group. It conducted HIV/AIDS outreach to both straight and LGBTI audiences at cruising grounds, in universities and high schools, and among social groups of gay men. Solidarity activists from outside Nicaragua provided assistance, including written and video materials, condoms, and small amounts of financial aid; the San Francisco–based Nicaragua AIDS Education Project and Latino AIDS Project provided notable help. But CEP-SIDA was hampered by the financial and political challenges that beset Nicaragua in the late 1980s. The project folded soon after the Sandinistas’ 1990 defeat.

**Lasting Impacts**

Women’s, feminist, and LGBTI organizing continued in Nicaragua after 1990, and new activist groups emerged from networks earlier forged by the Nicaraguan gay movement and CEP-SIDA. Such organizing maintained leftist politics across the 1990s and into the twenty-first century, even as the FSLN stood in retreat. After the FSLN regained power in 2006, however, it clashed with women’s and LGBTI groups. A key reason for this conflict was that, in 1998, Daniel Ortega’s stepdaughter, Zoilamérica Narváez, had accused him of sexual abuse, and Ortega aligned himself and other FSLN leaders with social conservatives in order to ensure immunity from prosecution. In the eyes of Ortega’s critics, such alliances undermined the vision of the Nicaraguan Revolution, including its possibilities for gender and sexual freedom. Today, many LGBTI and feminist groups in Nicaragua lay claim to the legacies of the Nicaraguan Revolution, even as they reject the leadership of Ortega and his wife, current vice president Rosario Murillo (1951–).

**BIBLIOGRAPHY**

Nigeria has a population of more than 190 million. It is roughly divided into an Islamic-dominated north and a Christian-dominated south. It has more than 200 ethnic groups, but the most prominent ones are the Yoruba, Hausa-Fulani, and Igbo. The Nigerian LGBT community cuts across all these ethnic groups. Based on the reports of the journal *Psychological Science in the Public Interest* which indicate that the portion of adults reporting a history of any same-sex sexual interaction ranged from 6.9 percent to 8.8 percent, Jide Macaulay, the first “out” gay pastor from Nigeria, estimates that the Nigerian LGBT population is up to 13 million (interview with Macaulay, June 2017).

Interactions among the many ethnic and religious groups often lead to conflicts in Nigeria. These conflicts spill over to include attacks on the LGBT community through so-called jungle justice, especially when religious fanatics fuel the hate directed toward the LGBT community. Jungle justice is a type of illegal policing—an extreme, biased vigilante justice in which the perpetuators take the law into their hands and crush a perceived threat. This occurs especially with LGBT members who dare to be “out” or are suspected to be homosexuals. In February 2016 a young man, Akinnifes Olumide, was viciously attacked and almost bludgeoned on the suspicion of being gay. He later died from the injuries he sustained. The killers were neither tried nor arrested (*Simon Ateba News 2016*).
This is one of the reasons why many in the Nigerian LGBT community live underground—for fear of persecution through beatings, fines, or imprisonment, or even of outright murder. For instance, Adam Nossiter (2014a) reported that some religious officials in the northeastern Nigerian state of Bauchi said that “they want to root out, imprison and punish gays.” The people that expose homosexuals to these officials do so as a way to cleanse their community of homosexuality. According to one of the officials, Mohammed Tata, the act of homosexuality is “detestable ... this thing is an abomination” (Nossiter 2014a). His opinion on the rights of the Nigerian LGBT community echoes that of a majority of Nigerians, including Chris Okotie, a popular pastor who has advocated for legal and religious prohibitions against same-sex practices (Elakhe 2015). Although the members of Nigeria's LGBTQ community face intense hostility that includes psychological/mental abuse and physical abuse and attacks, they keep pushing for their rights and their visibility, mostly through writing, film, and activism. Their resilience is evident in their works, and this gives hope for a better future.

**Legal and Religious Prohibitions against Same-Sex Practices**
Nigeria is a federation of thirty-six states. Each state has its own criminal codes, all of which proscribe homosexual behavior, as do the federal penal codes. Four of the twelve northern states of the Nigerian federation adopted various forms of shariʿa, or Islamic law. In these states the crime of sodomy can be punished by stoning. Apart from shariʿa courts, Nigeria's legal system registers homosexuality as a crime punishable by a jail term of fourteen years. The criminalization of homosexuality derails any attempt to form policies that support the Nigerian LGBT community. Also, any form of injustice toward the LGBT community in Nigeria is perceived as legal even though Nigeria is a signatory to the African Charter on Human and Peoples' Rights (adopted in 1981), which insists that all peoples are equal. The charter also emphasizes an international legal obligation to fundamental freedoms. In some cases, homosexuals are fined or even given a death penalty in regions where shariʿa is applied as a penal code. Yet the 1999 Nigerian constitution guarantees a right to privacy, specifically in Sections 18 and 37.

Religion is of great importance to Nigerians. According to the Pew Research Center (2015), Nigeria is nearly equally divided between Christians and Muslims. Many Nigerians continue to practice local, indigenous religions alongside their professed adherence to Islam or Christianity. Generally speaking, the forms of Islam and of Christianity that are practiced in Nigeria today tend to be fundamentalist and most intolerant of homosexuality, although there are exceptions, such as the Reverend Jide Macaulay’s House of Rainbow church. Because the Nigerian Anglican Church does not want to accept homosexuals as ordained ministers, it broke away from the Canterbury and other Anglican churches. The Catholic Bishops' Conference of Nigeria encouraged the enactment of legislation to criminalize homosexuality and supported the 2014 Same Sex Marriage (Prohibition) Act. This coalition between religious institutions and state power is the major reason why gay rights are inhibited in Nigeria. This issue is well documented in Asonzeh Ukah’s 2016 essay “Sexual Bodies, Sacred Vessels: Pentecostal Discourses on Homosexuality in Nigeria.” Many homosexuals in Nigeria are subjected to the humiliation of church deliverance sessions organized in most cases by their family members. During some of these deliverances they are beaten. These atrocities are constantly perpetuated against homosexual Nigerians in the name of delivering them from the demons of homosexuality. The hostile treatment of homosexuals is not justifiable considering that Nigeria historically had and still has a variety of nongender fixed roles and practices.

Before Nigeria was colonized by the British, there were nongender binary relationships and practices, and these still exist. In the state of Kano in northern Nigeria, for example, there are a group of men called ‘yan daudu who have sex with men (Gaudio 2009). Some of these men are effeminate and do not follow strict gender norms and attitudes; they wear women’s clothing and even use female pronouns when addressing themselves. They keep male lovers and take on traditionally feminine tasks, such as cooking and selling food. Often, they enjoy lavish gifts from both their lovers and their male admirers. They live openly and are very visible in their communities (Pierce 2007).
But with the introduction of Islam and Christianity in Nigeria, homophobia has been widespread. One of the well-known cases of ʿyan daudus being punished happened in 2008. Abubakar Hamza, who was also known by his female name, “Fatima Kawaji,” was not only jailed for cross-dressing; he was also fined. There have been instances where gay men have been accused of conducting same-sex weddings and charged in court (Lui 2017). Another incident occurred at the University of Benin, where “three female university students who were alleged to have been caught engaging in lesbianism in their room were forced to perform sexual acts on themselves against their wish while they were being recorded by some men who locked them in their room” (Ilesanmi 2013, 109). Furthermore, some “outed” gay men are known to have been victims of the aforementioned jungle justice. When they are lynched, the act is widely perceived as honorable because the perpetrators are seen as honor killers. They are hailed as the agents of God who are determined to rid their society of the sins of Sodom and Gomorrah. Out of these highly homophobic dynamics, the Same Sex Marriage (Prohibition) Act was born.

**The Same Sex Marriage (Prohibition) Act**

On 30 December 2013 the National Assembly of the Federal Republic of Nigeria passed an anti–gay marriage bill, known as the Same Sex Marriage (Prohibition) Act. It was signed into law on 7 January 2014 by Goodluck Jonathan, Nigeria’s president at the time. This was done secretly and was not revealed right away. The signing became known to the public six days later. The international press tagged it the “Jail the Gays Bill.” The provisions of the law made it obvious that it was a crackdown on homosexuals and same-sex unions. The law, given that it applies to the whole country, marked a turning point for the members of Nigeria’s LGBT community: its vigorous enforcement forced hundreds to flee Nigeria and seek asylum (Patricca and Azuah 2016).

Although the Nigerian Same Sex Marriage (Prohibition) Act is called an anti–same-sex marriage law, it outlaws all types of homosexual organizations and activities. The act’s language on the prohibition of homosexual activities in particular is brief and vague: “The public show of same sex amorous relationship directly or indirectly is prohibited” (Section 4, Article 2). The lack of a definition for what constitutes a “public show of same sex amorous relationship” alarms Nigerian activists, who fear that the ambiguity indicates the intention of the government to promote a witch hunt against homosexuals rather than its stated objective of protecting traditional “natural” marriage between a man and a woman. The law is essentially an assault on the civil and human rights of all Nigerians. This law goes against all the provisions of the African Charter on Human and Peoples’ Rights, of which Nigeria is a signatory. It also contradicts Section 37 of the Constitution of Nigeria, which states: “The privacy of citizens … is hereby guaranteed and protected.” The privacy of Nigerians cannot be protected, however, if anyone can be accused of directly or indirectly making a public show of same-sex amorous relationships.
The unfortunate reality for Nigerians generally, not just homosexuals, is that anyone can be accused of being homosexual, especially when there is no rationale for determining what signifies a "public show of same sex amorous relationship." In this context when a man gives a lingering hug to his brother or a woman walks with her arms around the shoulders of her sister, they could end up in jail (Patricca and Azuah 2016). Furthermore, the members of the Nigerian LGBT community, especially gay men, are constantly under attack based on the popularity of fundamentalism within both major religions of Christians and Muslims. According to the report Nowhere to Turn: Blackmail and Extortion of LGBT People in Sub-Saharan Africa, published by the International Gay and Lesbian Human Rights Commission,

Lesbian and bisexual women must also deal with customary and religious laws that dictate and limit their behavior. In those northern states that have adopted shari‘a, both male and female homosexuality have been outlawed, with death as the maximum penalty for male homosexuality and whipping or imprisonment as the maximum penalty for female homosexuality. The strong legal, religious, and social prohibitions of homosexuality empower families, neighbors, and communities to police gender norms among homosexual men and women—and allow practices like extortion and blackmail to flourish.

Generally, extortion and blackmail is especially common in the male homosexual community. This is because homosexual men in Nigeria more publicly transgress gender norms, especially the belief that men should be dominant over submissive women. By rejecting the privilege enjoyed by heterosexual men, homosexual men represent a visible threat to patriarchal values and the sexual ideologies they support.

(THORESON AND COOK 2011, 46–47)

Because of the dire situations Nigerian homosexuals face, most of them resort to marrying the opposite sex just to escape being caught as homosexual.

When the anti–same-sex marriage law was enacted, it triggered a spate of recorded and unrecorded attacks against LGBT people around Nigeria. About a month after Jonathan signed the bill into law, some men in the Gishiri neighborhood of the capital city, Abuja, who were suspected of being homosexuals were attacked, beaten, and ejected from their homes by a mob of about fifty young men, who shouted “We are working for Jonathan!” during the attack, according to witnesses (Nossiter 2014b). Not only were no members of the mob arrested, but the mob dragged four of the victims to a police station, where the
police further beat and insulted them. Some men and women rumored to be homosexual disappeared without a trace. Hence, there were cases in which gay men were declared dead without an investigation into how or why they were killed. Such cases of assaults, attacks, and disappearances are often met with cold silence because family members of the victim would be stigmatized if they attempted to investigate.

**Education System**

The violence against homosexuals does not just affect their economic and social lives; it spills into educational institutions as well. Nigeria's inherited British form of education is the most accessible form of education in the country, existing alongside other, indigenous educational structures. In addition to Islamic schools, the non-British forms of education include skills-based training in rural areas covering such vocations as cattle herding, blacksmithing, fishing, trading, pottery making, and farming. Much of Nigeria's education system is faith based, with curricula that either shun LGBT topics altogether or demonize them. Religious leaders such as Seyoum Antonios, an Ethiopian who is funded by radical US Christian evangelists, organized religious revivals at Nigerian universities in 2013 with a focus on gay bashing. That same year, a well-respected Christian leader, Pastor Enoch Adeboye, visited campuses to condemn homosexuality. As Kehinde Okanlawon, a sexual and health rights activist, noted in his 2017 essay “Homophobic Bullying in Nigerian Schools,” these developments are further encouraged by American evangelists who fund so-called crusades to promote antigay sentiments. Consequently, religious creeds are entrenched in Nigerian schools, and the enrolled students are constrained to adopt hostile and discriminatory beliefs about LGBT persons. In a number of cases LGBT persons have been assaulted in their schools. These attacks have rarely been given any attention in the media. As Okanlawon (2017) further observes, there is an absence of research on homophobic intimidation in Nigerian schools, especially in Nigerian universities, where policy changes and interventions are urgently needed to make schools secure for LGBT persons, who have the equal right to be protected as citizens of Nigeria. For the many LGBT persons who are not physically attacked or killed outright, they still must face other harsh realities, including unemployment and economic hardship.

**Employment and Economics**

Nigeria’s economy is dependent on exports of petroleum. Because of corruption, mismanagement, and falling crude oil prices, Nigeria has experienced staggering unemployment rates. Over 70 percent of the population is categorized as poor. According to a 2012 report by the African Development Bank and three other international agencies, the unemployment rate among young people in Nigeria aged fifteen to twenty-four was 38 percent in 2011. LGBT people in Nigeria are disproportionately affected by Nigeria’s poor economy because of bias against them. Those who are found to be homosexuals are
instantly fired. In some cases, homosexuals have been reported to the police for legal prosecution. As a result, they resort to concealing their sexual orientation and claim heterosexuality just to maintain their employment status. Furthermore, they are alienated from government programs, and no social activities are created with the Nigerian LGBT individual in mind.

Social/Government Programs

Disregarding the needs of the LGBT community, the Nigerian government has neither any social nor health programs for that community. This finding was documented in the Bisi Alimi Foundation’s 2017 report titled “Not Dancing to Their Music.” Nevertheless, the National Agency for the Control of AIDS recognizes the term and categorization MSM (men who have sex with men). Hence, that agency does support the need for health interventions in the LGBT community even while the national legal provisions of the same-sex marriage act refuse to recognize the legitimacy of that community. Additionally, some pro-LGBT nongovernmental organizations work discreetly to assist with advocacy, as well as with health and social events; among these organizations are Queer Alliance Nigeria, the Initiative for Equal Rights, the International Centre for Sexual Reproductive Rights, and the Women’s Health and Equal Rights Initiative. As an example of the activities of these groups, Queer Alliance Nigeria has been involved in, among other things, fighting for LGBT rights, providing health assistance/awareness, and offering safe spaces for LGBT individuals who have been rendered homeless because of their sexual orientation (Queer African Youth Network 2017).

LGBTQ Activism in Nigeria

Although there are many legal and cultural impediments to the acceptance of Nigeria’s LGBTQ community, there are reasons to hope that change can occur. While the 2007 Pew Global Attitudes Project revealed that 97 percent of Nigerians do not accept homosexuality (Pew Research Center 2007), a Bisi Alimi Foundation survey, published in 2017, found that that number had fallen to 87 percent by 2015. In spite of the challenges the members of the Nigerian LGBT community face, they continue to fight for their rights and find creative ways to counter the hate and stereotypes about them.

One way they fight back, for example, is through writing. A Nigerian online magazine, Nigerians Talk, released its first-ever gay edition as a response to the anti–same-sex marriage act. The gay-themed edition was unveiled in February, a few weeks after the Nigerian president signed the act into law. The editor and publisher of the e-zine said this about the antigay law: “If the anti-gay legislation around the continent does achieve something, I hope it is a chance to now talk more openly about those among us that—being different only in sexual orientation—live and love just like us, and do us no harm” (Tubosun 2014). Among the gay-themed narratives that were included in the edition were
Jude Dibia’s “Witness,” Elnathan John’s “Barna and I,” Ayodele Morocco-Clarke’s “What Matters Is the Way We Are,” and Unoma Azuah’s “Whip.” Following in the same tradition of LGBT literary visibility as a tool for fighting homophobia in Nigeria, Azuah edited a 2016 book titled *Blessed Body: The Secret Lives of Lesbian, Gay, Bisexual, and Transgender Nigerians* that counters the stereotypical narratives surrounding LGBT lives in Nigeria and in the diaspora. There are also more recent releases, such as the online LGBT-themed magazine *14: We Are Flowers*, which was launched in early 2017, and Nnanna Ikpo’s novel *Fimí Síîê Forever: Heaven Gave It to Me*, released in April 2017.

In the arena of human rights activism, pro-LGBT nongovernmental organizations such as Queer Alliance Nigeria and the Initiative for Equal Rights have recorded successes in intervening on behalf of and defending some members of the Nigerian LGBT community who were either attacked physically or kidnapped by providing counseling, as well as legal and financial assistance. The Initiative for Equal Rights is also involved in visual activism, particularly with their production of films, such as *Veil of Silence* (2014) and *Hell or High Water* (2016). In the religious arena, pioneer gay Nigerian Christian pastors such as Jide Macaulay continue to make their mark in the Christian ministry of gay rights advocacy. Macaulay started the House of Rainbow church in Nigeria in 2006, and many Nigerian LGBT individuals embraced the church because it recognized and catered to them as beloved of God. Although he was eventually forced to flee Nigeria, the church Macaulay founded continues to flourish in Nigeria and in several African countries, including Botswana, Burundi, Ghana, Lesotho, Liberia, Malawi, Nigeria, South Africa, Tanzania, Uganda, and Zambia. Branches of the church have also opened in two European countries: Sweden and the United Kingdom. These various activist endeavors have given the Nigerian LGBT community hope for a future society that would not only recognize it but also give it space to grow and celebrate the strength and beauty of its diversity.

Nkoli, Simon (1957–1998)

Z’ÉTOILE IMMA
Assistant Professor, English and Africana Studies
Tulane University, New Orleans, LA

Prominent South African anti-apartheid, gay rights, and AIDS activist.

Simon Tseko Nkoli fought for justice and democracy in South Africa from across many movements during his lifetime. As a founding member of the Gay and Lesbian Organisation of the Witwatersrand (GLOW), the Township AIDS Project, the Positive African Men’s Project, and the National Coalition for Gay and Lesbian Equality, Nkoli not only served to bridge the anti-apartheid movement and the gay rights movement within South Africa and internationally, but through his leadership and courageous organizing he shaped an agenda for an intersectional gay and lesbian Global South–centered human rights that still reverberates today.

Born in Soweto, Nkoli was raised by his grandparents on a white-owned farm in Orange Free State until age eleven, when he joined his parents who were living as illegal squatters in Bophelong Township. Growing up in the segregated rural areas and later in a working-class township community exposed Nkoli early on to racist violence and systemic impoverishment. Formative experiences of discrimination and marginalization led him to participate as a student in the anti-apartheid movement. Along with thousands of South African youth, he was detained for several months for his involvement in the student demonstrations of 1976. Between 1976 and 1980, Nkoli was detained for months at a time for “suspected terrorism,” and in 1981 he was held for seven months as a potential state witness in the trial of other activists. Under the apartheid regime, activists were often detained under the guise of serving as “potential state witnesses,” which allowed the state to terrorize activists and undermine trust within communities and organizations.

Although his pursuit of higher education was interrupted by the consistent repression he faced, and despite being assaulted and tortured in prison, Nkoli remained committed to anti-apartheid activism and civil disobedience. He cofounded the United Democratic Front–affiliated Vaal Civic Association, and by 1981 Nkoli served as Transvaal regional general secretary for the Congress of South African Students (COSAS). Although he was largely respected in the movement, his position within COSAS was threatened when several members of the local executive committee demanded his expulsion from the organization because of his homosexuality. Nkoli had come out as gay to his family years earlier and had openly discussed his sexual identity with friends. By a slim but vocal margin, COSAS
members voted to keep Nkoli in his position as secretary. Seeking support and camaraderie, Nkoli joined the Gay Association of South Africa (GASA) in 1983. Faced with the overwhelming whiteness of GASA, Nkoli formed the Saturday Group to recruit black members and encourage multiracial socializing and coalition building within the organization.

Nkoli’s work as coordinator of GASA’s Saturday Group was short lived. In September 1984 his leadership in organizing a rent boycott campaign in the Vaal townships led to his arrest. Known as the Vaal uprising, a series of marches across the area’s townships attracted a brutal response from the police, who killed more than forty protesters over the course of five days and arrested hundreds. As violence erupted, three local officials were killed, including a deputy mayor. In response to the upheaval, the apartheid state charged Nkoli and twentyone other activists with murder and treason in what became popularly known as the Delmas Treason Trial.

Nkoli was detained from 1984 to 1988. In prison, when Nkoli came out as gay to his codefendants, some responded with shock and calls to drop Nkoli from the collective defense strategy. Additionally, the leadership of the largely apolitical GASA refused to offer public support for Nkoli, citing that he was arrested for activities unrelated to gay rights. Socially isolated and incarcerated, Nkoli fell into a deep depression and was hospitalized in the prison psychiatric ward for three months. It was while in prison that Nkoli was diagnosed as HIV positive. In support of their client, Delmas lawyers reached out to an international set of gay and lesbian rights organizations and anti-apartheid task forces for letters in support of Nkoli’s immediate release. As letters of solidarity with Nkoli poured in from Europe, Canada, and the United States, his codefendants were persuaded that Nkoli’s sexual identity would not be used to discredit the defense, and Nkoli rejoined the general prison populace in better spirits.

Nkoli and ten other defendants were acquitted of all charges in 1988. Settling in Johannesburg, he made a call for activists to join him in creating an anti-racist gay and lesbian rights organization; the result was the founding of GLOW. Now a kind of activist celebrity, Nkoli visited cities such as Vienna, London, Amsterdam, Atlanta, Toronto, New York, and San Francisco to address progressive communities and mobilize support for democracy in South Africa, as well as to fund-raise for grassroots projects serving South Africa’s black and HIV-positive communities. In 1990 Nkoli cofounded the Township AIDS Project and worked for many years as an AIDS educator and counselor. With a cadre of activists from GLOW, including Bev Ditsie (1971–), Nkoli would organize the first gay and lesbian pride march on the African continent in 1990.

As South Africa began its slow transition from apartheid regime to democracy, Nkoli was one of the first to openly discuss his HIV-positive status and was an early agitator for awareness, compassion, and health care for the HIV positive as a form of social justice. He
was also at the center of a group of activists who lobbied the recently released Nelson Mandela (1918–2013) and the African National Congress for public recognition of, and full citizenship for, gays and lesbians in the new South Africa. As a result of his work as a leader within the National Coalition for Gay and Lesbian Equality, the Constitution of South Africa (codified in 1996) protects its citizens against discrimination based on sexual orientation.

Nkoli was awarded many honors, including the Stonewall Equality Award and Lidell Jackson Award, as well as the proclamation of Simon Nkoli Day in several major cities in the United States. A lover of athletics, he delighted in his role as the official opener of the Gay Games in New York City in 1994. He wrote several autobiographical essays, commanded countless interviews, and used print media and documentary film to advocate for Africa's black LGBT populations. Nkoli was mourned globally and received a state funeral in Johannesburg upon his death from HIV-related illness in November 1998. His friendship with fellow GLOW activist Ditsie is recounted in the 2002 film Simon and I, which was codirected by Ditsie and Nicky Newman. In 2017 Stellenbosch University renamed the building that houses the campus equality and disability units Huis Simon Nkoli House.

FILMOGRAPHY
The Arabo-Islamic world entertained matters related to sexual behavior in a number of discursive ways. In Islamic jurisprudence, sexual behaviors were categorized as licit or illicit, and jurists busied themselves with specifying punishments for the illicit and protocols for the licit. During the Islamic golden age, typically understood to have been between the ninth and thirteenth centuries in Iraq and between the ninth and fifteenth centuries on the Iberian Peninsula, there emerged an alternative discursive category in which sexual desires, behaviors, and cultures were examined, pondered, and chronicled. This body of literature is difficult to define. Sometimes it was manifested in medical or natural science treatises on sexual function and dysfunction; elsewhere, it was found in collections of popular anecdotes, poems, and songs; and at other times, sexual mores became apparent in the extremely complex, orally transmitted folktales of uncertain origin, such as the stories eventually Arabized and collected in written form in *A Thousand and One Nights* and other similarly dynastic sagas such as *Sirat al-Amira That al-Himma* (The story of Princess That al-Himma).

Scholars can ascertain from scanty sources that there were dozens of erotological manuscripts in existence in the Arabo-Islamic empire of the golden age, although only a handful have survived (Franke 2012). Among this handful is *Nuzhat al-albāb fīmā lā yujad fī kitāb* (The Delight of Hearts; or, What You Will Not Find in Any Book [1988]). *Nuzhat’s* author, Aḥmad ibn Yūsuf al-Tifāshī, was born in the Tunisian town of Tifāsh in 1184 CE and died circa 1253 CE. In the book, he indicates that he collected the material found therein during his travels throughout the Arab world, which spanned centers of culture and power including Cairo, where he acted as a judge, Damascus, where he studied under the famed Tāj al-Dīn al-Kindī, and Baghdad. He also traveled to Armenia and Morocco and throughout his own country of birth, Tunisia, at the beginning of his career (Habib 2007).

Tifāshī’s book is an extraordinary compilation in its far-reaching scope, its collection of material, and its substantiation of acquired narratives, sometimes through the implementation of a chain of transmission not dissimilar from those used in hadith (the
sayings of the prophet Muhammad) collections. These features set his work apart from mujūn literature (a form that depicts otherwise unacceptable behaviors and expressions in a lighthearted yet brazen way). In Tifāshī’s earlier book, Azhār al-afkār fī jawāhir al-aḥjār (c. 1211; Best thoughts on the best of stones), he comprehensively classified gemstones; in the twelve chapters of Nuzhat al-albāb, he similarly classifies various types of known sexual behaviors. These chapters include some rather surprising categories. Chapter 1, for example, catalogs the erotic act of safʿ, slapping or hitting, without directly linking it to sexual activity, but raising the specter of the sadomasochistic relationship dynamic. A number of chapters are dedicated to describing prostitution (both male and female) and zina (nonmarital sex). Chapter 6 is about sodomizers of young men and boys, al-lāta, who are defined as plying younger men with money, alcohol, and other rewards. Chapter 7 mostly relates stories about Abū Nuwās, the famous Abbasid poet of ninth-century Baghdad, and his exploits with young men as well as ghulām (male slaves). Chapter 8 shares more stories about al-lāta, again mostly in reference to Abū Nuwās. Chapter 9 refers to the practice of dab, which is the opportunistic rape of a sleeping man by another man. Chapter 10 is about anal sex with women, which was often understood to be a minor form of liwāt, or male sodomy (al-liwāt al-asghar); it is traditionally forbidden in Sunni Islam. In Chapter 11, the reader is treated to an extremely rare compilation of stories, poems, and observations related to sexual relations between women (suhaq). The final chapter on al-khunāth and the mukhannathin is another equally rare compilation about effeminate and gender-ambiguous persons commonly seen as men. The order of these chapters reflects a “descending hierarchy with the more important subjects coming first” (Malti-Douglas 2001, 126).

To date, there is no reliable and comprehensive translation of Tifāshī’s extraordinary feat of erotology. The chapters concerned with male homoeroticism were translated into French and published under the title Les Délices des coeurs (Khawam 1981), and an English translation of the French version was published by Gay Sunshine Press as The Delight of Hearts (Tifāshī 1988). Samar Habib translated into English the chapter concerned with female homoeroticism (Habib 2009).

Female Homosexuality

Tifāshī’s chapter of same-sex sexual activity between women is by far the medieval Arabo-Islamic world’s most illuminating literary artifact on the subject. There is no other surviving text quite like it, in that it appears to be free from moral rebuke. (This tone changes, albeit slightly, when Tifāshī deals with male homoeroticism.) Indeed, there is a hint of admiration in Tifāshī’s observations on the musaḥiqāt (grinders), with the not insignificant exception of his opening sentence, which refers to the phenomenon of suhaq as an ailment (daʾ). Suhaq, Tifāshī explains, is a term that refers to the grinding of saffron, and the women who practice it are described in lurid detail as grinding their genitals.
against each other or, at the very least, grinding their clitorises to climax. There is no description of penetrative sex of any kind among Tifāshī’s grinders, as though penetrative sex without penises was unheard of.

The first part of the entry on grinding is concerned with collating scholarly opinions on the causes and origins of the behavior. One of the possible causes that Tifāshī discusses is that a woman’s vaginal dimensions may be ill-suited to her male lover’s genitalia: “Just as the male’s member varies in length and shortness, so it is with the woman’s womb [vagina]. So if the dimensions of the woman’s womb were suited to that of the penis, then she would like him, and if it was not suited to her then she would hate him … and prefer grinding” (Habib 2009, 89). Or, Tifāshī reports, the cause of discomfort may be a condition the woman acquired as an infant from her wet nurse’s excessive consumption of watercress, celery, and clover, which results in a chronic itchiness that leads women to grinding in an effort to alleviate their symptoms. Or, it may be that a woman is habituated to grinding with other women from childhood, particularly in situations of concubinage where she had little choice in the matter, Tifāshī reasons. This is his only mention of the use of slave girls by their female owners for such purposes, and it contrasts sharply with the numerous anecdotes about ghulām in chapters about male homoeroticism. Tifāshī also, and surprisingly, indicates that “some wise men” saw grinding as “a natural appetite” resulting from an “inverted boil,” which is capable of producing a kind of vaginal water that has a cooling effect and that relieves a grinder’s “itchiness”; this seems to be a description of the process of producing female ejaculation. Following this contemplation of the origins of grinding, the author launches into relating his own observations and the stories told to him by others. The remainder of the chapter is divided into two subsections that collate poems and anecdotes that alternately praise grinding and censure it.

**Al-Khunāth and Mukhannathin**

There are eight subsections in what is one of the most substantial chapters on al-khunāth and the mukhannathin in premodern Arabic literature. During Tifāshī’s time (and still today), individuals identified socially as male, effeminate, and seeking to be sodomized by men were referred to as al-ma’bun, synonymous with mukhannath. A mukhannath is always depicted as penetrated by a man (rajul), who is not given a homosexual indicator here, although in jurisprudence he is considered a lūtī (sodomite), and is placed on equal footing with al-ma’bun/mukhannath with respect to punishment under the law. Culturally, however, a man may penetrate a ma’bun without losing his place in the hierarchy of normalcy; he may be resorting to this act because he has no access to women, for example. If, however, a man is habitually seeking out men to sodomize, without recourse to women, he may be identified as a lūtī (plural: lūtiyīn or lāta). Tifāshī dedicates two chapters to the lāta (plural form of lūtī), discussed below.

The term mukhannath was used as early as the seventh century in the Arabian Peninsula.
By contrast, *al-khunāth*, a term designating intersex persons, does not appear as a separate category of inquiry in Arabic literature and jurisprudential compilations until *Musanaf Abd al Razk* in the earliest years of the ninth century. Tifāshī discusses male effeminacy, female masculinity, and biological intersexuality in the subsection on the khunāth, suggesting that these sexual- and gender-atypical phenomena exist along the same continuum of masculinity and femininity as aberrations. Tifāshī catalogs individuals known to have been born with both sets of genitalia; a deceased man who, upon autopsy, was found to possess a womb; a woman who, after bearing children, developed a penis; masculine women who menstruated infrequently or not at all; and women with mustaches, and even one Kurdish woman with an extensive beard (*Tifāshī 1992*). Tifāshī also relates a biological theory proposed by the scholar Abu Bakr al-Rāzī that fetuses acquire their characteristics (masculine or feminine) based on the quality of the egg and sperm (*manīī*) of their progenitors. When the sperm (*manīī al-rajul*) dominates, Razī reasons, the fetus is born male, and a masculine one at that. When the ovum is more dominant (*manīī al-marʾa*) the fetus is female, and also feminine. Sometimes, however, the sperm or the ovum may be compromised in some way, producing children who are neither masculine nor feminine. This results in the birth of females that are not very feminine, he says (*Tifāshī 1992*).

There are no stories about al-khunāth or poems written about or by them; they are mentioned in passing, much like the masculine women that Tifāshī calls *muthakarāt*. By contrast, there are many stories and anecdotes about mukhannathin that give us vivid pictures of social relations. These stories reveal consensual pleasure, hypersexuality, and humor, but some also carry the weight of incidents that are not commensurate with pleasure, such as a gang rape, which is narrated to facilitate a punch line spoken by a mukhannath (*Tifāshī 1992, 288*); the acquisition and coercion of a male slave (285–286); sex with a young ghulām whose body is not ready for the act (284); and stories of lashings, banishings, and insults that appear to be intended to make the reader laugh.

Of the anecdotes about mukhannathin, there are some that may seem remarkable to us in our contemporary contemplation of premodern sexualities. For example, there is a brief anecdote about a mukhannath who seeks to be penetrated only by another mukhannath. This exceptional reference to mukhannathin exchanging active positions indicates that reciprocal sex was known to men of the time, even if it was largely ignored because it did not fit neatly into the maʾbun/lūtī dichotomy. When the mukhannath was asked why he sought to be penetrated by another like him, he replied that only they know exactly where the seat of pleasure is, while other men penetrate haphazardly (*Tifāshī 1992*).

**Al-Lāta**

There are two chapters, 6 and 8, that discuss al-lāta (the singular form of the term, *lūtī*, is derived from the Qur’anic story of the prophet Lūt, corresponding to the figure of Lot from the Hebrew scriptures). From the outset, these men are depicted as manipulating boys and
young men into having sex with them. The opening description in chapter 6 leaves the unmistakable impression that to be such a man requires status and access to wealth. “The first rule of al-lāta,” writes Tifāshī,

is to have a nice, unoccupied house whose key is in his hands. It must also have a bathing facility and birdcages withaudible, singing birds in them. And there must be a chess board. And there must be portfolios filled with poems and stories about amorous love and illustrated books depicting myths, and stories about great leaders and noblemen. There must be an endless supply of alcoholic brews, for these are his greatest assistants. And he must be in possession of dirhams [money], ready to be used.  

(TIFĀSHĪ 1992, 141; TRANSLATION BY SAMAR HABIB)

The remainder of chapter 6 relates a story originally told by al-Jāḥiẓ in which an elderly man who was once the leader of a gang of thieves takes an adolescent male lover in prison. When the pair are taken to be whipped together before their release, the ghulām makes no sound throughout his 100 lashes, impressing those present. Meanwhile, the pain is evident on the elderly man’s face at every lash that falls on his lover. When the jailers are done with punishing the ghulām they decide not to whip the elderly man because it is unlikely he could endure even five lashes—they had misunderstood his reaction as fear of being whipped. The elderly man protests and declares that he can take as many as 500 lashes. So they do punish him with 500 lashes, per his request, and to their surprise, he withstands their assaults to the very end, without so much as cowering. This prompts a man sitting with the governor to say, “Is this the man you blamed the ghulām for allowing him to sodomize him? If he wanted to sodomize me, I wouldn’t stop him” (Tifāshī 1992, 143; translation by Samar Habib). What is remarkable about this story is not this punch line but the rare description of a male same-sex relationship that implies emotional attachment and even love. In medieval erotological literature there are almost never depictions of male same-sex sexual acts as anything other than sex with no emotional involvement (which is not the case for homoeroticism between women).

Chapter 8 collates some of Abū Nuwās’s most famous poems in which he extols the pleasures of sex with men over and beyond sex with women. This is perhaps Tifāshī’s least innovative chapter, in that he reiterates sources that remained in circulation due to Abū Nuwās’s popularity and the survival of his poetry and anecdotes about him in books from the Abbasid era. In one anecdote, a companion of Abū Nuwās named al-Jumāz hears him say, “I desire [ashtahi] something found neither on earth nor in paradise.” Al-Jumāz, shocked by the sacrilegious idea that paradise might not contain something desired by one
of its inhabitants, asks him to clarify, and Abū Nuwās replies, “I desire a ghulām who is permitted religiously [ghulāmun halal].” Abū Nuwās is often depicted not only as bisexual but also as an irreverent atheist, which makes his pronouncement rather remarkable. Predictably, al-Jumāz responds, “You will never be saved” (Tīfāshī 1992, 173; translation by Samar Habib).

BIBLIOGRAPHY

"An Act to consolidate and amend the Statute Law of England and Ireland relating to Offences against the Person" (24 & 25 Vict., c. 100) is of particular interest to LGBTQ+ history because of its provisions against "unnatural offences" (Sections 61–63). The legislative history of these crimes can be traced back to the Protestant Reformation and Henry VIII’s (r. 1509–1547) break with the Roman Catholic Church. In 1533, in order to introduce a secular rule for a matter formerly dealt with by the church, the English parliament legislated “An Acte for the punysshement of the vice of Buggerie” (25 Hen. 8, c. 6), which judged “the detestable & abominable vice of buggeri committed with mankind or beest” a felony punishable by death. Buggery of a man, a woman, or an animal was equally felonious. The brief Counter-Reformation of Mary I (r. 1553–1558) abolished the new statute and revived the jurisdiction of the ecclesiastical courts, but Henry VIII’s law was reintroduced and made permanent in 1562 under Elizabeth I (r. 1558–1603) as “An Act for the punishement of the Vyce of Sodomye” (5 Eliz. 1, c. 17).

Variations on the buggery or sodomy law then remained on the statute books for the next four centuries. Executions for sodomy came to an end in continental Europe by the end of the eighteenth century, and the French revolutionaries and the 1810 Napoleonic penal code dropped sodomy as a crime. But there was no such relaxation in Britain; in fact, the height of the executions for sodomy came in the first third of the nineteenth century, when more than fifty men were hanged (Weeks 2018). The “abominable,” “nameless,” “unspeakable,” “infamous” nature of the crime/vice/offense, which became a staple of discourse (or silence) about sodomy, ensured that discussion in legal texts and in Parliament would be minimal and couched in veiled terms. The only English legal theorist who wrote in favor of decriminalization was Jeremy Bentham (1748–1832) in a 1785 essay titled Paederasty, but he did not dare publish it. (It was not, in fact, published until 1978.)

Peel's Acts

Thus, when the Buggery Act was repealed and replaced in 1828 by Section 15 of the Offences Against the Person Act (9 Geo. 4, c. 31), there was no diminution of the hostility to
sodomy. Section 15’s language was remarkably similar to that in the Henrician statute: “And be it enacted, That every Person convicted of the abominable Crime of Buggery, committed either with Mankind or with any Animal, shall suffer Death as a Felon.”

Moreover, Section 18 of the act attempted to increase the conviction rate by stipulating that, in cases of buggery (as well as of rape and of sex with girls under the age of ten), only penetration and not ejaculation needed to be proved.

The 1828 legislation was one of eight omnibus statutes instigated by the Tory home secretary Robert Peel (1788–1850) to consolidate the criminal law. Peel’s Acts, as they were known, replaced 278 individual statutes. Peel’s purpose was to restore the credibility of the criminal justice system, long under attack from radicals and reformers because of its lack of certainty and order. The laws had piled up into a chaotic mess of overlapping accretions. In addition, there were more than 200 capital crimes on the books, which meant that—to avoid an orgy of bloodletting that would have undermined the public rituals of terror and demency by which the “bloody code” operated—95 percent of the condemned had to be pardoned by the late 1820s, and whether a felon lived or died seemed arbitrary. Therefore, Peel’s intention was to synthesize and simplify the criminal laws, increase the likelihood of conviction in the interests of social order, and restore the deterrence of the death penalty by weeding out obsolete and overly vindictive capital offenses.

Whig Reforms

It was the Whig administrations of the 1830s, and especially the home secretary John Russell (1792–1878), who whittled away at the death penalty still further in a successful bid to reduce the toll of executions. In 1833 the Whigs initiated the Royal Commission on the Criminal Law, and in its Second Report in 1836, it recommended the abolition of a number of capital offenses. But sodomy was still too toxic a subject. The report stated, in reflexively coded language, “A nameless offence of great enormity we, at present, exclude from consideration” (Second Report from His Majesty’s Commissioners on Criminal Law, 9 June 1836, 2). But the trend away from executions for all but the most violent of crimes was clear. Two Londoners, James Pratt and John Smith, were, in 1835, the last men to be hanged for sodomy. Russell thought opinion had shifted sufficiently for him to attempt, in 1841, to abolish the death penalty for rape, sex with underage girls, and unnatural offenses. He succeeded with the first two but, while the Commons voted in favor, he was stymied on the third in the House of Lords. The Earl of Winchilsea “implored their Lordships not to withdraw the penalty of death from a crime so utterly abhorrent to the feelings of human nature,” and their lordships concurred (Hansard’s Parliamentary Debates, Lords, 3rd ser., vol. 58 [1841], col. 1568).

The 1833 commission was the first of six commissions that produced multiple reports over the next three decades with the aim of codifying or consolidating the criminal law—or, if that were too ambitious, just the statute law alone: “to simplify it, to amend it, to bring it
within the smallest possible compass” (Lord Stanley, *Hansard’s Parliamentary Debates*, Commons, 3rd ser., vol. 140 [1856], col. 739). The first fruits of this labor, after numerous false starts in Parliament, were the seven Criminal Law Consolidation Statutes (chapters 94–100) of 1861: the Accessories and Abettors, Criminal Statutes Repeal, Larceny, Malicious Damage, Forgery, Coinage Offences, and Offences Against the Person Acts.

The Criminal Law Consolidation Statutes were, essentially, new editions of “Peel’s Acts,” updated to include subsequent legislation, with minor amendments to iron out anomalies and enhance clarity. But there were two key differences. The first was that they assimilated Irish laws, providing uniformity in all parts of the United Kingdom except Scotland. The second was that most of the remaining death sentences were abolished; only murder, high treason, piracy, and arson in a royal dockyard now merited hanging.

The Offences Against the Person Act consolidated all English and Irish statute law pertaining to interpersonal violence—stretching from murder to assault to rape to abortion—into a single act. Section 61 restated Section 15 of the 1828 act (and Section 18 of the comparable Offences Against the Person [Ireland] Act [1829], 10 Geo. 4, c. 34) but with a reduced punishment: “Whosoever shall be convicted of the abominable Crime of Buggery, committed either with Mankind or with any Animal, shall be liable, at the Discretion of the Court, to be kept in Penal Servitude for Life or for any Term not less than Ten Years.” Section 62 had no direct equivalent in the 1828 act. It stated, “Whosoever shall attempt to commit the said abominable Crime, or shall be guilty of an Assault with intent to commit the same, or of any indecent Assault upon any Male Person, shall be guilty of a Misdemeanor”; the penalty was three to ten years’ penal servitude or up to two years’ imprisonment, with or without hard labor. Previously, “attempted sodomy” (which meant any sexual activity between men short of penetration) was covered either by common law, by the “assault, with intent to commit a felony” clause (Section 25) of the 1828 act, or by Section 9 of the Larceny Act (1827), which defined sodomy, attempted sodomy, and solicitation to sodomy as “infamous Crimes.” Section 63 (like Section 18 of the 1828 act and Section 21 of the 1829 Irish act) stipulated that ejaculation was not essential to secure a conviction: “it shall not be necessary to prove the actual Emission of Seed in order to constitute a carnal Knowledge, but the carnal Knowledge shall be deemed complete upon Proof of Penetration only.”

**Buggery Laws in the British Empire**

In a bid to Christianize colonial subjects by ridding them of their “perversions”—and to protect the colonizers themselves from the temptations of “Oriental vices”—the British exported their buggery laws to the empire. In colonial America, the southern colonies (in contrast to a distinctive Puritan code in the north) had either applied the 1533 act or, in the case of the lawmakers of South Carolina, written its terms verbatim into their own laws. Some of the later exports, including to Canada, the Caribbean, and New Zealand, were also
practically copies of the wording in the 1533, 1562, 1828, or 1861 acts. Others were variations on a familiar theme. The most influential was Section 377 of the Indian Penal Code (1860), which was largely the work of the first Indian Law Commission, chaired by Thomas Babington Macaulay (1800–1859). It criminalized “Whoever voluntarily has carnal intercourse against the order of nature with any man, woman or animal,” and it specified that “carnal intercourse” meant penetrative sex. The Indian Penal Code then became the template for the spread of antisodomy legislation to colonies such as Singapore, Malaysia, and Brunei (through the Straits Settlement Law [1871]) and to various African colonies at the turn of the century. Only Sudan, uniquely in the British Empire, allowed consent in certain circumstances as a defense.

The second most influential medium for the spread of the buggery laws was Section 208 of the Queensland Penal Code (1901), which was the work of a chief justice of Queensland, Samuel Walker Griffith (1845–1920). This was couched more broadly, targeting not only any person who had carnal knowledge of a person or an animal, but also any person who “permits a male person to have carnal knowledge of him or her against the order of nature.” This made it quite clear that the passive partner was just as guilty as the active one, that women were not exempt, and that the law was not limited to penetrative intercourse. The Queensland code was widely adopted across parts of Australia, the Pacific, and Africa. The Criminal Code Orders in Council adopted in Cyprus in 1928 and in Mandate Palestine in 1936 were also based on the Queensland code, but stipulated different penalties for male rape and consensual male sex.

Repeal and Retention

Back in Britain, by the end of the nineteenth century the Westminster parliament had added to the provisions of the 1861 act two additional offenses to ensnare men committing homosexual acts. The first was Section 11 (the Labouchère Amendment) of the Criminal Law Amendment Act of 1885. This criminalized “gross indecency,” but in many ways it simply supplemented the prosecution of nonpenetrative offenses hitherto covered by “attempted sodomy.” The second was Section 1 of the Vagrancy Act of 1898, which zeroed in on a male who “persistently solicits or importunes for immoral purposes.” Apart from sentencing adjustments, these three statutes remained fully in force until they were superseded by the Sexual Offences Act of 1956, which consolidated and amended much of the country’s sex-crime legislation while restating the anti-homosexual laws in simpler language.

But it was also in the 1950s that the first serious attempt was made to decriminalize homosexual acts. The Conservative government of Winston Churchill (1874–1965), alarmed at the rise in cases known to the police of buggery, gross indecency, and indecent assault—from 622 in 1931 to 6,644 in 1955—established the Wolfenden Committee to investigate the state of the law (Home Office and Scottish Home Department 1957,
The Wolfenden Report of 1957 recommended that consensual sex in private between two men over the age of twenty-one no longer be a criminal offense. It then took a decade of political maneuvering before this change was embodied in the Sexual Offences Act of 1967, which applied to England and Wales.

Elsewhere in the British Isles, it took longer for decriminalization: Scotland (operating under partially different laws) in 1980; Northern Ireland in 1982 (after a European Court of Human Rights verdict in *Dudgeon v. United Kingdom* [1981], which ruled that the government had failed to protect Jeff Dudgeon’s right to a private life under Article 8 of the European Convention on Human Rights); and the Republic of Ireland in 1993 (after a similar court ruling in *Norris v. Ireland* [1988]). The anomaly of leaving the law against heterosexual buggery intact (the 1967 act focused on men only) was corrected in 1994. The final public and political repudiation of the buggery laws came in 2017, when the UK parliament granted posthumous pardons to all those convicted of buggery and gross indecency with consenting adults over age sixteen in private since 1533. (Those who are living still need to apply under the “disregard rule” to the Home Office to ask for their past convictions to be expunged from criminal records.)

The story across the former empire was more mixed. Most of the colonies had achieved their independence before the Sexual Offences Act of 1967, so it was up to the new nations to make their own choices. Some, such as Canada (1969), New Zealand (1986), Australia (state by state, 1975–1997), and Hong Kong (1991), decriminalized homosexual acts through the legislative process. Others needed more prompting from their own higher courts: for example, South Africa in 1998, Fiji in 2005, and India in 2018. Cyprus was forced to act in 1998 because of another European Court of Human Rights ruling (*Modinos v. Cyprus* [1993]). Turkish Cypriot deputies voted to decriminalize in 2014, removing Northern Cyprus’s status as the only remaining territory in Europe to maintain a ban on homosexual sex. Yet others—in the Caribbean, Africa, and parts of Asia—steadfastly upheld the laws as, in an ironic reversal, vital to the protection of their “cultural values” against “Western corruption.” And Sudan introduced a new shari’a-inspired penal code in 1991 that removed the defense of consent in buggery cases.

**Operation Spanner**

If the buggery laws still live on in some of the former colonies, different clauses of the 1861 act have unexpectedly played a role in more recent LGBTQ+ debates in Britain. During a raid in 1987, the Greater Manchester Police came across some videotapes of men having sadomasochistic sex. The subsequent investigation, dubbed “Operation Spanner,” overseen by the London Metropolitan Police, produced evidence of the involvement of nearly fifty men in various locations across the country over the course of a decade. The tapes graphically depicted a variety of practices, including the nailing of scrotums and foreskins to boards, the dripping of hot wax into urethras, the sandpapering of testicles, the slitting of
genitalia with scalpels, branding with hot metal, the insertion of wires, fishhooks, and safety pins into penises, and scourging with stinging nettles and cat-o’-nine-tails.

Sixteen of the men were tried at the Old Bailey, London, in 1990. Charging them under the Sexual Offences Act of 1967 was not an option—even though group gay sex contravened its provisions and one of the men was under twenty-one when he first became involved—because the act stipulated that trials should begin within a year of the offense. Four of the men were therefore convicted for keeping or aiding and abetting the keeping of a disorderly house; and, thanks to an absence of other viable options, all sixteen were charged with violations of Sections 20 and/or 47 of the 1861 act. Section 47 proscribed “any assault occasioning actual bodily harm,” while Section 20 specified a greater degree of damage: “unlawfully and maliciously wound[ing] or inflict[ing] any grievous bodily harm.” The only precedent for the deployment of these clauses against sexual practices was Rex v. Donovan (1934), the case of a man tried for the consensual caning of a seventeen-year-old female; he was found guilty but cleared on appeal. In the Spanner case, all sixteen men were found guilty. Sentences ranged from fines to prison terms of four years and six months.

The Limits to Consent

The authorities in the Spanner case readily conceded that the activities were consensual and in private, that they involved no payment, and that the videotapes were for group consumption only and not for wider circulation (the simple possession of pornography not being a prosecutable offense). The question of consent was the lynchpin of the men’s defense. As one of the defendants, Anthony Brown, put it, “My sexuality is my own private business.... The people I beat fully consented, enjoyed the beatings, and were all over 21” (quoted in Kershaw 1992, 36). None of them was permanently injured, infected, or required hospital treatment. They played by clear rules with the use of code words to terminate the pain if necessary. But the presiding judge, James Rant, was not persuaded. Consent, he thought, was not an adequate defense for anything greater than trivial harm; “the courts must draw the line between what is acceptable in a civilised society and what is not.” An editorial in the Times of London considered this “a proposition both dubious and dangerous. He is not appointed to decide such a question. Indeed, the very mark of a civilised society is that, as far as possible, it allows its citizens the liberty and the privacy to do as they like” (1992, 17).

Several of the men took the case to the Court of Appeal, which upheld the verdict but reduced the sentences (because the defendants had not been aware that their activities were illegal), and then to the House of Lords, where three Law Lords approved the verdict and two dissented. Lord Templeman, dismissing the appeal, believed that “society is entitled and bound to protect itself against a cult of violence. Pleasure derived from the infliction of pain is an evil thing. Cruelty is uncivilised” (Regina v. Brown 1993, 10). Lord
Mustill disagreed, suggesting that the 1861 act had been deployed, inappropriately, only because no other statute could be found. Typical conduct snared by the relevant clauses "involves brutality, aggression and violence, of a kind far removed from the appellants' behaviour which, however worthy of censure, involved no animosity, no aggression, no personal rancour on the part of the person inflicting the hurt towards the recipient and no protest by the recipient" (Regina v. Brown 1993, 33).

Three of the men, backed by the campaign group Liberty, appealed to the European Court of Human Rights on the grounds that the United Kingdom had breached its obligations to respect private life under Article 8 of the European Convention on Human Rights. But, pointing to the qualifying phrase in Article 8 stating that a democratic society does have the right to interfere in private life “for the protection of health and morals,” the court unanimously held in its 1997 ruling that the men’s rights had not been violated. Nor did it find evidence of any bias against homosexuals in the decisions by the British authorities, in spite of the men’s suspicions that they had been dealt with more punitively because of their sexual orientation.

A recommendation by the Law Commission of England and Wales that—short of serious disabling injury—consent should be a legitimate defense, plus ongoing campaigns by BDSM (bondage and discipline, dominance and submission, sadism and masochism) practitioners (notably the Spanner Trust, set up in the wake of the case), and general support for reform in liberal circles, have not yet prevailed on Parliament and the courts. There have been no comparable cases against homosexual sadomasochists since, but, in theory, Sections 20 and 47 of the Offences Against the Person Act of 1861 still define the limits of sexual activity for consenting adults in private in Britain today.

The Order of Chaeronea

BRIAN LEWIS
Professor of History
McGill University, Canada

Secret society of homosexuals founded by George Cecil Ives in Great Britain in the early 1890s.

The Order of Chaeronea was the first named campaign group in Britain for homosexual rights. Its inspiration came from the Battle of Chaeronea in 338 BCE. There, allegedly, the Sacred Band of Thebes, made up of 150 pairs of male lovers, refused to flee or surrender and was annihilated by the stronger forces of Philip II of Macedon. The motivation for the band came from a remark of Phaedrus in Symposium, by the ancient Greek philosopher Plato:

And if there were only some way of contriving that a state or an army should be made up of lovers and their loves, they would be the very best governors of their own city, abstaining from all dishonor, and emulating one another in honor; and when fighting at each other's side, although a mere handful, they would overcome all men.

(1993, 7)

The genealogy of the Order of Chaeronea can be traced from the American poet Walt Whitman (1819–1892) through the English socialist Edward Carpenter (1844–1929) to the English criminologist and sexologist George Cecil Ives (1867–1950). It was from reading Whitman and visiting him in Camden, New Jersey, in 1877 that Carpenter was inspired by the democratic, class-transgressing ideal of male comradeship. As the historian Sheila Rowbotham (2008) relates, in 1886 Carpenter outlined his idea to Charles Robert Ashbee (1863–1942; later a leading light in the Arts and Crafts movement in Britain) for a band or freemasonry of comrades—an idea germinating since that first visit to Whitman and gaining greater urgency with the passage through the Westminster parliament of the Criminal Law Amendment Act of 1885, one section of which was the notorious Labouchère Amendment, which criminalized all forms of homosexual behavior. This band of comrades was to be based on a small circle of Cambridge University friends, including artistic and
intellectual young men such as Ashbee and the philosopher and political scientist Goldsworthy Lowes Dickinson (1862–1932). In the same year, Carpenter began a passionate relationship with a young, working-class man, George Hukin, and—on reading Plutarch’s account of the Sacred Band of Thebes—he found a suitable image for himself and Hukin as socialist warrior-lovers within this clandestine brotherhood (Rowbotham 2008). As he put it in a 19 December 1887 letter to Charles Oates (Edward Carpenter Collection),

> We are going to form by degrees a body of friends, who will be tied together by the strongest general bond, and also by personal attachments.... The knowledge that there are many others in the same position as oneself will remove that sense of loneliness which one feels so keenly at times—especially when plumped in the society of the Philistines—and which is really almost unbearable.

**Founder**

There is no indication that this homoerotic freemasonry was ever anything more than an informal mutual-support group. But, in the early 1890s, Ives, another young Cambridge man with poetic and literary tendencies, made contact with Carpenter and his Thebans. And it is Ives who is credited with founding the Order of Chaeronea, in late 1893 or early 1894. It is from this point that the faint traces of the order can be mapped through Ives’s remarkable 3-million-word, 122-volume diary, plus his correspondence and other papers, all now housed at the Harry Ransom Center at the University of Texas at Austin.

Born in 1867, the illegitimate son of minor gentry, Ives spent much of his gilded youth migrating between the family’s country estate in Hampshire in the south of England, town house in London, and villa in Nice on the French Riviera. From an early age he was aware of his sexual abnormality (abnormal only by modern standards, he insisted, not by those of Greece and Rome). Maybe as early as age sixteen or seventeen, and certainly by the time he became a student at Cambridge University’s Magdalene College, he had determined what his future must be. Because he was wealthy enough to live independently, freed from the need to earn a living but not so rich as to be tempted to fritter away his life he would be an “instrument of Destiny,” dedicating himself to aiding in the liberation of fellow homosexuals and of mistreated prisoners. Over the course of his long life—he died at the age of eighty-two in 1950—he accomplished this through writing and organizing. He began his diary in 1886 as a nineteen-year-old (intending it to be “a mine for the making of history” [Ives Papers, diary, 20 December 1886]); he helped found the British Society for the Study of Sex Psychology (later the British Sexological Society) in 1914; and he produced a body of published work, including three books of Uranian (or pederastic) verse and a
succession of volumes or tracts advocating sexual and penal reform. His best book, *A History of Penal Methods* (1914), which was widely and favorably reviewed in spite of its brave advocacy of homosexual rights, cemented his reputation as a noted criminologist. It enabled him in 1915 to suggest, with some justification, that, aside from Carpenter and the sexologist Havelock Ellis (1859–1939), no one else had done as much in Britain to advance “the Cause,” “the Faith,” or “the Ideal,” as he variously called the struggle for the rights of homosexuals.

**Formation**

It is the diary that sets the historian’s pulse racing today— Ives as a chronicler rather than a midwife of a revolution in queer understanding—but his footnote in queer history is, ironically, mostly thanks to the one aspect of his campaign for the Cause about which the least is known: the Order of Chaeronea. By the time of its founding he had forsaken the country for London. In the early 1890s he was drawing on a range of references—classical, Whitmanesque, and Carpenterian, above all—in constructing his vision of the Hellenic, Higher Philosophical Ideal (his terms). His recurrent visionary daydream was of youths, freely sleeping in each other’s arms in the calm, exalted joy of love; and the true glory of Hellenism was reserved for male youths between the ages of fifteen and nineteen at the height of their physical perfection. This is what he himself had missed in his own youth, he confessed, except in reverie. He did, however, frequently spend whole afternoons at the bathing sheds on the green (common land) on the banks of the River Cam during his college years, swimming, sunbathing, and playing improvised cricket or football with the local lads of the town. “It was quite Hellenic,” he said. “We all ran about quite naked and the fair forms amongst the trees and along the grass-banked river would set me dreaming in a sort of Greek ecstasy” (Ives Papers, diary, 30 May 1892). Still, it was too late for him to find comrade-love, he lamented in September 1893, at the advanced age of twenty-six, “but I shall see it in others, if not now, in the life to come. To think of them free!, as they will be; to think of Our Ideal being widespread over the land Kinetic mighty ecstatic glorious” (diary, 21 September 1893).

But to set youths free required organization: hence his idea for the Order of Chaeronea. “There are many of us,” he wrote in 1892. “A great army: of many tongues and kindreds but as yet scattered and unorganized; but this must not be; our common cause shall be a bond between us all, overcoming all small differences and jealousies, and uniting us as one body, one mind one effort in our cause” (diary, 3 April 1892). As he put it in early 1893, “A little band would shake the world, but a little band brave, earnest, and unstained, and ‘we’ should scatter far greater hosts than fought at Chaeronea, some might fall, all might be swept away, but the Cause would prevail whether we lived or died” (diary, 5 March 1893).

**Organization**
So how was the Order of Chaeronea organized? “A Commentary upon the Rule and Purpose of the Order” survives in the Ives Papers (box 5, folder 11). This document indicates that the order was quasi-Masonic, quasi-religious. It was secretive, to avoid suspicion, detection, or prosecution. It was nonhierarchical: the members were a band of brothers. There were no membership lists, and the initiation process involved two members initiating a third, who was then supposed to create further links in a chain with no automatic knowledge of the other links, so that if any part of the chain collapsed or was crushed, the whole organization would not disintegrate. The members were styled “priests” of the order and donned monkish robes, wore symbolic rings, dated their letters to fellow members from 338 BCE (so that 1900, for example, became 2238), addressed each other in the letters with phrases such as “From brother to brother greeting” or “From One to Another Greeting,” and sealed those letters with the seal of the order. This seal was an elaborate concoction, consisting of an outer wreath of calamus (taken from Whitman’s *Leaves of Grass*: the calamus flower has strands that cling together, representing the adhesive love of male friendship); an inner wreath of myrtle (a symbol of love and immortality); the date 338; a chain with open links at both ends; the letters ZLD, standing for “zeal,” “learning,” and “discipline”; and the word or acronym AMRRHAO—the motto of the order, which remains obscure, described as “a sign-word which tells a truth. Once upon a time it was carven on an old wall.”

The rules of the order rejected any orthodox religion or divine revelation. Its most important creeds were, first, “We demand justice for all manner of people who are wronged and oppressed by individuals or multitudes or their laws” and, second, “We believe in the glory of passion. We believe in the inspiration of emotion. We believe in the holiness of love.” All initiates had to promise the following: “That you will never vex or persecute lovers. That all heart-love, legal and illegal, wise and unwise, happy and disastrous, shall yet be consecrate for that love’s holy presence dwelt there.” Once the promise had been made, the “priest” performing the ceremony intoned, “Then Comrade / We receive you / Go and join link to link / Over the World / To you I transmit this charge, bequeathed also to me.” The service concluded with suitable passages of exhortation taken from Thomas Carlyle, Carpenter, Whitman, Oscar Wilde, George Eliot, Ecclesiastes, James Russell Lowell, and the Sufi mystic poets Rumi and Jami.

**Membership**

The Order of Chaeronea’s membership was primarily, it seems, homosexual literary and artistic men, especially in and around London. Some of the names can be identified in Ives’s correspondence: the writers Laurence Housman, Montague Summers, Louis Wilkinson, Samuel Elsworth Cottam, Charles Kains-Jackson, John Gambril Nicholson, and H. G. Hart; the artist and collector Cecil French; and, in Berlin, Adolf Brand, the producer of the homosexual periodical *Der Eigene*. Ives’s friends Carpenter and Wilde conspicuously did
not get involved.

There is no indication that the order included women. Although he noted that some members of the order disliked a close association with women, Housman indicated in 1928 that the lesbian novelist Radclyffe Hall would be a very suitable candidate, if Ives decided to invite women to join (British Sexological Society Collection, box 23.4, Housman to Ives, 30 November 1928). Hall and her lover, Una Troubridge, did express an interest, but they were not impressed when they finally met Ives in 1933, and apparently the matter went no further (Radclyffe Hall Papers, Troubridge’s daybook, 5 December 1933).

Impact

Did the order accomplish anything? Housman’s letters to Ives are the most revealing here. He continually berated Ives for his timidity and for his narrow-minded focus on the Cause rather than on social injustice in general. On many occasions Ives expressed disappointment with the number of recruits and the zeal of the disciples. Housman replied that he did not see how the order could thrive in its current format. It was composed mainly if not entirely of homosexuals who had a special ax to grind and whose motivation for joining was personal and selfish—to link up with other homosexuals—rather than being inspired by the message of social freedom. It had no appeal whatsoever for many excellent humanitarians who were doing the real, effective work in changing public opinion, who were repelled by the cult of mystery and ritual, and who did not think so secretive and self-interested a society worth joining. In other words, Housman concluded, he could see no way for the order to be rendered effective as a body, even though specific members might do good things individually (British Sexological Society Collection, box 23.3, Housman to Ives, 22 July 1924, 6 November 1927).

If such a long-term priest of the order could reach such a dispiriting conclusion, it is quite possible that the order achieved very little—that its quirky, esoteric mix of secular spirituality, mysticism, and eccentric ritual appealed to few and that the underground army of warrior-priests campaigning for the Faith was largely a figment of Ives’s overwrought imagination or daydreaming. It is surely significant that very little is now known about the order outside the materials to be found in his own archive, as is the fact that, although it survived into the late 1940s, it presumably died with him in 1950. Certainly the paradigm shift in the understanding of human sexuality between the late nineteenth and mid-twentieth centuries, propelled and reflected by sexologists from Karl Heinrich Ulrichs (1825–1895) in Germany to Alfred Kinsey (1894–1956) in the United States, apparently owed nothing to the order. So the Order of Chaeronea remains a queer footnote in British history. But Ives meticulously chronicled that paradigm shift in his diary, and it is this that remains of abiding importance for the historian.

Ives, George Cecil. Papers. Harry Ransom Center. University of Texas at Austin.

“Sexual orgasm constitutes one of the most amazing aspects of human behavior,” suggests American sexologist Alfred Kinsey (Kinsey et al. [1953] 1998, 631). Orgasm is a reaction to sexual stimulation, a reaction that comprises contractions in the pelvic muscles preceded by muscular tension and an increase in blood flow to the sexual organs. Orgasm is also associated with the “pleasure center” of the brain, which includes the amygdala (which regulates emotions) and the nucleus accumbens (which plays an important role in reward, pleasure, and addiction). In individuals with penises, orgasm is usually accompanied by ejaculation of semen. In individuals with vaginas, it may be accompanied by a secretion of fluid, although debates are ongoing within the medical community about what this fluid is composed of and where exactly it is secreted from. Alongside the physiological aspects of orgasm, orgasm also carries cultural weight. For instance, culture dictates the value of orgasm and the meanings attached to its occurrence (or lack of occurrence). This entry locates orgasm within the historical study of sex and sexual dysfunction, considering male, female, transgender, and intersex orgasms. It explores the notable absence of consideration of orgasm in queer theory and looks at the importance of sexual pleasure to the field. The entry also considers the relationship between orgasm and sex aids or sex toys.
Given the centrality of orgasm to norms of sex and desire, Michel Foucault, a foundational thinker in the history of sexuality, argues that orgasm is an “ideal” rather than simply a biological function (1978, 71). For Foucault, discourses about sexuality contribute to controlling what sex is and to dictating how desire should be experienced. Within this thinking, orgasm is a site where the norms and ideals of sexuality and pleasure are enforced.

**Orgasm and Behaviorist Therapy** Within sexological thinking on orgasm, the ideal orgasm has been one achieved during heterosexual coitus. This bias and its resultant effects are particularly apparent within the homophobic, behaviorist therapy of the mid-twentieth century, which occurred in places including Australia, Canada, the United Kingdom, and the United States (see Jagose 2013 for more on behaviorist therapies and orgasm). These treatments sought to reorient male homosexual eroticism away from same-sex desire toward what was deemed normal, that is, heterosexual desire, via a process of “orgasmic reconditioning” (Marquis 1970). Since the aim was to “correct” the “abnormal” pleasures that men took in other men, treatment involved attempting to associate pain (either by electric shock or induced nausea) with erotic images of men and to associate pleasure with heterosexuality (by showing patients images of women during orgasm). Importantly, in this behaviorist therapy, the orgasm is the thing that needs changing, and an “appropriate” orgasm to heterosexual stimulation evidences the therapy's success. Similar orgasmic reconditioning was carried out on transgender individuals, to align both their gender identities and their desires (Reay 2016).

**Simultaneous Orgasm** In the early modern period in Europe, mutual or simultaneous heterosexual orgasm was referenced in medical and midwifery tracts, and it was deemed necessary for conception (Laqueur 1990). However, by the eighteenth century, mutual orgasm had lost its cultural saliency in the West, and in the nineteenth century the necessity of women’s orgasm to conception (and even the existence of women's pleasure in sex) was all but absent (Laqueur 1990). In the early twentieth century, simultaneous orgasm reemerged as culturally salient, this time as a key measure of the health of the heterosexual couple (Jagose 2013). In sexological discourse, simultaneous orgasm became both the normal accomplishment of sex and the secret of love (see Ellis 1910). In China, Zhang Jingsheng, popularly known as “Dr. Sex,” proposed that female ejaculation (which he described as three different kinds of water) and simultaneous orgasm were crucial to both conception and a healthy baby (Chiang 2010). In the United States, simultaneous orgasm appears frequently in marriage advice books from the twentieth century, where it ostensibly evidenced the pinnacle of love between a husband and wife (see Stopes 1918; Sanger 1926; Masters and Johnson 1966).

**Fake Orgasm** Faking orgasm is a practice that is widely reported worldwide, particularly by women, but it is also a practice that men partake in. Orgasm can be faked in any number of encounters, heterosexual or otherwise; however, the practice tends to be associated with
and most frequently practiced by women in heterosexual encounters. The prevalence of women faking orgasm is often linked to the failures of heterosexual coitus (and specifically vaginal penetration) to provide women with sexual fulfillment (see Jagose 2013 for more on fake orgasm). A popular cultural discussion of women faking orgasm, which condenses debates about men’s lack of knowledge about women’s pleasure and women’s agential performativity of faking it, can be found in the 1989 film When Harry Met Sally.

Orgasm and Sexual Pleasure in Queer Theory

It is perhaps the link between orgasm and normativity that has produced a lack of queer engagement with orgasm as an object of study (see Jagose 2013 for more on the orgasm in queer theory). Despite queer theory beginning by taking sex and sexuality as a distinct object of study (see Rubin 1984; Sedgwick 1990), orgasm has received relatively little attention.

Early work in the field of sexuality studies made apparent the way sex and desire are neither private nor ahistorical, and argued for the ways heterosexuality in particular is promoted by institutions such as the church, the state, hospitals, and schools (see Berlant and Warner 1998). Counter to this, the pursuit, celebration, and theorization of the pleasures and social forms enabled by nonheterosexual or “deviant” desire has remained a hallmark of queer thinking and politics. Queer theorist David Halperin remarks that there is “no orgasm without ideology,” referencing the way that sexuality is historically situated and that the notion of pleasure is deeply political (2002, 103). An important strand of queer thought has insisted on the connection between sexual practices, pleasures, and politics. This can be traced back to Foucault’s call for the invention of a new eroticism—a reorganization of the body and pleasures outside of disciplinary norms (1978). Predominantly, this work has tended to focus on gay male public cultures within a Western context, including, for example, public cruising cultures, bathhouses, and fist-fucking (see, for instance, Bersani 1987; Warner 1999).

Despite this focus on sex and alternative pleasures outside of the norms of heterosexuality and heterosexual cultures, queer theory has remained remarkably silent on the orgasm in particular. A marked exception in terms of queer theory’s treatment of the orgasm is found in Leo Bersani’s influential essay “Is the Rectum a Grave?” (1987). Bersani, in this essay, sees orgasm as useful for thinking about the sexual as involving both an inflation of the self and simultaneously a loss of consciousness of the self.

The Sexed Body and Orgasms

Within the study of orgasm, there exist ongoing debates about the relative similarities or differences between women and men’s orgasms. In the Middle Ages, influenced by the ancient Greek physician and philosopher Galen, female genitalia were imagined as an
inversion of male genitalia, with the clitoris being of the same matter as the penis; thus, orgasms were imagined similarly with both being required for conception. Yet, in the Kama Sutra, a Sanskrit text dating from the fourth century CE, orgasm is not referred to directly, but sexual pleasure and satisfaction are described as differently experienced by men and women (Vatsyayana 1963). In traditional Chinese medicine, sex involves a balancing act between depletion and absorption, and men’s orgasms, because they involve ejaculation, are seen as more dangerous to the loss of qi (life force) than women’s orgasms. Across twentieth- and twenty-first-century popular cultural texts, there is frequent debate about which sex has the “better” orgasm, making orgasmic similarity or difference central to debates about sexual difference.

A common theme in the history of thinking on the male orgasm is that it represents a loss of power or vigor. This can be found, for instance, in Taoist thinking where men are advised to prolong their orgasm and gain energy and vitality from women’s orgasms (Ruan 1991). Within Christian traditions, caution about a loss of vitality associated with orgasm is often linked to the condemnation of masturbation. This thinking can be found as well in the Victorian era, where masturbation was associated with insanity and homosexuality (Whorton 2001). The medical diagnosis of “spermatorrhea,” or “seminal weakness,” also emerged in the nineteenth century. Meant to diagnose “excessive” loss of semen, the condition produced a kind of medical and popular panic around male sexuality so that almost any seminal emission was regarded as a symptom of disease (Mason 1994). In the twentieth and twenty-first centuries, penile orgasm is frequently represented as the normative aim of heterosexual sex. For instance, in heterosexual pornography, it is predominantly male orgasm and ejaculation that are represented as the aim and end goal of sexual encounters.

The history of thought around women’s orgasms revolves, in part, around understandings of the vagina and the clitoris and their relative relationship to pleasure. Women’s anatomy and its relationship to pleasure has historically produced far more debate than male anatomy and pleasure, which relates to shifting ideologies of patriarchal discourse (see Laqueur 1990; Traub 1995). Influential in these more recent debates is Sigmund Freud’s differentiation between clitoral and vaginal orgasms (see Gay 1989). Clitoral orgasms, according to Freud, were a sign of sexual immaturity, and the goal of women’s sexual socialization was the “mature” vaginal orgasm. In the West, from about the mid-twentieth century, women’s primary pleasure was relocated to clitoral orgasms (see Kinsey [1953] 1998). Debates and discussion between sexologists and readers from around the world about women’s orgasmic pleasure and vaginal penetration/clitoral stimulation can be found in the pages of the International Journal of Sexology, edited by Indian sexologist A. P. Pillay (Ahluwalia 2015). Alongside sexological studies, feminist activism from the 1960s and 1970s highlighted the primacy of the clitoris to women’s sexual pleasure (see Atkinson 1970; Koedt 1970; and Shulman 1971). Despite studies that continually show that the majority of women cannot reliably reach orgasm without clitoral stimulation (Lloyd 2005),
vaginal orgasm retains a strong cultural saliency, perhaps evidencing the stronghold of the myth of sexual reciprocity in heterosexual, vaginal penetrative coitus (Jagose 2013). What is apparent from debates about vaginal versus clitoral orgasm is that women’s pleasure has historically been difficult to untangle from patriarchal discourses and heterosexual norms.

Norms of heterosexuality, and particularly binary sex, are no less central to the relationship between orgasm and intersex and trans individuals. In the case of intersex individuals, in the twentieth century there was an increase in surgical “fixes” for bodies that did not clearly fit within a sex binary. These surgeries, pioneered in the 1950s at Johns Hopkins University in the United States, focus on making the sexed body appear clearly male or female. These surgeries privilege the visual appearance of secondary sex characteristics (and their ability to fit clearly within a two-sex binary), meaning the sexual pleasure of the adult intersex individual is secondary (see Chase 2006).

A similar issue occurs when it comes to transgender surgery. Dominant narratives of transgender subjectivity often describe transgender people as unable to take pleasure in their bodies and, indeed, medical professionals demand this narrative from transgender individuals who want to access surgery (see Spade 2006). Yet, narratives by transgender people themselves dispute this forcefully, claiming pleasures in their transgender bodies outside of medicalized norms of sexed binaries and heterosexual norms (see Cromwell 2006).

**Orgasm and Sex Aids**

Sex aids are devices that assist people in feeling sexual pleasure and achieving orgasm and include vibrators, anal plugs, dildos, and the Fleshlight. Dildos, devices that are usually designed for the penetration of the vagina, mouth, or anus and are traditionally solid and phallic in shape, have a long history, with the oldest dildo dating back more than 30,000 years. Masturbatory aids for individuals with penises include inflatable sex dolls and, more recently, products such as the Fleshlight. The Fleshlight is an artificial vagina or artificial anus sex toy, which can be bought modeled after female or male porn actors. Various sex aids associated with BDSM (bondage and discipline, dominance and submission, sadism and masochism) became popular within gay male subcultures in the West, particularly the leather subculture, from the 1970s. Lesbian, gay, bisexual, trans, and queer (LGBTQ+) sexual practices around sex toys and masturbatory aids often involve deconstructing the limits of the body and the so-called fake or imitative toys. Sex toys for many LGBTQ+ individuals might be reconceptualized as extensions of the body. This might also be the case for differently abled individuals or individuals with nonnormative bodies. For many individuals, a prosthesis that aids in expressing sexual desire might be liberatory, rather than experienced as a lack.

Vibrators have perhaps the most contentious history and the one with the strongest ties to
orgasm as it relates to the study of sex. In the height of diagnoses of hysteria in western Europe in the nineteenth century, it is well documented that medical professionals treated women by various forms of "uterine" massage. Some historians argue that this massage enabled women to achieve orgasm, and the vibrator was invented to speed up this process (see Maines 1999). However, many historians also suggest that there is little evidence to support the idea that practitioners or patients were seeking sexual gratification (see King 2011). Given the taboos around masturbation (with the widespread belief that masturbation led to mental illness), combined with doctors' fears about impropriety, this would have likely been a rare or fringe practice, if it occurred at all (see Hall, n.d.). However, the mythology of the Victorian vibrator retains a strong cultural currency with the story of women queuing up to be masturbated by their doctors repeated across many different cultural domains, notably represented in the 2011 film Hysteria.

Vibrating devices did, however, emerge in the nineteenth century as medical treatment for all kinds of ailments (Morus 2001). Vibrators became purchasable from the beginning of the twentieth century, and vibrator manufacturers began advertising to individuals (both men and women) outside of the medical profession. It is difficult to say definitively that individuals did not start using them as orgasmic aids in the privacy of their own homes.

Orientalism in Gay Pornography about the Middle East

JEDIDIAH ANDERSON
Visiting Assistant Professor of Arabic
Furman University, Greenville, SC

The manner in which Orientalism and pinkwashing influences gay pornography made in—and about—the Arab world.

Given the Orientalist tendency to construct the Arab world in hypersexualized terms, it is not particularly surprising to see this attitude reflected and these tropes reenacted in gay pornography, or to see that there is a very productive and flourishing genre of gay pornography that seeks to represent the Middle East and Middle Eastern themes and that sexualizes both LGBTQI Middle Eastern men and women. Gay pornography depicting Arabs (both male and female) and Middle Eastern subjects is not a new phenomenon but rather has its roots in colonialist Orientalist art and literature. Gay pornography has also been extensively used as a discursive tool in pinkwashing (the practice of championing gay rights as a way to distract attention from discrimination against other groups); however, Arab gay and straight actors and producers in pornographic movies are beginning to produce discourses that counter these Orientalist tropes and discourses of pinkwashing.

Orientalism and Homoeroticism

Joseph Allen Boone, in his article “Vacation Cruises” (1995) and subsequent book The Homoerotics of Orientalism (2014), maps the creation of the Arab male as a homoerotic, Orientalized subject in both art and literature of the colonialist era. He claims that

the geopolitical realities of the Arabic Orient become a psychic screen on which to project fantasies of illicit sexuality and unbridled excess—including, as Malek Alloula has observed, visions of “generalized perversion” and, as Edward Said puts it, “sexual experience unobtainable in Europe,” that is, “a different type of sexuality.” This appropriation of the so-called East in order to project onto it an otherness that mirrors Western psychosexual needs only confirms the phenomenon that Said calls “Orientalism” in his book of that name.

(BOONE 1995, 89)
While writers that have critiqued Orientalism through the lens of sexuality studies have focused on heteronormative sexualities, Boone argues instead that “the possibility of sexual contact with and between men underwrites and at times even explains the historical appeal of orientalism as an occidental mode of male perception, appropriation, and control” (90). Discussing the impact that travel in the Middle East and North Africa has had on gay, bisexual, and sexually ambiguous writers and other cultural figures from the Western world such as André Gide (1869–1951), Oscar Wilde (1854–1900), E. M. Forster (1879–1970), Malcolm Forbes (1919–1990), and Mick Jagger (1943–), Boone looks at three aspects of the development of the Arab world in Orientalist discourse: the construction of the Orient as “a symbol of polymorphous perversity [engendering] their obsessive fascination with, and often anguished negotiation of, the homoerotic”; “the homo-erotic undertow in representations of life on the desert”; and the “gay male enclaves established in the African Maghreb since the beginning of the twentieth century,” in which Western gay men sought places where they could escape Western opprobrium for their actions (90).

Frequently connected to each other and operating in tandem, these three aspects of homoerotic Orientalism constructed the Arab world as a place of endless homosexual opportunity and depravity for Westerners, which Westerners were able to exploit and appropriate both in order to explore their desires and to find some sort of creative and sexual “awakening” (101). This same attitude was reflected in art and photography, as documented by Boone.

**From Homoerotic Discourse to Homoeroticism**

The Orient and Middle Eastern men are not only constructed as passive sexual objects in this Orientalizing discourse. As Boone describes in his aforementioned book *The Homoerotics of Orientalism*, “The myth of the beloved boy is complemented by a corresponding fantasy figure capable of inciting equal amounts of anxiety and desire in Occidental imaginations: the unremittingly virile man of Middle East extraction” (2014, 90), stemming from a mythos of “‘pure’ unspoiled masculinity constructed out of late-nineteenth-century Anglo-European worries that its male population had become too civilized, too soft, too enervated in a world in which the sexes were more equal and everyday life no longer beset by violence and hazard” (91). Boone traces how this aesthetic, combined with a large dollop of the trope of the Arab as passive sexual object, has found its way into portrayals of homoeroticism in popular Western gay culture, including in ads for events at gay clubs and tanning salons, as well as in photography. This homoerotic Orientalism has also been combined with tropes of homonationalism (the idea of a homosexuality that is in line with nationalism and that is tolerated in a way that presents the tolerating country as civilized) in order to mock figures such as an Arab sheikh penetrating Uncle Sam, in a cartoon protesting the oil embargo of the 1970s, and the former Iranian president Mahmoud Ahmadinejad, who was portrayed on the *New Yorker*
cover as cruising in a bathroom. It has also been deployed in representations of the infamous scandal at the Abu Ghraib prison in Iraq, in which eroticized bodies are depicted in the same forms of torture perpetrated there by US soldiers on Iraqi prisoners (Boone 2014).

Not merely artistic photography but also visual media with explicitly pornographic intent began to appear as early as the 1800s. Boone points out how in an 1884 compilation of "classical references to sexuality" by the German scholar Friedrich Karl Forberg, the only image (painted by an artist who went by the pseudonym Paul Avril) that does not "use Greco-Roman classical settings" is an Egyptian-themed one, which is also the only one of three that include homosexual acts, and one of two that bears a descriptive title [Hadrian and Antonius in Egypt] as opposed simply to naming the sexual position being depicted.... Strategically, the identification of the two lovers as historical figures serves to legitimize Avril's inclusion of a scene of male sodomy not only by placing it in “real” history but in a foreign land already associated in the popular imagination with same sex activity.

(401–402)

Other similar pornographic images were also produced around that time, focusing on the Arabness of the participants. In the 1920s a French pornographic film set in the Arab world and titled Mektoub (It is written) was released, featuring lesbian, heterosexual, and male homosexual encounters and presenting the Arab world as a place of harems and polymorphous perversity. This same motif of the Arab world as a place of heightened same-sex activity was reproduced again in the 1960s in a series of erotic cartoons produced by Dom Orejudos (1933–1991; also known as Etienne), in which American sailors are captured by a generic Arab sultan and turned into sex slaves, and in which Crusaders are also kidnapped, violated, and castrated by Saracens (Boone 2014).

As film developed, so did pornography depicting Arabs and the Arab world. Examples include an appearance by the porn star John Holmes (1944–1988) in the 1980s film John Holmes: The Man, which was advertised as “John Holmes and his cock [playing] a shah in ancient Persia who commands a court of male subjects to become his willing love slaves,” and the release of the films Harem (1984; also known as Sex Bazaar), Hammam (2004), and Nomades (2005) by the gay French director Jean-Daniel Cadinot (1944–2008), all of which were “filmed in the Maghreb” (Boone 2014, 406).

Modern Times
The Occidental trend of Orientalizing gay Arab male bodies has continued to the present day. One of the most notable films that enacts this trope is *Arabesque* (2005) from Raging Stallion Studios. A three-hour-long feature, it depicts actors who are mostly not of Middle Eastern ethnicity—with the exceptions of Huessein, who is a German of Turkish decent (GayPornStar 2017), and François Sagat, who was “born to Arab parents in France” (Klinck 2010)—performing the roles of Arab men having sex in stereotypical Arab marketplaces, on Persian rugs, and on sets made to look like palaces in the Arab world, in keeping with the Orientalist tropes that have been thoroughly discussed in this entry.

The marketing description of the film invokes these same tropes, describing the setting of the film in this way:

> A long time ago, in a far away place ... beneath the shimmering sun of the hot Sahara was a land of fire and flame—a romantic world of forgotten dreams that harken back to a bygone age where men ruled the desert from horseback and found sexual pleasure in their violent lusts and desires. The powerful drumbeat of the Arabian heart drove men into each other's arms, a co-mingling of sweat and passion that filled deep-rooted needs, the result of a lonely existence surrounded by sand and palm. This is the setting of Arabesque. ([“ARABESQUE” 2006](#))

Virtually all the aforementioned tropes are reenacted in this description of the film: the desert as romantic and a place to recover “forgotten dreams”; men with uncontrollable “lusts and desires,” who satisfy them violently; and the environment of the desert becoming a place conducive to homosex.

It is interesting to note that Arab trans and lesbian pornography has not reached the same level of popularity that Arab gay male porn has. While Arab trans pornography is frequently indistinguishable from other forms of trans pornography except for the ethnicity of the actors, it is notable that the veil plays a major role in Arab lesbian pornography, as it does in heterosexual pornography featuring Arabs.

**From Orientalism to Pinkwashing**

More recently, one can see the incorporation of pinkwashing and homonational discourses into gay pornography dealing with the Middle East. One of the most blatant examples of this is the production of the film *Men of Israel* (2009) by the Russian-born porn producer Michael Lucas. In this film, the actors have sex among the ruins of a destroyed Palestinian
village (Schulman 2012). The desire of Lucas (who had lived in Israel prior to moving to the United States) to engage in pinkwashing discourse is extremely clear from his blog, which mixes pinkwashing, Far Right Israeli politics, and stills of gay Israeli sex from his movies for the explicit purpose of showing the freedom in Israel for gay men in contrast with the purported situation in the rest of the Middle East (Lucas 2017). Some of the articles that he wrote that were published on various news media websites sought to portray Muslim immigrants as an inherent threat to the LGBT community in the United States (e.g., Lucas 2016). In his writings he has argued against the idea that “Republican and conservative gays and Jews care more about [Republican US Senator Ted] Cruz’s support for Israel than they do about his horrendous record on LGBT rights” (Lucas 2015), has suggested that travel in Jordan for LGBT people is “dangerous” in comparison with travel in Israel (Lucas 2012), and has denigrated LGBT activists calling for a boycott of LGBT organizations that meet in Israel as “poisonous” (Lucas 2011). His politics and how his political ideology features in his pornography are extremely clear.
In 2006, prior to the production of Men of Israel, Collin O’Neal produced World of Men: Lebanon as part of a series of films with a global perspective, with most of the sex scenes taking place in buildings that were bombed out in Lebanon’s civil war (1975–1990). One can see, when juxtaposing the two film covers, a similar positioning of the male bodies on them, so that one evokes the other, with the actors and location both being constructed as oversexualized sites of polymorphous perversity. One can also see the major role that space plays in both of these films, with the presence of the demolished Palestinian village—which Sarah Schulman, in her 2012 book Israel/Palestine and the Queer International, cites the Palestinian American filmmaker Nadia Awad describing as “desecration porn” (117)—playing almost a triumphal role in constructing Israeli men as stronger, more civilized, defeaters of the Palestinian savage. In World of Men: Lebanon, by contrast, the sex among the buildings destroyed by the civil war serves to frame Lebanon as a destroyed place, in which the normal lines of interaction have been disrupted and invite new sexual possibilities. While there is little in the way of locally produced gay pornography in the Middle East, there is a fairly well-developed amateur gay pornography sector in Israel that, instead of focusing on Orientalist tropes or the Arab-Israeli conflict, focuses on providing a recognizable “local” experience (Auerbach 2017).

Responses to Orientalism in Pornography

Evangelos Tziallas, in his 2015 article “The New ‘Porn Wars’: Representing Gay Male Sexuality in the Middle East,” argues that the production of Men of Israel by Lucas was actually a response to the trend of the production of both World of Men: Lebanon and pornographic films that sexualize Arabness, such as Arabesque. Tziallas further argues that World of Men: Lebanon represents an attempt to provide an intervention into these Orientalizing tropes, shifting the construction of Lebanese from the category of “Other” to part of a global framework within which homosexual desire is dispersed throughout, saying:

In many respects, Lebanon is a typical offering; it is neither the first nor will it be the last gay male pornographic film to sell the fantasy of leisure travel or profit off of the exoticness of foreign locales.... At the same time, the series highlights and advertises a global network of gay male sexuality, one which includes those typically perceived as hostile and in opposition to it, while simultaneously challenging the American gay porn industry’s preference for white performers and its tendency to sort races. Unlike Arabesque ... [Collin O’Neal’s World of Men:] Lebanon and [Men of] Israel were shot in the Middle East offering a comparative portrait of how same-sex desire functions in a Westernised space in the Middle East, such as Israel, and in a non-Western nation, such as Lebanon. O’Neal presents Lebanon as neither an enclosed space
nor a homophobic one, but a globally integrated nation that is sexually and culturally diverse: a gay-hub for men in the surrounding region.

(2015, 100)

According to Tziallas, it is this trend against “Othering” nonwhite bodies by deploying discourses of globalization that Lucas is working against. Through the production of Men of Israel, Lucas attempted to reconstitute the division between East and West that O’Neal’s film sought to break down. Tziallas describes it thusly:

Playing with authenticity and performance, the films attempt to blur the manufactured border between the East and the West, “white” and “not white,” and resist dominant images of Muslim and Arab men as categorically homophobic: it is precisely this blurring of identities and racial bodies that Lucas is responding to and reacting against. It is not just that Arab or “Arab” men are the latest gay pornographic craze, but the way in which the breakdown between Eastern and Western bodies, identities and cultures symbolically attempts to bridge what is popularly manufactured as a chasm between two opposing civilisations. The last thing Lucas wants is for the West, or at least gay men in the West, to see the surrounding regions as not only nonthreatening but similar, and Lucas uses his film to reassert an imaginary East/West border.

(2015, 94–95)

It is important to note that none of the actors in O’Neal’s World of Men: Lebanon is Lebanese, and only one (Sagat) is partially of Arab descent, continuing the unfortunate trend of the Global “West” speaking on behalf of and representing a local “Orient,” so it would be disingenuous to say that these newer productions dealing with the Arab world are unproblematic. While also constructed as hypersexual as the product of war, these same Lebanese male bodies are also, in gay Lebanese circles (and tacitly by the Lebanese government), constructed as yardsticks of civilization and modernity, in keeping with the idea of Lebanon more being more integrated into the system of globalization. Through the marketing of the Lebanese gay tourist industry, which has taken cues from the pornographic movie industry, Lebanon is portrayed not only as an Orientalist gay paradise but also as a progressive and yet more “authentically” Arab gay-tolerant counterpart to Israel. In addition, while Israel promotes itself as a gay-friendly country, the gay Lebanese tourist industry in turn promotes that one can go to a gay club in an Arab country in order
to counter the claim frequently made by the Israeli government that Israel is the one country in the Middle East that has gay rights.

**Arab Americans in Pornography**

While the heterosexual Lebanese-born American adult film actress Mia Khalifa rose to new levels of notoriety after appearing in a hijab in one of her videos and became the most viewed adult film actress on Pornhub in December 2014 (Kaufman 2015), it is important to note that the most visible Arab American gay adult film star, Conner Habib, has been frequently and thoughtfully contributing his own perceptions on sex work, society, the Israeli-Palestinian conflict, and pornography to sex-positive discourses. A former English instructor at the University of Massachusetts who then went into adult films, Habib says that he has “a hunch that [he’s] the only person who’s ever won awards for teaching, writing, and porn” (Uses This 2017). On his blog he speaks extensively on his experiences growing up as a half-Syrian, half-Irish person in rural Pennsylvania and how these experiences shaped his own subjectivity (both sexual and otherwise), such as how his lack of exposure to American sports while growing up prompted other students to mock him for being gay (Habib 2012a) and having a teacher tell him that she would “send [him] back to Syria on a camel” (Habib 2012b).

While Habib’s ethnicity has rarely been foregrounded in his films, he has spoken out frequently about both issues in the Middle East and issues related to the Middle East. For example, he signed a statement made by members of PEN America protesting the awarding of the PEN/Toni and James C. Goodale Freedom of Expression Courage Award to *Charlie Hebdo* magazine (Greenwald 2015). Afterward, he explained on his blog why he had signed the statement, saying that

> there is an insistence that these cartoons [of the prophet Muhammad by Charlie Hebdo] are not racist. And yet many experience them that way. Shall we demand they discard their fear, their anxiety? Maybe we should demand they authenticate their pain to us before we take them seriously? Shall we call them stupid pussies as the bombs rain on them and the guns are turned on them?

*(HABIB 2015B)*

He also signed a statement sponsored in 2014 by Adalah-NY demanding that the Brooklyn Book Festival “no longer accept partnerships with the Israeli government or complicit institutions” and frequently makes statements in support of the BDS movement (the campaign of boycott, divestment, and sanctions against Israel) on his Twitter account
Given that pornography is a form of expression that is primarily focused on sexual desire, critical analysis of it and the discourses expressed in it is useful because it allows one to look not only at how desire is constructed in a particular society but also at how these forms of desire intersect with cultural and literary tropes that are seen outside of it. Because of this, pornography that deals with both homosexuality and the Middle East is particularly interesting to critique because Orientalist tropes outside of pornography often relate to the nature of desire, and particularly queer desire, and have left their imprint on the politics and the porn of and about the region to this day.

Otaku Sexualities in Japan

ALEXANDRA NOVITSKAYA
PhD candidate
Stony Brook University, Stony Brook, NY

Debates around the queerness of fan enthusiasm for Japanese media, particularly manga and anime.

*Otaku* is a Japanese term used to define enthusiastic fans of certain media—predominantly manga (Japanese comic books), anime (animation), and video games, but also pop idols (media celebrities), electronics, cars, trains, and so on. Derived from the Japanese honorific for *you*, the form of address used between the members of the otaku subculture, the term entered public discourse in the 1980s through the works of journalist Akio Nakamori (1960–), who used it to mock zealous manga and anime fans. Quickly becoming a stereotype associated with under-socialized, immature, and obsessive male hobbyists, the otaku gained even more notoriety in the late 1980s, when serial killer Tsutomu Miyazaki (1962–2008) was discovered to have been a fan of *rorikon* (anime and manga featuring prepubescent girl characters). In the 1990s there were attempts to reclaim and depathologize the otaku as the founder of the highly successful anime studio Gainax and self-proclaimed “Otaku king” Toshio Okada (1958–) defined the otaku as a new cadre of connoisseurs able to appreciate and distinguish between various pictorial styles of anime and manga, and to introduce these styles to the world as a vital part of Japanese culture (*Okada 1996*). In the 2010s, while the otaku are still sometimes stereotyped as obsessive and out of touch with reality, the term is no longer pejorative and is used by fans for self-identification (*Azuma 2009*). Beginning in the 1990s, the term spread outside Japan to refer generally to fans of Japanese media, achieving in the Western context a meaning close to “nerd” (*Saitō 2011*).
An Anime Fan in Tokyo, Japan, Exchanges Wedding Vows with His VR Anime Girl Crush. To the otaku, fictional characters are just as real as objects of sexual desire as “real” people—the difference being that the former are found in another type of reality. Understanding all reality as imaginary gives the otaku the right to their own imaginary sexuality even if it is masturbatory, immaterial, and object-oriented—destabilizing the natural assumptions of “proper” reproductive sexuality and making it queer.

Psychoanalytic Theory of Otaku Sexuality

Psychologist Tamaki Saitō (2011) has attempted to theorize the otaku culture from the perspective of their sexuality. He argues that what distinguishes the otaku from all other obsessive hobbyists is the sexual desire (moe) they experience toward manga, anime, and video-game characters. One such iconic character commonly found in Japanese media and popular among the otaku is a girl superhero: usually a teenager who has to save the world by using either her superpowers or weapons, including giant robots (mecha). Called “beautiful fighting girls” by Saitō, these characters are protagonists of classic anime works such as Kaze no tani no Naushika (1984; Nausicaä of the Valley of the Wind), Bishōjo Senshi Sērā Mūn (1992–1997; Sailor Moon), Shin sei ki evangerion (1995–1996; Neon Genesis Evangelion), and Shōjo kakumei Utena (1997; Revolutionary Girl Utena). Beautiful fighting girls, often portrayed as powerful and fearless warriors who nevertheless exhibit typically feminine traits, have long been a site of contention among academics and the general public, as they are understood as both overtly sexualized symbols of women’s objectification and a manifestation of women and girls’ empowerment (Napier 2005; Allison 2006). Drawing on the work of French psychoanalyst Jacques Lacan (1901–1981),
Saitō defines such characters as “phallic girls,” by analogy to the “phallic mothers”—powerful female figures in Lacanian theory—arguing that they are nothing other than pure fantasies of the otaku (2011, 8). Following Lacan’s tripartite model of human subjectivity (the Symbolic, the Imaginary, and the Real), Saitō posits that because the contemporary reality is oversaturated with media images, all perception of reality happens within the realm of the Imaginary, where we perceive images and appearances as mediated by the Symbolic (language and signs). Therefore, discriminating between so-called fiction and reality (riarity) and privileging the latter over the former makes no sense. For this reason, to the otaku, as objects of sexual desire, fictional characters are just as real as real people—the difference being that the former are found in another type of reality, one that is mediated. While the omnipresence of media images can be overwhelming and traumatizing to some, the otaku’s ability to be sexually attracted to fictional characters is actually a healthy adaptive strategy—an attitude useful to everyone, Saitō claims. Understanding all reality as imaginary gives the otaku the right to their own imaginary sexuality, even if it is masturbatory, immaterial, and object oriented—destabilizing the natural assumptions of “proper” reproductive sexuality and making it, according to J. Keith Vincent (2011), queer.

Undoubtedly meant to depathologize the otaku, Saitō’s approach has significant limitations. His analysis concerns exclusively heterosexual male otaku who, Saitō insists, are “healthy” in their “real” sexual lives; that is, they have “vanilla” relationships with “perfectly respectable members of the opposite sex as partners” (2011, 32). Ignoring female otaku and stressing the near absence of “homosexuals” (2011, 32) in the otaku subculture also reproduces, perhaps unknowingly, patriarchal and heterosexist assumptions in regard to otaku sexuality.

**Female Otaku (Fujoshi)**

The term *fujoshi* (rotten girl, and a pun on “girls and women”) is used to describe female otaku who are invested in male-male erotic narratives in manga and anime such as *boys’ love* (BL, commercial homoerotic works) and *yaoi* (form of fan fiction and art focused on “coupling” [*kappuringu*] presumably heterosexual male characters from mainstream manga and anime, similar to the Western form “slash”) (Welker 2015). Similar to the male otaku, fujoshi are stereotyped as failed (rotten) and immature women. They are “rotten” because they do not conform to conventions of appropriate feminine behavior: they are invested in fictional men rather than real ones and prefer same-sex romance to heterosexual relations. *Female otaku and fujoshi* are sometimes used interchangeably, yet some female otaku do not identify as fujoshi (Hester 2015). Finally, as is the case with male otaku, the term *fujoshi*, though it carries a hint of self-mockery, is used among the BL and yaoi fans themselves and is sometimes a source of pride (Galbraith 2015).

Scholars have pointed out that BL/yaoi narratives allow women to safely explore sexuality and gender and to play with it either via self-identification with male characters (Fujimoto...
1991) or by taking on an observer’s perspective (Otomo 2015). For instance, Yukari Fujimoto argues that BL provides women with a space to escape gender oppression and to purify love from “the tarnished male-female framework of heterosexual love” (1991, 283). Similarly, discussing the practice of reading BL/yaoi as one in which the autoerotic reader seeks her own disappearance as a subject, Rio Otomo argues that fujoshi is not an identity but rather an indication of individual taste, which is nevertheless shared by many, and this anti-identitarian, antinormative spirit likens fujoshi to “queer,” which is similarly best understood not as identity category but as a “celebration of heterogeneity, a way of living and a utopian worldview” (2015, 150).

Saitō’s theory of the sexual foundations of the otaku identity can be extended to fujoshi, albeit with significant differences (Vincent 2011). Unlike male otaku, whose moe is the desire they feel for fictional female characters of manga and anime, fujoshi’s moe is directed toward the relationship between fictional characters, not the characters themselves, and is sustained not only by reading or drawing BL/yaoi but also via moe-banashi (moe talk), a form of communication between fujoshi friends where they discuss romantic relationships between their favorite male characters as well as animate and inanimate objects (Galbraith 2015). In the words of one fujoshi herself, fujoshi differ from “normal” people and even other otaku in that they are not satisfied with things as they are in the existing narratives, and so create alternatives using their abundant imaginations (Galbraith 2015, 155). Patrick W. Galbraith argues that this interest in pure fantasy links fujoshi and the male otaku, as both are attracted to “fictional contexts” where they enjoy “layering” contexts one upon another, creating new possibilities for the relationship between fiction and reality (156). This investment in transforming fiction through layering may explain why some fujoshi are not interested in consuming BL stories with “confirmed” same-sex romances, preferring yaoi-style reimagining of mainstream heterosexual characters in same-sex couplings (2015). Galbraith’s observational study of a group of fujoshi friends stresses the communal essence of yaoi; through sharing yaoi art and fiction (dōjinshi) and online and in-person discussions of their favorite couples (moe talk), fujoshi relate to each other in affective, validating ways.

**Male BL Fans**

While the overwhelming majority of BL/yaoi fans are female, there is a small community of male fans who sometimes call themselves fudanshi (rotten men), though this term has not yet gained much purchase in Japan (Santos 2017). According to Kazumi Nagaike (2015), these male fans come in all sexualities, including heterosexual, and what they all have in common is their perception of BL/yaoi as an escape from the pressures of conventional Japanese masculinity. Reading BL fulfils their interest in androgynous ideals, self-feminization, male passiveness, and romantic narratives of “true love”— all far cries from Japanese patriarchal assumptions of assertive, domineering masculinity. Unlike shōnen
(boys’) manga, where romantic plotlines are told through the prism of competition, BL allows its male fans to explore and embrace masculine passivity—a salvation for some, as Nagaike puts it (193).

**BL and Gay Men: The Yaoi Dispute and Contemporary Gay Manga**

Despite the widespread belief that yaoi and BL characters are pure fantasies of the women who produce and consume them, and as such, have nothing to do with “real” gay men, female fans of homoerotic manga and anime have been accused of fetishizing, appropriating, and harming gay men (Lunsing 2006). Wim Lunsing recaps the famous yaoi ronsō (yaoi dispute) that started in 1992 when gay activist Masaki Satō published an essay critical of yaoi in the feminist magazine *Choisir* (Choose). Satō accused yaoi creators and consumers of homophobia and of invalidating gay lives, comparing them to “dirty old men” interested in hentai (conventional pornography based on objectification of women). Yaoi as a genre, he argued, produces distorted images of gay men that have little to do with reality, and it contributes to the growing public interest in homosexuality (the “gay boom”) without helping real gay men; furthermore, the common yaoi trope of characters perceiving homosexuality as “disgusting” is homophobic. Satō’s criticisms elicited a variety of responses from the female fans of BL and yaoi, who insisted that as a fantasy, yaoi was not about real gay men at all, and that it was liberating to its readers because it provided women with romantic narratives free of gender roles and female objectification. However, BL and yaoi do reflect and influence gay sensibilities in Japan. Lunsing notes that characters in BL/yaoi narratives who react to homosexuality with disgust or shock may be a reflection of popular homophobia in Japan. Additionally, until the mid-1990s, Japanese gay men predominantly followed the handsome and slender bishōnen (androgynous young male) beauty ideal common in BL; men who were not able to uphold this ideal faced ostracism and alienation from the community. A major shift occurred in 1995 when the first manga works of Gengorō Tagame (1964–) were published in the gay magazine *G-Man*. Tagame, who would become a leading author of gei komi (gay comics, or manga produced for gay men by gay men), drew extremely masculine characters who were muscular or chubby, broad-shouldered, and hairy. The publication of his works in *G-Man* made fashionable among Japanese gays traits associated in the West with the “bear” subculture, such as a bulky build and facial and body hair.

While the yaoi dispute continues and scholars still observe a certain degree of guilt and unease among some fujoshi with regard to “appropriating gay men” (Ishida 2015), the relationship between BL/yaoi and gei komi is neither straightforward nor easily defined. Thomas Baudinette’s study (2017) of young Japanese gay men’s consumption of gay media shows that they understand BL and gei komi as two aspects of the same meta-genre—gay manga—and treat them as equally important to their subjectivities as gay men. Lunsing
(2006) notes the commonality of pictorial styles, themes, and tropes shared by both BL/yaoi and gei komi such as bondage, sadomasochism, and rape scenarios. Interestingly, like female producers and consumers of yaoi and BL, some gei komi artists claim that in their real lives they do not have sex the way it is portrayed in their works, as the latter are purely imaginative. Tagame, who initially was very critical of BL/yaoi on grounds similar to those cited by Satō, eventually changed his position, admitting that both BL/yaoi and gei komi are fantasies and are equally valid as such (Santos 2017).

In conclusion, several decades of manga and anime popularity in Japan allowed the otaku culture to develop into a new form of individual and collective engagement with media, which has a rich potential for exploring alternative and queer sexualities both in and outside Japan.

Evidence of homoeroticism in the visual art of the Ottoman and Persian Empires.

According to conventional wisdom there is little in the way of depictions of homoeroticism in the Ottoman and Persian visual archive beyond the outpouring of miniature paintings of beautiful youths, often wine servers, that flourished in the Safavid period (1501–1736). However, what some have taken to be the invisibility of male homosexuality in regard to Middle Eastern art turns out to be far from accurate. This oversight owes first to a widespread misperception that Islam prohibits bodily and erotic imagery and hence that there will be little to find. Second, it owes to the tendency of Western scholars to look for signs of homoeroticism common to the Hellenistic and European traditions (e.g., sculpture or paintings glorifying the nude male body) but absent in Ottoman and Persian visual representation. Third, it owes to the reticence of Middle Eastern studies historians to take up sexually controversial topics until relatively recently, discouraging investigation into this visual heritage. In fact, once one learns to look at this archive with fresh eyes, decoding its particular system of signs, one discovers an overwhelming abundance of visual evidence of male homoeroticism. This wealth of evidence complements scholarship in the history of Middle Eastern sexuality since the beginning of the twenty-first century, revealing the extent to which institutionalized forms of male-male sexuality, love, and romance permeated premodern Persian, Arabic, and Ottoman cultures and aesthetics.

History and Aesthetics of Miniature Art

The tradition of adorning book manuscripts with miniature paintings flourished in Persia from the ninth century onward, reached a zenith in the Safavid dynasty, and spread eastward to the Mongol Empire and westward to the Ottoman Empire. Although Thomas W. Arnold's 1928 influential thesis about the prohibition of figural imagery in Islamic art has since been refuted by a number of scholars in the field, the widespread assumption of Islam's hostility to representations of the human figure lingers, coloring sexual historians' suppositions about the likelihood of locating substantive visual evidence of the erotic—much less the homoerotic—in such cultures. But as various scholars have clarified,
admonitions against artistic representations (for usurping God’s role as the creator of human likenesses) exist in various hadith (collections of sayings of the prophet Muhammad) but not in the Qur’an. Indeed, the idea of a “ban” on human figuration never extended beyond sculpture and decorations in mosques. But in the fine arts, from wall paintings (most of which have been destroyed over time) to illustrated manuscripts to brocaded silk garments to luxury household objects such as lacquered pen boxes, idealized human figures of both sexes are everywhere, and their beauty is designed to rivet the viewer’s gaze. At the same time, the very stylization of these ideal representatives of beauty—apparent in the depiction of seemingly nonindividuated, circular faces on fragile necks, tilted eyes, and pinched lips (traits inherited from earlier Persian contact with Chinese art traditions)—created an aesthetics of beauty whose focus on the ideal, in contrast to the realist emphasis of European portraiture, also functioned to protect the artist from accusations of imitating God’s creation through mimesis.

Persian and later Ottoman miniature art is nothing if not aesthetically self-reflexive, and this self-reflexivity often becomes a key to deciphering the genre’s homo-erotic subtexts. Take, for example, a single-page image from a Safavid album in Istanbul’s Topkapi Palace Museum depicting a handsome youth, perhaps a prince, contemplating a single folio on which is painted the image of another young man. Such an image is not just a self-conscious meditation on art (in which the viewer’s contemplation of this artwork is mirrored in the act of artistic contemplation represented in the depiction). That this depiction of the act of looking is also meant to symbolize the inception of sexual desire—in this case male-male desire—is underlined in the way it “quotes” Nizami’s Khamsa, a revered and continually illustrated heterosexual romance epic from the twelfth century in which the heroine, Shirin, falls in love with Khusraw when she sees his portrait. The three different specimens of verse affixed to the same album page, moreover, share the theme of erotic desire. Text, illustration, and context thus all reinforce the representation of a romantic yearning that is in this case homoerotic.

As an image created independently of a larger text, this folio represents a later development in the tradition of miniaturist art. But miniature paintings conceived to serve as illustrations to the history, verse narrative, medical treatise, or poetic anthology they accompanied in earlier texts are also suffused with homoerotic subject matter. These range from illustrations to often repeated stories (such as the prince who is waylaid by an infatuated lover on the way to a polo match) to the Ottoman poet and courtier Fazil Enderuni’s Huban-name (1792–1793; Book of beauties), a sequence of lyric portraits singing the erotic charms of desirable boys around the globe—each of which is accompanied by a miniature painting illustrating the winsome youth at hand.

Because these images most often originated as the property of the elite, the question arises whether the homoeroticism pervading them reflects sexual mores beyond those of their elite viewers. These circumstances of ownership and circulation, in turn, have fostered
assumptions that, because aristocratic circles have always allowed room for “rarefied sexual tastes”—tastes as exceptional as these rare book-objects—such representations do not reflect the social values or habits of the larger culture. Yet, as numerous scholars have definitively shown (Ze’evi 2006; Andrews and Kalpakli 2005; El-Rouayheb 2005; Rowson 1997; Massad 2007), male-male sexuality pervaded Islamic culture on multiple levels, including literary traditions whose oral performance reached wide audiences from the tenth to nineteenth centuries. Likewise, one should not dismiss the possibility of such imagery also reaching wider audiences, both local and foreign, than is often assumed. First, the Persian artists who originated the miniaturist motifs that dominated manuscript production for some 400 years traversed vast areas (sometimes freely, sometimes as booty), often bringing their personal caches of manuscripts with them as they set up schools to teach their skills in new locales; manuscripts were often given by rulers to diplomats and important figures from other countries as gifts and received by courts as tribute offerings. Whereas Istanbul remained the hub of art production throughout the Ottoman Empire, the ever-shifting political fortunes of the ruling dynasties of Persia meant that the Persian Empire’s centers of artistic production periodically shifted from one city to another as new dynasties relocated their capitals, thus dispersing local traditions of miniature painting widely across the face of Asia Minor and even Europe.

Although the most talented artisans and calligraphers worked in royal studios, many artists served their apprenticeships in bazaar workshops and, by the fifteenth century, were employed in ateliers whose customers included upper- and middle-class patrons, ranging from governors to merchants. Commercial enterprises also increasingly produced illustrated manuscripts expressly for sale to foreign visitors. As the presence of Europeans in these regions exploded beginning in the mid-sixteenth century, their travel narratives provide ample evidence of the hordes of book manuscripts available for viewing and sale, along with a number of individual paintings separated from their original manuscripts and dispersed in urban bazaars, including, in the words of one such traveler, William Ouseley, images “offensive to the modest eye” (1823, 1:69).

The dissemination of such images, including homo-erotic ones, across large geographic areas was also facilitated by three important artistic developments. First is the rise of the poetic miscellany in the 1400s, which consisted of poetry by various authors and combined various themes and styles and both full and abridged texts. In such volumes, illustrations inevitably tended toward the love themes (often homoerotic) of much of the poetry and existed in a much looser relation to the text than those created for the narrative romances or historical chronicles. The second crucial development was the rise of the self-standing single-page painting as an aesthetic object existing in its own right. This tradition included innumerable portraits of languid, epicene youths in a style perfected by Riza-i ʿAbbasi (c. 1565–1635) and his most famous student, Muʿin Musavvir (1617–1708). The third development of significance was the increased popularity in the sixteenth century of the album genre, in which illustrations and lines of poetry cut from older texts were affixed to
new pages in aesthetically interesting arrangements, allowing the arranger to focus on favored themes and subject matters through juxtaposition and placement. Thus, the independently minded collector might decide to bring multiple representations of beautiful youths by different artists together on a single page, creating a “conversation” between the figures.

This technique is evident not only in Middle Eastern albums but also in those of European collectors who brought their singly purchased folios back to France, England, or Germany to bind into albums. Charles Hercules Read (1857–1929), the keeper of British antiquities at the British Museum from 1896 to 1921, amassed fifty-seven such folios in an album that now resides in the Morgan Library and Museum. While textual evidence suggests that several of the Persian illustrations came from the same early seventeenth-century muraqqā’ (album), Read inserted into their midst a number of leaves from other sources as well. The result is a handpicked collection overwhelmingly consisting of images of beautiful male youths, raising the question of whether this thematic played a role in their original assembly, their purchase by Read, and the additions that Read made to the collection.
Figures 1: Portrait of Shah ʿAbbas I with One of His Pages (1627). Attributed to Muhammad Qasim, this famous representation of the shah includes several homoerotic symbols, including a wine bottle between the youth’s thighs.

Examples of the Various Categories of Homoerotic Illustrations

To illustrate the homoerotic frisson that infuses the archive of Ottoman and Persian miniature painting, the following paragraphs discuss an array of images arranged in thematic categories. Read’s album provides an excellent launching point to discuss the first grouping: single portraits of youths depicted as objects of desire. In one image dating to Herat (present-day Afghanistan) between 1600 and 1610, a seated youth epitomizes the beau ideal (perfect model) of Safavid art in his combination of indolence, lissomeness, and a coyness that borders on yawning indifference. The youth’s detached gaze acts as one of the motors of desire for the viewer, whom the portrait projects as the wishful male suitor who would rather wrest the youth’s attention to himself. This desire is flamed by the epicene youth’s obvious enjoyment in striking a provocative pose as he offers himself up to the viewer’s gaze: from his elaborately wrapped turban, to the ermine borders of the cloak that he hugs loosely to his chest with his unseen left arm, to the artfully casual strands of hair that lie on his neck, and from his arched eyebrows to the open-legged posture on the raised platform on which he ever so casually lounges against his ornately brocaded pillow, he renders himself an object of desire and display.

Another common depiction of homoeroticized desire in the miniature tradition features male couples. Figure 1, attributed to Muhammad Qasim in 1627, is the most famous of many representations of the Persian shah ʿAbbas I (1571–1629) in the company of a handsome youth, as well as the one whose homoerotic signifiers are most artistically encoded. Note how the shah clasps the extended wrist of the smiling boy with his own hand, bringing flesh into contact with flesh, as the two stare intently into each other’s eyes. The boy appears ready to chuck the shah under the chin (an iconic gesture of amorous affection in miniature art—here reversed, because the youthful beloved is usually the recipient of the gesture), while the shah’s right arm, draped over the youth’s shoulders, pulls him closer into a near embrace. Meanwhile, the boy’s left hand strokes the tilted neck of the equally iconic wine flask, which rises between the youth’s thighs (one of which is exposed) as if an erect phallus and extends into the vicinity of the shah’s lap, thereby visually creating a symbolic link between their erogenous zones. The miniature is accompanied by the following verse: “May life grant all that you desire from three lips, those of your lover, the river [of life—flowing at the bottom left corner of the frame], and the cup.”

Expression of amorous affection between youths of the same age is also part of the visual tradition. Often the youths’ intertwining of limbs makes it difficult to tell where one body
ends and the next begins, evoking the arabesque design ubiquitous in Middle Eastern aesthetics. This simultaneously sensuous and formal appeal is apparent in a late sixteenth-century album miniature. As the two wine-drinking youths engage in a flowing embrace, the anonymous artist captures the sensation of bodies caught in motion: the S-like curve of the horizontally extended arms of the youth in front, who holds his turban in one hand and the wine flask in the other, forms links in a chain created by the overlapping limbs of his companion. The latter youth drapes one arm over the bare-headed boy's shoulder and down his back, his hand directing the viewer's eye to the leg that he has simultaneously twined around the boy's waist. One can almost feel the pressure of this leg pulling the bare-headed boy in to his companion's inner thighs; all the while the turbaned youth's other hand tantalizingly extends the wine cup to his companion's mouth.

There also exist numerous miniatures depicting groups of men in which the entire mise-en-scène is suffused with male-male desire, thereby making homoeroticism the image's dominant trope. One exquisitely rendered example is a very small Ottoman miniature in a volume of poetry, Kâsim-i Envâr, probably copied in Isfahan in 1456–1457 but with its illustrations added by Ottoman artists later in the sixteenth century. Eight figures (plus a nearly offstage musician) form a visual circle that gives the painting its formal symmetry. At bottom right, a köçek (male, often effeminate, dancer) entertains this all-male group of refined aristocrats in a sumptuous palace setting. The participants in this pleasure party form a range of types of couplings (and age pairings) that attests to the sheer variety of acceptable homoerotic desires in this world, a variety familiar to viewers of the image.

At the top center of the group, a man with a slight moustache who is holding a wine bottle—his position indicating that he is probably the host of this indoor sohbet (highly aestheticized, aristocratic, all-male pleasure party)—is extending his free hand to meet that of the youth he is engaging in conversation, while a lad positioned on the far left looks on. Meanwhile, at the right border, two young men hold hands. But, most notably, in the lower left corner two seated and embracing youths, also of the same age, are depicted in the passionate act of kissing—a degree of intimate lovemaking very rarely illustrated in the miniature tradition.

Festivities have moved outside, and have already passed their climax, in the illustration of an all-male garden party included in the album of the Ottoman sultan Ahmed I (1590–1617) from the Topkapi Palace Museum collection. The narrative encoded in the illustration registers the surprised looks on the faces of the attendants, to the left, who have just appeared with refreshments, as they take in the scene of drunkenness and debauchery that greets them. Just below the central fish pond, one youth is attempting to revive his older companion, who, as the broken bottle and fallen turban indicate, appears to have passed out from too much wine. In an equally humorous touch, the sage sitting by the fish pond is so caught up in a moment of creative inspiration that he remains as oblivious to the amorous antics taking place around him as the cat who is intently watching the fish circle.
the pond. Meanwhile, the gazes of three of the attendants on the left direct the viewer to the postcoital “pillow talk” occurring between the two youths reclining on the ground on the right half of the folio. That the two have just engaged in sex is not only indicated by the fact that they have removed their outer garments and turbans, as the neatly stacked clothing of each indicates. It is also signaled by the way in which their transparent undergarments teasingly reveal their still-tumescent penises. That of the youth who faces the viewer lies draped across his left thigh, while the genitals of the youth whose back is to the viewer are tucked between his legs, visible along with his buttocks. The overall depiction is both whimsical and erotic, its outdoor setting in a lovely landscape lending a bucolic carefreeness to an afternoon of excessive indulgences in the double pleasures of wine and lovemaking.

Another all-male venue providing artists with the occasion to depict scenes suffused with sensuality is that of the hamam (public bath). While there is a rich poetic tradition evoking, in often explicit terms, the homoerotic pleasures of the bath and its delectable bath boys, visual representations are often more subtle. An illustration of a group of men cavorting in a hamam’s bathing pool in a sixteenth-century album of miniatures housed in the Topkapi Palace Museum depicts a degree of male intimacy that appears relatively innocent on the surface but that, on closer view, includes a degree of tender sensuality superseding general locker-room homosociality. The artist strategically allowed the wrap of the masseur on the bottom left to fall open, exposing his penis, and rendered the blue towels of the two men preparing to dive into the pool on the upper right translucent, so that they reveal fully outlined genitals beneath. There is more going on, at least in the miniaturist’s imagination, than first meets the eye.

Various explicit images of male intercourse can also be found in the archive, ranging from miniatures to everyday painted objects. Often these conform to the pattern of age-differentiated sodomy most common in Ottoman and Persian culture, in which the adult male is the active partner and the adolescent youth the passive recipient. But some visual images also attest to a greater flexibility than this truism allows. A case in point is an eighteenth-century illustration in Nevʻizade ʻAtayi’s Khamsa (see Figure 2). On the one hand, the central action inscribes the familiar script: a mustachioed turbaned man mounting a boyishly plump youth reclining on a pillow on a raised dais that underscores the scene’s “to-be-looked-at” quality. On the other hand, this staging makes all the more pronounced the alternative relations and erotic practices occurring among the witnesses to this spectacle—indeed, the slightly ajar door to the rear of the platform hints at the porous dimensions of this phantasmic tableau, its openness to new possibilities. Thus, in the front of the raised platform, a single man enjoys the pleasures of autoeroticism, taking in the coupling occurring to his rear with eyes aslant. Meanwhile, the two men to the right add another intriguing element to the scenario. On one level they might be interpreted as waiting their turn to enjoy the youth. Yet on second glance they seem more interested in getting off watching each other as they exchange intense glances. A more mobile exercise of
homoeroticism—here involving adult peers—inhabits the fringes of the pederastic model that occupies center stage; such a reversal of expectations also occurs in multiple miniatures in which the youth is shown as the active partner, sodomizing his senior partner.

This erotic plasticity is encapsulated in a tiny miniature that forms a fitting conclusion to this survey, a scene occurring within a brothel that provides a reminder that well into the early twentieth century Middle Eastern formations of sexuality and desire were not constructed on an either/or polarity pitting heteroand homosexuality as binary opposites, as was increasingly the case in Christianized Europe. While this sixteenth-century miniature, illustrating a story in the Külliyat of Saʿdi, measures only a few inches, it depicts a world teeming with activity, including six couples (and four other onlookers, clients, or attendants). Not only do men engage in sex with both female and male partners in a shared architectural space and on the same visual plane, the artist has taken care to represent as
many variations of acts and age pairings as possible. Of the five couples involved in sexual activities, two are male-male and three are male-female. In addition, a man woos the seated woman on the carpet to the right, while a man entering the door at the bottom left seems to be pursuing a boy whose body is cut off by the bottom margin. In terms of both visual and architectural hierarchies, the pride of space is the decorated alcove at the top center, generally occupied by the highest-ranking person in the miniature, which accords the action occurring in it—a man penetrating a youth—elevated prominence. In contrast to this model of age-differentiated sodomy, a second male pairing—located at the bottom right corner— involves two youths of the same age. Given their parity and that certain brothels served not only as sites where one might pay for sex (with either a male or female) but also as “safe spaces” rented by males, it is not unreasonable to surmise that the latter couple are not in fact client and prostitute but lover-companions. A hint of this erotic porosity also infuses the scene’s depiction of heterosexual congress. While two involve face-to-face intercourse between an older man and younger woman, the third depicts a youth on his knees, erection exposed, as he manually pleasures his female companion. In sum, this remarkable image celebrates a plethora of erotic activity whose fluidity is encouraged by the privacy that the brothel’s enclosed world provides its patrons. Within this erotic zone, adulterous intercourse (between male clients and female prostitutes) and sodomy (between males) are equally permitted and occupy the same playing field, occurring in “full sight” of each other.

From bawdy scenes such as this to single portraits of youthful dandies, from couples of similar and differing ages to illustrations of all-male venues, from palaces and hamams to pleasure gardens, the Ottoman and Persian visual archive is suffused with a sensuality that is both implicitly and explicitly homoerotic. That so much evidence has remained, in the face of later censorship (in some manuscripts the point of insertion in scenes of sodomy has been rubbed out), raises the question of how much has been destroyed, as well as how much remains to be discovered. But what the extant archive offers up—once the viewer learns to resee with fresh eyes, and from a queer angle of vision—is a startlingly evocative trove of images whose homoerotic content is already present and awaiting analysis.

Welch, Stuart Cary, Sheila R. Canby, and Norah Titley. *Wonders of the Age: Masterpieces of

When late eighteenth-century European navigators first landed at Tahiti, in what is today French Polynesia, they were bewildered by what they thought was a society untouched by “civilization,” in which people lived in innocent harmony with nature. What perhaps enchanted them the most was what they understood as the islanders’ seemingly unabashed approach to sexuality. They were somewhat aware of the fact that the sexual freedom they thought they were witnessing was entangled with dynamics of material exchange that Tahitians were anxious to establish with the seemingly powerful newcomers, and thus was the product of a cross-cultural encounter riddled with politics and potential misrecognition (Wilson 2002). The exacting narratives that they published upon their return would cause sensations in London and Paris salons, fueling romantic fantasies about humanity before the fall from Paradise and debates about national and racial difference (Cheek 2003).

There were, however, limits to the travelers’ enchantment. When they witnessed “unnatural” same-sex practices and gender-bending that some Tahitians engaged in, the enlightened spirit of scientific discovery and romantic wonderment gave way to moral indignation (Besnier 1994). These they also recorded in lurid detail in their journals, where they were suffused with European discourses of “civilization” and “primitivity” and helped confirm that islanders were, after all, savages.

Pacific Transgender in the Late Eighteenth Century

What the navigators described involved male-bodied individuals who were socially considered women, called to this day māhū in Tahitian (as well as Hawaiian) and by a variety of other names in other societies of the region (e.g., fakaleitī in Tonga, fa’afafine in Samoa, ʻakavaʻine in the Cook Islands, qauri in Fiji), many of which are neologisms and often unstable. It can expediently be referred to in English as “transgender” despite the risk of erroneously conflating the category with others with which it shares some but not all characteristics. Eighteenth-century Europeans wrote that māhū socialized primarily with women, performed women’s work, and were subject to the same gender-based taboos as women. They were part of chiefs’ retinues and, according to these descriptions, were not
the object locally of any particular moral reprobation or social marginalization. Unlike transgender categories in other parts of the world, however, they did not perform any particular religious function. This was a category defined in terms of gender rather than sexuality, but since māhū were not socially considered to be men, they did not take on male sexual roles. Instead, they engaged in receptive sexual acts with normatively gendered men, who appear to have been mostly or exclusively members of the elite classes.

While eighteenth-century Europeans, who believed that both effeminacy and same-sex desire were the consequences of spending too much time with women, must have made some sense of māhū’s gendering and sexuality, they were unanimous, in contrast to Tahitians, in their moral evaluation of these “depraved” individuals and their “abominable” and “detestable” practices. This reaction makes sense in the context of the fact that these encounters were taking place at a time when a gender revolution was taking place in England that would squarely establish a heteronormative order, violently repressing sodomy and male effeminacy as signs of moral and civic deficiency (Trumbach 1998). Yet the encounters also may have had a strong, if unacknowledged, homoerotic undertone (Wallace 2003). As the navigators were followed in Tahiti by missionaries of the evangelical London Missionary Society, any trace of Enlightenment curiosity gave way to the categorical and virulent condemnation of all Tahitian sexual practices.

One puzzling fact is that in contrast to the copious European documentation of gender-crossing māhū in Tahiti, accounts of comparable social categories in other island groups are at best equivocal. In Hawai‘i, naval officers who accompanied British explorer Captain James Cook (1728–1779) noted that male elites surrounded themselves with “the most beautiful males they can procure about 17 years old,” referred to as ‘āikane (a term that later came to mean “bond friend”); the chiefs “are extremely fond of them, and … they bestow all the affections upon them that were intended for the other sex” (Ledyard 1783, 132). But these were quite different (and to eighteenth-century observers, undoubtedly more puzzling) than māhū because gender and sexual desire did not align as the Europeans expected at the time.

Explorers’ journals bear witness to the fact that early encounters were replete with reciprocated misapprehensions about gender and sexuality. Several passages about Tahiti recount situations in which a Western sailor courted a beautiful young woman, only to discover to his dismay that she was a māhū; this was a source of great hilarity to all bystanders. In both Hawai‘i and Aotearoa New Zealand, European sailors were occasionally the object of Polynesian men’s sexual interests. Some writers express doubts about island men’s masculinity, but surely these doubts must have been reciprocated, despite the silence of archives on the topic, particularly in island societies that practiced circumcision as a rite of manhood, where an uncircumcised man, which included European travelers, was (and still is) considered deficient.
Outside of Tahiti, early records provide either no comment or comments about the absence of transgender individuals. For example, William Mariner, a young midshipman who spent 1805 to 1809 in Tonga, 1,700 miles from Tahiti, after the ship on which he was sailing was attacked and scuttled, dictated upon his return to Britain an account of Tongan society, in which he declared, “As to certain preposterous habits, which so disgrace the moral character of nations west of them, and which have been said to infect the natives of some of the South Seas islands, we must do the Tonga people the justice to say, that they have not the most remote idea of any thing of the kind” (Martin 1817, vol. 2, 178; “west” is undoubtedly an error, since Tahiti is east of Tonga). As for the possibility of women taking on a male role in Pacific Island societies, early-contact witnesses are uniformly silent.

Islanders' own perspectives on the history of the transgender, whether in encounters with European travelers or in other contexts, are unfortunately difficult to excavate, as oral history in the region is silent on this social category; historical memory focuses on the identities and deeds of people of importance, which transgender persons certainly were not. Some indigenous activists in the region claim historical knowledge of the transgender in settler colonial societies of the region where struggles over indigenous rights are most visible, namely Aotearoa New Zealand and Hawai‘i. However, these claims invariably focus on mythological figures that transgress gender categories or attest to close same-sex friendships, such as that between the warriors Tūtānekai and Tiki in Māori mythology, as narrated in writing by mid-nineteenth-century chief Te Rangikāheke in the 1850s (Walker 2014). The exact nature of these dynamics is very difficult to interpret specifically (and they tend to lend themselves to romanticization), but they do play an important role in contemporary struggles for the recognition of nonheteronormative practices in contemporary indigenous and sexuality politics.

Pacific Transgender in the Long Nineteenth Century

By the early twentieth century, according to Western accounts, men who take on and are attributed feminized personas were ubiquitous throughout Polynesia, the triangular region of the Pacific with Hawai‘i, Aotearoa New Zealand, and Rapanui (Easter Island) at its apexes. Today they and gender-crossing women are part of all societies of the region, including the contiguous regions that Westerners have referred to since the nineteenth century as Micronesia, in the North Pacific, and Melanesia, in the Western Pacific.

Documentary records that followed Enlightenment-era accounts fall largely silent for the duration of the long nineteenth century, other than in the confusing and sensationalistic accounts by a few colonial agents (e.g., Jacobus X 1893). How these identities may have spread to regions where they were evidently unknown at first contact with Europeans remains an unanswered question. A tantalizing hypothesis argues that early cross-cultural encounters were theatrical events as much as they were political and economic events, in which the encountering parties performed for one another (Balme 2007). The central role
played by gender-crossing men and the prominence of slapstick gender equivocations in these encounters is no coincidence, given the category’s predilection for performance, which survives to this day. Could gender crossing in island societies where it was apparently not known in precontact days have been triggered by the precolonial encounter?

In the course of the nineteenth century all Pacific Islands were incorporated, to various degrees, into the colonial empires of the United Kingdom, France, Spain, and Germany, as well as, in the last decade of the century and first decade of the twentieth, the United States and Australia. At the center of imperial projects were zealous efforts to turn islanders into civilized and Christian colonial subjects. Colonial and missionary agents outlawed precontact religious rituals, cannibalism, infanticide, and human sacrifice, as well as, to various degrees in different island groups, tattooing, dancing, long-distance canoe voyaging, and the manufacture of tapa cloth. They and the local elites who benefited from their presence reconfigured social structures and cultural practices so that Christianity and the colonial order would eventually constitute “tradition.” Newly introduced diseases, liquor consumption, slaving-ship raids, land dispossession, religious and other wars, and other calamities finished the restructuring job where imperialism and missionization left off.

While they undeniably transformed Pacific Island societies, imperial projects were inevitably counterbalanced by action “from below,” ranging from quiet tactics of resistance to open rebellion. As the “new Pacific historiography” that emerged in the 1970s and 1980s, inspired by subaltern and postcolonial critiques, has documented (Denoon 1997), Pacific Islanders were not simply victims of colonialism, but took events into their own hands, although often with aims that differed from one another. One illustration is precisely the fact that, despite the new moralities imposed on Pacific Islanders during this period, gender identities and sexual practices that did not conform to the new normativities evidently expanded and flourished, although the details of this flourishing remain unknown.

Transgender and Modernity
Fakaleitī at a Hair Salon in Tonga, 2008. Tongan fakaleitīs (male-bodied individuals who are socially considered women in Tongan society) are expert hairdressers and their salons are social hubs where they socialize with one another and with their women friends and clients.

In the early twentieth century Western observers began commenting again on the transgender people, this time not only in Tahiti but also elsewhere in the region. This renewed interest owed much to the emergence of the discipline of anthropology, which sought to document social and cultural practices, allegedly suspending moral judgment. For example, American anthropologist Edward Winslow Gifford (1887–1959), who conducted fieldwork in Tonga in 1920 and 1921 and published one of the first modern ethnographies of a Pacific Island society, writes that “little could be learned about berdaches (fakafefine, which [missionary dictionary compiler] Baker defines as ‘a monster’). Only a single informant … vouchsafed information concerning them. He said that anciently ‘there were many,’ but in 1920 he knew of but one” (1929, 203; Gifford was familiar with berdaches from his previous fieldwork among Native Americans). In Coming of Age in Samoa, American anthropologist Margaret Mead (1901–1978) relates encountering one “deviant,” a twenty-year-old boy who made “continual sexual advances to other boys,” whom girls regarded as “an amusing freak” but whom men looked upon with “mingled annoyance and contempt” (1928, 148). The possibility that non–gender-bending boys might have been equally interested in the young fa'afafine is not part of the description.
But these remarks were invariably incidental. Sustained analysis did not take place until the 1960s, when American psychological anthropologist Robert Levy (1924–2003) conducted psychoanalytically inflected research in Tahiti. In 1971 he published a brief article in which he proposed that *māhū* performed a particular “function” in Tahitian villages, namely to demonstrate to heteronormative youth what a man should *not* be, in a context in which, according to Levy, the relative lack of cultural markers of gender rendered masculinity fragile. While subsequent researchers demonstrated that this analysis and the assumptions on which it is predicated are flawed (*Besnier 1994*), it deserves credit for having opened a debate in the ensuing decades.

One important characteristic of male-bodied transgender Pacific Islanders is the role that they frequently adopt as cultural brokers, performers, and innovators, in character with the role they played in early contacts between islanders and Westerners. They distinguish themselves for their cultural creativity and orientation to an external world and the future (*Mageo 1992; Besnier and Alexeyeff 2014*). For example, in urban centers of the region such as Nuku'alofa, Papeete, Suva, and Apia, they organize beauty pageants and similar performances, which are eagerly attended by admiring, although sometimes mocking, audiences (*Besnier 2002*).
In contexts where colonialism remains in place this orientation to modernity and the future takes on a more complex configuration. This is the case, for example, in French Polynesia, a large territory of islands scattered across the eastern Pacific, one of the last polities of the region still administered by a European power. From 1966 to 1996 France conducted nuclear tests in the territory, despite growing local opposition and evidence of the long-lasting deleterious effects of these tests. During the same period a tourist industry also developed, bringing significant numbers of visitors to the main centers, particularly Tahiti and Bora Bora.

These dynamics have had an important effect on transgender inhabitants. Tahitians consider māhū to be attentive to their self-presentation, good at working in the care industries, and proficient language learners, competencies that make them well-suited for labor in the tourist industry. Since the 1960s many have migrated from the outer islands to the main centers. This has given rise to a bifurcation between “traditional” māhū, who adapted the care work they were known for in rural contexts to care for tourists, and a new identity, the raerae, who gravitate toward the sex industry that emerged to cater to tourists and military personnel. Mainstream Tahitians appreciate the former for their ability to secure wage employment, and thus contribute to kinship economics, and for conveying a positive impression of Tahiti to the outside world. They are also appreciated for the role of guardian of “traditional” culture that some adopt, by becoming dance teachers, for example, thus contributing to the anticolonial cultural revitalization movement. Mainstream Tahitians are much more critical of the raerae, whom they view as culturally “inauthentic,” too blatant in their sexuality, and uninterested in their kinship obligations, as well as objectionable for their association with the undesirable French military presence (Kuwahara 2014).

One finds similar tensions in other areas of the region between the “traditional” and “modern” manifestations of male-bodied transgender, whereby those who take on “traditional” identities garner the moral approbation of mainstream society and those who adopt “modern” identities, particularly by showcasing same-sex desire over gender crossing, are the object of disapproval (Besnier and Alexeyeff 2014). However, one must also insist that both “tradition” and “modernity,” and the social categories they produce, are historical and social constructs. In Tahiti, for example, the revitalization of traditional culture, in which māhū play a visible role, is a political reaction to the colonial presence, and the modern identity that raerae adopt is the product of geopolitical dynamics of much greater scale than local cultural politics, including the presence of military and the history of nuclear testing.

Throughout the region, male-bodied transgender persons are far more visible than female-bodied transgender individuals, who tend to avoid the limelight, are the object of considerably more moral reprobation than their male-bodied counterparts, and have a much more obscure history. If they were present in eighteenth-century Tahiti, they
completely escaped the notice of Western travelers, and today they have been the object of very little research. Yet “mannah” women, who perform work traditionally associated with men, seek sexual relations with nontransgender women, and fail to conform to the heteronormative expectations of women, are widely attested throughout the region, where it is common to refer to them as *tomboys* (a borrowing that has been incorporated into local languages, as it also has been in Southeast Asia).

As anthropologist Serge Tcherkézoff (2014) argues in reference to Samoa, the lives of *fa’afafine* and *tomboys* present considerable asymmetry: while *fa’afafine* find their place in society despite hostility from some quarters (particularly from fathers and brothers, who are concerned that they might compromise the family’s dignity), *tomboys* find it very difficult to do so. They are often categorically rejected for bringing shame to the family, and in contrast to *fa’afafine*, whose company women in particular delight in, few seek their friendship, leading many to leave the communities in which they were born. In the Pacific, heteronormativity applies its hegemony considerably more stringently on female-bodied than on male-bodied transgender persons.

**Gendered Geographies and Global Flows**

So far, this discussion has been primarily concerned with transgender identities in Polynesia. While Polynesia is the region where these identities are most visible, transgender categories are found in other parts of the Pacific such as Micronesia and the urban centers of Melanesia, although their emergence there appears to be a recent phenomenon and their position in society is considerably more precarious. In Highland Papua New Guinea transgender identities must be distinguished from now abandoned “ritualized same-sex practices,” initiation rituals that involved semen transactions between older and younger men.

From the second half of the twentieth century many societies in the Pacific Islands became transnationally mobile, and this mobility added considerably to the gendered and sexual geography of the region. From the 1960s, for example, Samoans and Tongans have been moving overseas to seek wage work, first to New Zealand, which initially welcomed them as they filled needs in the lower rungs of the labor market, and then to Australia and the United States. Today there are more people of Tongan and Samoan descent outside of Tonga and Samoa, respectively, than in the islands, and the two societies today constitute diasporas, populations dispersed over a large area from an original center, but with enduring relations between the center and the expatriate communities and among the latter. Other mobilities are more restricted in scope (e.g., Cook Islanders to New Zealand, Wallis and Futuna Islanders to New Caledonia, Micronesians to Guam and Hawai‘i) and more recent (e.g., Fijians and ni-Vanuatu to New Zealand and beyond), and yet others have brought people from elsewhere to the region (e.g., in the nineteenth and early twentieth centuries, South Asians to Fiji and East Asians to Hawai‘i, originally as sugar plantation
laborers in both cases). Despite the fact that the increasing criminalization of border
crossing by the underprivileged worldwide creates new obstacles for Pacific Island labor
migrants, they continue to be mobile as island economies stagnate while wage work
becomes essential to survival.

Transgender islanders have participated in these mobilities with enthusiasm. This
enthusiasm is grounded in their affinity with innovation and change, and may once again
echo their age-old role as cultural brokers. But it also has a pragmatic foundation, in that
moving to an urban, anonymous environment enables them to pursue what they see as a
freedom from the moral and social strictures of small-scale societies. At the same time, the
reality they encounter in postindustrial countries is often at odds with their designs: there,
they are often stereotyped as racialized, unskilled, and unwanted immigrants of suspect
gendering, and have to make do with employment at the bottom of the labor market,
including sex work.

In Western countries Pacific Island transgender people encounter new forms of gender and
sexuality. For example, they are often invited to form alliances with existing groups
espousing LGBTQ politics and identities (ranging from political activism to circuit parties),
while in the islands they generally had viewed Western-style gays, lesbians, and
transgender persons with suspicion and incomprehension, as “foreign ways of being” with
which they did not identify. New experiences lead some to rethink the relationship
between their own gendering and sexuality. In other cases, sex reassignment and other
body-altering interventions, which were not available in island countries as of 2017,
become a possibility that some consider.

The legalization of same-sex marriage in Pacific Rim countries (New Zealand since 2013,
the United States since 2015, Australia since 2017) has had the unexpected effect of making
legal migration easier for transgender Pacific Islanders than for their heteronormative
compatriots, as they are more likely to have remained unmarried at home. However, the
legalization in 2013 of same-sex marriage in France, which also applies to Pacific Island
territories administered by France, including New Caledonia, Wallis and Futuna, and
French Polynesia, has been met with a moral backlash. Despite efforts to promote French
Polynesia as a same-sex wedding destination to revitalize a declining tourism industry, the
legalization of same-sex marriage there has been framed as yet another colonial imposition
from metropolitan France. Elsewhere in the region, marriage equality is legal in the US
state of Hawai‘i and in Guam and the Northern Mariana Islands, both US territories.
Marriage equality was legalized in 2015 on Pitcairn Island, a British dependency peopled
by fewer than fifty descendants of Bounty mutineers, none of whom overtly identifies as
transgender or gay. Elsewhere, there is considerable opposition to the idea, including
among the transgender population.
In the region of the Pacific generally referred to as Melanesia, comprising Papua New Guinea, Solomon Islands, New Caledonia, and Vanuatu, transgender identities are a relatively recent phenomenon largely confined to urban spaces. However, one phenomenon involving same-sex practices was first documented by anthropologists in the 1980s (a time when ethnographic fieldwork increased dramatically in the region), namely what Gilbert Herdt called “ritualized homosexuality” or “rituals of semen ingestion,” practiced by groups inhabiting the Great Papuan Plateau as well as a few other groups in Melanesia. These rituals, which ceased to be practiced in any society of the region in the late 1980s, generally consisted in oral, anal, and masturbatory sexual relations involving a prepubescent or pubescent boy as the ingestor and a young unmarried adult man, who was usually in a specific kinship configuration to the boy, in the context of initiation rituals. Among some groups such as the Gebusi, these practices were also supplemented by sexual relations among younger men outside of initiation rituals.

The practice operated in the context of the belief that, while girls were nurtured by their mother’s milk, boys had to ingest semen in order to successfully attain adulthood, and women could sap boys’ and men’s masculinity. The dramatic gender segregation and avoidance that these beliefs engendered are common in societies in the New Guinea Highlands, including many that did not practice ritualized same-sex practices. These societies are also particularly concerned with exchange in general and the exchange of body substances in particular, of which semen ingestion is only one particular form. Ritualized homosexuality was: (1) obligatory, in that boys could not grow into men without engaging in it; (2) sustained, in that the boy and his older relative maintained their sexual relationship until the boy was deemed mature and in turn, took on the role of semen giver; and (3) temporary, in that all grown men were expected to eventually marry heterosexually and produce children after an adolescence of receptive homosexual practices and a young adulthood of active homosexual practices. It thus cannot be understood as a matter of sexual identity.

It generally took place in the context of rituals of initiation during which the young initiates were instructed in religious secrets, were kept physically separate from the rest of the group, and were subjected to practices designed to induce pain and fear, such as nose bleeding induced by shoving bamboo into the nostrils. While erotic pleasure on the part of both parties was an uncontroroversial aspect, semen transactions took place in an atmosphere of terror and hazing. This has prompted some commentators to view them as imbued with domination and submission, although these did not take the form of a feminization of the receptive younger party in the transaction—quite the contrary, as the latter was seen as benefitting by becoming more masculine.

With a few exceptions, ritualized homosexuality had largely disappeared by the time
anthropologists began conducting systematic fieldwork in Papua New Guinea in the 1980s, and many anthropologists have based their ethnographies on informants' memories of these practices. Today, groups that formerly practiced it have forgotten the practice and sometimes virulently denied that it ever existed. The extensive Christian missionary effort to which the region has been subjected since the 1980s has played a role in this cultural amnesia, but so has the fact that the inhabitants of the region are considerably more interested in the future than in the past.

Global flows have brought other ideas to island countries, including new religiosities. In the social order established in the nineteenth century, Methodist, Anglican, Congregationalist, and Catholic churches are part and parcel of “tradition.” These established churches have generally not been concerned about transgender persons, many of whom are devoted church members and presentable citizens, as long as they do not showcase too much their sexual activities. In the last decades of the twentieth century, in contrast, new forms of Christianity such as Mormonism, Pentecostalism, and charismatic versions of established churches have gained considerable ground in island societies and have brought new politicized moralities that conflate transgender identities with gay and lesbian identities in the West, of which they are vocally disapproving.

Martin, John. *An Account of the Natives of the Tonga Islands, in the South Pacific Ocean, with an Original Grammar and Vocabulary of Their Language, Compiled and Arranged from the Extensive Communications of Mr. William Mariner, Several Years Resident in Those Islands.* London: Printed for the author, 1817.

The use of the term queer in Pakistan, including related activist groups and the indigenous designation khwaja sira.

The word *queer* generally lacks the kind of salience enjoyed by the terms *gay, lesbian, bisexual,* and *transgender,* as well as the umbrella initialism LGBT, among both gender and sexually normative and nonnormative Pakistanis. As such, *queer* has not yet emerged as an inclusive, overarching framework, as a category against the fixity of categories (Johnson 2010; Sullivan 2003), for the purpose of either social identification or political activism in the country. This is not to say that the term should or will in time achieve salience in the Pakistani context. Such an assumption would support a flawed linear evolutionary and imperialist logic that presupposes that regions of the Global South are “backward” and in need of modernizing in step with Euro-American notions of progress. That said, it is worth mentioning a few queer platforms that have emerged over the last decade that have had some modicum of impact, especially with regard to identification, community formation, and information dissemination. It should be noted, however, that in the absence of a substantial historiography of what can be deemed “queer Pakistan,” the information presented here has been pieced together by the author largely from his own research and personal experience of having worked with Pakistani gender and sexual minorities since the late 1990s. Like any historical recounting, it should be treated as fragmented, incomplete, and still in the making.

**Queer Organizations**

The emergence of the first two organizations, referred to here as P and M (pseudonyms have been used throughout this entry for both people and organizations in order to protect their identities), can be traced to 2009 and 2010. The Lahore-based P’s stated mission is to “support, inform, and empower the Pakistani LGBT/queer community to advocate for its own rights and autonomy, strive to eradicate homophobia and trans-phobia from Pakistani society, and create community and fellow-feeling.” P not only has an online presence in the form of a website and a Facebook page, it also exists offline as a government-registered organization and a physical community space. According to its executive board, P was registered as a broad-based social welfare organization meant to serve a range of marginalized groups rather than just gender and sexual minorities (e.g., religious...
minorities and people with disabilities). It was this broad focus that enabled the group to safely and successfully pass the approval process and become a recognized nongovernmental organization (NGO). In 2011 P’s office location, a small apartment that doubled as the residence of one of the organization’s executive committee members, was set up to serve as a queer safe house for those needing to escape familial and communal persecution. Some of P’s activities have included, but are not limited to: hosting awareness-raising events with key stakeholders (e.g., meeting with medical and mental health professionals to learn about their treatment of queer people and then organizing sensitizing presentations based on their input); conducting research on gender minorities (e.g., an international donor-funded “project on violence experienced by lesbian and bisexual cisgender women and transgender women in Pakistan”); and issuing statements on relevant historical and current events to express solidarity with other oppressed groups that are marginalized for reasons other than gender and sexual difference. P strives to be inclusive and to reach a wider audience by publishing most of its original written content in both Urdu and English.

Unlike P, M’s existence has been largely limited to social media, although the platform has occasionally organized group and individual meetups, thereby providing opportunities for its members to connect offline. Over the years the group’s online status has changed from an open to a secret group. This shift, brought about amid security concerns, involved a sizable membership purge in which the group’s participant pool shrank to fewer than 500 members in late 2017. For the sake of safety and privacy, M’s administrator runs the group under an alias but has personally met numerous group members, including the author. M has largely served as a platform for bringing together people of Pakistani origin as well as those interested in advocating for “queer equality in Pakistan” into a safe space where they can exchange pertinent information and engage in dialogue. The group has occasionally experienced moments of intense online activity followed by months of dormancy.

In the 2010s, a few more self-proclaimed queer spaces emerged on popular social media platforms. R and N, both of which are open to anyone wishing to join, are among the most recent online forums to organize under the banner of “queer.” R came into existence in 2013 to serve as a “Pakistani LGBTQIA advocacy and resistance group,” and N, formed in 2017, purports to be a “safe space” for the expression of “pride through art, culture, and dialogue.” Replacing the now defunct C, B was created in early 2016 to serve as a hidden online “hang out” space for Pakistani queers to “celebrate [their] … existence, make bonds, define and redefine what it means to be gay, bi, queer and trans!” The group is much more active than P and M because its broad focus on sociality, rather than just on issues of queer oppression and social justice, yields discussions on a diverse range of topics, including bawdy humor, popular culture, history, and current events. It also hosts postings for job openings in either LGBTQ-focused or LGBTQ-friendly organizations; personal experiences related to intimacy, sex, discrimination, violence, and familial problems; and group member selfies and photographs of events and small get-togethers. As of late 2017, B was primarily
made up of gay and bisexual men, along with a handful of trans and intersex women, while trans men, lesbians, and other queer women have been consciously left out of the group.

To date, the five aforementioned forums have a combined social media following of close to 3,000 people but with significant overlap in membership and participation. These five should be viewed not as an exhaustive list of queer groups, but as a partial one meant to offer a sense of the type of activities that have transpired under the banner of “queer” in Pakistan between 2009 and 2017. The majority of queer groups in Pakistan maintain a clandestine existence due to the legal, religious, and cultural restrictions and stigmas associated with gender and sexual difference. In such an environment of secrecy, it would be highly improbable for the author to have access to and knowledge of all queer spaces, especially those that are kept hidden and/or cater exclusively to queer women. (The author, being a cisgender man, did not have access to or sufficient information about women-only queer groups.)

The Politics of Naming and Identification

Although there are several other prominent and not-so-prominent online Pakistani clusters with a similar focus, none of them functions under the queer framework, but instead works within the narrower, but more familiar LGBT classificatory scheme. One such group, A, a key player working to “inform, lobby/advocate on issues that affect the lives of Pakistanis/South Asians who identify as LGBTI,” deliberately eschews the term queer because its executive director considers it to be offensive and ineffective—not entirely unlike earlier generations of North American gays and lesbians.

A majority of the author’s own research participants identify as either khwaja sira and/or transgender alongside a host of other identity terms, including hijra, zennana, khusra, murat, and trans. (Although the conflation of transgender with khwaja sira has increased in recent years, not all transgender people identify as khwaja sira, and vice versa, because the former is viewed by many as a modern label with insufficient cultural overlap with indigenous subject positions.) Most informants were either unfamiliar with the word queer or unclear about its meaning. This appeared to be the case both with lower-class, non-English-speaking activists who identified as khwaja sira and lower-middle-class, transgender-identifying informants who spoke a mixture of Urdu and English and were key constituents of gender and sexual minority rights organizations. For many, then, lack of proficiency in the English language limited access to information and became a major barrier in efforts to forge ties with local and global queer networks.

The terminology used for and by gender and sexual minorities has also been influenced by the domain of public health, especially HIV/AIDS intervention work. As in other regions of South Asia and the Global South, NGOs and community-based organizations (CBOs) working to curb the spread of sexually transmitted infections (STIs) in Pakistan were
among the first to organize collectives of gender- and sexually nonconforming people. These groups use a range of industry-specific terms to describe their nonnormative beneficiaries. For instance, the initialisms MSM (men who have sex with men) and TG (transgender), introduced by these organizations, are now routinely invoked as identity labels by NGO/CBO staff and their activist affiliates. Although the global LGBT discourse has figured prominently in the context of these sexual health initiatives, queer as an organizing category that challenges categorization has been less useful because it defies the very logic of stable and discrete groupings on which STI interventions rely for identifying and monitoring target populations.

Still others organize under broader, more encompassing, and potentially less threatening labels, such as gender and sexual minorities and indigenous classifications like khwaja sira. Although the number of groups working under the banner of “queer” in Pakistan has gradually risen, whether or not the term will gain prominence in social and activist domains remains to be seen. To date, however, queer has not gained the same currency as the terms gay, lesbian, bisexual, and transgender.

That said, the significance of an LGBT discourse in the Pakistani context cannot be overstated. Specifically, the adoption of identificatory language that traces direct linkages with a global LGBT movement has proven to be ostensibly dangerous in that it has been perceived by local opposition forces as a foreign cultural imposition and an affront to the Pakistani nation. The following incident demonstrates that by using khwaja sira, a historically and culturally rooted term, in identifying themselves to the state and the national public, gender-nonconforming activists have managed to impede allegations of antinationalism. In the summer of 2011, the US embassy in Islamabad hosted a pride event and subsequently issued a press release expressing its support for LGBT rights in Pakistan. The announcement of the pride celebration sparked anti-US and antigay rallies in several Pakistani cities where religious political parties, such as the Jamaat-e-Islami, took to the streets, condemning the event as a form of “cultural terrorism” and “an assault on Pakistan’s Islamic culture” by the United States (Express Tribune 2011).

Subsequently, another religious organization, Muslim Youth Forum (MYF), launched a campaign against homosexuality by displaying antigay signage in Lahore. A banner hung at a busy city intersection stated, “There is no place for Gay and Lesbian in Islam.” Another poster, referencing the US embassy pride event, called for the immediate dismissal of the representatives of “gays and lesbians in foreign affairs agencies” and the “gay, lesbian and straight education network” from Pakistan (Kashif 2012).

The strategic significance and utility of the term khwaja sira as a safety measure for staving off allegations of dissent are evident in the different ways the US embassy’s actions affected various gender and sexual minority groups in the country. On the one hand, fearing that this incident would spark violence and jeopardize the safety of queer people, the core
members of P and M organized a covert Skype meetup to deliberate over how to respond to the controversy. After careful consideration, the activists decided in favor of lying low instead of engaging in the heated mass-mediated debates surrounding the events. Although the collaborative potential of transnational connections is undeniable (Speed 2008), the case in point clearly demonstrates that they can have detrimental impacts as well. In this instance, local queer activists viewed the embassy’s action as an imperialist move that jeopardized their already meager efforts to organize.

On the other hand, khwaja siras were either unaware of, or unfazed by this entire controversy, and even the protesting groups did not seem to view khwaja siras as a part of LGBT. This is not entirely surprising because at the time, khwaja sira did not always translate as “transgender” in mainstream discourse. (It must be noted, however, that in the years since this incident, the terms transgender and trans have progressively become more salient identity categories.) Furthermore, unlike LGBT, khwaja sira was not perceived as a foreign import but as an indigenous category with deep roots in Islamic South Asian history. The language used to identify minority groups has consequences for how they are perceived, and in appropriating khwaja sira, community activists established distance between gender-nonconforming people and such politically charged English terms as gay and lesbian, which in the popular imaginary were associated with Euro-American sexual subjectivities and rights activism. Unlike khwaja sirs, the gender and sexual minorities who identified with globalized LGBT categories risked their well-being and were condemned for colluding with imperialist forces believed to be working against Pakistani and Islamic interests. Hence, even though gay and lesbian are more prominent categories than queer, they have proven to be problematic and dangerous in Pakistan.

Legal Developments

If queerness is understood as an overarching and inclusive umbrella category, then within this broad domain of difference the nonnormative populations that have made significant progress in Pakistan, particularly in terms of activism and legal reform, are khwaja sirs and transgender citizens. Though rarely invoked, Section 377 of the Pakistan Penal Code, an injunction inherited from the British colonizers, criminalizes sodomy as an unnatural offense. With this colonial law intact, the Pakistani Supreme Court made a series of historic rulings from 2009 to 2012 in which third-sex/-gender citizens were granted a range of legal privileges and protections. Among the rulings was the recognition of khwaja sirs as a distinct sex/gender, the provision of security, inheritance and voting rights, the right to take public office, educational and job opportunities, and access to government-sponsored welfare programs for khwaja sirs.

The proceedings commenced after Islamic jurist and human rights lawyer Aslam Khaki filed a Supreme Court (SC) petition in 2009 seeking protection of the fundamental rights of khwaja sirs. Khaki’s actions were in response to a police raid and the subsequent arrest of
khwaja siras at a celebration in Rawalpindi that was followed by a public protest staged by
khwaja siras (Redding 2015). Though unexpected, the SC’s actions coincided with similar
developments in other South Asian countries, including India, Bangladesh, and Nepal (Khan
2014). Moreover, the advancement of khwaja sira rights can be attributed to the historic
significance of Mughalera khwaja siras (1526–1857), who played such important roles in
the imperial courts as guarding the royal seraglio (Manucci 1906) and serving as army
generals and regal advisers (Lal 1994). As a historically rooted term, khwaja sira has
retained legitimacy and respect in contemporary Pakistan, while most other queer
descriptors are stigmatizing and harmful.

It was roughly in 2016 and 2017 that transgender emerged as a synonym for khwaja sira.
This change occurred at the intersection of additional legal developments and the rise of a
younger cohort of middle-class activists who have either a functional or a strong command
over the English language. After being unanimously approved by the Pakistani Senate, the
Transgender Persons (Protection of Rights) Bill, was passed by the National Assembly in
May 2018 and subsequently signed into law by the country’s president.

Parada do Orgulho LGBT de São Paulo, Brazil

JAN SIMON HUTTA
Assistant Professor, Institute of Geography
University of Bayreuth, Germany

One of the world’s largest pride parades and its role in Brazilian LGBT politics.

The Parada do Orgulho LGBT de São Paulo (São Paulo LGBT Pride Parade) has taken place annually since 1997, most often in June. The 1969 Stonewall riots in Manhattan, as well as the LGBT marches and parades that have occurred in its wake in various parts of the world, have served as its main points of reference. A crucial local precursor in São Paulo, however, was a march that took place in June 1980, organized by a coalition of sex workers, queers, Afro-Brazilians, and feminists to protest a violent police campaign (see de la Dehesa 2010). Protest marches also took place in 1995 in Rio de Janeiro and Curitiba, as the closing event of the International Lesbian, Gay, Bisexual, Trans and Intersex Association World Conference and the 8th Encontro Brasileiro de Gays e Lésbicas (Brazilian Meeting of Gays and Lesbians), respectively. Since 1999 the Parada has been organized by the Associação da Parada do Orgulho LGBT de São Paulo (APOGLBT; Association of the São Paulo LGBT Pride Parade). The latter part of the parade’s name has been changed several times, initially from “GLT” (1997–1998) and “GLBT” (1999) to “Gay” (2000–2003) and then back to “GLBT” (2004–2007) and to “LGBT” in 2008. Invariably, the Parada has traversed São Paulo's city center, from Paulista Avenue via Consolação Street, located in Brazil’s financial center, to Roosevelt Square. Parade trucks play largely electronic music and feature artists, politicians, activists, and other public figures. Unlike pride parades in the United States, no barriers separate spectators from participants, and there is no clear separation between the different groups and organizations marching, which has led some to compare Brazilian pride parades to Carnival.
The Parade as a Space of Activism

Politically, the Parada do Orgulho LGBT de São Paulo has emerged as part of the Brazilian LGBT movement’s politics of citizenship, which seeks to achieve social rights for LGBT people and to counter homophobia and transphobia (Hutta 2013). The APOGLBT not only has considered the Parada crucial in making LGBT people and their demands publicly visible, it has also used it as a space of education and activism, distributing pamphlets, communicating political demands, and organizing an accompanying series of cultural and political events throughout the year.

The slogans the organizers chose for each parade have largely mirrored the Brazilian LGBT movement’s shifting advocacy priorities. Early on, the focus was on diversity and visibility. The poster announcing the first parade in 1997 thus proclaimed, “We are many, we are in all places and in all professions.” In 2004 and 2005 the slogans focused on families and civil partnership, reading, respectively, “We have family and pride” and “Civil partnership now! Equal rights, no more, no less.” From 2006 to 2014 slogans centered on homophobia (e.g., in 2006: “Homophobia is a crime! Sexual rights are human rights”), which in 2007 was...
further connected to racism and machismo: “For a world without racism, machismo and homophobia.” While the visibility of lesbians formed a thematic focus as early as 2002, trans issues appeared more consistently only during the following decade after trans activists publicly denounced the APOGLBT in 2012 for marginalizing them (even though trans activists had been involved in the organization earlier than that). The 2014 slogan thus explicitly addressed the issue of “homolesbotransphobia,” and in 2016 the official slogan was “Gender identity law now! All together against transphobia.” Given the unprecedented rise of evangelical churches and groups in Brazil since the 1980s—and an increase in anti-LGBT mobilization among evangelicals since the middle of the first decade of the twenty-first century (de la Dehesa 2010)—the topic of religion was also incorporated into the Parada’s slogans starting in 2008. The 2017 slogan, for example, proclaimed: “Independently of our beliefs, no religion is law! All together for a laical state.”

Growth and Its Social Context

Since the middle of the first decade of the twenty-first century, the Parada do Orgulho LGBT de São Paulo has been considered the world’s largest pride parade. After around 2,000 people attended the initial parade in 1997, participant numbers started to grow in the first years of the twenty-first century, totaling several hundred thousand. Between 2005 and 2016, the organizers reported between 2 million and 4.5 million participants each year, peaking in the years between 2011 and 2013. Police and other sources, however, did report lower figures for several years. The Parada’s emergence and growth have been facilitated by São Paulo’s commercial gay and dynamic cultural scenes (Facchini and França 2013).

In this social context, a new focus on public visibility in the LGBT politics of citizenship rapidly gained traction starting in the late 1990s. Apart from voicing political demands, parade participants thus enjoyed being able to publicly socialize, show same-sex affection, and perform or express gender in ways that challenge hegemonic norms, which was hitherto largely restricted to specific private, subcultural, or cruising spaces. Thereby, the São Paulo parade—in conjunction with the LGBT parade in Rio de Janeiro, both of which received wide media coverage—played a vital role in projecting LGBT cultures and demands into the national (and international) public arena. At the same time, however, the Carnivalesque character of the parade and the participation of commercial actors have provoked critiques regarding the event’s depoliticization, which the organizers sought to counter in 2016 by unifying the parade trucks and their slogans.

The event’s massive growth since early in the first decade of the twenty-first century was also facilitated by an increase in funding, especially from the Ministry of Tourism, state-owned banks and oil companies such as Caixa and Petrobras, and, more recently, Netflix. Prominent politicians, including São Paulo’s former mayor and state governor, have praised the economic returns the Parada generates through hotel occupancy and visitors’ consumption, estimated at 180 million reais each year. The Parada’s growth also correlated
with a proliferation of pride parades nationally and internationally. In 2011, 387 LGBT parades were counted across Brazil. It is important to note, however, that the increasing visibility of LGBT people and issues has not necessarily translated into social acceptance. For instance, the massive participant increase of the Parada do Orgulho LGBT de São Paulo has been paralleled by the dramatic growth of São Paulo’s evangelical March for Jesus, for which the police reported 5 million participants in 2010 and 2011. While the LGBT parades in Brazilian cities have certainly paved the way for political achievements such as the legalization of same-sex marriage in 2013, they have thus also provoked a conservative backlash.

Such a backlash has also assumed violent forms, including in the context of Brazilian LGBT parades. Most dramatically, on the evening of the 2009 Parada do Orgulho LGBT de São Paulo, neo-Nazis threw a homemade bomb at participants, leaving over twenty injured. That same evening, aggressors—not identified at the time of writing—beat thirty-five-year-old Marcelo Campos Barros to death. Together with the persistently widespread violence against LGBT people across the country and the homophobic and transphobic campaigns by conservatives and evangelicals, these incidents signal that LGBT politics—and especially the pride parades, with their intense production of queer visibility—continue to be at the focus of some of the most ardent social and political contestations in Brazil.

Parenting Rights in North America

DAVID RAYSIDE
Professor Emeritus of Political Science and Sexual Diversity Studies
University of Toronto, Canada

The history and current status of LGBTQ rights pertaining to adoption, surrogacy, fostering, and custody in Canada and the United States.

From the early 1990s into the early twenty-first century, the number of lesbians and gay men having children was on the rise, and during this period they made significant gains in securing formal parental rights. Progress was uneven, occurring at first in only a few US states and Canadian provinces, but this was years before such rights were recognized in other parts of the world. In North America, victories were being registered even with socially conservative campaigns placing the supposed risks to children at the center of their opposition to LGBT rights. In the United States, despite the persistence of such campaigning, a steady accumulation of favorable legal decisions was confirmed and enlarged by the US Supreme Court’s 2015 marriage equality ruling in Obergefell v. Hodges. In Canada, a shift in law and public policy came very rapidly over the course of the 1990s, several years before marriage rights were extended to same-sex couples. In both countries, lesbians and gay men as individuals or in couples still face hurdles in adoption, especially those who are nonwhite or economically disadvantaged. Surrogacy remains challenging, especially for gay male couples. The barriers facing trans parents remain formidable, and much less “tested” through courts and social agencies than the impediments facing lesbians and gay men.

Context

In the United States and Canada, family law is largely within the jurisdiction of regional governments, occasionally producing a patchwork of approaches to sexual diversity. Courts play a crucial role, and much of what is legally recognized has come through the decisions of judges ruling on the basis of common-law principles, often in the absence of statutory guidance at the state or provincial level except for that which prioritizes the “best interests of the child.” State and provincial courts are guided or constrained by judicial interpretation of the US Constitution and the Canadian Charter of Rights and Freedoms, although they can still find ways to discriminate in judgments involving sexual minority claimants, particularly in the United States.

More than a quarter of US states still lack explicit prohibitions on discrimination against
sexual minorities. Rights protections for trans people have lagged, and there are still around twenty states with no explicit protections based on gender identity and expression. The Supreme Court has never extended to LGBT people the same interpretive force of the equal protection clause of the Fourteenth Amendment to the US Constitution as it has to racial minorities and women. Even with that court having ruled in favor of lesbian and gay claimants, such as with the 2015 case on marriage, it is not yet clear how much leeway will be provided for discrimination based on religious belief, or specifically for administrative and judicial decisions that discriminate against LGBT parental claims.

In Canada, parental claims were significantly bolstered by favorable interpretations of the Charter of Rights during the 1990s, effectively including sexual orientation within the ambit of the already very broad prohibition on discrimination. The Supreme Court of Canada’s 1999 ruling in *M. v. H.* barred discrimination in provincial family law in a case specifically arising from the recognition of cohabitational same-sex relationships. By that time, Canadian law and public policy had already extended recognition to de facto heterosexual couples, narrowing the gap with formal marriage at least as much as any jurisdiction in the world. Attaining similar recognition for same-sex relationships, then, entailed most of what would be secured by marriage in the United States. By the mid-1990s Canadian courts were also specifically ruling that discriminating on the basis of sexual orientation in adoption was unconstitutional. In 2003 appeal courts in several provinces ruled against the exclusion of gay and lesbian couples from marriage, and 2005 federal legislation simply echoed what courts had already decided by changing the formal definition of marriage (a matter lying exclusively in federal jurisdiction). The overall effect of these advances was that parental rights were secured, in law at least, for lesbian and gay couples, whether married or not. Trans rights were encoded in federal human rights law in 2017, by which time almost all provinces and territories had effected protections against discrimination involving trans people through either changes to human rights statutes or interpretations delivered by provincial human rights tribunals.

The strength of resistance to parenting advocacy owes much to the power of religious conservatism in each country, and on this front the United States is highly distinctive among Western democracies. Weekly attendance at religious services is double that in Canada, as is the proportion of the population declaring that religion is important in their lives. Estimates of the number of evangelical Protestants, who are usually at the heart of protests against LGBT rights, average around 30 percent, about three times their proportion of the Canadian population.

**Early Advocacy**

Local groups advocating rights for lesbian mothers and gay fathers were part of the gay liberation movement from the 1970s on. They faced a formidable challenge in confronting social prejudice and institutional practice that saw sexual difference and parenting as
incompatible and as threatening the health and safety of vulnerable children. Lesbian and gay activism during this period provided support for mothers and fathers to defend access to their own children. The stakes were typically the retention of custody of children born of now-dissolved opposite-sex relationships. Until the early 1980s, there were few favorable court rulings in either country, and virtually none that came without onerous restrictions aimed at protecting children from visible signs of homosexuality.

In both countries there was a very slow shift toward more positive outcomes in the 1980s, aided by a judicial focus on the best interests of the child, although expectations of “discretion” were still the norm. In Canada, expanding legal recognition of cohabiting heterosexual relationships was facilitating the willingness of courts to acknowledge rights and responsibilities flowing from de facto parenting, although this idea was also gaining traction in some US jurisdictions. In 1984 the US Supreme Court ruled in a race-related case (*Palmore v. Sidoti*) that decisions could not be rationalized by societal prejudice. However, the continuing criminalization of same-sex activity in many states (until the 2003 Supreme Court ruling in *Lawrence v. Texas*) was a very powerful impediment, reinforcing other factors to produce dramatic differences in outcomes across state lines.

In 1977 the state of Florida enacted an explicit ban on adoption and fostering by lesbian and gay individuals, although in other parts of the United States and in Canada statute law remained largely silent on this question. In fact, there were openings created for lesbians and gay men to become foster parents during this period, eased by the low public visibility of the fostering system and by shortages of prospective parents. Fostering agency workers were prepared to approve adoptions where the foster care had been successful, though often with particularly challenging cases and using a higher standard in screening parental applicants.

**Incremental Gains, 1985–1995**

Parenting claims expanded in the second half of the 1980s. The HIV/AIDS epidemic added to the arsenal of antigay campaigners, but it also heightened LGBT visibility in the political arena and mainstream media. The epidemic contributed, as well, to a politicization of demands for recognizing same-sex relationships and parental rights, in part because of a heightened sense of vulnerability about family ties not being officially recognized. More same-sex couples were now choosing to have children through informal arrangements or through assisted-reproduction clinics. In both countries, most clinics were still refusing to provide such service, but there were a few in the United States willing to do so. There are no solid data from the period in either country, but the US census in 2000 indicated that one-third of lesbian couples and 22 percent of male couples had children at home.

The most common parental claims arose from couples seeking “second-parent” adoptions to obtain formal status for a nonbiological partner, usually for children whose conception
had been planned from the outset. In the United States, important courtroom victories were won in New York (1992), Vermont (1993), and Massachusetts (1993) and then at mid-decade in New Jersey, Illinois, the District of Columbia, and New York. Vermont became the first state to enact statutory approval of second-parent adoptions in 1995. By that time, courts in several other states seemed more willing to apply the notion of de facto parentage to claimants seeking rights, at times in cases involving same-sex parents separating and in conflict.

In Canada, the early 1990s also saw important court rulings that discrimination against same-sex relationships was unconstitutional. This did not necessarily carry over to parenting, although that same period also saw important breaks from heterosexual presumptions in Ontario and British Columbia family law.

**Accelerated Change in Canada, 1995–2015**

During the second half of the 1990s the contrasts between the Canadian and US trajectories were sharpened. In 1995 the British Columbia legislature broke new ground by in effect opening up adoption to same-sex couples, as well as to de facto heterosexual couples. This meant easing not only second-parent adoption but also joint adoption of a child not biologically related to either adult—until this point unrecognized across North America. That same year, an Ontario court effected basically the same change in a case brought by four lesbian couples. The 1999 *M. v. H.* ruling by the Supreme Court prohibiting discriminatory differentiation between same-sex and opposite-sex cohabitational couples then provoked sweeping legislative change at the federal, provincial, and territorial levels over the next five years, although it would take longer for issues such as joint birth certificates to be free of discriminatory legacies.

Even if for this reason marriage mattered less than it did in the United States, the legal recognition of same-sex marriage in the 2003–2005 period further reduced the room for discriminatory decisions on adoption. Early in the decade, before that happened, Quebec had developed a civil union regime for both same-sex and opposite-sex couples, in part because that province’s distinctive civil code did not extend the same recognition to de facto couples as had become the norm elsewhere in Canada (without the need for civil union). At that time, Quebec also eased registration for both parents in same-sex couples on birth certificates, although by then it was clear that the courts would require such a change elsewhere.

**Contested Incrementalism in the United States, 1995–2015**

The story in the United States is different, in large measure because of persistent opposition to same-sex marriage, leading to the passage of the federal Defense of Marriage Act in 1996 and constitutional prohibitions on the recognition of same-sex marriage in over
half the states by the end of 2006. This, along with political and legal mobilization specifically targeting lesbian, gay, and trans parenting, would prevent the kind of “takeoff” in measures recognizing same-sex relationships that had occurred in Canada.

Nevertheless, courtroom and legislative gains in one parenting area or another continued their steady spread across states. Between 1999 and 2007, precisely the time when antigay marriage referenda were being passed, the number of states recognizing second-parent adoption had risen to nine, and claimants had secured appellate court support in at least parts of an additional fifteen states. By the middle of the second decade of the twenty-first century, marital or civil union legislation had been secured in close to 40 percent of US states, and in several more states second-parent adoptions were being approved for same-sex couples. The acceptance of joint adoptions was becoming more widespread, and courts were also leaning toward viewing parental rights formalized in one state as transportable to other states.

In several states, conservative judges and political opponents succeeded in reinforcing existing barriers to LGBT parental claims or created new ones. Although Florida’s explicit ban on gay and lesbian individual adoption was overturned in 2010, several states solidified barriers, especially to joint adoptions, and additional states were considering legislatively expanding the right to discriminate on religious grounds. This was essentially creating two camps: a steadily growing roster of states that were moving toward comprehensive recognition of LGBT parenting rights and a group of states in which conservatives were doing all they could to prevent such recognition.

Cross-Country Access to Marriage in the United States

The 2015 Supreme Court ruling in Obergefell v. Hodges was an extremely significant gain for lesbian and gay marriage rights across the United States, and in the process eliminated most of the formal barriers to lesbian and gay parentage. In fact, the majority opinion explicitly cited parenting in support of its view, providing ammunition for future parenting claimants contesting state-level barriers. Attempts to limit joint adoption to opposite-sex couples were already falling before court challenges, and now would almost certainly suffer that fate.

Opportunities for discriminatory policies and practices, however, were not eliminated. In a country where LGBT rights in general—and those involving children in particular—are still so politically contested, prejudice retains powerful entry points. Adoption agencies still exercise discretion that may disadvantage people considered less than ideal for parenting. Legislative opponents in several states have either enacted or proposed “religious freedom” laws that allow service providers to discriminate, and it is not yet clear how much leeway the US Supreme Court will provide for these religious exemptions, even after its support for a religious exemption in Masterpiece Cakeshop v. Colorado Civil Rights
Commission (2018). Custody cases that pit now-separated same-sex partners against one another provide judges considerable leeway in the interpretation of the best interests of the child.

Room for prejudice also exists in Canada, but the significant reduction in political mobilization targeting LGBT family issues, and the relatively un politicized processes of judicial appointment, appear to have reduced the room for that. There is still uncertainty about how trans parenting cases will be adjudicated, although gender identity issues have been less intensely politicized in Canada than in the United States.

**Assisted Reproduction**

In the United States, the fragmented nature of health-care provision, as well as the extent to which it is driven by free market considerations, created openings in the early 1980s for assisted-reproduction clinics willing to serve lesbian and gay clients—though, of course, for a price. During that same decade a continent-wide market in frozen sperm expanded rapidly. Canadian women often availed themselves of such services, because access to locally provided assisted reproduction was difficult and not covered by government health insurance. By the middle of the first decade of the twenty-first century, there were LGBT-
friendly services in Toronto and Vancouver, although many more were available in urban centers across the United States.

The challenges facing gay male couples were much more daunting, in part because they depended on a surrogate, which entails considerable costs. Since 2007, Canadian federal law has outlawed payments of fees (though not expenses) to individuals who are involved in assisted reproduction. This may be a challenge in securing sperm donations but is especially daunting for those depending on surrogacy. In the United States, surrogacy law varies enormously. About ten states would be viewed as generally quite supportive of surrogacy, with at least five prepared to register both same-sex parents on birth certificates. At the other end of the spectrum, there are complete bans on surrogacy in a small cluster of states (including New York, Indiana, and Michigan) and significant hurdles in a few other states.

The presumption of parentage is virtually universal in the treatment of children born through assisted reproduction to married couples, and almost as automatic for cohabitational opposite-sex couples, even more so in Canada than the United States. In the case of an anonymous sperm donor, there is effectively no other claimant to parental rights, so the issue is unlikely to be contested. In the United States, however, even post-Obergefell, officials in some states will still resist placing the names of two women on a birth certificate, forcing them to go through formal adoption proceedings.

With surrogacy, US states, and to some extent Canadian provinces and territories, vary in the legal room they provide for surrogates to claim parental rights or to change their minds after earlier agreeing to not do so. Across most of the continent, it is not yet clear that same-sex parents using surrogacy would be at a particular disadvantage compared to heterosexual couples, although in parts of the United States they most certainly would. Antigay state legislators still seem intent on creating barriers for gay couples using surrogates and for other sexual minority couples seeking official recognition of parental rights and responsibilities.

Lesbian and gay reliance on assisted reproduction has often led to a desire to acknowledge the legal standing of more than two parents. In 2007 an Ontario court ruled in favor of a lesbian couple who wished to extend parenting rights to the gay man who assisted them. Nine years later that province’s legislature explicitly allowed for the registration of up to four parents on a birth certificate, and there seems to be no categorical impediment to such recognition elsewhere in Canada. In the United States, the first major decision in that direction was by the California legislature in 2013, and within a few years there were at least twelve states where courts or legislatures had opened up room for the same.
Lesbian Couple Raquel Grand (left) and Deanna Djos with Their Daughters at Their Home in Toronto, 2016. Grand and Djos were part of a 2016 court case petitioning for the right to both be registered as parents on their daughters' birth certificates. Laws in place at the time forced lesbian couples who conceived with a known donor to pay for a legal adoption.

Foreign Adoptions

The policies of foreign countries toward international adoptions have a profound effect on sexual minorities, because such couples are much more likely than heterosexual couples to be limited to that option. Increased attention to unethical adoption practices, embodied in the 1993 Hague Adoption Convention on intercountry adoption, led to an overall reduction in such adoptions in the decades to follow. But the spread of same-sex marriage also led to a tightening of restrictions specifically on lesbian and gay applicants by most of the countries to which sexual minority couples and individuals turned for options. In 2013, for instance, Russia imposed restrictions on applicants in all those countries that recognized such marriage, something that many other countries had already effected. This is in a context where domestic adoptions are difficult for all individuals and couples to arrange except for children who have been difficult to place.

Conclusion

The spread of official recognition of LGBT parental status became noticeable in the 1990s, with important precedents established in several US states and Canadian provinces. This followed a significant increase in the number of lesbians and gays with children, more and
more of them planned in the context of a same-sex relationship. In other words, the law, and eventually public policy, was catching up to new kinds of family formation. Sometimes even conservative family court judges were agreeing to coparent adoptions in cases where both parents were in complete accord and no one was objecting. This would sometimes occur even in jurisdictions where little progress had been made in securing official recognition for sexual minority rights.

Although there were a few US states in which pioneering steps had been taken in supporting lesbian and gay parenting claims, Canadian law and public policy leapt ahead of the United States and other countries. In the meantime, however, away from the limelight of the battle over same-sex marriage, there was a steady growth in the number of US states where parental rights were being recognized. The year 2015 marked a significant step forward, but much groundwork had already been laid. A declining minority of states has resisted that change, and, in some cases, attempts were even made to sharpen the restrictions on parental rights for sexual minority claimants.

In both countries, sexual minority parents still faced serious barriers, more formidable for gay men than lesbians and still more so for trans people and for those whose socioeconomic status or whose relationships do not accord with what appears to be safely normal. For many, too, the barriers to international adoption or the costs associated with assisted reproduction are simply too high. That said, the determination of LGBT individuals and couples to have children and assert their right to be recognized as parents has had a profound impact on US and Canadian law and public policy.

Kazyak, Emily, and Brandi Woodell. “Law and LGBQ-Parent Families.” Sexuality and Culture
20, no. 3 (2016): 749–768.

The misrepresentation of women, homosexuals, and Middle Eastern culture in the first Western movie adaptation of A Thousand and One Nights, produced in 1974.

A Thousand and One Nights (known in the West as The Arabian Nights, henceforth referred to as The Nights) has long fired the imagination of Easterners and Westerners alike. Since its documentation in written form in the tenth century, the text has been translated into almost every language known to humankind. The stories of The Nights came from various cultures—Indian, Persian, and Arabic. Through a repeated process of dissemination and assimilation, they have come to exhibit “the cultural and artistic history of Islam” and the countries from which they originated (Haddawy 1990, xv). There are two known manuscripts of The Nights: the fourteenth-century Syrian manuscript deemed to be the more authentic and the eighteenth- to nineteenth-century Egyptian manuscript containing copious additions to the original frame story of Shahrazad and Shahrayar.

In 1974 Italian director Pier Paolo Pasolini (1922–1975) was the first Westerner to adapt The Nights into film, as part of his Trilogy of Life series. Pasolini was a prominent, though controversial, writer and film director whose daring works reflected his commitment to neorealism and subproletariat Communism as well as his aversion to Catholicism and consumerism. Il fiore delle mille e una notte (1972; A Thousand and One Nights [1974]) represents Pasolini’s fascination with the Arab oral literary tradition that produced The Nights. Although generally recorded in written form, the text’s stories still carry the simplicity and charm of an oral literary tradition that has remained unaffected by the distortions and the restrictions of the written word. Furthermore, Pasolini was interested in the multiplicity of narrative voices, the various “narrative divisions,” and the “narrative that calls attention to itself” (N. Green 1990, 187). Thus there are no rules governing the organization of his various plots, with the possible exception of the laws of fate. It was his desire to create a film that corresponded to his theory of art for art’s sake that motivated Pasolini to portray sexual explicitness and an all-powerful Eros in a prelapsarian world—a world free from original sin and full of adventure, dreams, mythology, and fantasy—namely, the “Oriental” world of The Nights.
Il fiore delle mille e una notte was the culmination of Pasolini’s Trilogy of Life series that includes Il Decameron (1971; The Decameron [1971]) and I racconti di Canterbury (1972; The Canterbury Tales [1972]). The director had experimented with sexual explicitness in the first two films of the trilogy, and in Il fiore delle mille e una notte he was uninhibited, freed from the restrictions of Catholic theology and the feudal class structure that he was bound to face with his adaptations of The Decameron and The Canterbury Tales. In Il fiore delle mille e una notte he helped himself to a dreamland of sexual fantasy and bawdy pleasures, where “animality” and “savagery” replace Christian “spirituality” and “pseudo-civilization” (N. Green 1990, 187).

Yet, Pasolini’s representation of the Other in Il fiore delle mille e Una Notte, as represented by women, homosexuals, and Eastern culture in general, is marred by his own assumptions and expectations of what an Eastern culture should be. Consequently, the Other becomes a mirror that reflects Pasolini’s own fantasies, and in the process the text loses its specificity and the nuances of its Eastern identity. Indeed, the relationship between the self and the Other has always posed a dilemma for Pasolini; to him, the self is always in a state of fragmentation, which is why it seeks to identify with the Other, which it views as whole. As William Watson points out, “Pasolini’s desire for the other ... corresponds to his own lack of being, his awareness of his incomplete, divided and fragmentary self” (Watson 1989, 7). However, Pasolini’s adoption of Arthur Rimbaud’s motto “Je suis un autre” (I is an other) has its own drawbacks, as the difference between appreciating and appropriating the Other becomes hard to define. Moreover, in this Lacanian mirror the Other forms a “salutary” image of the self but never a true one—hence in reality, the image is a misrecognition of the self.

Women as the Ultimate Other

The most evident manifestations of the Other in Il fiore delle mille e una notte are women and same-sex individuals. Early in his childhood, Pasolini came to associate female reproductive ability with animality and bestiality after hearing his mother’s frank answer to his question, “How are children born?” Later, he admitted that his childhood vision of his mother was “a half-memory, invisible” (Watson 1989, 3). This biographical information, combined with the observation of one of his associates that Pasolini viewed “young girls primarily as rivals for the young boys he pursued,” sheds important light on Pasolini’s view of women in general (Watson 1989, 17).

The first distortion of the female image in Il fiore delle mille e una notte is Pasolini’s disavowal of Shahrazad as the main narrator of the stories. In fact, the frame story of Shahrayar and Shahrazad is pivotal to understanding the rest of the tales. In the fourteenth-century Syrian manuscript’s text, after discovering his wife’s adultery and betrayal, King Shahrayar vows to avenge his wounded male pride on all females by deflowering a virgin every night, then beheading her the next morning. Shahrazad, the vizier’s daughter,
volunteers to save her fellow women by marrying the king and telling him a story every night until she cures him of his lust and desire to kill. Some of Shahrazad’s stories involve virtuous and powerful women—Shahrazad’s side of the tale; other stories feature treacherous and lewd women—Shahrayar’s side of the picture. By ignoring the frame story and the illumination it sheds on the text, Pasolini omits a crucial element of the original narrative.

In Pasolini’s *Il fiore delle mille e una notte* it seems that things happen as if they are governed by an omnipotent destiny that makes the characters look superficial, passive, and inapt. This is mainly because we do not see the characters in their socially and culturally specific contexts—that is, in Shahrayar’s and Shahrazad’s frame story as well as in the Arabic culture itself. For example, in the original text the story of ‘Aziz and ‘Azizah is a portrayal of true female solidarity. ‘Aziz and ‘Azizah are cousins who have been promised in marriage to each other since childhood. ‘Azizah is completely enamored of ‘Aziz, but ‘Aziz does not share her feelings. ‘Aziz is interested only in pursuing amorous escapades with other love interests, including Boudour (Dalilah in the original), while insensitively enlisting the help of ‘Azizah to ensure his success. ‘Azizah is always ready to help him attain his desires because she selflessly places his happiness over hers. Ultimately, her sorrow gets the best of her and she dies of her unrequited love.

In the written text, ‘Azizah never considers Dalilah her rival. On the contrary, the two women begin to correspond, through ‘Aziz himself, on the subject of ‘Azizah’s helpless love affair, though Dalilah does not know that ‘Aziz is ‘Azizah’s love interest. Dalilah and ‘Azizah have many qualities in common: intelligence, fidelity, and a genuine appreciation for true love. These qualities set them apart from ‘Aziz, who is portrayed as naive, ungrateful, and selfish. ‘Azizah and Dalilah share, albeit unconsciously, a bond of sisterhood, which puts them in one camp and ‘Aziz in another. When Dalilah learns the nature of ‘Azizah’s love for ‘Aziz and realizes that he is the cause of her death, she exclaims, “By Allah, were she thy cousin, thou hadst borne her the same love as she bore thee! It is thou who hast slain her, and may the Almighty kill thee as thou killedst her! By Allah, hadst thou told me thou hadst a cousin, I would not have admitted thee to my favours!” (*Smithers 1894, 2:214*). Moreover, she insists on paying a visit to ‘Azizah's tomb, where she inscribes on the headstone verses that dignify ‘Azizah’s true love and martyrdom. She addresses her, “O thou slain of love, ... May Allah help thee. And grant thee home in Heaven and Paradise-height to see!” (*Smithers 1894, 2:217*). For both Dalilah and ‘Azizah, dying for one’s true love is a deed that equals martyrdom, and “the slain of love” deserves heavenly bliss in Paradise. Later, Dalilah refuses to take ‘Aziz back when she learns he has just become a married man. For Dalilah, betraying another woman by stealing her husband or fiancé is inexcusable: “Then said she, ‘Thou art of no use to me, now thou art married and hast a child; nor art thou any longer fit for my company; I care only for bachelors, and not for married men: these profit us nothing’” (*Smithers 1894, 2:230*).
This female solidarity and sisterhood is felt even by 'Aziz's mother, and later by his own wife. Both of them weep for 'Azizah's unfortunate death and pray for God to take vengeance on 'Aziz for his ruthless treatment of her. This is surprising coming from 'Aziz's own mother, who is expected to be protective of her son, yet her sense of justice and above all, female solidarity, drives her to wish him bad luck. 'Aziz describes his mother's reaction to 'Azizah's death thus: “So I entered the house and when my mother saw me she said, ‘Her death lieth heavy on thy neck and may Allah not acquit thee of her blood!’” (Smithers 1894, 2:214). Another example of female solidarity occurs earlier in the tale when 'Azizah seeks advice from Dalilah, whom she believes is more experienced than herself in the matters of the heart; to 'Azizah, Dalilah is not a rival but rather an older sister or tutor in love. Her decision to help 'Aziz decipher Dalilah's mysterious non-verbal signs is motivated by her true love for 'Aziz as well as her sense of belonging to the female sex, and to resurrecting the symbiotic language of the mother as opposed to the symbolic language of the father. In helping 'Aziz to decipher Dalilah's hand signs, 'Azizah tries to remind 'Aziz of his “pre-Oedipal” stage, before he experienced psychological separation from his mother and from the feminine aspects of his character, and before his introduction to the patriarchal language of the father (Chodorow 1978). These examples of female bonding and sociability are juxtaposed with models of male sociability (in the frame story of Shahrayar and Shahzaman and many other tales) and give female characters a reactive power that parallels the male power in The Nights.

In Pasolini’s film, however, this solidarity is played down to the point of virtual elimination. We do not know, for example, that 'Aziz is castrated because of his poor treatment of 'Azizah, not because of Dalilah's/Boudour's power as a femme fatale. It is noteworthy that in the film Pasolini refers to Dalilah as “Boudour the Madwoman (Budur la Pazza),” whereas in the original Arabic text she is called "Dalilah the Wily"; the shift in epithets from intelligent to psychotic signifies her newly diminished role. Throughout the story, 'Aziz proves to be interested only in gobbling food and making love without making a real effort to develop a serious relationship with his cousin or with Dalilah. So it is appropriate that, in the end, his punishment at the hands of Dalilah and her female attendants entails a physicality that echoes his earlier behavior. In other words, Dalilah castrates him to deprive him of the only thing that matters to him—his sexual potency, by which he values his masculinity. The literary text explains clearly that the nature of the punishment reflects the nature of the sin itself. In the film, however, the shocking castration of 'Aziz is portrayed as an act of extreme violence initiated by Dalilah's jealousy and vindictiveness. Additionally, in the written text, 'Aziz is treated as a sexual object at the disposal of two women, his wife and Dalilah; he is placed in the position of the passive female object rather than the active male subject so that he experiences how it feels to be treated as a sexual plaything. Earlier, in the original Arabic text, his wife declared that she needs him only to perform a “cock's duty.” When he asks her what that duty is, she answers: “His duty is to eat and drink and company with the hen.” Similarly, in the written text, after she castrates
him, Dalilah sends him off with these words: “Go forth this instant to whom thou wilt, for I needed naught of thee save that which thou no longer hast; and now I have no part in thee, nor have I any further want of thee or care for thee” (Smithers 1894, 2:231). As a result of this forced role reversal, ‘Aziz realizes the immorality of his loose and irresponsible behavior and quickly comes to regret ‘Azizah’s death.

This nexus of food, sex, and violence is a recurring theme in the text version of the story of ‘Aziz and ‘Azizah as well as the story of ‘Ali Shar/Nur ed-Din and Zumurrud. The men’s lust is signified by their gluttonous desire for food rather than love for the women whom they court or wed. And for the sin of overindulging in carnal desires (a failing usually attributed to men), sinners are punished by women, who represent the other side of the human equation (responsiveness, good manners, and an ability to experience a true love both spiritually and physically). In the written story of ‘Aziz and ‘Azizah, the cause of ‘Aziz’s castration and subsequent misery is, at least in part, his inability to control himself when the table is set before him. This blending of food, sex, and subsequent violence alludes to “the nexus of sex and death” proposed in the earlier frame story of Shahrayar and Shahzaman, the king’s brother (Malti-Douglas 1991, 19). In the original text, the purpose of punishing men who are extremely gluttonous or lustful is to give them a taste of their own bitter medicine by being placed in the position of the consumed female instead of the consuming male. Thus, the physical punishments of ‘Aziz and the three evil men in the story of Ali Shar/Nur ed-Din and Zumurrud stress this carnal side of their characters—their visceral overindulgence in sex and food.

The story of Zumurrud and Nur ed-Din provides yet another opportunity for Pasolini’s misrepresentation of Eastern women. In the original, Nur ed-Din, a naive adolescent boy, luckily comes to the attention of Zumurrud, an experienced and strong-willed girl. They live happily together until Zumurrud is kidnapped by some thieves who rape and torture her. Despite her ordeal, she manages to escape, disguised as a man, and to be installed as the king in a city whose chieftains have mistaken her for their long-awaited promised king. Meanwhile, Nur ed-Din is looking frantically for his lost beloved and is repeatedly taken advantage of by manipulative, “lewd” women. As the new king, one of Zumurrud’s first royal orders is to hold a banquet for travelers every day on the outskirts of the city, in the hope of eventually reuniting with Nur ed-Din. Her plan pays off and she finally finds her lover, but she does not disclose her true identity before she tricks him into a masquerade game through which she shows him who is truly in charge.
Zumurrud (center, in yellow robe) Masquerading as King of the Walled City in a Scene from Pasolini’s Il Fiore delle Mille e una Notte. Zumurrud, an experienced and strong-willed girl, is mistaken for the promised king of the walled city after the chieftains see her disguised as a man.

During her banquets, Zumurrud takes her revenge on the men who raped her: the old Christian man, his young brother, and the thief who kidnapped her. All of them are guilty of desiring her body and exerting male power over her. Their carnality manifests during the banquet in their gluttony with regard to a certain sweetened rice dish. All three of them insist on eating some of it despite the people’s warning that whoever eats from this dish will face a certain death at the hands of the king, Zumurrud. Needless to say, Zumurrud makes sure that they are decapitated and that their bodies are stuffed with hay and publicly displayed. The nature of their punishment, here again, coincides with the nature of their sins: excessive lust and gluttony. The sweetened rice dish is a trap that uncovers their transgressive, aggressive libidos. Once again, in the original text of The Nights, the woman, Zumurrud, acts as an instrument of divine justice sent to take women’s revenge on men. In Pasolini’s film, however, the motif of the sweetened rice dish and its connection with the death of the three men is never explained to the audience. Thus the whole scene turns into a meaningless farce that denotes nothing except, perhaps, the superficiality, irrationality, and savagery of Eastern culture.

In the literary text of The Nights the exemplary tale of male infidelity makes sense because it is juxtaposed with the story of the treachery of King Shahrayar’s wife. In Pasolini’s interpretation, however, the film provides only examples of female lewdness (Nur ed-Din and the three women), violence (Zumurrud and the three men), and castrating elements
Furthermore, Pasolini’s women are portrayed as lascivious, lazy, and inferior to men. Indeed, being both women and Easterners makes them doubly inferior to Pasolini and to his implied audience (Kabbani 1986). Technically speaking, the female body attracts little attention from the camera; it exists only in relation to the male body so as to accentuate the aesthetics of the penis. When the female body is shown, it is generally in frontal shots that stress the lack of a penis. For example, in the scene that shows Nur ed-Din with the three women in the pool, three sets of female genitalia are matched with one male sexual organ; the underlying message is that one penis can overcome three female vaginas, both aesthetically and symbolically. This is emphasized when the women ask, referring to his penis, “What is it called?” and Nur ed-Din responds, “It is the donkey that crops the scented grass, and eats the pomegranate, and spends the night at the inn.” The “scented grass,” “pomegranate,” and the “inn,” of course, are metaphors for the female genitalia that will be overcome and destroyed by the careless consuming act of the donkey (the penis).

Furthermore, in the film, the old woman who helps Nur ed-Din locate Zumurrud after she is kidnapped makes sexual advances toward him. While fondling his genital area, she says to him, “I helped you, you must be sweet with me.” In the literary text, however, the old woman helps him because she feels sorry for him, and she has no intention of sleeping with him. Finally, the culmination of Pasolini’s debasement of women in Il fiore delle mille e una notte occurs in the celebration of fellatio in scenes that depict acts performed by Dalilah and Dunya on ‘Aziz and Taj al-Muluk, respectively. As mentioned earlier, Pasolini’s representations of his female characters in the film marginalizes them both as women and as Easterners, casting them as lascivious and treacherous. The fact that the Eastern women are subjects of Eastern men makes little difference, since Pasolini subjects the whole Eastern culture, women and men alike, to his own phallic, usurping gaze.

**Homosexual Others**

Pasolini’s portrayal of homosexuality in this film is another example of this problematic representation. At the beginning and also the end of the film, Pasolini presents us with what seems to be the ideology and method he follows in creating his cinematic rendition: “The truth lies not in one, but in many dreams.” If this on-screen motto is accurate, one would expect to see different sides of the truth and multiple representations of female and male homosexuality, or even of heterosexuality. On the contrary, what we see is the same male/female, active/passive dichotomy repeated time and again in heterosexual/homosexual scenes. For example, at one point in the movie we see ‘Aziz preparing to shoot Dalilah’s vagina with what appears to be a golden penis-shaped arrow. The camera moves from a close-up of the penis-shaped arrow to a close-up on Dalilah’s face overcome by horror, and then dissolves into a shot of ‘Aziz’s face full of satisfaction and victory as he shoots the arrow toward her vagina. Another heterosexual lovemaking sequence starts with a close-up on Taj al-Muluk’s lower parts and his seemingly erect
penis, followed by a shot of Dunya performing fellatio, and finally a shot of Dunya sleeping at her lover’s thighs with her face situated in a worshipful posture opposite his penis.

Pasolini’s objectification of Easterners is not restricted to women; it extends to men who engage in same-sex relationships as well. Young “Third World boys,” as Pasolini called his homoerotic characters in this film, are presented not much differently than their countrywomen. They are objectified for Pasolini’s eager eyes and by the camera’s inquisitive and usurping gaze. Commenting on the erotic in *Il fiore delle mille e una notte*, Pasolini remarked:

---

*May I say, a bit tautologically, that for me eroticism is the beauty of the boys of the Third World. It is this type of sexual relation—violent, exalting and happy—that still survives in the Third World and that I have depicted almost completely in *Il fiore delle mille e una notte* although I have purified it, that is, stripped it of mechanics and movements [by] arranging it frontally, almost arresting it.*

*(QUOTED IN N. GREEN 1990, 194)*

---

It is exactly this “arresting” and rearranging, and the “stripping” of the male homosexual characters of their movements and their unique identities (the dangers of their Otherness) that make the naked male a sexual object, subject to the camera’s rape. Pasolini has “purified” this Other from excessive Otherness, from extra unwanted eroticism, or to use bell hooks’s term, from extra “spices,” only to make this Other more liable to consumption by the dominance of the Western gaze. On the dynamics of “eating the Other,” hooks reflects that “White racism, imperialism, and sexist domination prevail by courageous consumption. It is by eating the Other that one asserts power and privilege” (*hooks 1992, 36*).

In Pasolini’s *Il fiore delle mille e una notte*, homosexuality loses its fluidity and multiplicity of sex roles as well as the experiences of intimacy and affection. The real dynamics of a Middle Eastern homosexual relationship—one that involves the cultural context of homosociability and spiritual sublimity—are not represented here. On the contrary, homosexuality represents a commodity in the sex market, subject to the rules of supply and demand and ready to be sold to anyone with an economic advantage. Earlier in the film, when a poet becomes interested in three youths, he offers them food and drinks in exchange for voyeuristic and sexual pleasures. His proposal includes the following verses: “To two youths I said: ‘I love you’ / ‘Have you money?’ they said. / I responded ‘Yes, and I spend it generously.’ / The youths exclaimed: ‘Done.’” In the same vein, the verses that the disguised Zumurrud recites to Nur ed-Din while pretending to seduce him in the final scene
of their tale describe a young lad who accepts the homosexual advances of a rich man who offers a large sum of money. The line uttered in the film, which is not present in the original text of *The Nights*, affirms the transactional aspect of homosexual acts: “I showed him a dinar.” Only then does the boy say, “If it is fate I cannot escape it.”

Once again, homosexuality falls into the power dialectic of the active/passive binary that characterizes male/female relationships. It becomes another form of sexual transaction subject to the same economy of purchase, and to the ills of prostitution and violence. Consequently, we have Pasolini, the Western male, objectifying the “exotic,” poor, almost feminine Eastern boys by the power of the phallic camera and his financial and technical power as a director. In the previous episode involving the poet, the three youths are seen later in the tent. Here, the point-of-view shot stresses their fetishistic positions, as their heads are eliminated while their genitalia is “arrested frontally” and displayed for the voyeuristic pleasure of the director and audience. Defining the mechanics of the fetish object, Linda Williams remarks: “Fetishism was understood as a delusion whereby the fetish makers worshiped their own constructions not simply as conventional human-produced *symbols* of supernatural power, but as the literal embodiment of that power” (*Williams 1989, 104*). Williams also points out that the lack that one feels in relation to the Other is actually “a lack of ability to imagine a relation to the other in anything but the phallic terms of the self” (114). Elaborating on the psychic process that the male audience undergoes in relation to images of men in the cinema, Steve Neale explains that the male viewer (and in Pasolini’s case, one might add, the director) experiences the following stages: “narcissistic identification, voyeuristic looking, and fetishistic looking” (*Neale 1983, 15*). By Neale’s standards of male identification with male characters on-screen, Pasolini’s objectification of the “Third World boys” may have been part of his own fetishized identification with the Other—that is to say, a self-fetishization or even self-exoticization, especially because Pasolini’s open homosexuality motivated him to seek and identify with the Other in this film. After all, he often felt exiled at home, and this identification with the Other is part of his revolt against fascist Italy, religion, and oppressive norms of expression. However, as a Western Other, Pasolini has authoritative power over all the various little Eastern Others, to put it in Jean-François Lyotard’s terms of the *grand/petit récit*. This makes the identification between Pasolini and the rest of the marginalized Others almost impossible, because their relationship is governed by the dominating power of the camera lens, of seeing and not being seen, of “cultural appropriation” rather than “cultural appreciation” (*hooks 1992, 39*). In his reflection on Pasolini’s approach in *Il fiore delle mille e una notte*, Vincent Canby confirms this observation:

> Most of the tales have to do with power, with the power of beautiful women to bewitch their lovers and the power of the rich to control the poor. Pasolini clearly doesn’t approve of this—the Marxist in him will out. Yet the manner of
Later in his life, Pasolini expressed this same aggressive male power in his homosexual relationships: by seeking “to transform body into things, as he bought sexual favors from boys,” he “play[ed] the male” role himself (Watson 1989, 15–16).

Some critics consider *Il fiore delle mille e una notte* to be representative of a crucial moment in history in which homosexuality is freed from sin and irony as well as Otherness. But Pasolini’s depiction of homosexuality as Other is flawed at best. This is evident from both his commodification of the Middle Eastern male actors in the film and his complete obliviousness to registers of female homosexuality in the literary text. For example, in the story of Zumurrud and Nur ed-Din, the cross-dressing Zumurrud, in her new role as king, has to marry Hayat al-Nufus (the former king’s young daughter). In the original text of *The Nights*, this carries the possibility of a lesbian encounter, whereas in the film the disclosure of Zumurrud’s true identity is turned into a silly laughing matter. The Arabic text stresses female solidarity, connectedness, and the sisterly love that the two women feel for each other: “And when Hayat al-Nufus had ended her verses, she said, ‘O my sister, verily the breasts of the noble and brave are of secrets the grave; and I will not discover thine.’ Then they toyed and embraced and kissed and slept till near the Muezzin’s call to dawn-prayer” (*The Nights* 1884, 3:73). Female homosociability and potential homosexuality is not based on material gain. This stands in sharp contrast to Pasolini’s depiction of male homosexuality, which is subject to rules of the sex market. Despite Pasolini’s desire to escape patriarchy’s paradigm of a monolithic heterosexuality, he falls prey to some of its prime fallacies. In particular, he remains surprisingly faithful to patriarchy’s notion of devaluing women for their perceived lack vis-à-vis a phallocentric value system. Hence, the homosexuality of the “lacking” female body is not even worthy of depiction in Pasolini’s film, because it does not produce the same scopophilic, phallic pleasure.

Still, Pasolini should be credited for his commitment to the original text in his depiction of the last encounter between Zumurrud and Nur ed-Din. Here, the audience experiences the pleasure of witnessing a departure from the traditional “active male” and “passive female” roles. The essentialist dichotomy of fixed gender roles is questioned and even mocked in this masquerade scene where Zumurrud performs her active oppressive male role and even excels at it. The message in both the written and in the cinematic versions of *The Nights* is that femininity and masculinity are but socially constructed concepts—simply masks used to perform biologically determined roles. Once donned, the masks produce in
their wearers the culturally constructed norms, behavior, and manifestations of one gender or the other. For example, Zumurrud admits that she “wants to play a trick on ‘Ali Shar [Nur ed-Din in the written text] just for fun” (*The Nights* 1884, 3:73). In fact, the fun she refers to is the ability to transgress all social and sexual boundaries that separate the two sexes, to have a fluidity and a multiplicity of representation between female and male identities. Zumurrud proves to us and to ‘Ali Shar himself that when enacting the role of a male, she can be quite as violent, as insensitive, and as cruel as a man can be. By the same token, Nur ed-Din can be forced into being an unwilling, passive sexual partner in an unwanted homosexual relationship when the balance of power is no longer in his favor. In fact, ‘Ali Shar finds himself completely helpless when Zumurrud threatens to kill him if he does not acquiesce to her demands. She warns, “Durst thou disobey me? it shall be an ill-omened night for thee! Nay, but it behoveth thee to do my bidding and I will make thee my minion and appoint thee one of my Emirs” (*Smithers* 1884, 3:343). Later, she orders him to “take off [his] underwear and lie down facing downward” (*Smithers* 1884, 3:343). This places him in the position of the passive participant, a role traditionally reserved for female characters. However, to our dismay, Pasolini undermines the dynamics of the role reversal and shifts our attention from a critique of male/female power dialectic to a mere homoerotic, voyeuristic scene as the camera moves from the masquerading Zumurrud to the naked buttocks of Nur ed-Din. We watch Zumurrud gazing and objectifying Nur ed-Din, while the camera is also objectifying him by focusing on his buttocks as they occupy the center of the screen.

*Il fiore delle mille e una notte* was lauded for unmasking homosexuality, for exposing it in front of the camera without any scruples. However, the very fact that Pasolini chose to unmask homosexuality in a removed, “Oriental” setting rather than a European one prompts us to doubt the sincerity of his representation. Just four months before his death in 1975, Pasolini explicitly disavowed his Trilogy of Life series in the article “Abiura della Trilogia della vita,” writing that he regretted ever making it. He was disappointed at the realization that because the Trilogy of Life became a box-office hit, his success was co-opted by capitalism. He declared later that “he would never again be able to show the youthful human bodies in the same positive way he did in the trilogy. The sacredness of sexuality had become transformed into a consumer product” (quoted in *Michalczyk 1986, 101*). He also disavowed permissiveness, the subproletariat, and the Third World. In “Abiura dalla Trilogy della Vita,” Pasolini explains his new position:

>The young men and boys of the Roman sub-proletariat—the ones I portrayed later in the old and resistant Naples and later still in the poor countries of the third world [sic]—if they are now human garbage, it means that they already were such then: they were thus imbeciles compelled to be adorable, squalid criminals compelled to be likeable scoundrels, inept cowards compelled to
This should not surprise us, coming from such a controversial and contradictory artist as Pasolini. Still, it is rather ironic that once the screaming eroticism, the sexuality, and the appropriated bodies of the “Third World boys” that Pasolini worked hard to portray in his *Il fiore delle mille e una notte* had appealed to the public, threatening to speak for itself and to assume its own agency, he decided to disown the film. Could it be that a little bit of excessive Otherness had escaped his monitoring calculating lens, becoming too dangerous, too racy, too Other? hooks provides an answer to this question in her observation that “to seek an encounter with the Other does not require that one relinquish forever one’s mainstream positionality” ([hooks 1992, 23](http://example.com)). Pasolini enters the sphere of the Other seeking adventure and self-exaltation. He wants to be elevated by the “exotic,” the “primitive” and the “prelapsarian” Other. It is obvious, to use hooks’s terminology, that he leaves the Other symbolically and literally richer than he had been before, “but we have no idea how the Other leaves him” ([hooks 1992, 39](http://example.com)).

Pasolini’s domination over the Other in the film goes far beyond depiction of his characters, extending to control over the music and even the mise en scène. For example, at one point in the film, a Western musical tune with a loud organ track prevails over scenery of sea and desert as a jinni (genie) flies over the landscape with Shahzaman; this device helps the director to keep the scene from sounding too “Eastern,” and to regain control over the narrative. Furthermore, Pasolini’s use of the colors gold and red reflects his fascination with the luxuriant and exotic East. Once again, his fetishism of an Eastern life full of tranquility and bawdy pleasures drives him away from accurate depiction. At this point, we are reminded of Pasolini’s motto, “The truth is not in one dream but in many dreams,” which begins and ends *Il fiore delle mille e una notte*. It is apparent that Pasolini’s truth regarding Middle Eastern culture is distorted in the same way the dream of Dunya is distorted by the impositions and alterations of Taj al-Muluk. Taj al-Muluk, a determined suitor for the celibate Dunya, hires two Sufis to draw on the wall several pictures to illustrate Dunya’s dream of two male and female doves. However, his drawings suggest a different ending to the dream in order to convince Dunya to give up celibacy and to accept him in marriage. Likewise, Pasolini created his many dreams of the Middle East, replete with his own version of the truth, which he deems to be absolute and universal. In *Il fiore delle mille e una notte* the Other, as represented by women, homosexuals, and Middle Eastern culture as a whole, is patronized, objectified, and misrepresented. It is as if Pasolini could not reconcile his simultaneous fascination with the Other and his desire to seize, capture, and control every aspect of it. Pasolini’s eager eyes and the devouring gaze of his camera appropriate Middle Eastern Others and strip them of their unique identities,
placing them under his arresting lens. Indeed, Pasolini’s post-structuralist promise of representing multiple truths dissolves into a traditional totalitarian objectification of all other minorities. Pasolini’s Il fiore delle mille e una notte, perhaps unintentionally, highlights the irony of Karl Marx’s famous motto, “They cannot represent themselves; they must be represented.”

BIBLIOGRAPHY

The cultural weight of the penis in defining masculinity, its role in sexual pleasure, the ways it can be modified, and its relation to intersex and trans bodies.

“The genital area accounts for only 1 percent of the surface area of the body. But—1 percent or not—genitals carry an enormous amount of cultural weight,” argue David Valentine and Riki Anne Wilchins (1997, 215). Genitals carry the weight of sexual and gender identity and sometimes even of ethnic and cultural belonging. This entry explores the cultural weight of the penis in transnational contexts: its shifting relationship to cismen (those men who were assigned “male” at birth) and masculinity; its position in sexual encounters; its alterations and reconfigurations; and its relation to intersex and trans bodies. The entry also considers the role that cultural, medical, religious, and political views play in the meaning-making of the penis.

The Penis and Masculinity

The dominant, Western view of the penis is one deeply tied to biomedicine. The hegemony of this worldview, now shared by people around the world, was accomplished by direct colonization and cultural imperialism—the imposition of Judeo-Christian ideology, Western science, and psychiatry—eroding or replacing local and traditional views (see Chiang 2012 for an example). The concept of biological sex (itself a cultural construction) is composed of three distinct indicators: genitals, chromosomes, and hormones. Thus, “being male” is, from a medical view, simply the state of having a penis (and corresponding testes), XY chromosomes, and a prevalence of testosterone. In lived experience, though, the penis (along with other socially significant markers such as facial and body hair or a deep voice) is a defining component of “maleness” because rarely do people, or those around them, have direct experience of their hormones or chromosomes. In fact, most do not spend significant time considering their “sex” per se, in comparison with their gender—the social meanings, identities, rules, and roles written onto the sexed bodies of humans.

Although the medical view of the penis is relatively modern—the anatomy correctly identified by the Belgian physician Andreas Vesalius in the sixteenth century, spermatozoa recognized two centuries later, and the connection to hormones and chromosomes added
in the twentieth and twenty-first centuries—the penis’s connection to social expectations of masculinity is perhaps as old as human history. More than its role in the assignment of “male sex,” the penis holds its greatest weight in relation to masculinity, the gender most commonly connected to the male sex category. In fact, ideas about masculinity have shaped the human conception of biological sex; even Vesalius believed that the vagina was merely an inverted penis—in other words, that women were simply failed men. For Vesalius, men’s supremacy was a given, something that must be evident in nature (Friedman 2001).

Men often place great significance on the penis to their self-definition. Throughout human history, the penis has been both revered and feared for its connection to masculinity, although its specific meanings and social manifestations have shifted. In ancient Egypt, the penis was understood as the giver of life and featured prominently in creation stories (Friedman 2001). In ancient Greece, a small, flaccid penis was valued as symbolic of masculine beauty and appeared conspicuously in some of the period’s famous artworks. Other ancient civilizations valorized the large, erect penis. It is prevalent in ancient Roman art, as in Pompeii, and in ancient Hindu worship of the lingam, a phallic symbol for the god Shiva (although some scholars argue that the lingam was not always intended as phallic, especially when it appears as the “lingam-yoni, an erect penis conjoined at the base to a vulva ... the undivided self of the male and female, which was believed to be the embodiment of the divine” [Dasgupta 2014, 107]). In the modern Western world, the large penis is hegemonic and is presented frequently in pornographic and media representations (Lehman 2007).

**Penis as Phallus** The phallus is a symbolic representation of the penis, distinct from its fleshy reality; the phallus is large and erect, symbolic of potency and power. But the actual penis often fails as phallus, because it is more frequently flaccid than erect and often small, delicate, and easily injured. The phallus often symbolizes the socioeconomic, military, and political power of a society, dating back to the great ancient monuments such as the phallic hermae of ancient Athens and the Forum of Augustus in ancient Rome (Friedman 2001), through more modern examples of skyscrapers and other monuments (e.g., the Washington Monument in Washington, DC) (see also Williams 2014). In certain contexts, such as hard-core pornography, penis and phallus are treated as one—with only large, erect, or semi-erect penises shown (Lehman 2007).
Phallus Statue outside of a Japanese Fertility Shrine. The large, erect penis, or phallus, has been a symbol of potency and power in many cultures since ancient times.

The penis-as-phallus is not relegated to the realm of pornography. The emphasis on size, which is inextricably tied to notions of masculine power, can be seen in the availability of many products and techniques to increase penis size: vacuum pumps, surgical enlargements, hanging weights, and milking, or jelq, a technique of stretching the penis from an early age (Paley 1999). An interesting example is foreskin restoration, a variety of techniques (and products) available to help unhappily circumcised men regrow their foreskin. For the men who undertake them, these techniques may address issues around sexual sensation, bodily autonomy, or penis size, with an emphasis on a long, or redundant, foreskin (Kennedy 2015).

Penis size is highly racialized. Although a large penis is hegemonic, the stereotype of excessively large, even animalistic, penises among black men has been used to justify visions of black men as dangerous, oversexed, subhuman, and aggressive (Friedman 2001). Colonial fascination with African sex organs later became an American obsession about black men defiling white women, leading to the lynching of thousands of black men. In LGBT history, this stereotype looms large, as, for example, in the controversy surrounding the American photographer Robert Mapplethorpe’s (1946–1989) images of black genitalia and in modern-day examples of racial discrimination on gay dating sites. In contrast to
black men’s presumed largeness, the white imaginary has long conceived of Asian men as effeminate, and thus stereotypes of their bodies include a small penis. Despite all these cultural beliefs, surveys consistently show that most penises are actually between 5 and 7 inches when erect (Paley 1999).

Fears about penis size manifest in a variety of ways around the world. Small penis syndrome is a condition wherein a man is concerned about the size of his penis, an anxiety that persists despite reassurances by medical professionals that the penis is of normal size. This condition produces an array of social anxieties, not least of which center around public urination and sexual activity (Wylie and Eardley 2007). Other penis anxieties include koro (the belief that one’s penis is shrinking) and beliefs in penis snatching. These are often considered culture-bound psychiatric syndromes, but because they have appeared in an array of contexts, some have considered the underlying cause to be mental illness shaped by cultural beliefs (see Crozier 2012 for the evolution of this psychiatric diagnosis and Chiang 2015 for specifics on the Chinese context). Outbreaks of koro have been documented primarily in Asia (Malaysia, China, Thailand, India, Singapore, and Indonesia), with some individual cases among European, African, and American patients (Crozier 2012). Likewise, penis snatching (the belief that someone has stolen your penis) has been documented in African nations most recently but was also part of the witch hunts of medieval Europe (Lombard 2014). Magic was said to have all sorts of power over the penis. In medieval France, for example, impotence was sometimes attributed to the spell of a sorceress, as in the case of Martin Guerre (Davis 1983). These anxieties, as well as the way they are understood medically, demonstrate the widespread emphasis placed on genital size, performance, and reliability.

**Penis or Testicles?**

The term *penis* is popularly used in place of all male genitalia—penis, scrotum, and testes. Historically, though, the penis and testicles vied as the measure of a man. Because the penis was a site of excretion (of urine and seminal fluid), it was sometimes viewed as animalistic or dirty. In early Christian thinking, the penis could even be evil—a source of lust and sin (Friedman 2001). When selecting a new pope, the final test was an examination of the testicles, and when giving an oath, men often swore—or testified—by placing a hand near their testicles (Friedman 2001).

In modern times, the penis takes primacy over the testicles as the defining piece of genitalia. This change marks a shift in thinking about masculinity and the body—from an emphasis on reproduction to one on power and pleasure. The Austrian neurologist Sigmund Freud’s (1856–1939) emphasis on the penis (or lack thereof) in his analysis of castration anxiety and penis envy helped solidify the penis as primary to human personality development (Friedman 2001). It was the French psychoanalyst Jacques Lacan (1901–1981), though, who truly theorized the phallus, drawing the distinction between
physical organ (penis) and power symbol (phallus) that is in use today. Nevertheless, the
testicles remain significant. One can see the cultural weight of the testicles by looking at
those who have lost them, for example, to testicular cancer. Like survivors of breast cancer
who seek reconstructive surgery to regain a sense of wholeness, testicular cancer survivors
may opt for replacement with testicular implants to maintain a particular aesthetic
wholeness. Particularly interesting, implants (a product called Neuticles) are also available
for neutered pets, suggesting that the ideology of masculinity is culturally pervasive.

The Penis in Sexuality

The penis is a central part of many men’s sexuality. The penis-as-phallus is understood as
the definitive penetration tool; this explains its popular representation in mainstream
pornographic materials as large, erect, and hard. These representations led many radical
feminists to decry the penis as a tool of rape and domination (e.g., Dworkin [1987] 2007).
In one’s lived sexuality, however, the penis takes on many more roles than simply as
dominating penetrator: it can be both giver and receiver of pleasure; part of sexual
encounters with others or one’s personal self-pleasure; a source of pride, guilt, or failure;
and the literal (physical) organ or a manufactured substitute.

The Penis and Penetration

The pleasures of the penis are many. Most readily imagined is
its role as penetrator of orifices: mouth, vagina, and anus. The penis’s culturally hegemonic
job is to penetrate vaginas for the purpose of reproduction, even though the penis does and
can do much more than this. Its reproductive role is supported by many religious values, as
well as by medicine; sodomy laws, which make nonreproductive sex illegal, have also
protected this role (such laws were overturned in the United States in 2003, but they
persist elsewhere [Carroll and Mendos 2017]).

Penetration is typically understood to rely on erection. Erection is a source of anxiety for
some, and this anxiety has led to the development of a competitive pharmaceutical industry
of erection achievement and maintenance. The inability to achieve or sustain erection is
considered a medical condition in need of treatment (Potts 2000). The wide variety of
actual penises and erectile states is ignored in favor of a medically established “normal”
erection. Any deviation is classified as pathological. The failure of an erection seems to be
evidence of the lived, embodied penis’s shortcomings as phallus (Potts 2000).

Although many experience erectile problems as a source of distress, some scholars have
argued that at least some of this suffering is the by-product of the cultural (phallic)
emphasis on erection, and still others have noted that erectile dysfunction may be more a
psychological condition—the result of performance or other anxiety— than a physiological
one. In a 2015 study of hundreds of Chinese men, Everett Yuehong Zhang argues that
anxieties around impotence reflect not only physiological or psychological issues but also
the political, economic, and social changes associated with modernity. Whatever the cause,
erectile dysfunction can be treated by some very profitable drugs, such as Viagra and Cialis, or by more invasive treatments, such as injections and surgically implanted silicone rods (Potts 2000). To combat the stigma men may feel admitting their erectile problems, companies such as Pfizer, the maker of Viagra, hire big stars for advertisements. In 2002 Pfizer hired Pelé (1940–), the world-famous Brazilian soccer legend, to represent them globally. He encouraged men to talk to their doctors, although he has often been cited in interviews explaining that he has never needed the drug himself.

The Other Pleasures of the Penis The penis need not be an erect penetrator to be pleasurable. It need not be erect, and it need not penetrate—it can be penetrated, it can be enjoyed while flaccid or lusted after during urination, and it can be pleased alone. One example of the pleasures of the penis not readily captured by the hegemonic medical model of penis/phallus as erect penetrator is docking. In this sexual act, the foreskin of one penis becomes an orifice to be penetrated. Docking is unavailable if circumcised, so for many, the pleasures of a penetrated penis are unknown (Harrison 2002). In recreational (as opposed to urological) sounding, the urethra is penetrated by objects or liquids. Although unsafe sounding can damage the urethra (Breyer and Shindel 2012), it is another example of pleasurable penetration of the penis. Other penile pleasures can be found by exploring the nonerect penis as part of sexual play. This lies far outside many Western imaginations because the penis is so closely tied to all that is masculine and not feminine (and thus not soft, receptive, or passive) (Potts 2000).

Masturbation is another penis pleasure not easily captured by the reproductive model (Dikötter 1995; Laqueur 2003). In Western societies, masturbation was long seen as a sin or moral failing, and in some religions, it continues to be framed as sin. By the 1800s, however, medicine discovered the “problem” of masturbation and sought out its cure. Masturbation was believed to cause all manner of illness—seizures, paralysis, blindness, insanity. It was believed to sap men’s potency, both sexually and productively. An entire disease was invented in the 1800s, spermatorrhea, which described the loss of too much semen from chronic masturbation or sexual activity, sending Victorian England into a social panic (Rosenman 2003; Crozier 2000); in the 1900s Chinese urbanites had a spermatorrhea panic of their own, believing that men could lose important life force from uncontrolled ejaculation (Shapiro 1998). Nevertheless, masturbation—alone or with others—flourishes as one of many penile pleasures, and though religious dictates may still caution against it, medicine no longer considers it dangerous.
Display of Phallus-Shaped Vibrators. The use of dildos, strap-ons, and other penis substitutes can be used to achieve some of the functions of the penis.

Other Kinds of Penises Despite the penis’s close association with masculinity, not all men have penises and not all people with penises are men. This fact is discussed in depth below, but it is important to note the role of instrumental penises, not just the biological, fleshy ones, in sexual activity. Dildos, strap-ons, and all manner of substitutes can be used to achieve some of the functions of the penis (see Pfeffer 2017 for a discussion). Survivors of penile cancer and botched penis surgeries may choose these options, as well as some trans men who do not desire or have not pursued reassignment surgeries. Likewise, some women and nonbinary people might also use these alternatives during sex play. The pleasures of the penis are many and need not be restricted to only the flesh variety.

Penile Alterations

From piercings, tattoos, and implants to circumcision, super- and subincision, and complete removal through castration, the penis has been subjected to numerous modifications throughout human history (see Paley 1999 for an overview). Some alterations serve purely aesthetic purposes. Others serve greater purposes: religious or cultural, medical, and even punitive.
Castration Castration can refer to the removal of the testicles and scrotum only or to the additional removal of the penis (Chiang 2012). It has a varied history and has served many purposes over time. Some societies encouraged castration of vanquished enemies after battle, and others required it for positions in royal courts reserved solely for eunuchs, or even for fame among the operatic castrati, renowned for their permanently high-pitched voices. Castration has even held religious significance, especially among small Christian sects such as the Skopty in 1800s Russia who practiced self-castration as an act of godly devotion (Friedman 2001).

At its most basic, castration represents the elimination of reproductive capacity, which is why it frequently involves the removal (or destruction) of only the testicles. In the Western imaginary, this biological loss was also often seen as a desexing, a loss of masculinity. Not so in imperial China, where castration played an important role in palace life (Chiang 2012). Interestingly, Chinese castration practices removed both testes and penis but, contrary to Western expectations, did not lead to eunuchs’ loss of masculine social recognition. Europeans who encountered this practice misunderstood and used it as justification for treating China as a lesser civilization (Chiang 2012). (This was also true of the practice of footbinding in China, as well as of so-called female genital mutilation throughout Africa.)

In contrast to imperial Chinese eunuchs, castration may produce a new sex/gender category in the case of the hijra in South Asia. The term designates a specific social category—a kind of third sex/gender—some of whom are completely castrated (meaning penis and testicles are both removed). Not all hijras are castrated, though, and not all hijras share the same gender identity (Bakshi 2004).

Castration has also been employed as punishment, especially for sexual crimes. Chemical castration—the use of pharmaceuticals to suppress desire, rather than the surgical removal of the gonads—is legal in several US states as punishment for child molestation or sexual abuse. Castration, both surgical and chemical, has been used as a “cure” for homosexuality in the United States, Britain, and Nazi Germany. Famously, Alan Turing (1912–1954), the English code breaker and inventor who helped turn the tides in favor of the Allies in World War II (1939–1945), was subjected to chemical castration for his homosexuality.

Castration appears in few recent popular cultural sources, but George R. R. Martin’s fantasy novel series titled A Song of Ice and Fire (the first volume of which was published in 1996), and its television adaptation, Game of Thrones (2011–), introduces several castrated characters. Varys, castrated early in his life, serves as a court official; Theon Greyjoy is castrated as part of his torture while imprisoned; and the Unsullied are a group of enslaved soldiers, all castrated to ensure their obedience and focus. Among older works, Honoré de Balzac’s (1799–1850) Sarrasine (1830) is significant, featuring a castrato character, Zambinella, as is Roland Barthes’s (1970) analysis of the novella, which details its
Castration has also featured as a theme in psychoanalytic feminist film theory, as in the work of Laura Mulvey (1975) and Kaja Silverman (1988).

Circumcision Like castration, circumcision has a varied history. The procedure itself varies by context and purpose. As a basic definition, circumcision is the surgical removal of the foreskin (prepuce) from the head (glans) of the penis. Circumcision appears in Neolithic cave drawings and ancient Egyptian art, suggesting it has been practiced for millennia. About one-third of men around the world are circumcised, and most of these circumcisions were performed for cultural or religious reasons. The procedure is most common in Africa but also occurs with frequency in the Middle East, Australia, and the United States.

Circumcision features prominently in both the Jewish and Muslim faiths. In Islam, the practice is related to the belief that the prophet Muhammad was born without a foreskin. It is not mandated by the Qur’an but performed frequently in accordance with tradition, so age at circumcision varies from place to place. In Judaism, the act of circumcision—which takes place in a ritual Brit Milah, or bris, ceremony and is often performed by a ritual circumciser called a mohel—is understood as a covenant with God and is mandated unless there are health concerns, such as hemophilia, in the infant. There is a growing minority in Judaism that rejects circumcision, arguing, for example, that the ritual is patriarchal (Kimmel 2001), or unnecessarily painful, and opting instead for a ceremony with no cutting.

Circumcision also has a fascinating medical history. The surgery has been recommended as a cure for all manner of illness—from epilepsy to paralysis—and is closely associated with the rise of an anti-masturbation movement in the West (Darby 2005). The supposed dangers of masturbation, detailed above, caused great panic in Victorian times, and circumcision presented a relatively easy solution.

Today, few national or international medical associations recommend the procedure. The World Health Organization has recommended its application in sub-Saharan African nations as part of the fight against HIV. In the United States, a 2012 statement from the American Academy of Pediatrics suggests that the benefits outweigh the risks, so it continues to be fairly widely practiced there. The evidence in favor of circumcision is mixed. It seems to prevent female-to-male HIV transmission and to protect against penile cancer and human papillomavirus, although many of its benefits can also be achieved through safe-sex practices or good hygiene, rather than permanent genital alteration. Claims that circumcision is more hygienic (because the foreskin traps sloughed skin cells and secretions, known as smegma) also hold little weight, as the foreskin is easily cleaned by simply retracting and gently washing it. Unless a person has phimosis, a condition where the foreskin cannot fully retract, circumcision is rarely medically necessary; even then, some phimosis cases can be treated with steroid creams or physical manipulation.
A Pediatric Nurse Dresses a Toddler following a Medical Circumcision in Massachusetts. Medical circumcision is widely practiced in the United States, where the medical community touts the procedure’s benefits in preventing disease transmission and promoting hygiene.

The limited benefits and spotty evidence in favor of circumcision have led to the rise of an anti-circumcision social movement in the United States, Canada, Australia, and parts of Europe. This movement argues that circumcision is a violation of medical ethics when performed on nonconsenting infants and children; that it is an unnecessary medical intervention; and that it may cause lasting and irreversible damage, such as loss of sensation, erectile dysfunction, scarring, pain, and, in extreme cases, loss of the penis or death. Exemplifying this ongoing debate, a German court in Cologne ruled in May 2012 that nontherapeutic circumcision constituted illegal bodily harm on a child. Many saw this as an attack on German Jews and Muslims. Before the year ended, the government passed a law protecting the religious practice and parental consent to the procedure. As of late 2017, no country had banned the surgery (despite significant legislative efforts against female circumcision, commonly called female genital mutilation, and despite efforts by anti-circumcision activists to demonstrate similarities between the two practices).

Circumcision has also been performed as an aesthetic surgery. In Japan, for example, circumcisions are done for cosmetic reasons. And in the United States, many parents circumcise sons for aesthetic reasons (e.g., to look like the father or to be attractive to future sexual partners). Studies have suggested that heterosexual women in the United States prefer a circumcised look—perhaps because it is familiar— and there are some in
the gay community who prefer it as well. In fact, some gay dating sites ask for circumcision status—cut or uncut—suggesting that penile appearance is a relatively important criterion for sexual attraction.

Related to circumcision, though different in surgical character, are the practices of subincision and super-incision. Subincision usually involves cutting the penis from the base to the urethral opening, along the underside of the shaft, but may also refer to a slit in the foreskin on the underside. Superincision usually describes a slit in the foreskin, on the top of the organ, but may also describe a procedure similar to subincision—a slit along the length of the shaft, in this case at the top of the organ. Neither practice is as common as circumcision, but all are performed as rites of passage. Subincision has been noted in Australia, Papua New Guinea, and Kenya; super-incision is recorded in New Zealand and other parts of the Pacific (Kennedy 2014). The risks associated with these surgeries are high, especially damage to the urethra, and vary according to the length of the slit.

**The Penis in Gender Transition**

Much of the above discussion assumed a penis on a cisgender man. This is because the penis has been a central part of the embodiment of masculinity and because Western gender ideology assumes a direct relationship between biological sex and social gender roles. However, as societies’ understanding of gender becomes more complicated, it is clear that the penis does not make (or unmake) the man. Indeed, people of all gender and sexual identities can possess penises. This final section explores the role of the penis for men and women of transgender experience and for intersex people.

**The Penis and Transgender Bodies** Neither the bodies nor the identities of humans are easily captured in simple binary boxes: the hijra of South Asia and the two-spirit people and berdaches in Native American cultures are among the best-known nonbinary gender identities. Prior to colonial interference, many non-Western societies allowed for variation in gender identity and performance. In the West, the term *transgender* is generally used to refer to individuals whose identity does not match the sex category they were assigned at birth. Thus, some women have penises and some men do not. How one resolves the conflict between assigned category and actual identity—and whether one even sees a need to resolve the difference—varies individually and culturally.

Some trans women (sometimes transwomen or transwomens) who have not had/will not have surgery may choose to tuck or otherwise disguise the penis, whereas others simply accept the body with which they were born. Trans men (sometimes transmen or trans-mens) who do not wish to have (or cannot afford) surgery may purchase penis alternatives for a number of purposes. Packing—the use of an object to create the appearance of a penis in one’s pants—has been used by trans men, drag queens, lesbians, and genderqueers. Because most cismen stand to urinate, this may be desired by trans men. Thus, alternatives
may allow standing urination through the use of a cup that collects urine at the urethral
opening and directs it through a tube in the artificial penis. To approximate a penis during
sexual activity, the typical options are dildos and strap-ons (see above). Testosterone
therapy regularly causes enlargement of the clitoris, which also can harden during arousal,
and for some, this functions as a penis alternative.

Not all transgender people want or will have gender confirmation surgeries; bottom
surgery, or surgery on the genitalia, is particularly uncommon (see Stryker and Whittle
2006 and Stryker and Aizura 2013 for more on trans experiences). For those who do seek
surgical alteration of the body, the penis may present opportunities or challenges. Trans
men who seek the surgical creation of a penis may undergo a number of procedures,
including phalloplasty or metoidioplasty. The former involves the creation of an appendage
resembling a penis out of skin from other areas of the body (e.g., forearm, thigh, abdomen).
The aesthetics, functionality, and sensation are often not ideal, and complications can be
significant, which is why many men of transgender experience do not opt for this
procedure. The latter, metoidioplasty, is more common and involves severing ligaments
around the (hormonally enlarged) clitoris, freeing and elongating it. In this procedure, the
full sensation of the clitoris is retained, and fewer surgeries are needed.

For trans women seeking surgery, the existing penis is turned into a vagina and clitoris. The
penis is inverted to create the vaginal opening and the head of the penis is fashioned into a
clitoris. Because the nerves of the glans are retained, this clitoris is sensitive and can allow
for orgasm. The scrotal skin is used to create labia. Significantly, the presence of foreskin
can help this process (in part by ensuring more length in the penis itself), an argument that
some in the anti-circumcision movement use in their opposition to circumcising. In other
cases, part of the colon may be used to create a vaginal opening. Bottom surgery has not
always meant the creation of alternative genitalia. In the first half of the nineteenth century,
for example, some trans women wanted simpler alterations, such as castration
(Meyerowitz 2002). A castration procedure known as orchiectomy (or orchidectomy), the
removal of one or both testicles, is another option for trans women who seek to rely less on
external hormonal medication to suppress testosterone. The surgery was popular in
Thailand in the trans and “ladyboy” communities, as well as for those outside the country
who traveled there for surgery; in 2008 the Thai health minister banned cosmetic
castration for underage patients, and since then age and evaluation criteria have been
employed (Chokrungvaranont et al. 2014).

Pop culture references to these surgeries are becoming more numerous. The popular
American reality TV show I Am Jazz (2015–) explored these surgical options as the
transgender title character pursued a surgical transition. Dr. 90210 (2004–2008), another
reality show, followed a surgeon who specialized in gender confirmation. Although there is
a growing number of surgeons in the United States who specialize in transgender surgeries,
Thailand has become a popular destination for the surgeries, with patients from around the
world citing both good results and lower costs.

**The Penis and Intersex Bodies** Penises vary in shape and size. Some individuals are born with ambiguous genitalia that are not readily identifiable as either male or female (in a traditional medical sense); the ambiguity, here, is decided by a physician using a normative scale. Clitorises that are too long by this standard may be surgically reduced, regardless of risk to sensation or function, and penises that are deemed inadequate—for standing urination or vaginal penetration, the two markers of a masculine and thus phallic penis—may be surgically altered to create a “female” appearance (Preves 2002). Individuals whose bodies—in terms of either genitals or chromosomes—are not readily identifiable as male or female are diagnosed as intersex (having one of the “disorders of sex development,” as they are controversially termed in the medical literature). In past decades, intersex people were called *hermaphrodites*, but this term has fallen out of usage (much like the older *transsexual* instead of *transgender*) and is generally considered offensive unless a person self-identifies as such.

In past decades, intersex conditions were immediately treated with “normalizing” surgery, but the emergence of a politically active intersex social movement has led to a reconsideration of this practice. Nonconsensual alteration of intersex children's bodies was deemed a violation of the United Nations Convention against Torture (which went into effect in 1987) by the United Nations Committee against Torture. Most physicians now recognize the importance of leaving the decision to patients when they are older. Like transgender people, many intersex individuals decide against surgery, opting instead to embrace their bodies and determine their own gender identity.

Where other cultures have made space for individuals who fall outside the sex/gender binary, there has been little space for intersex people in the Western imaginary, though that space may be growing. In popular culture, Jeffrey Eugenides's novel *Middlesex* (2002) focuses on the topic; despite the book’s popularity, some in the intersex community have been critical because the narrative suggests that intersex conditions result from incest. In film, the Argentine director Lucía Puenzo’s *XXY* (2007) and the American director Lisset Barcellos's *Both* (2005) are notable and were well received by the intersex community.

People Like Us (PLU)

JUN ZUBILLAGA-POW
Faculty Fellow, Humanities, Arts, and Social Sciences
Singapore University of Technology and Design

An early LGB organization in Singapore, established in 1993.

PLU stands for “People Like Us”; it is an organization, a euphemism, and a world-making project. In its short twenty-plus-year history, it has established an unprecedented mode of creative and political resistance. Its ambitious collective vision has, however, caused many of its activists to face personal and political censure, dismissal, and irrational rejection from the civil service. Yet, at the same time, the neologism has expanded and been appropriated beyond its original meaning. The ambiguity, and correspondingly the flexibility, of the phrase lies in the double meaning of the word *like*. It can refer to a measure of similitude between “people” and “us” or an expression of collective attraction. The phrase also encompasses the binary implications of its words: people versus individual, and us versus them. The term has additionally been used and abused by apologists and denialists alike ever since the founding and christening of the social group by Joseph Lo and others in Singapore in 1993. This entry elaborates on the political structures that buttressed the multifaceted history of PLU in Singapore and beyond.

PLU was initially conceived as an informal gathering of friends who, through word of mouth, came together in one another’s houses in the early 1990s. Their intention was to raise awareness and increase understanding of gay and lesbian issues. Some of the topics that concerned them included health care, social politics, and legal matters. Within two years, they found a centralized location at the Substation, an arts venue, and expanded their operations through weekly forums. These attracted a turnout of around 50 to 100 people (Chua 2014). Emboldened by the popularity of its activities, the organization attempted to register as a company in 1995 and as a society in 1996 and 2004, but the applications were all rejected by the state authorities. With the rise of new “civil societies,” PLU with the sponsorship of the gay web portal Fridae established the annual Singapore Pride Season, otherwise known as IndigNation, in 2005 (Koh and Soon 2012).

As is the case with most activist organizing, social politics among the proponents, the general public, and the state were inevitable. Throughout PLU’s twenty-odd years of existence, the political mobilization of PLU and other grassroots offshoots—such as the queer women’s group Sayoni and the counseling business entity Oogachaga— can be classified into three different types of sociopolitical structures: macropolitics, mesopolitics,
and micropolitics. PLU has engaged publicly in a form of macropolitics in its attempts to
officially register with the Registrar of Companies and the Registrar of Societies, which
were rejected by the authorities as “unlawful ... prejudicial to public peace, welfare or good
order” (Lo 2003, 134). The organization’s follow-up actions in the form of appeal letters to
the Ministry of Home Affairs and the Prime Minister’s Office were also apparatuses on this
structural level of political activism.

On the micro level, ideological and interpersonal differences in opinion have remained
commonplace. Two cases in point are the agenda setting and composition of the
organization. Some members of the group preferred to focus their time and effort on
community building, whereas others wanted to make government engagement the group’s
priority. The few women in the group also felt that lesbian issues had been marginalized
from the forum and related activities, resulting in the splintering of the initial group. These
and many other internal quibbles became part and parcel of the micropolitics that old and
new members of PLU had to grapple with on a regular basis. Other than gender
representation, the demographic categories of class, language, and race were very much
neglected in the PLU’s constitution. Most of the founding members were cisgender (a
person whose self-identity conforms to the sex assigned at birth), upper/middle class,
anglophone speakers of Chinese descent. As a result, the activities that they organized
markedly left out the concerns of gays, lesbians, and transgenders from other demographic
profiles.

A notable exception is the programming for the annual pride festival, IndigNation. Spread
across the month of August, the array of events ranges from literary, filmic, and visual arts
events to community forums on cultural, health, legal, and social matters. The public nature
of many of the meetings, featuring ethnic minorities, trans men, and gays who are hearing
impaired, engendered the mesopolitics of LGBT activism. These activities, which require
government permits, encompass mesopolitical tactics of invention and creation. The
intermingling of procedures and people with different identities thus mediates between the
micro and macro orders of political actions and affords both community building and state
engagement at the same time.

More importantly, an indirect consequence of PLU’s failure to achieve state recognition is
its timely provision of an alternative identity of empowerment in the early 1990s. PLU, as
opposed to the locally derogatory terms gay and homosexual, became a vernacular
euphemism used to identify people who are attracted to others of the same gender
(Zubillaga-Pow 2012). Eventually, certain entities—such as the now-defunct queer youth
group PLUME (People Like You and Me) and the travel guide PLU Travel Orbit (PLUTO)—
adopted the label for their own group names and associate their respective members and
clientele with it (PLUGuide). Since the late 1990s, the appellation has also garnered
popularity in neighboring Malaysia and Thailand, generating a transnational imagined
community through print and the internet (Haritaworn 2012; AIDS Bhedbhav Virodhi
Andolan 1999). With the recent advent of academic queer theory and international human rights advocacy, LGBT and SOGIE (sexual orientation and gender identity and expression) are gradually becoming local substitutes for PLU in everyday parlance. After slightly over two decades of world making, PLU has today been relegated to a level of moribund usage.

Performance Artists in Latin America

ANTONIO PRIETO-STAMBAUGH
Professor, Department of Theater
Universidad Veracruzana, Mexico

An overview of important queer performers, with a particular focus on those in Brazil, Chile, Argentina, Peru, Puerto Rico, and Mexico.

Performance is a body-and-action art form usually (but not exclusively) presented as solo interventions in public spaces and art galleries. Queer artists around the world have found performance art to be an ideal medium for the creation of memorable and provocative statements that affirm their identities and challenge homophobia and heteronormativity. While the pioneers of this art form as it is known today came primarily from Europe and the United States (Marina Abramović from Yugoslavia, Joseph Beuys from Germany, Carolee Schneemann and Chris Burden from the United States, to cite only a few), it is important to acknowledge the specific aesthetic and political genealogies of performance art stemming from countries of Asia and Latin America.

This article focuses on LGBTQ artists from Latin America and the Caribbean who not only resist entrenched patriarchal and homophobic social systems but also, as in the case of Brazil, Chile, and Argentina, confronted the right-wing military dictatorships of the 1970s and 1980s. The current generation of LGBTQ performance artists in Latin America grapples with such issues as the ongoing AIDS epidemic, neoliberal globalization, violence and discrimination against LGBTQ people, transgender rights, and the affirmation of a politicized “postporn” sexuality. The work of these artists appropriates international queer politics from a decolonial *cuir* (that is, a Latin American iteration of *queer*) position mindful of how gender, class, and ethnicity intersect. They perform their specific identities grounded in local politics and cultural practice, using terms such as *joto* (faggot), *loca* (crazy woman), and *muxe* (a Zapotec term used by female-identified men in some indigenous communities from the Isthmus of Tehuantepec in Oaxaca, Mexico).

Context

The emergence of conceptual art in Latin America coincided with the political upheaval brought about by the 1959 Cuban Revolution and the ensuing coups d’état in many South American countries (Brazil in 1964, Chile in 1973, and Argentina in 1976, to name a few). In this Cold War scenario of right-wing forces versus left-wing student groups and rural guerrillas, violence took the form of systematic arrests, torture, and the physical
disappearance of thousands of people, especially in the aforementioned countries, but also in Mexico, where a massacre of students and local residents was perpetrated by military forces on 2 October 1968 in a residential complex in Mexico City just days before the opening of the Olympic Games in the city.

During the 1960s and 1970s, several Latin American playwrights and directors began to “come out of the closet.” In Brazil, Nelson Rodrigues (1912–1980) published his groundbreaking play *O beijo no asfalto* (The kiss on the asphalt) in 1960, dealing with the issue of homophobia (a first in Latin American theater), while in Paris, the legendary Copi (1939–1987), born and raised in Argentina, became known for his radically queer plays *Eva Perón* (1969) and *El homosexual, o la dificultad de expresarse* (1971; The homosexual, or the difficulty of expressing oneself). Although Copi’s work was originally published in French, it has been widely translated and performed throughout Latin America. In Mexico, lesbian director Nancy Cárdenas’s 1973 adaptation of Mart Crowley’s *The Boys in the Band* (1968) opened to much controversy in a mainstream theater in Mexico City. Years later, playwright José Antonio Alcaraz and actor-director Tito Vasconcelos were responsible for spearheading a Mexican gay theater movement with the 1980 production of *Y sin embargo se mueven* (And yet they move).

The political confidence and visibility gained by gay and lesbian activists after the New York Stonewall riots of 1969 influenced the early LGBT movement in Latin America and the Caribbean, which initially adopted the “sexual liberation” discourse, affirming visibility and demanding an end to homophobic persecution. The fight against violence and discrimination toward trans-identified people became visible much later, toward the beginning of the present century. The first publicly constituted homosexual group in South America, known as Nuestro Mundo (Our World), appeared in Argentina in 1967, with a worker- and union-based membership. Pioneering feminist and gay activists were keen on establishing solidarity with the larger progressive movement. For example, a manifesto published in 1975 by Mexican activists and writers Luis González de Alba, Carlos Monsiváis, and Juan Jacobo Hernández proclaimed that “homosexual liberation is another form of social liberation” (De la Garza 2017).

Performance artists in Latin America derive material from local cultural traditions, such as carnivals and *carpa* theater (Mexican variety shows of the early twentieth century, full of sexual puns and political parodies). For example, Hélio Oiticica (1937–1980), a key Brazilian artist of the tropicalist movement of the 1960s, played with gender ambiguity and carnivalesque cross-dressing, wearing his *parangolés* (sculptural costumes) as he danced in public spaces to the rhythm of samba or abstract music. In Mexico, a thriving political cabaret scene emerged in the 1980s, thanks mainly to the work of Jesusa Rodríguez and Tito Vasconcelos, with shows that celebrated lesbian and gay identities while using drag to parody everyone, from the Mexican president to the pope. The crossover success of these performances owed much to the political urgency that recalled classic *carpa* numbers.
Rodríguez and Vasconcelos have also been prominent activists in Mexico’s LGBTQ movement, often making performative interventions in the local pride parades. The following sections take a closer look at some of the key groups and artists from Brazil, Chile, Argentina, Peru, Puerto Rico, and Mexico.

Performance Artists in Brazil

Queer performance art in Brazil includes Dzi Croquettes, a trailblazing group that emerged in Rio de Janeiro during the early 1970s. Dzi Croquettes became famous for the use of radical cabaret and burlesque shows full of defiant drag numbers, a remarkable achievement considering this was the height of Brazil’s violently repressive military dictatorship (1964–1985). The all-male group’s name pays homage to the Crokettes, a San Francisco–based countercultural theater ensemble of the 1960s. The Brazilian group had a language of its own derived from the use of cross-dressing and sensuality in the Rio Carnival, as well as the psychedelic motifs and musical innovations of the 1960s tropicalist movement.

Dzi Croquettes’ first show, *Gente computada igual a você* (1972; Computed people just like you), combined monologues with dance numbers in drag. Performed initially in underground clubs in Rio, the show was later taken to venues in the city of São Paulo. This and other gleefully raucous performances defied conservative morality, making the group an easy target for censorship—which, of course, only increased the public’s interest. The performances were full of irony and double-entendres, and their extravagant frocks, made of recycled clothes from all walks of life, mixed colorful skirts with football stockings and other garments. The group lived as a queer family, less concerned with “gay power” issues—which they deemed as too commercial—than with the need to include all sexualities and races (*Aliaga and Cortés 2014*).

Dzi Croquettes gained international fame when they performed in Paris in 1973 and 1974, earning the admiration of stars like American entertainer Liza Minnelli. The thirteen-member group (which included choreographer Lennie Dale, writer Wagner Ribeiro de Souza, and performer Ciro Barcelos) was at one point joined by women performers but ultimately disbanded in 1976. The award-winning documentary *Dzi Croquettes* (2009; directed by Raphael Alvarez and Tatiana Issa) has helped keep the legacy of this group alive for contemporary audiences.

After the turn of the millennium, a new generation of LGBTQ artists emerged in Brazil, working with trans and postporn issues. Pêdra Costa is a trans artist and anthropologist based in Vienna, Austria, as of 2018, whose work articulates a critique of neocolonialism and an affirmation of the queer immigrant body. The group Coletivo Coiote (Coyote Collective) became known in 2012 for their aggressive interventions in the streets of Rio de Janeiro, vowing to undertake “terrorism with the asshole” ("*terrorismo com o cu*") to
destabilize compulsive heteronormativity (Vergara 2015, 27). Miro Spinelli, based in Rio de Janeiro, gained attention with the 2015–2017 project *Gordura trans* (Trans fatness), where h/she explores the politics of subjectivation and the abject display of the queer/trans fat body.

**Performance Artists of Chile and Argentina**

Chile and Argentina are two Latin American countries from the so-called Southern Cone that suffered US-backed military coups, followed in the first case by the dictatorship of General Augusto Pinochet (r. 1973–1990), and in the second by a highly repressive military junta (1976–1983). This section focuses mainly on Chile, where, during the dictatorship, conceptual artists managed to speak truth to power by means of codified performances and unannounced public interventions. One of the first artists to do so was Carlos Leppe (1952–2015), whose *Happening de las gallinas* (1974; *Happening of the Hens*) “challenged traditional concepts and taboos associated with the body, sexuality, and gender in Chile” (Neustadt 2008, 163). Leppe went on to produce work with photography and video, displaying his body in poses that suggested torture and at the same time a queer sexuality under siege by the military regime. In 1975 he created an installation in a gallery of the capital city of Santiago that was made of a wooden frame with three hangers, each one with a large-format photograph of the artist suspended upside down. Two images showed him dressed in a gown that suggested a female opera singer. The images were unsettling, as the artist’s body wore the prostheses of female breasts breaking through the gown’s fabric. The middle image was of the artist’s naked torso wearing surgical gauzes over his breasts and genitals.

Openly gay artists Pedro Lemebel and Francisco Casas worked together from 1988 until 1997 under the name *Las Yeguas del Apocalipsis* (The Mares of the Apocalypse), orchestrating provocative performances such as *La conquista de América* (1989; The conquest of America), staged on Columbus Day (12 October) at the central patio of the Chilean Commission of Human Rights. In that piece, Lemebel and Casas danced together, barefoot and shirtless, wearing only black trousers and their hands holding white scarves, over a map of South America covered with shards of broken Coca-Cola bottles. They were dancing *La Cueca Sola*, a national dance that was often performed in plazas by the mothers and wives of young activists that had been “disappeared” by the regime. With this deceptively simple yet powerful performance, Lemebel and Casas denounced the wounding of bodies of its citizens (suggested by the broken Coke bottles covering the map) by imperialist intervention in South America and the violence exerted by the Pinochet dictatorship on sexual diversity. *Las Yeguas* moved on to create their most emblematic work, *Las dos Fridas* (1989–1990; The two Fridas), a photo performance and installation piece where they replicated the famous self-portrait by Mexican artist Frida Kahlo (1907–1954), in which she is depicted as two women holding hands and with their hearts
exposed. Lemebel and Casas cross-dressed as Frida— their torsos again exposed—in an image that suggests queer suffering and solidarity. The photo-performance was printed as a postcard and circulated widely among LGBTQ groups across Latin America and beyond.

More recently, Chilean activist and performer Víctor Hugo Robles (1969–) gained international attention through his persona El Che de los Gays (The Che Guevara of the Gays), created in 1997. By queering the iconic symbol of the Cuban Revolution, Robles's public performances seek to raise awareness of homophobic public policies and the ongoing AIDS epidemic, which is especially deadly for poor and working-class gay youth. The thirty-two-minute documentary El Che de los Gays, directed by Arturo Álvarez in 2005, chronicles Robles’s artivist (artist-activist) work. In 2015 Robles published in Chile his memoirs, titled El diario del Che de los Gays (The Che of the Gays' diary).

A younger generation of radical artivists in Chile is represented by the Colectivo Universitario de Disidencia Sexual (CUDS; University Collective of Sexual Dissidence), founded in 2002. CUDS members define themselves as “postfeminist sexual dissidents who organize bodies to create actions of sexual terrorism in authoritarian spaces” (quoted in Aliaga 2014, 84; translation by Antonio Prieto-Stambaugh), in reference to the pornoterrorismo or “pornoterrorist” movement. The collective’s founder, Felipe Rivas San Martín (1982–), performed a controversial piece titled Ideología (2011; Ideology), in which he walked around an installation that displayed archival material on Chile’s history. At one point, he stopped before a picture portrait of Salvador Allende (1908–1973), the socialist president deposed during the 1973 military coup. To the dismay of the audience, Rivas masturbated and ejaculated over the picture of this iconic hero of the Latin American Left. Critic Juan Vicente Aliaga read this gesture as “an exercise that demystifies the Father
In Argentina, there was, as mentioned above, a tradition of gay theater dating back to the 1960s. Performance art has thrived since then, with two particularly noteworthy trans performance artists active today. Susy Shock (1968–) is a Buenos Aires–based singer, activist, writer, poet, and fanzine artist known for her performance-manifesto “Yo reivindico mi derecho a ser monstruo” (2011; I affirm my right to be a monster), calling for a depathologizing of trans identity. Her activism contributed to the passing of a historic 2012 gender-identity law in Argentina allowing individuals to alter their gender on official documents without having first to undergo surgery or receive an official diagnosis. In a similar vein, Naty Menstrual (1975–) is a trans woman who began cross-dressing during the 1990s in underground venues of Buenos Aires, where her spoken-word performances caught the eye of editors who offered to publish her poems. Her work draws inspiration from the aforementioned Copi and Pedro Lemebel, as well as Manuel Puig, Charles Bukowski, and Truman Capote.

**Performance Artists of Peru**

Peru has a rich cultural heritage, being the home of the ancient Mochica, Nasca, and Inca indigenous civilizations, as well as present-day Quechua and Aymaras. The country was besieged by internal conflict when the Maoist-inspired Sendero Luminoso (Shining Path) guerrillas waged war on the government from 1980 to 1992. Notable theater and performance groups have emerged in this context, such as Yuyachkani, founded in 1971 and still active today.

The Chaclacayo group (1983–1990), formed by Helmut Psotta, Sergio Zevallos, and Raúl Avellaneda, created performances in public spaces such as city streets and beaches that responded to the surrounding political violence while challenging heteronormative sexuality. Zevallos’s *Rosa Cordis* (1986) was a performance tableau mixing religious and queer imagery, in which he crossdressed as an eroticized Saint Rose of Lima (1586–1617), the patron saint of the capital city of Lima. The Chaclacayo group “aimed to define a beauty made up of obscenities and link it to a magnificent and miserable dramatic mise-en-scène that resembled an opera of abjection” (Lerner Rizo-Patrón and Villacorta Chávez 2008, 152; translation by Antonio Prieto-Stambaugh).

Artist Giuseppe Campuzano (1969–2013) created the Museo Travesti del Perú (*Peru’s Transvestite Museum*), an ambitious performance and installation project that aimed at queering his country’s official history. Under the provocative slogan “toda peruanidad es un travestismo” (all Peruvianness is transvestism), the traveling exhibit made a critical revision of archive materials and objects from the pre-Columbian, colonial, and contemporary periods, demonstrating an underlying queer aesthetic sensibility in images...
ranging from androgynous Catholic saints to cross-dressing in indigenous dance traditions. The Museo Travesti del Perú directly challenged official history as a heteronormative and colonialist construct. Campuzano published a richly illustrated book to accompany the exhibit in 2008. Additional information in English, along with images and a video clip are available online at the Hemispheric Institute of Performance and Politics website (http://hemisphericinstitute.org/hemi/en/campuzano-presentation).

Performance Artists of Puerto Rico

The island of Puerto Rico has a uniquely complex geopolitical situation, as its commonwealth status makes it a de facto Latin American colony of the United States. Queer Puerto Rican performance artists usually move back and forth between the island and the mainland United States, which makes them translocal artists, but also, as scholar Lawrence La Fountain-Stokes (2011) argues, translocas, a term that suggests the “transgeneric transitoriness” of artists with a queer diasporic subjectivity. Transloca playfully uses the Spanish word loca (literally “crazy woman,” but also “effeminate”), which gay people in Latin America embrace as an affirmation of defiant femininity.

Freddie Mercado (1967–) uses flamboyant drag alluding to Puerto Rican pop culture and religiosity. Mercado avails himself of his training in theater and visual arts to create bizarre personas with elaborate makeup and spectacular self-made dresses, sartorial installations that often include papier-mâché dolls and other objects. Thus transformed, the artist can be seen strutting down the streets of the capital city of San Juan or appearing in gallery exhibits and theatrical performances. Mercado’s work is at the same time grotesque, humorous, and dreamlike, using surreal montage techniques that challenge not only gender normativity but also mainstream notions of race, nationality, and Caribbean identity (La Fountain-Stokes 2009).

Pepe Álvarez (1980–) belongs to a more recent generation of queer Puerto Rican artists. His work mixes dance, multimedia, and conceptual performance addressing the relationship of body, space, and identity. Performances such as Parentela (2005; Family) and A dos aguas (2013; Slanted rooftop) use a small wooden house as a leitmotif, suggesting the quest for a safe space that requires the collaboration of a family or community to be built. The latter performance was developed with several young artists who worked with people from their working-class neighborhoods in order to develop a participatory “community map” that involved the idea of home building as a way of collective empowerment.

Performance Artists of Mexico

Outside the thriving political cabaret scene mentioned above, Mexican performance artists have only recently begun to openly address LGBTQ issues. One of the first to do so was
Katia Tirado (1965–) with *Exhivilización: Las perras en celo* (*1995; Ex-civilization: Bitches in heat*), a powerful performance that was staged as a two-woman wrestling match in a ring surrounded with four sculptures of erect penises. Tirado and her co-performer wore Mexican wrestler masks, facing away from each other, their bodies linked by elastic ropes and a rubber hose connecting their vaginas. During the match, they struggled to reach the tips of the penis sculptures to make them “ejaculate” with fireworks. As they did so, the performers appeared to both fight and caress each other, in a paradoxical dance of phallocentric pain and homoerotic pleasure (*Prieto-Stambaugh 2003*). More recently, Tirado teamed up with Austrian visual artists Gin Müller and Jan Machacek to create *Melodrom: The Making of a Rebellious Telenovela* (*2014*), a multimedia performance featuring Tirado cross-dressed as She Guevara, a trans version of Che Guevara.

Lukas Avendaño (1977–) has emerged as one of the most noteworthy performance artists in Mexico for work that addresses his *muxe* identity. *Muxe* is the local term for male homosexuals in the indigenous Zapotec community of Juchitán, Oaxaca, known for social acceptance. In his piece *Réquiem para un alcaraván* (*2012; Requiem for a stone-curlew bird*), Avendaño queers Mexican nationalist representations of Zapotec women (whose traditional dress was made famous by Frida Kahlo), while at the same time embodying the...
mixed pleasure and pain of being identified as *muxe*. His cross-dressing performance interweaves ritual dances with autobiographical passages, and includes moments that involve audience members, as when a traditional *muxe* wedding is staged between Avendaño and a male spectator, at a time when same-sex marriage was being hotly debated in Mexico ([Prieto-Stambaugh 2014](#)).

A younger artist who has caught the attention of the local LGBTQ community is Felipe Osornio (also known as Lechedevirgen Trimegisto). Born in the city of Querétaro in 1991, Osornio has collaborated with Spanish *pornoterrorismo* artist Diana Torres and is known for a series of performances and photo montages based on his manifesto “Pensamiento puñal” ([2013](#); “Fag way of thinking”). In this text, Osornio affirms his identity as a *puñal* (a derogatory term in Mexico equivalent to “faggot”) while also creating a radical epistemology of subaltern queerness where marginalized sexuality, class, and ethnicity converge to powerful effect: “I'm a bronze *puñal*, an old-fashioned cyborg, my gadgets are needles and blades, an ethno-cyber-punk covered with barbed wire, a *cholo* dream-catcher. I'm brown, my skin burnished like an Apocalyptic Jesus Christ” ([Osornio 2013](#); translation by Antonio Prieto-Stambaugh).

In 2014 Avendaño and Osornio cocreated *Amarranavajas* (Blade tier), performed in a community-funded student center in downtown Mexico City, in which they aimed to articulate “a decolonial-criu semantics” ([Prieto-Stambaugh 2016, 41](#)). Avendaño appeared dressed as an extravagant transdominatrix Aztec warrior, naked except for his shiny red high-heeled boots and scarlet loincloth. He performed a defiant choreography surrounded by the audience, as he recited passages of the “Pensamiento puñal” manifesto. Osornio wore a red long-sleeved shirt and red leather pants with cowboy boots depicting painted images of “souls of the Purgatory.” His “Mexican Macho” appearance contrasted with actions that suggested a body vulnerable to pain and disease, using religious imagery in combination with medical instruments. As the performance progressed, the artist's pain was transformed into a call for community empowerment and resistance to all forms of discrimination.

Another young artist who queers Mexican stereotypes of gender is Lia García (1989–), a transgender woman whose work plays with images of the *quinceañera* (the coming of age celebration for Mexican girls turning fifteen) and the bride to address social perceptions of women’s rituals in Mexico. In her performance *Voz en construcción* ([2015; Voice under construction](#)), she appears as an archetypal mermaid who “seduces” the audience with her masculine voice as a way of exploring the social anxiety provoked by a transgender body in the public sphere.

**Conclusion**

LGBTQ performance artists in Latin America are gaining increased global recognition for
their way of challenging dominant stereotypes of gender, sexuality, religiosity, nationality, ethnicity, and class. Although this entry has focused mainly on Brazil, Chile, Argentina, Peru, Puerto Rico, and Mexico, there are other countries with important artistic scenes, such as Colombia, Venezuela, Bolivia, Costa Rica, Cuba, and the Dominican Republic. However, in these countries there is a relative scarcity of published information about queer performers, who often work in underground venues or appear in unannounced urban interventions. It is hoped that new research will fill in this void.

The artists featured in this entry often also work as activists, challenging hetero- and homonormative ideologies, celebrating queer/cuir bodies and erotic desires, and working on alternative community building. Some, like “The Che Guevara of the Gays,” promote public policies to make available retroviral medicine for lower-class youth exposed to HIV. After the turn of the millennium, new issues came to the forefront, such as same-sex marriage and transgender rights. Latin American performance artists embody a decolonial politics by affirming local identities and grassroots movements, demonstrating that English terms such as *gay* or *queer* need not erase the diversity of gender subject positions worldwide.

Phone Apps

SHAKA MCGLOTTEN
Associate Professor of Media Studies
Purchase College, State University of New York

The cultural impact of dating apps aimed at LGBTQ individuals.

The web-based online dating platforms Gay.com, Gaydar, and PlanetRomeo paved the way for phone apps aimed at LGBTQ communities. When the first geosocial smartphone app, Grindr, was released in 2009 it quickly became an important tool for gay, bisexual, and other men who have sex with men (MSM) to engage in different forms of sociability, including dating, friendship, and networking (Goedel and Duncan 2015; McGlotten 2013; Woo 2013). However, it is primarily known as a hookup app for casual sex. A then-unique affordance of this dating app was geolocation, which allowed users to identify one another via proximity.

Other apps quickly followed, including Scruff, Jack’d, Hornet, and Surge, as well as ones aimed at people who identified as lesbians, bisexuals, or otherwise same-sex–loving women, such as Brenda, Zoe, and Daatch, later renamed Her. There are far fewer dedicated apps for women, and none is as successful as those for male-identified MSM and heterosexuals. Several contributing factors play a role in this phenomenon, including assumptions about lesbian sexuality, particularly that they prefer models of longterm sociability rather than casual hookups (Murray and Ankerson 2016). The “problem” of lesbian sexuality has made it difficult for designers and developers, who initially modeled lesbian-focused apps on those for gay men, and who struggled to find ways to capitalize on lesbian romantic and sexual practices (Murray and Ankerson 2016).

Many established web-based dating/hookup platforms for men, such as Manhunt, PlanetRomeo, and Adam4Adam, to name only a few, also released their own smartphone applications. New apps targeting specific demographics continue to be released, such as Grizzly (for bears, or burly, hairy men who display markings of traditional masculinity) and Daddyhunt (for those interested in intergenerational intimacies). Grindr served as a model for these apps, as well as for apps such as Tinder, which initially targeted heterosexual communities and which is often mistakenly identified as the geosocial dating app that paved the way for others.
Gay Dating Apps. Phone apps have become an important tool for LGBTQ persons to meet those who share their orientation, particularly as dating apps allow for filtering according to one’s unique sexual subculture, such as bear, butch, femme, geek, leather, transgender, twink, and poz.

Although mobile dating apps have been adopted globally, cultural contexts shape their popularity, as well as the particular ways in which they are used. In Europe, for instance, while Grindr is used widely, many also use PlanetRomeo, which has been a favored platform in Germany and many European countries since 2002. Hinge has been widely adopted by the gay community in Sydney, Australia. In New York City, Jack’d is primarily associated with men of color. Hornet, like Jack’d, while popular in the United States, is not widely used elsewhere. Blued, now in global partnership with Hornet, is considered the largest gay social media app in the world; it originated in China and is now popular in many other Asian countries. Among lesbian dating applications, Butterfly is popular in Hong Kong (Choy 2017; Tang 2017) and 9 Monsters in Japan (Brännmark 2017). In Brazil, Disponível (available), now renamed Crush, is one of the most widely used apps in Latin America for men seeking sex with men. These differing contexts reflect different modes of engagement and interaction, as well. There are a number of ways social norms shape how these apps are used. Across North America, Grindr is widely seen as tawdrier than apps such as Tinder, which requires users to authenticate their identities by syncing their accounts with Facebook. In Hong Kong, lesbian users of Butterfly must negotiate conservative familial pressures with their desires for romantic sociability, although this is also true not only for lesbians who do not use the app, but non-lesbians across Asian contexts (Tang 2017). In India, as elsewhere, the accessibility of smartphones has created class-based hierarchies; there, using a smartphone app such as Grindr can be a way for middle-class professionals to keep “the riff-raff” away (Dasgupta 2017, 45). Additionally, across contexts, language operates as a powerful sorting tool, as many of the most popular apps are designed for English speakers.
Frequently, LGBTQ people also use other social media dating applications not specifically geared toward them. Tinder, OkCupid, and Match.com are all popular dating platforms, with their own smartphone apps, that LGBTQ people commonly use. These apps are especially important for LGBTQ women, for whom fewer dedicated apps exist. Additionally, Facebook, Instagram, Tumblr, Snapchat, Twitter, and WhatsApp also function as supplements to gay smartphone apps. These platforms are used to verify others' identities and engage in forms of impression management (Blackwell, Birnholtz, and Abbott 2015), including those that not only display a broader range of individual characteristics but also situate them within larger social contexts. As supplements, they often develop their own niche sexual subcultures tied to but extending beyond the use of mobile applications (Wignall 2017). Smartphone apps are, therefore, part of broader and increasingly complex media ecologies and are frequently used in conjunction with other networked media (Mowlabocus 2010).

Problems with Apps

Often, as is the case with many new media technologies, hookup apps inspire ambivalent feelings in users. On the one hand, they offer possibilities for sex, dating, friendship, and even professional networking. On the other hand, these apps can be a source of anxiety and frustration. Profile creation is a challenging process that requires users to present the best version of themselves in order to attract partners, and the process must be tailored to the particular applications (McGlotten 2013). Dissembling and other types of unreliable behavior are prevalent and are a source of anger. For example, “catfishing” (deceitful behavior designed to obtain users’ photos or otherwise trick them) is widespread. “Ghosting” is also common, though not exclusive to LGBTQ gay social dating apps. It refers to practices that include not replying to messages and unexpectedly and inexplicably blocking users or otherwise disappearing from what had been ongoing social interactions. Spambots are another source of irritation; users respond to messages only to discover they are not speaking to an actual person but to an automated agent whose purpose is to solicit users for financial information, either for nefarious purposes or, more banally, to pay for services such as pornographic websites or vitamin supplements (Cockayne et al. 2017). Finally, although the terms of service explicitly forbid advertising for paid services such as those offered explicitly by massage therapists or implicitly by those seeking “generous” partners, a gray economy of sex work persists, although unlike catfishing, ghosting, or bots, these practices are not troublesome to all users; indeed, for many, these services are one of the affordances of smartphone apps.

While the geosocial nature of apps allows users to know their relative distance from one another, this capacity also presents unique problems. For example, many men and women do not want to be located, for a variety of reasons including an unwillingness to make their sexual behaviors and identities public and, especially, locatable. Some users are concerned
that employers might discover them online, others that their partners might discover their infidelities. The stakes are higher for men in countries where homosexuality is especially stigmatized or illegal. Since its release, a number of crimes from robbery to murder have been tied to Grindr and other mobile social networking applications around the world, including in the Middle East, Russia, and Chechnya. Grindr and other applications responded to concerns about security flaws that allowed the locations of users to be discovered even when the location feature had been disabled (Mowlabocus 2014), as in 2018 when Grindr released a patch that ended the ability of users and third parties to access user data. As of 2018, however, many security flaws have persisted. New controversies have emerged as well: in 2018 it was revealed that Grindr had shared the HIV status of its users with other companies (Ghorayshi and Ray 2018).

Finally, a particularly difficult challenge members of marginalized and stigmatized groups face is the pervasiveness of discrimination (McGlotten 2013; Woo 2013). Racism, ageism, fat phobia, and effeminophobia are so widespread that phrases such as “no fats, no femmes” (Han 2008) and “no spice, no rice” (meaning no Latinos, no Asians) have saturated gay vernaculars and are frequent topics of conversation both on- and offline. Likewise, the social pressures on LGBTQ people, especially gay men, to conform to certain bodily norms have been termed “body fascism” (Pronger 2002; Roth 2014). Discriminatory attitudes are widespread but so, too, is the backlash against them. Many users’ profiles contain critiques of such exclusionary language and practices and also expressions that signal their openness to a variety of ethnicities, races, and ages, as well as to trans, nonbinary, and genderqueer identities. Since 2017, Grindr has expanded the ways in which users may describe themselves beyond specifying age, weight, and sexual preferences. Now one may also identify with a particular gay “tribe”—bear, butch, femme, geek, leather, transgender, twink, poz, and so on—and specify a gender identity (such as cis man or trans man) and preferred gender pronouns. Sero-sorting is another way users identify and signal preferences for sexual partners and sexual practices (Race 2001). One’s HIV status can either expand or limit erotic opportunities. The efficacy of HIV treatments and the introduction of the HIV preventive preexposure prophylaxis (PrEP), however, have profoundly affected MSMs’ sexual practices, so even though discrimination against HIV-positive individuals persists, the significance of HIV status has been somewhat diminished. Apps now offer the option to include descriptors such as “Negative, on PrEP” (Grindr) and “Treatment as Prevention” (Scruff). And although apps do not provide categories to select one’s preferences regarding drug use, often dubbed “chemsex,” users can express a desire for “party and play” or “PNP.” HIV status—whether one is negative or positive—PrEP, and chemsex each shape contemporary sexual practices, affording users opportunities to engage in a variety of sexual intimacies and collectivities even as these continue to be disparaged in the popular gay press and in medical discourse (Dean 2009; Hakim 2018; Race 2018).
Cultural Significance

The cultural significance of smartphone apps is situated within longer histories of gay male sociability, especially in bar cultures, bathhouses, bookstores, and cruising (Chauncey 1994; Delany 1999). Given the historical barriers to access to the public sphere, much less to cultures of public sex, women have had fewer opportunities to engage in these particular practices, although they have developed their own cruising cultures (Bullock 2004) and have cultivated other opportunities for romantic and erotic contact, including, like gay men, at bars and private parties (Kennedy and Davis 1993). These opportunities have expanded since the women's and gay liberation movements; persons designated female at birth are active on social dating/hookup applications, seek out casual sex as well as romance, and have developed an array of kink scenes. Nevertheless, the practices enabled by smartphone apps are especially tied to gay male sexual histories especially insofar as the apps facilitate not only casual but anonymous sex. Anonymity, in particular, is a thread that weaves through gay sexual histories; modern urban spaces allow men to be anonymous and seek out "no strings attached" sexual encounters (Higgs 1999). Many users of hookup apps likewise choose to be anonymous, by not including photos or any other identifying information about themselves or by signaling a preference for "discreet" sexual experiences. One finds in the grids of gay dating apps not only the now paradigmatic headless torso but also many blank profiles without photos or any other identifying information. Smartphone apps are also tied to these histories through often cruel practices of social ranking—antecedents to the discriminatory attitudes described above (Bersani 1987). Importantly, apps have also created contexts for new identifications, possibilities for connection, and sexual practice; attendant to these are the emergence of new modes for communication, including the use of specific emojis that sidestep and condense traditional linguistic markers. Many users' profiles include emojis that convey users' desired sexual practices. For example, in the language of emojis, eggplants and bananas are a shorthand for penises, rain for semen, and peaches and cakes for buttocks; when used in combination, such as eggplant, peach, and rain, they signal the desire for, in this case, anal sex.

Particularly for MSM who do not necessarily identify as “gay,” apps that facilitate sex provide entrée, for those so inclined, into broader gay social worlds. Although there is no comparable history of cruising among lesbian and bisexual women, sex plays a similarly important role in introducing women into LGBTQ communities; lesbians do cruise, too (Bullock 2004). “Community,” of course, is always partial and incomplete insofar as the boundaries of communities are determined as much by exclusion as inclusion. Moreover, community as a concept and set of experiences is always undergoing transformation. Smartphone apps expand opportunities to cultivate a shared sense of belonging across virtual and real-life contexts, even as they have changed what it means for LGBTQ people to be-in-common.
Future of Phone Apps

Since 2015, some hookup apps have sought to remake themselves as lifestyle brands that, typically through various forms of corporate partnerships, extend their reach into media, fashion, and other domains. Some also produce their own original content. These rebranding efforts include emphasizing the role apps can play in creating a sense of community. In-app notifications inform users about local social networking opportunities and advertise for products, parties, and other events, especially in the free versions of the apps. In response to research that showed that apps have increased transmission of sexually transmitted infections (STIs) among MSM (Landovitz et al. 2013), app developers have engaged in public health outreach efforts, informing members about increased local risks of STIs or about where they can access free STI testing and the HIV preventive PrEP, which has transformed the ways MSM negotiate sexual risk, and which has been added as a selectable option in many apps’ HIV-status category. Some apps also encourage forms of political organizing, from drawing attention to the plight of LGBTQ refugees fleeing repressive regimes in their home countries to promoting get-out-the-vote efforts. For example, responding to targeted violence against gay men in Chechnya in 2016 and 2017, the Grindr app launched a campaign to support LGBTQ persons in Chechnya.

Some nostalgic commentators have argued that smartphone apps represent the death of gay culture insofar as the rise of the apps appears to have coincided with the disappearance of gay public spaces—especially bars, but also cruising and other sexual venues. While these phenomena are likely correlated, it is difficult to establish a causal relationship. In key ways, social dating apps extend and supplement earlier forms of queer sociability; they are ultimately about connection (Roach 2015). People use apps to arrange dates that may lead to long-term relationships or friendships, as well as casual sexual encounters. Like earlier mediated forms of communication that afforded LGBTQ people opportunities to connect—personal ads, newsletters, party lines, chat rooms—smartphone apps provide another means to establish social connections, even if these connections are passing rather than enduring. Apps are especially important for LGBTQ people living in rural environments, or in explicitly hostile ones, where there are few, if any, dedicated spaces for them to socialize. Similarly, these applications are widely used by queer youth across geographic locales, again in conjunction with other media to learn more about their gender and sexual identities.

Smartphone apps are now thoroughly integrated into the lives of LGBTQ people. They are firmly situated within LGBTQ histories, reflecting, reproducing, and refracting patterns of socialization, from the central role of sex to the persistence of discrimination. These apps do not represent an end point to these histories; new media technologies are sure to emerge that, like these apps, simultaneously build on, extend, and transform the social contexts in which they are situated.

Photography, first developed in France in the 1830s, became an important medium in the articulation of homoerotic desire, beauty, and body ideals in Europe. Queer male beauty imagery clustered around two distinct archetypes—the classical ideal and militant muscular masculinity—whereas lesbian photography was slower to develop owing to the prohibitive cost of materials and social and class barriers that affected women more profoundly than men. By the twentieth century, in the years leading up to the sexual revolution, queer photography, whether photographs of stylized pickups or party shots, was a crucial strategy of resistance and community building. It created opportunities to articulate and honor same-sex desire. At the same time, police photography, both the images generated by investigators and those confiscated from members of the gay and lesbian scene, served a more coercive function in enforcing hegemonic norms. Similarly, images played an important role in sexology, with visual documentation of gender and sexual nonconformity supplementing medical definitions of deviance.

After the decriminalization of same-sex sexuality in the 1960s across western Europe, homoerotic imagery entered the mainstream as part of the commodity culture of advertising. The relaxation of censorship also meant that ever more explicit photos could be published in gay men’s magazines, chiefly but not solely published in Amsterdam. Exhibitions of erotic photography also emerged onto the scene in the 1980s, influenced by the success of Robert Mapplethorpe (1946–1989) in the United States. By the late 1980s and 1990s, there was a palpable shift in magazine and scene publications away from natural bodies toward images of fit, tanned, young physiques, a visual response to the ravages of HIV/AIDS. What once served the queer communities in helping to visualize alternative images of healthy, strong bodies and robust desire had the unintended effect of creating out-of-reach body norms. A rise in body image dissatisfaction, low self-esteem, and impossible-to-reach class, race, age, health, and beauty standards arose in what was quickly becoming an increasingly commodified queer scene.
Wilhelm von Gloeden Photograph of Two Taormina Boys. Gloeden’s photos from the late nineteenth century featured shepherd boys from the remote Sicilian seaside community of Taormina elegantly posed in Arcadian settings. His work drew on the mixed iconography of feminized masculinity, homoerotic desire, and working-class consciousness.

Nineteenth- to Mid-twentieth-Century Historical Overview

In the nineteenth century, the visualization of classical male beauty was deeply connected to the rise of middle-class rights, tastes, and privileges in the age of science, liberalism, and empire. As intellectuals turned their attention to the classical world for the roots to their republican ideals, men’s bodies acquired new importance as emblems of antiquity and the European inheritance. Whereas some saw these images as emblems of universal man in a state of nature, others saw in them vestiges of a more permissive age. In the remote Sicilian seaside community of Taormina, the Prussian aristocrat Wilhelm von Gloeden (1856–1931) resuscitated classical motifs in the Hellenistic staging of erotic male beauty. Far removed from the iconography of friendship circulating in the United Kingdom, Gloeden’s was a more earthy vision of the beauty of sexual awakening. His subjects were Taormina’s shepherd boys elegantly posed in Arcadian settings, and his photographs drew on the mixed iconography of feminized masculinity, homoerotic desire, and working-class consciousness circulating in the late nineteenth-century Victorian cult of Saint Sebastian (d. c. 288), which venerated the young Praetorian guard martyred by arrows for giving aid to Christian soldiers. The rediscovery of the Sebastian martyrdom, drawn from the Victorian encounter with Renaissance literature, gave same-sex-desiring men an appropriate icon of
suffering on which to hinge their own sorrows. Gloeden's images circulated as postcards and were traded in private collections. They were part of the early transnational tourist imaginary, as gay travelers from across western Europe trekked to Italy in search of visual pleasure made flesh.

PHOTO COURTESY OF MARLO BROEKMAN AND DIANA BLOK

“The Lovers” (1980) by Marlo Broekmans and Diana Blok. The two women (Diana Blok and Bernardien Sternheim) embracing in this photo are intended to represent love and death. Broekmans and Blok formed a unique photographic partnership between 1978 and 1981 in which they shared roles as subjects in front of the camera and as photographers behind. In their work they attempted to portray the authentic female self rather than the female as conventionally defined by men.

If the nineteenth century brought classical tropes into circulation in the public realm, the twentieth century saw reactions to elite and middle-class morality and class privilege, ushering forth alternative visions of queer eroticism. Anti-bourgeois, anti-modernist social movements advocated a return to a simpler life, promoting the veneration of a more earthy masculinity alongside the more classical image of natural man. Fascist, Communist, and working-class movements of the 1930s similarly tapped into this vision of male physicality and comradeship, creating homosocial spaces where, some contemporaries feared, the cultivation of male bonding might spill over into outright homosexuality. The Nazis represent the extreme example of how photography was employed to document and identify gay men who fell foul of social and gender norms, although, as the photography
theorists John Tagg (1988) and Allan Sekula (1984) have argued, images always played a coercive regulatory role since photography's inception as a medium. The Nazis inherited a long tradition of police photography, which crossed national boundaries and formed a core feature of the regulation of queer life.

Images from Case Files

Images would play a signature role, too, in medical, sexological, and psychiatric case files, identifying the physical features and gender markers that signified gay men, lesbians, and trans persons. Sometimes, however, trans persons pushed back at the medical community, exchanging letters and personal images in an attempt to shape the visual discourse that defined them in the medical arena. This was the case in the first magazine devoted to transsexuality (as transgenderism was then called): Das 3. Geschlecht (The third sex). This popular magazine, published between 1930 and 1932 and connected to Magnus Hirschfeld’s (1868–1935) famed Institut für Sexualwissenschaft (Institute for Sexual Science; located in Berlin), published images that would be taken up in transatlantic sexological networks, influencing the work of US-based researcher Alfred Kinsey (1894–1956) and even appearing in Harry Benjamin’s 1966 book The Transsexual Phenomenon, which drew on these images to help make the case for more humane treatment of trans patients. Hirschfeld’s institute and the visual archive he had accumulated were targeted specifically by the Nazis for the way they normalized queer bodies across the gender spectrum, highlighting in the extreme how deeply political photography was to queer legibility.

Various Trends in the Postwar Era

Mass media, new social movements, and the growth of fitness and body culture movements—together with demographic shifts in the decades after 1945—meant that changing social, aesthetic, gender, and visual markers of queer bodies and identities gained greater traction. The decriminalization of homosexuality in many parts of western and eastern Europe in the 1960s, together with greater economic power and access to film stock and cameras, meant that same-sex desire among women and racialized minorities also emerged onto the scene with greater visibility in this expanding public sphere. Galleries were able to mount exhibitions of material previously deemed illegal and risqué, allowing for greater diversity of images. This, too, evolved in stages, with photographs by lesbian photographers presaging the work of photographers of color. In Amsterdam in the 1970s, Marlo Broekmans and her Uruguayan lover Diana Blok produced photobooks of self-portraits celebrated in the lesbian scene, while a decade and a half later the queer photographer Ajamu X would critically engage with black male eroticism in stylized portraits and group photos. The Black LGBT Archive and the rukus! Federation that Ajamu helped found with Topher Campbell would agitate for greater visibility of black, queer artists and activists in
the United Kingdom. This suggests the need to think about different time lines for photographic constructions of same-sex identity and desire when factoring in gender, race, and postcoloniality. Access to materials, the political climate, and the pace of liberal social and legal reforms, especially of censorship, also help explain why certain countries and cities countenanced the growth of queer photographic practices over others. This changed somewhat first with the advent of the Polaroid camera and later with digital technology, which has made it easier for everyday people across Europe to use photography for erotic camera play and stylized self-portraits, which further has aided queer communities in appropriating the image as part of self-definition and as resistance to hegemonic ideals.

---

*Chinese novel depicting homoerotic relations between members of the literati and the female impersonators of kunqu opera.*

*Pinhua baojian* (Precious mirror for ranking flowers) is a Chinese novel written by Sen Chen (c. 1796–1870) and published for the first time in 1849. It is set in the capital city of Beijing and focuses on the representation of the homoerotic relations established between elite literati, wealthy merchants, and young female impersonators (dan) of kunqu opera. While also featuring some purely mercenary transactions, the novel primarily foregrounds male romances that are predicated on chastity—even on the complete lack of any carnal desire—and on a sentimental affinity that erases the social gulf between the elite literati and the socially debased actors.

### The Novel’s Model

Radicalizing the discourse on love carried out in the eighteenth-century classic *Honglou meng* (Dream of the red chamber), *Pinhua baojian* champions the aesthetics and affectivity of “sublime love” (*McMahon 2002*). Although, beginning in the late sixteenth century, a sizable number of works of fiction had been produced that explored the topic of love between men, *Pinhua baojian*’s most important literary predecessor is undoubtedly *Honglou meng* (both in terms of sentimental and sexual relations), from which Chen borrows both the basic romantic ideology and key aspects of the narrative plot. There is a notable difference between the two novels, however, pertaining to gender. *Honglou meng* involves a love triangle between a young man and his two female cousins—one the source of his most passionate attachment, and the other who will eventually become his wife—whereas *Pinhua baojian* instead follows the romance between a young elite man, Mei Ziyu, and an opera actor of female roles, Du Qinyan, and the parallel story of his marriage to a woman, Wang Qionghua, who uncannily looks just like his beloved boy-actor. If *Honglou meng* moreover hinted at a triangular bliss that it finally failed to deliver, in *Pinhua baojian* the protagonist manages in the end not only to enjoy a harmonious marriage with a woman but also to preserve the affective connection with the young actor, who gets redeemed from his lowly status and practically adopted into his family. In this way, *Pinhua baojian*’s Ziyu is allowed to salvage both his social obligations and his romantic yearnings: to have a devoted
wife and keep his beloved male friend, too. In spite of the ostensible parallelism between Ziyu's two relationships, however, it must be emphasized that the novel is especially concerned with the homoerotic one between the two young men; the very fact that Ziyu's wife turns out to look like the boy-actor symbolically suggests the derivative nature of his heterosexual liaison. The latter appears to be in other words a reflection, perhaps one could even say a copy, of his homoerotic one, which remains the ultimate romantic standard the novel aims to portray as ideal (Vitiello 2011).

**Placing the Novel in Its Social Time**

The world depicted in *Pinhua baojian* is related to social practices current at the time it was written, especially in the capital city of Beijing. There was a long history of male prostitution in China that gravitated around the theater, the boy-actors (especially female impersonators) having traditionally doubled as prostitutes. Beginning in the late eighteenth century, the theater became a key site of Beijing social culture (Goldman 2012). As a result, the imperial capital also became the center of male prostitution. The actors typically entertained their patrons/aficionados after their performances, when they shed their female clothes and resumed their masculine personas (Goldman 2012; Wu and Stevenson 2010). The vogue of such actor-prostitutes, known as "gentlemen" (xianggong), apparently reached its peak between the end of the eighteenth and the beginning of the nineteenth centuries in Beijing, precisely the time and place in which Chen’s novel is set. *Pinhua baojian* is the first novel that looks specifically at this chapter of erotic culture and zooms in on the particular romantic relations between actors and scholars flourishing in that milieu. Before becoming the object of a fictional representation, this social phenomenon had already found a literary expression in a connoisseurial genre of writing known as *huapu* (flower registers) that was devoted to the aesthetic appreciation and ranking of the looks and performing skills of female impersonators. Such expertise earned their owners a social capital that could be spent to strengthen ties within the male literati elites. For this reason, it has been suggested that Chen’s novel can be ultimately considered a fictionalization of such connoisseurial writings and practices (Wu and Stevenson 2010).

Being traditionally tied to the business of male prostitution, the actor was burdened by an ambiguous social status. This explains the novel's heartfelt concern with discriminating between morally superior boys unjustly trapped in their debased station, who are deservedly treated as equals by their romantically inclined patrons, on the one hand; and ordinary male prostitutes, who deserve instead to be despised together with their vulgar clients, on the other. As for the idealized actors, they are appreciated for being the ultimate embodiments of feminine beauty, being at the same time pitied for being perfectly fine men, virtual literati who, because of adverse circumstances, have had the misfortune of falling into a socially loathed position. It follows that the fuel of the romances the novel's
author most cares about is the desire on the part of the actors’ sophisticated patrons to liberate and redeem them from their lowly condition.

As mentioned, at the center of the narrative there is one romance cast as exemplary of the ideal love between men. Another germane romance—that between Tian Chunhang and Su Huifang (apparently inspired by a real, and legendary, homoerotic affair that occurred just a few decades before the novel’s publication)—represents an important strand in the novel’s plot, in that it reinforces its core romantic ideology. A series of mundane, mercenary relations between vulgar wealthy men (usually merchants) and actor-prostitutes play a similar role, if this time in a contrastive fashion. In these crude affairs the romantic fantasy finds its all-too-real obverse; and in fact only in the representations of mercenary relations does the reader find descriptions of sexual acts, whereas the novel’s “superior” lovers, when they meet, are always rigorously clothed and have hardly any physical contact at all. Indeed, Pinhua baojian’s preeminent romance is characterized by the lovers’ continued separation and yearning to see each other. In fact, they barely ever meet; the few encounters between them are moreover drowned in tears, as if suffering and the deprivation of the beloved’s sight were the real essence of the romantic experience, as opposed to its mundane, carnal fruition. Although other characters do not understand the chaste romance of the “superior” lovers, those who sympathetically witness their love understand that chastity is supposed to be the basis of the sublime love of a scholar for a boy-actor. For the novel’s “superior” characters, a passion for boys is thus the mark of an enhanced aesthetic and romantic sensibility. As various characters state throughout the novel, the scholar’s attitude toward a boy-actor ought to be “an aesthetic delight devoid of sexual desire” (hao se bu yin). It is such an attitude that defines the ideal male romance between a renowned scholar (mingshi) and a famous actor (mingdan)—what might be called the “literati homoeroticism” that the novel proposes as an aesthetic and romantic ideal (Vitiello 2011).

Are the Boy-Actors in the Novel Virtual Women?

It has been pointed out that the boy-actors of Pinhua baojian are a variation on the female courtesans of a time-honored romantic literary discourse predicated on the redemption of a most talented and virtuous woman who is a model of moral behavior and who, as such, should be lifted out of her lowly condition and made to join the “decent” society she spiritually belonged to in the first place (Wang 1997). Some scholars have for this reason argued that the novel’s boy-actors ultimately stand for female courtesans and are to be considered for all practical purposes virtual women, suggesting that the novel should be read metonymically—that one should see through its rhetorical device and read women for men (Wang 1997; Starr 1999). This critical approach, however, would have the consequence of paradoxically erasing the male homoerotic romance from the novel, a move that does not appear to be justified either by the external evidence (the social scenario
described above) or by the fictional narrative itself (Vitiello 2011).

As for the latter, one could recall, for example, the debates found occasionally in the novel that center on the contrasting and ranking of male and female beauty, and implicitly of homo- and heteroeroticism (and resolved typically to the detriment of the latter). Even though the idealized boy-actors in the novel inevitably remind the reader of the countless literary representations of courtesans, it is worth noting that some actual female prostitutes do appear in the novel, if mostly presented as a lower type of entertainment compared to the elegant female impersonators (who are more often contrasted to lower-level male prostitutes). Moreover, the very form the “superior” actors’ redemption takes in Pinhua baojian—joining the ranks of the literati—is in itself gender specific, as it involves their full remasculinization, thus indicating that their male identities have never truly been overlooked, let alone entirely erased. Finally, as for the hypothesis that the homoerotic liaisons celebrated in the novel are presented as youthful experiences to be eventually superseded by heterosexual relations at the onset of maturity (Starr 1999), it is important to note that the novel’s ending clearly confirms the homoerotic nature of the relationship between Ziyu and Qinyan, even after the actor has been redeemed and has become a virtual brother/friend of the protagonist. The novel’s last scene features in fact (the now ex-actor) Qinyan falling asleep on Ziyu’s arm, thereby symbolically (and pointedly) evoking the most canonical literary standard of homoerotic relations—that is, the 2,000-year-old story of Emperor Ai of the Han dynasty who cut off the sleeve of his own robe to avoid awakening his male favorite who had fallen asleep with his head lying on it, and from which the expression “cut sleeve” (duanxiu), one of the key terms of the Chinese lexicon of male homosexuality, is derived (Vitiello 2011).

In conclusion, while the boy-actors’ beauty and demeanor in Pinhua baojian is no doubt associated with femininity, and their charm is inextricably tied to gender ambiguity, this does not mean that they are perceived as virtual women; the novel’s characters are perfectly aware of their fundamental boyhood. On one occasion, one sophisticated patron of boy-actors states that, because it is not proper to bring women along in public, the actors are the best compromise, having the face of a girl but a male body. In this regard, there is a metafictional moment toward the narrative’s ending, when the author says that, because the two lovers, being two men, could not crown their romantic destiny, heaven out of pity had made for Ziyu a girl that perfectly resembled Qinyan. In other words, Ziyu’s wife, Qionghua, needs to be narratively summoned to bail out her husband from his impossible romantic predicament; and the same actually applies to the other exemplary romantic couple in the novel. In both cases, women not only allow men to fulfill their social and filial obligations through marriage but also—as the novel’s conclusion suggests—provide a space to accommodate their homoerotic yearnings and relations (Vitiello 2011).

Pinhua baojian continued to be reprinted into the 1930s and was shortly before then identified by the foremost intellectual and writer of the period, Lu Xun (1881–1936), as the
predecessor of the long list of late nineteenth-century novels about brothels and female prostitution. It is witness to the literary resilience of the novel that it has, in more recent times, inspired the Taiwanese writer Wu Jiwen’s *Shiji mo shaonian’ai duben* (1996; *The fin-de-siècle boy love reader*), which offers a rewriting of Chen’s novel in which the main characters anticipate the subjectivities of late twentieth-century gay men (Sang 2014).

## BIBLIOGRAPHY

Although homophobia was never a central tenet of National Socialist (Nazi) ideology (as anti-Semitism was), the party leadership clearly considered homosexuality as a serious threat to the German nation. For the National Socialists, sexuality was inextricably tied to race, citizenship, and power. In 1937, for example, Nazi leader Heinrich Himmler (1900–1945) told a group of SS lieutenants that “all things which take place in the sexual sphere are not the private affair of the individual, but signify the life and death of the nation” (quoted in Burleigh and Wippermann 1991, 193). Because sex was the means through which race was reproduced, the architects of the Nazi state were obsessed with comprehending and controlling human sexuality.

Homosexual Germans occupied a legal and ideological gray area in the Nazi state. Their German ethnicity granted them citizenship in the Third Reich. Yet, their alleged sexual deviance violated the ultimate law in Nazi Germany: the supremacy of the “master race” above the desires and interests of the individual. According to Nazi ideology, when gay men and lesbians forsook their sexual duty to provide offspring for the fatherland, they surrendered the rights and protections of full citizenship, which were reserved for heterosexual Aryans. Germans who engaged in homosexual behavior, therefore, were perceived as both racial and political threats to the German Volk (nation).

Although there was disagreement over what constituted, caused, or dispelled same-sex desire, the predominant belief held by most Nazi leaders was that homosexuality was a set of particular behaviors, a vice that potentially anyone could fall victim to; it was not considered something that was inborn and constituted a subjective identity. Therefore, the National Socialists waged what they saw as a campaign against homosexuality, rather than seeking the physical extermination of homosexuals themselves. This campaign progressed in stages throughout Germany. The first step was to destroy the lively queer subcultures that existed with varying levels of visibility across Germany’s urban centers. The second step was to use the law to deter homosexual behavior. In the summer of 1935—at the same time that they passed the infamous Nuremberg Race Laws—Nazi jurists amended
Paragraph 175, the national antisodomy law that had been a part of Germany's penal code since the unification of the nation in 1871. The new version of the law criminalized all “indecency” among men, which meant that everything from sex and mutual masturbation to a kiss, holding hands, or a stolen glance was illegal (Giles 2005). The new version of Paragraph 175 continued decades of legal precedent by excluding any mention of female homosexuality; thus, lesbians were not subject to arrest or conviction under the law.

The third aspect of the Nazis' antihomosexual policies focused on punishing men accused of homosexuality and ultimately seeking to “cure” their alleged deviant behavior. The number of Paragraph 175 convictions handed down by German courts rose by an astounding 900 percent in the first five years of Nazi rule (Dickinson 2007). In all, around 100,000 German men accused of homosexuality were arrested between 1933 and 1945. A majority of these arrests were the result of civilian denunciations (Micheler 2002). Of those men arrested, 53,480 were ultimately convicted and given either a fine or a prison sentence (Hoffschildt 2002).

Between 5,000 and 15,000 men accused of homosexuality were incarcerated in concentration camps during the Third Reich. Gay prisoners were labeled with a variety of markings, from a range of different colored triangle badges (green denoting criminals, black for “asocials,” and red for political prisoners) to the numbers “175.” By the end of the 1930s, however, a pink triangle had become the standard badge for gay concentration camp prisoners. At any given time, gay men made up usually less than 1 percent of the total prisoners in a camp (Knoll 2002). Undoubtedly, there were lesbians in concentration camps, too, but they were not necessarily arrested for being a lesbian. Some of the lesbian prisoners may have worn a black triangle, although there are also records indicating that some wore other badges.
A Chart of Prisoner Markings Used in German Concentration Camps. The Nazi regime had an elaborate system of badges sewn onto concentration camp prisoner uniforms that enabled guards to identify the alleged grounds for incarceration. In this chart, the column second from the right designates the various symbols used for homosexual prisoners. In addition to the basic pink triangle, there were also symbols indicating (proceeding downward from the pink triangle) homosexual "repeat offenders," homosexuals assigned to the camp’s "disciplinary unit," and homosexual Jews.

The widespread homophobia that permeated German culture at the time followed gay prisoners into the camps. The men with the pink triangle faced discrimination and violence not only from the guards but from fellow inmates as well. As a rule, gay men were spared the gas chambers and were not sent to death camps because the Nazi leadership considered them first and foremost Germans who could be reintegrated as productive members of society once they were “cured” of their vice. While reeducation remained the Nazis' official policy, there are numerous documented instances of the systematic murder of gay men both within and beyond concentration camps. Moreover, the combination of forced isolation in separate barracks, harder work details, smaller food rations, and deadly medical experiments created an environment that caused the death of the majority of gay men sent to concentration camps. An estimated 65 percent of men imprisoned on grounds of homosexuality died in the camps (Giles 2005).

Continued Persecution in the Postwar Period
Because the pink triangle prisoners had violated the German penal code, the Allied forces regarded them as criminals once the war in Europe ended in May 1945. Thus, when Allied troops liberated the camps, they often transferred gay inmates who still had time on their sentence to local prisons to serve the rest of their term. And although the victors began a process of denazification to eliminate unjust and discriminatory laws passed by the Nazi judicial system, the Allies allowed the 1935 version of Paragraph 175 to remain in effect in their zones of occupation. Courts in the German Democratic Republic (GDR; East Germany) ruled to revert Paragraph 175 to its pre-Nazi version in 1950, just one year after the country was founded. In the Federal Republic of Germany (FRG; West Germany), however, lawmakers and jurists continuously decided to uphold and enforce the Nazi version of the law. One gay concentration camp survivor stated poignantly at the end of the war, “Liberation was only for others” (Seel 1995, 88).

Even when gay survivors in Germany decided to face the social repercussions of speaking publicly about their experiences, they had to admit to acts that remained illegal. There were several legal challenges to the constitutionality of Paragraph 175 in the FRG, but in 1957 West Germany’s Federal Constitutional Court declared once and for all that the 1935 version of Paragraph 175 would remain in effect. The court stated that the law predated the Nazis, and although Nazi jurists had reworded it in 1935, the essence of the law was untainted by National Socialist ideology. Therefore, the court framed Paragraph 175 as a German law that was still needed to protect the moral fortitude of the West German people. The gay men who had been arrested under the Nazi regime, the court concluded, were not victims of “typical Nazi injustice” but were instead criminals who had been constitutionally punished for their crimes.

Agents of the West German legal system used Paragraph 175 with gusto. Between 1949 and 1969 over 100,000 men were arrested, and more than 59,000 of those men were convicted (Hoffschildt 2002). Because the East German government had reverted the law to its pre-1935 version, there were drastically lower numbers of arrests and convictions of gay men in the GDR (rarely more than 100 convictions per year). After passage of an amendment to the East German criminal code in December 1957, authorities all but stopped enforcing Paragraph 175 (Huneke 2013).

While it is important to emphasize that the situation for West German homosexuals had certainly improved after the defeat of the Third Reich, the continuities in law, social attitudes, and even police and judicial personnel are striking. In 1963 the historian and theologian Hans-Joachim Schoeps felt justified in claiming that “for homosexuals, the Third Reich hasn’t ended yet” (86; translated by W. Jake Newsome).

**Pink Triangle as Gay Liberation Logo in Germany**

During the 1960s, the political landscape in the Federal Republic of Germany underwent...
significant shifts. Konrad Adenauer (1876–1967), who had been chancellor of West Germany and leader of the conservative Christian Democratic Union (CDU) since 1949, resigned in October 1963. By 1966 the left-wing Social Democratic Party had come to power as a coalition partner with the CDU. Three years later, liberals and Social Democrats composed the majority in the parliament. The 1960s also witnessed extensive changes in social, cultural, and political values across the globe. It was in this context of social change that the West German parliament amended Paragraph 175 in 1969, decriminalizing sex among men over the age of twenty-one. The amendment of the law opened the space for the emergence of an organized, politically active gay rights movement (Schwulenbewegung) in West Germany in the early 1970s.

One of the first gay liberation groups in West Germany, and eventually the largest and most significant one, was the Homosexuelle Aktion Westberlin (HAW; Gay Action Group of West Berlin). One of the primary concerns of the group, which was founded in August 1971, was how to make gay activists visible to the rest of the West German public. Increased visibility was meant to demonstrate that gays and lesbians, while a minority, could become an influential political force. Moreover, members of the HAW asserted that adopting and wearing an official gay symbol would force the symbol’s wearer to “come out” and publicly identify as gay, which was seen as a first step to ending suppression against gays and lesbians in society. Several possibilities for a new gay logo were put forward for consideration.

In 1972 a Hamburg publishing house released Die Männer mit dem rosa Winkel (The Men with the Pink Triangle [1980]), the autobiography of a gay concentration camp survivor under the pseudonym of Heinz Heger. For members of the HAW, the title of the slim book offered a solution to the gay movement’s problem of identification and visibility. HAW members asserted that, given their country’s history, the pink triangle was the perfect symbol for West Germany’s gay rights movement. They noted that the Frankfurt group RotZSchwul (Red Cell Gays) had already begun using the pink triangle unofficially. In October 1973 the HAW became the first group in the world to officially adopt the pink triangle as a gay rights logo. Gay liberation groups across West Germany soon followed the HAW’s lead and began using the pink triangle to draw parallels between discrimination in the past and the present.

The spread of the pink triangle signified the dissemination of a specific strain of gay activism throughout West Germany. The coming out of individuals, the formation of gay organizations, and the adoption of a gay liberation logo all created an awareness among gays and lesbians that there were people like themselves throughout the Federal Republic, who shared not only similar sexual desires or orientations but also an aspiration to engage in political activism.

The Pink Triangle in North America
In early 1974 James Steakley, an American graduate student who had spent time in West Germany and had even joined the HAW, introduced English-speaking audiences to the history of the Nazis’ campaign against homosexuality when he published his article “Homosexuals and the Third Reich” in *The Body Politic*, a gay liberation newspaper based in Toronto. In August of that year, activists in New York City wore pink triangle armbands as they protested in support of a gay rights bill being considered by the city council (*Jensen 2002*). The arrival of the pink triangle in New York City came just ten months after the HAW had adopted it as its own logo. By the end of the decade, and especially by the 1980s, gay activists in the United States and Canada were using the pink triangle and other Holocaust imagery widely in their activism. In February 1981, for example, the Metropolitan Toronto Police initiated a large-scale raid on locations that were known to be hangouts for gay men and lesbians, culminating in the largest mass arrest of civilians since World War II. Afterward, demonstrators wore shirts that read “Germany 1934, Toronto 1981” (*Lynch 1981*). These four short words sought to draw a thread of continuity between the persecution of gays in the Third Reich and the discrimination gays faced decades later in Toronto. Back in the United States, when members of the planning committee for the 1987 National March on Washington for Lesbian and Gay Rights decided on a logo, they chose a symbol that they knew powerfully bound together issues of civil rights in the present and a dark chapter of history. The official logo was a silhouette of the US Capitol dome superimposed over a pink triangle.

By the end of the 1980s, the debates resulting from the rising death toll of the AIDS crisis were also drawing rhetorical ties between sexuality, citizenship, and the Nazi past. The deaths of thousands of people—many of whom were gay men—paired with inaction on the part of the administration of US president Ronald Reagan, resulted in numerous comparisons with the Holocaust. In 1986 six leftist organizers in New York City unveiled a poster that was meant to motivate gay and lesbian communities to aggressively demand support during the AIDS epidemic. The poster, composed of a fuchsia triangle with the peak facing up, imposed over a solid black background and the bold motto “Silence = Death,” was adopted the following year by the activist group AIDS Coalition to Unleash Power (ACT UP). The poster would come to represent AIDS activism around the world. AIDS activists holding posters or wearing shirts adorned with a pink triangle and the “Silence = Death” motto asserted that everyone had a right to health care, regardless of sexuality or HIV status, a clear stance against comments by some conservative politicians and social commentators who suggested that the rights of health care were not understood as universal.

Therefore, while the pink triangle became politicized in West Germany, it was gay activists’ use of the symbol in the United States and Canada that gave the logo—and the history it represented—a wider resonance and significance in contemporary debates about sexuality, civil liberties, and human rights. Once the pink triangle gained prominence as an activist logo and cultural icon in North America, it was then further traded, adapted, and
transformed through international networks of activists throughout the Atlantic world and ultimately across the globe.

**Memorializing the Nazis' Gay Victims**

In both East and West Germany, there was a long history of denying that “the men with the pink triangle” were victims of Nazi injustice. Resistance to acknowledging gay victimhood was often the strongest during discussions for the various commemoration and memorialization ceremonies for the victims of National Socialism. In 1960, for example, Hans Zauner, then mayor of the town of Dachau, told a reporter, “You must remember that many criminals and homosexuals were in Dachau. Do you want a memorial for such people?” (quoted in Jensen 2002, 321). Despite resistance, gay rights groups across West Germany organized ceremonies throughout the 1980s to commemorate the Nazis’ gay victims. Beginning in 1984, gay groups in East Germany began laying a wreath at the main memorial at the former Sachsenhausen concentration camp, located near Berlin.

In December 1984 a collection of gay rights groups in Austria dedicated the world’s first permanent memorial to the gay victims of Nazi persecution by installing a commemorative plaque at the memorial site of the Mauthausen concentration camp. The memorial is a pink granite triangle with an inscription that reads: “Beaten to Death, Silenced to Death; to the Homosexual Victims of National Socialism; from the Homosexual Initiatives of Austria.” The triangle plaque and inscription came to be a model for nearly all subsequent memorials to the Nazis’ gay victims. Over the next two decades, memorials were established in seven locations throughout Germany, including the national Memorial to the Homosexuals Persecuted under the National Socialist Regime, which was dedicated in Berlin in 2008.

Germans were not the only ones to memorialize the men with the pink triangle. As of 2017, there were at least eight monuments or plaques outside Germany dedicated to the Nazis’ gay victims. An additional six memorials use the symbol of the pink triangle and are dedicated to victims of violence against the LGBTQ community, but not specifically to gay victims of the Nazi regime. The existence of these memorials indicates that people throughout the world feel that the Nazis’ campaign against homosexuality is neither a chapter of German history specifically nor the history of a particular minority group. By the beginning of the twenty-first century, the pink triangle past had become a moral lesson with global resonance about human rights in democratic societies.
Compensation, Justice, and Victimhood

After World War II, West German lawmakers and jurists excluded gay men from the official definition of Nazi victimhood. Because they were not considered victims of Nazi injustice, gay survivors were not eligible for restitution of confiscated property, financial compensation, or legal rehabilitation for unjust criminal convictions. When West Germany passed the Federal Compensation Law of 1956, gay survivors were summarily excluded. When the General War Consequences Act was passed a year later to provide financial aid to those who had “suffered excessively” during the war, gay men were technically allowed to apply. Only fourteen gay men in all of West Germany filed a petition. All fourteen were denied.

Facing increasing pressure from minority rights groups, the West German parliament agreed in June 1987 to establish a “hardship fund” for victim groups who had been left out of previous compensation processes. The federal hardship fund regulations clearly asserted, however, that these benefits were not official compensation or a redress for injustice. As a result of the impenetrable maze of bureaucratic red tape, documentation,
time, and effort required for aid from the federal hardship fund, only seventeen gay survivors applied. Two were granted recurring payments; six were issued a one-time benefit payment. One applicant died before the committee reached a decision. The remaining eight applications were rejected for various reasons. Because the federal government proved reluctant to help these victims, five of the West German states implemented their own hardship provisions between 1987 and 1990. Out of these five states, twenty-one gay men applied for aid; eleven received payments, while the other ten were rejected.

While Paragraph 175 had been amended in 1969 and fully repealed in 1994, it was not until 17 May 2002 (amid discussions of funding the national Memorial to the Homosexuals Persecuted under the National Socialist Regime) that the parliament of unified Germany officially apologized to all gay victims of the Nazi regime and annulled their unjust convictions. The decision also made any gay survivors who were still alive eligible for full restitution, including financial compensation. The government’s apology and pardon came so late, however, that most survivors had already passed away.

The German government’s 2002 pardon was only for men convicted under Paragraph 175 during the Nazi regime, not those convicted under the same law in West Germany between 1949 and 1969. In May 2016, after decades of pressure from gay rights groups, the German parliament announced that it planned to annul the post-1945 convictions and grant compensation to the estimated 5,000 wrongly convicted men who were still alive. As of August 2017, the parliament had yet to approve the legislation.

**Shared History, Shared Identity**

Through its use in social activism, the pink triangle became a way to add potency to activists’ claim that, in a post-Holocaust world, no government had the right or moral authority to regulate the sexual lives of its citizens or to use policies that discriminated against minorities. In both West Germany and the United States, activists rhetorically linked antigay policies to Nazism and asserted that as long as their governments continued discriminating against the LGBTQ communities the ideals of liberal democracy had not yet been fully achieved. Moreover, the sharing of memories and histories contributed to the transformation of gays and lesbians into an international political minority and helped establish a gay identity that transcended local and national boundaries.

The pink triangle originated as a concentration camp badge—a mark of damnation. Yet, through decades of grassroots activism, the writing of a more honest and accurate history, and the process of international memorialization, gay men and women transformed the pink triangle into a symbol that gave people the courage to come out, form an international community, and take pride in claiming a positive identity.
The opinions expressed herein are those of the author and are not to be viewed as official statements of the United States Holocaust Memorial Museum.

Pinkwashing

JEDIDIAH ANDERSON
Visiting Assistant Professor of Arabic
Furman University, Greenville, SC

The practice of championing gay rights as a way to distract attention from discrimination against other groups.

The term *pinkwashing* is used to describe a form of discourse, frequently political, in which a government or activist highlights the progressive nature of a country, political party, or organization in order to distract people from, or conceal, other ways in which said country, political party, or organization behaves in an oppressive and/or nonprogressive manner toward other peoples or groups. It is most frequently used in criticism of Israel’s policies toward LGBT individuals and Palestinians, as Israeli politicians have often highlighted the former in order to portray Israel as more progressive than surrounding Arab countries.

Pinkwashing is closely related to the concept of homonationalism, a term that was coined by Jasbir K. Puar, a queer studies scholar at Rutgers University, to describe

*a form of sexual exceptionalism—the emergence of national homosexuality ... that corresponds with the coming out of the exceptionalism of American empire.... This brand of homosexuality operates as a regulatory script not only of normative gayness, queerness, or homosexuality, but also of the racial and national norms that reinforce these sexual subjects. There is a commitment to the global dominant ascendancy of whiteness that is implicated in the propagation of the United States as empire as well as the alliance between this propagation and this brand of homosexuality.*

*(2007, 2)*

This idea of homonationalism can be seen in the Israeli context, as well as the American and European contexts. In its public relations materials, Israel frequently foregrounds its tolerance of LGBTQI individuals in comparison with Palestine in order to render itself sympathetic. The United States also foregrounds its support for LGBTQI rights in comparison to the Middle East for similar reasons, which is discussed in greater depth later
in this entry. Additionally, pinkwashing discourses can be seen in Europe, particularly on the right wing of the political spectrum. Two of the most notable examples would be the platform of Dutch right-wing gay politician Pim Fortuyn and the response by a sizable portion of white French gay men to Marine Le Pen’s political campaign in 2017.

**Examples in Israel, the United States, and Europe**

One of the best-known examples of pinkwashing was when Israeli prime minister Benjamin Netanyahu, while speaking in front of the US Congress in 2011, made the statement that “Israel has always embraced this path [of Western freedoms] in a Middle East that has long rejected it. In a region where women are stoned, gays are hanged, Christians are persecuted, Israel stands out.” Another example of an extremely common trope in Israeli pinkwashing discourse is exemplified in Yossi Klein Halevi’s 2002 article for the *New Republic* titled “Refugee Status.” In it, Halevi makes the claim that

*Palestinian homosexuals are increasingly seeking refuge in the only regional territory that does: Israel. In the last few years hundreds of gay Palestinians, mostly from the West Bank, have slipped into Israel.... The liberal world has never taken interest in their plight. Perhaps it’s because that might mean acknowledging that the pathology of the nascent Palestinian polity ... won’t be uprooted by one free election.*

(12–13)

These oft-repeated claims—that LGBT Palestinians are able to take refuge in Israel proper, that the liberal world has not “taken an interest in their plight” (unlike Israel), and that they are able to survive only because Israel has—are heavily interrogated by Jason Ritchie in his article “How Do You Say ‘Come Out of the Closet’ in Arabic?” Ritchie notes that many of these LGBT Palestinian refugees have been “imprisoned or deported” (2010, 559) and that they have been appropriated by Israeli nationalist discourse in order “to confirm the racist narrative of gay-friendly Israel versus homophobic Palestine by becoming the queer Palestinian victim, who flees the repressiveness of ‘Arab culture’ for the oasis of freedom and modernity that is Israel” (563).

The concepts of pinkwashing and homonationalism are frequently deployed in tandem in right-wing American political discourse. Puar illustrates how both were deployed in the construction of the torture techniques used in the Abu Ghraib scandal of 2003–2004, claiming that the homosexual overtones of the torture that took place in the US military–run Abu Ghraib prison in Iraq derived from two constructions of “the queer” that have been
formed by US hegemony: the homonational Western or Westernized queer who has been integrated into the nation and what Puar has termed the “monstrerterrorist-fag”—that is, an Orientalist trope applied to Arabs and Muslims in which they are portrayed as simultaneously sexually deviant and sexually repressed and homophobic (2007, 20–22, 45–47, 86–88).

Another example of pinkwashing and homonationalism in US politics can be seen in Donald Trump’s 2016 presidential campaign. For example, during the Republican national convention that year, right-wing provocateur Milo Yiannopoulos organized a party targeted toward gay men called “Wake Up!” At that event, speakers such as right-wing Dutch politician Geert Wilders and Islamophobic blogger Pamela Geller focused on the “threat” Muslims posed to the LGBT community, as opposed to LGBT rights issues in the United States. Arguing that a “pro-gay” stance had to be inherently anti-Islam, Geller in her speech stated that “the Democrats pay lip service, and talk about transgender bathrooms.... That’s not gay rights in the 21st century. Gay rights in the 21st century is the persecution, oppression, execution of gays living in Muslim countries under the Sharia” (quoted in Pinto 2016). By emphasizing the oppression of gay people living in the Muslim world, this discourse produced by the Trump campaign is intended both to distract the listener from the LGBTQI rights situation in the United States and to encourage that listener to support violence against the Muslim world in the name of “gay rights.”

It is also important to draw attention to examples of pinkwashing elsewhere in the world that are outside of the Israeli-Palestinian conflict. One example is the platform set out by Dutch politician Fortuyn, who argued that because Islamic countries were intolerant of homosexuality, and that tolerance of homosexuality was an important aspect of Dutch society, immigration to the Netherlands must be halted to prevent the importation of homophobia (Osborn 2002).

Additionally, as John Whittier Treat argues in his article “The Rise and Fall of Homonationalism in Singapore,” while the Singaporean government has an explicitly homophobic legal code, they have allowed and even encouraged queer-themed events and courses in queer theory in the country for the purpose of allowing Singapore to be constructed in Western discourse as modern in comparison with its neighbors and at the same time reap the economic benefits of LGBT tourism and spending in the country (Treat 2015).

Another important example of pinkwashing in Europe can been seen in the campaign of Far Right politician Le Pen in France in 2017. According to an unofficial survey conducted by Hornet, a gay social network, 36.5 percent of gay French voters were planning to vote for Le Pen for prime minister of France, even though her party, the National Front, promised to eliminate the institution of gay marriage in France. Referred to, interestingly enough in the French press as “homonationalists,” most gay Le Pen supporters cited terrorist attacks
perpetrated by ISIS and homophobic attacks against gay men by Muslim immigrants to France as their primary reasons for supporting her (Murdock 2017).

Platforms Associated with Pinkwashing

There are several organizations, websites, and events that are particularly associated with the deployment of pinkwashing discourse regarding Israel and that often come up in discussions of pinkwashing. These have frequently served as “flashpoints” for debate and protest on the topic, and they have regularly used the arguments of pinkwashing discourse. Three of the most notable are the Israeli organization A Wider Bridge, the website GayMiddle-East.com, and the annual Tel Aviv Pride Parade.

A Wider Bridge A Wider Bridge is one of the most noteworthy Israeli LGBT groups that has been associated with pinkwashing. Describing itself as “the North American LGBTQ organization building support for Israel and its LGBTQ community,” Wider Bridge provides news coverage on LGBT issues in Israel and presents coverage of the Israeli-Palestinian conflict with a decidedly pro-Israel bent, featuring articles such as “Berlin: LGBT People Pro-Israel at Pride” (Avni 2015) and “From One Queer Muslim to Another” (2016), an op-ed written by Nadiya al-Noor, a queer Muslim woman arguing that the critique against Israel of pinkwashing is “just tired anti-Semitism.” She argues that ignoring Israel’s successes with LGBTQI rights because of the Israeli-Palestinian conflict is unfair, as is limiting Israel’s identity to the conflict. Noor further claims that this focusing on the conflict when, for example, the Turkish occupation of Northern Cyprus is ignored, singles out Israelis simply because they are predominantly Jewish instead of Muslim.

Because of Wider Bridge's perceived association with pinkwashing, approximately 200 people at the National LGBTQ Task Force’s annual conference in Chicago on 23 January 2016 protested a reception being hosted by Wider Bridge there. Initially, criticism of the event had led to the reception being canceled; however, the National LGBTQ Task Force reversed that decision a few days prior to the conference. The protesters chanted “no justice, no peace” and, according to the Washington Blade, “held signs that read, among other things, ‘no pride in apartheid’ to draw attention to the Israeli government’s treatment of the Palestinians.” The protesters forced the reception to stop, and the invited speakers from Israeli LGBT rights group Jerusalem Open House for Pride and Tolerance were forced to leave the room (Lavers 2016).

GayMiddleEast.com Edited by Dan Littauer, the nowdefunct website GayMiddleEast.com was the subject of massive controversy among the Arab LGBTQI community in 2011 and 2012. According to activist Scott Long (2012), GayMiddleEast.com began as “a tourism site for non–Middle Easterners, with a seeming emphasis on sex tourism [in the Middle East],” and later began to position itself as a clearinghouse for information on LGBT rights and activism in the region. Long further observed that Littauer had an “obvious political bias
against reporting negative information about Israel” on the website, and a coalition of Arab LGBTQI activists drafted a statement criticizing the website for concealing the connections to Israel of the people running it (Queer Shadow Gallery Collective 2011). (Littauer and Assaf Shabi Gatenio, the owner of the website, were both born in Israel.)

![Protest against Israeli Pinkwashing in London, 2016](https://www.alamy.com/iphone-7-review-for-free-celebration-of-queer-pride.html)

---

**Protest against Israeli Pinkwashing in London, 2016.** Protestors hold a sign that reads “No to Pinkwashing, No Pride in Israeli Apartheid” at a rally in Altab Ali Park. The term pinkwashing is most frequently used in criticism of Israel’s policies toward LGBT individuals and Palestinians, as Israeli politicians have often highlighted the former in order to portray Israel as more progressive than surrounding Arab countries.

**Tel Aviv Pride Parade** The annual gay pride parade in Tel Aviv, Israel, has frequently been involved in controversy associated with pinkwashing. In 2016 the pro-Palestinian organization Pinkwatching Israel launched a call for a boycott of the parade (as is done every year by groups that oppose the Palestinian occupation). The group, on its website, included videos that juxtaposed the separation wall, checkpoints, and violence against Palestinians by Israeli soldiers with scenes of revelers at the parade. Along with the videos was a statement that read, in part:

Tel Aviv is known as a “top gay destination.” However, gay pride brochures fail to mention that it is also an hour away from the world’s largest open prison, Gaza, and that it is built on stolen land. They forget to mention that the gay
soldiers you dance with in the pride parade check, arrest, and kill Palestinians on a daily basis. After your day of pride, some tour operators will take you to Bethlehem or the Dead Sea, without telling you that you will travel through the illegally Occupied Palestinian Territories, or that the wine you are drinking in the Golan Heights comes from businesses that have been declared illegal under International Law.

(PINKWATCHING ISRAEL 2016)

The Israeli anarchist group Mashpritzot has also protested the pinkwashing that they perceive the Tel Aviv Pride Parade as engaging in by holding a “die-in” in 2013, where they painted their bodies pink and laid as if dead on top of a giant rainbow flag in the middle of the event (Meronek 2014). During the Gaza War of 2014, writers on both the Palestinian and the Israeli sides called attention to how the war began shortly after the Tel Aviv Pride festival that year (Kamin 2014; Khoury 2016). Because of the ongoing war, the Jerusalem Gay Pride Parade was postponed twice because participants were concerned about the image that it would send if the parade took place at the same time as the war (Kamin 2014).

Pinkwashing and Activism

Accusations of pinkwashing have spurred activists to protest a large number of LGBT-themed events sponsored by Israel in other countries. One of the best known of these protests in the United States occurred in 2010 during Frameline’s annual San Francisco International LGBT Film Festival, which included among its sponsors that year the Israeli Consulate General. Widely reported protests led by the group Queers Undermining Israeli Terrorism (QUIT) picketed the event while holding signs reading “Stop Pinkwashing Israel’s Crimes” and “Israeli Government Out of Frameline,” as well as “culture-jammed” signs advertising the festival by pasting speech balloons critiquing Israeli actions over the heads of the people depicted in the advertisements (QUIT 2010; Bay Area Campaign to End Israeli Apartheid 2010).

Another significant controversy took place in Toronto in 2010, when the organizers of Pride Toronto decided to ban the phrase “Israeli apartheid” on signs at the event after “pressure from city councilors, mayoral candidates, and Jewish advocacy groups.” The group Queers against Israeli Apartheid (QuAIA) claimed that this action was an attempt to ban them from participating in Pride Toronto, even though the executive director of the event said that “no group or person is banned from participating” (Dale 2010). Pride Toronto eventually reversed its decision, and the group was allowed to march (Creelman 2010).

In 2011 QuAIA attempted to march again in Pride Toronto, and after attempts to cut city
funding for the event based on the claim that the phrase “Israeli apartheid” was discriminatory, city manager Joseph P. Pennachetti issued a report stating that “the City ... cannot ... conclude that the use of the term on signs or banners to identify QuAIA constitutes the promotion of hatred or seeks to incite discrimination” (Pennachetti 2011). However, QuAIA decided not to participate in Pride Toronto that year, even after the decision was made, and instead decided to host a community event “to raise awareness of Israeli apartheid” (QuAIA 2011).

Critiques of Pinkwashing

There have been many criticisms leveled against both the concept of pinkwashing as a whole and against actions that protest LGBT-themed events sponsored by or associated with Israel. (It is interesting to note that outside of Puar, there has been little analysis of pinkwashing and homonationalism by the academy outside of the Israeli-Palestinian conflict.) One criticism exemplified in a 2016 article in Haaretz by journalist Allison Kaplan Sommer is that “gay pride in Tel Aviv should be celebrated and the occupation and oppression of Palestinians should be struggled against.” Another criticism that has been made by Syracuse University professor Miriam Elman (2015), among others, is that one should also be able to critique the situation of LGBT individuals in Gaza and the West Bank, which is indeed dire, as homosexuality is a felony in Gaza, and Palestinians in the West Bank are frequently subjected to violence and discrimination.

These criticisms should be carefully examined, as well as the criticism of Noor (2016), who argues that “the accusation of ‘pinkwashing’ is a common tactic used by the anti-Israel movement to silence gay Israelis, negate their struggles, spit on their successes, and turn LGBT people against the only state in the Middle East where they would not be treated as criminals.” In a region where homophobia runs rampant and the only nation in the region that has had an explicitly nonhomophobic political agenda is accused of violating international law through its occupation and the human rights violations that have taken place as a result of it, the issue of pinkwashing and the arguments for and against it need to be analyzed.

Poets in Latin America

DAVID WILLIAM FOSTER
Regents’ Professor of Spanish and Women and Gender Studies
Arizona State University, Tempe

The works of four major twentieth-century poets from Argentina, Mexico, and Chile that include queer elements.

A significant issue in writing about lesbian and gay poets in Spanish America (a term used instead of “Latin America” because Brazilian poets are not addressed in this entry) is the use of terms and concepts that were forged on the basis of US-European cultural models that took nary an account of sometimes considerably different and nationally variable Latin American sociopolitical circumstances. One example of this would be the Counter-Reformation theology that has informed so much of Spanish American history. Another would be the profound intermingling of indigenous cultures, with their own sexual ideologies, with the Counter-Reformation. Although the latter quickly became hegemonic on the continent, to this day indigenous and African cultural influences are strong in many places.

The issue of terms and concepts may be seen historically in the case of the Mexican nun-intellectual Sor Juana Inés de la Cruz (1651–1695). Despite key same-sex poems and arguably lesbian emphases in important prose works, there remains often rabid opposition to designating her as “lesbian.” And yet, Mexican lesbians have claimed that she is “the grandmother of all of us.” These questions also arise with regard to the much-praised self-exiled Cuban gay novelist Reinaldo Arenas (1943–1990), whose suicide in New York is in part linked to his inability to identify with the so-called metropolitan gay lifestyle. His psychosocial coordinates were simply too much in conflict with what he saw and how he was being “advertised” in the United States. As a consequence, any discussion of the topic is fraught with ideological conflicts.

Admittedly, with Arenas the subject is not poetry specifically. Yet he is a pertinent point of reference for the enormously controversial issue of how such a high-stakes issue as (homo)erotic desire is imbricated in complex cultural paradigms. And while certainly, narrative prose has been as much an important vehicle of queer writing in Latin America as it has been elsewhere in the West, it often has a sociohistorical specificity that, as in the case of Arenas, keeps it from easily “translating” into American culture. Poetry, by contrast, has the advantage of being able to eschew sociohistorical specificity, something that is, indeed, often seen in the more “universal” Spanish in which it is written (as opposed to the
oft-pronounced dialect markings of prose narrative). Also, when one understands how emotionally comprehensive poetry may be, it is easy to see how it has so much dominated what may be viewed as the classic core of Spanish American literature. Moreover, the vagueness and emotional comprehensiveness of poetry has often made it difficult to see the queer paradigms at work. This not only is true for the poets discussed here but also can be underscored with reference to the great icon of Spanish American poetry, the Nicaraguan modernist Rubén Darío (1867–1916): despite being a master paragon of lyrical poetry for well over a century, with the existence of an immense amount of scholarship on his work, it has been only in recent years that homoerotic details of his personal life have come to light (e.g., his love letters to the famed Mexican poet Amado Nervo [1870–1919]) and that it has become possible to speak of the homoerotic dimensions of his poetry. This is a circumstance, one might argue, in which poetry is a privileged vehicle of the broadest dimensions of human experience; at the same time, however, the complexity of poetry may make it difficult to tease out controversial dimensions, such as those associated with queer sexuality.

**Alejandra Pizarnik (1936–1972)**

Although not particularly well known among US readers, Argentine Alejandra Pizarnik (also a suicide) is unquestionably Latin America's most influential gay poet. The quality of her poetry gained early recognition (especially in Mexico and France), and by 1960 she was living in France and hobnobbing with the cream of the French literary and intellectual establishment. A Guggenheim Fellowship in 1968 and a Fulbright Scholarship in 1971 are indications of the recognition of her work while she was still very young. To a large degree, Pizarnik has received recognition because of the deep complexity of her poems, which possess a very surreal quality and demand an intense scrutiny from the reader. In this sense, she does not write about lesbian love in anything resembling a romantic manner but rather treats psychological and emotional processes as fields of emotional turmoil. Indeed, the title of one of her most important collections, *Extracción de la piedra de locura* (1968; *Extraction of the stone of madness*), seems to offer an overarching metaphor for her work and to point toward the schizophrenia that led to her institutionalization in Buenos Aires and to her suicide while on home leave from the mental hospital where she had been residing.
Cover of La Condesa Sangrienta by Argentine Poet Alejandra Pizarnik. La condesa sangrienta, first published in 1971, was Pizarnik's most important and controversial work. The book's eleven lyrical vignettes focus on the nefarious practices of the historical figure of Erzsbeth Báthory, a sixteenth-century Hungarian noblewoman who reportedly tortured to death some 650 young female victims, in part to use their blood in cosmetic practices designed to extend Báthory's youthful beauty.

It is difficult to overestimate the influence of Pizarnik's work, both in terms of its profound imbrication with the processes of women's emotions that have become central to feminism and in the way in which anything resembling lesbian paradigms eschews any facile reinscription in the lyric sentimentality of compulsory heterosexuality. Her poetry is less a question of lesbian thematics than it is an embodiment of the French feminist theorist Monique Wittig's famous dictum—spoken in the context of deconstructing binary gender categories in order to demonstrate that “woman” is a construction of enforced patriarchal, heteronormative codes—that “Lesbians are not women” (Wittig 1992, 32). Indeed, Pizarnik's most important—and most notorious—work, La condesa sangrienta (1971; The bloody countess), is not poetry in a conventional sense but a corpus of eleven lyrical vignettes that reference the nefarious practices of Erzsbeth Báthory (1560–1614), a Hungarian noblewoman who reportedly tortured to death some 650 young female victims, in part to use their blood in cosmetic practices designed to extend Báthory's youthful beauty. She perished while imprisoned in her own castle for her crimes.

While Pizarnik’s brutally lyrical evocations of the activities of Báthory and her accomplices
Xavier Villaurrutia (1903–1950)
The Mexican Xavier Villaurrutia is hardly known in the English-speaking world, but in Latin America he is a crucial figure in the intersection of a life of homoerotic desire with a major poetic movement, in this case Mexico’s Los Contemporáneos (The Contemporaries) movement, many of whose members were gay, but none with the tightly wound intensity of Villaurrutia’s existential texts. Villaurrutia brought the gay commitments of the 1920s and 1930s in Mexico into relief, and he is fundamental to present-day understanding of how prominent the gay strand of Mexican national and internationalist poetry was in that period. (The Contemporáneos movement constituted an urban poetic vanguard that sought to promote cultural sophistication in a Mexico still imbued with the traditional masculinist vitalism that sparked the Mexican Revolution [1910–1920] and the social and political structures it left as a legacy in the reconstruction of the country after 1920.)

One of the most noteworthy features of Villaurrutia’s poetry is the absence of Spanish-language gender markers. This absence is evident in the identification of the first person, although it is not unusual for the reader to assume that it is the biographical poet or his surrogate speaking, and there is no doubt as to the conventional social designation of Villaurrutia as a male speaking subject. Where the matter becomes distinctly notable is in the absence of gender marking for the second-person addressee of the poems, which in the case of amorous or erotic poetry is assumed to be the lover of the poet (i.e., the male speaking voice). Such a destitution of gender markers, which are really quite difficult to
avoid in Spanish—particularly when the nature of lyric poetry is to make attributions to the object of emotional address, attributions that the binary structure of the language systematically requires be marked for gender—may also affect third-person referents. This striving for a genderless mode of expression has little to do with a much later feminist agenda of striving to overcome the inherent sexism of, like most languages, Spanish. Instead, it is one aspect of queering Spanish, with the goal of questioning, suspending, and disrupting the language’s insistence on the heterosexist binary distribution of human subjects.

Given the intense homophobia in Mexico in the early part of the twentieth century (there is a veritable reign of heterosexual terror in Mexico following the decade-long Mexican Revolution), Villaurrutia chose not to risk writing openly homoerotic poetry. While his contemporary Salvador Novo (1904–1974), who is best known for his prose works, was able to pull off often outrageous gay camp, Villaurrutia, like most of the members of the very queer-marked Contemporáneos group, opts for circumspection. Nevertheless, prevailing heterosexism has worked to normalize Villaurrutia’s poetic expression, and criticism has had no trouble in both overlooking the absence of gender markings in his poetry and in attributing heterosexist—heterosexualizing—understandings of his poetic discourse. If the homophobic solution is to assume that the bulk of the English playwright and poet William Shakespeare’s sonnets addressed to a young man are mere “poetic convention” (the same occurs with the Mexican nun poet Juana Inés de la Cruz, with her poems addressed to other women), in the case of Villaurrutia’s syntax, it is assumed that the “undermarking” of gender must necessarily be understood to be heterosexist.

It is this “necessary” understanding that provides for a semiotic tension in his poems grounded in the challenge to the reader to perceive what the import of the suppression of gender marking might be. Villaurrutia’s so-called nocturnes are customarily described as existential propositions about the impossibility of love, the displacement of affection, the sterility of a universe inhabited by the poetic “I,” and the despair that comes from the inability to establish meaningful (i.e., erotic) human communication with the other inhabitants of that universe. Certainly, on one level the conventional lament over the vagaries of human sexual love is compounded by the particular barriers to love erected by the double helix of homophobia and compulsory heterosexuality. Yet, if the reader is unable to “catch on” to this latter added dimension of fickle Eros, the poetry still seems to work as a consequence of the poet’s eloquence in propounding a particular so-called existential cluster of sentimental motifs.

Thus, in a poem such as “Ellos y yo” (Them, and Me) the reader might be content to understand the poet’s lament over being unfortunate in love where others are successful—that is, the lament of the poetic “I” over his human failings: “Ellos saben vivir, / y yo no sé” (They know how to live, / and I do not). Certainly, this is a convincing lament, especially when the poet reprises it at the end of the poem: “Ellos saben vivir [...] / Yo: solo sé
llorar….” (They know how to live [...] / I only know how to cry....) (Villaurrutia 2004, 194, 195).

Leaving aside the suspiciously unmanly recourse to crying, a homoerotic reading of the poem might appear in the reader’s wondering why the narrator is unable to live, and exactly what the semantic scope of the verb “to live” is here. The poem was written in a period in which there was much psychologically driven talk of love as an integral part of human experience. This is an interpretation that brings with it the often explicitly stated proposition that “to live without love is to be as good as dead” (not to mention the particularly Freudian take on sexuality, which is intensely scrutinized in Mexico at the time). Thus, the poem invites the reader to wonder why it is, exactly, that the poet does not know how to live. Or, as he says at one point, they know how to kiss and I do not even know what that is. He goes on to say that “Me da miedo probar / a saber....” (I’m scared to even try / to find out....). But this and “mil cosas más” (a thousand things more) the author will never know. It is when the reader is able to move from the absence of gender marking (e.g., specifically here not saying that he is unable to kiss a woman, that he is unable to live through love for a woman) to a consideration of what the impediments might be for the poet to learn to live sexually that there can emerge an understanding of how this is not a conventional lover’s lament.

To be sure, Villaurrutia’s poems are dotted with references that one can easily attribute to the so-called same-sex underworld: the very dominance of the motif of the nocturne and the dead of night, the reference to public parks (with their nocturnal sex) and other circumstances of unapproved sexuality, the sense of the sterile emotional universe of someone who flees social intercourse (a coefficient of the “fear” previously mentioned), and the sense of méconnaissance (or misrecognition, in the sense that our understanding of life inevitably misses the mark) in the commerce with others: “Como una voz que no oiré jamás / así tú me amarás” (Like a voice I’ll never hear / that’s how you’ll love me, dear; from the poem “Presentimiento” [Premonition]) (Villaurrutia 2004, 200, 201). The rather curious syntax here serves as a correlative of the inevitable erotic disconnect that the homophobic understanding of homoaffective love ordains must occur. Because it is the poet who is speaking, his is the voice to be heard. Yet the emphasis falls on what the speaking voice cannot hear, as though it occupied itself with speaking insistently (i.e., the sustained composition of poetic texts) because it itself cannot hear the other. And while the other will speak of love, it cannot be heard, as though the conditions—such as sharing a common dialect of spoken love—for communicational exchange did not, could not exist or were irreparably disrupted.

All poetry is ultimately metapoetic, because a recognized cultural function is to address the most profound disconnects of human experience, and linguistic disconnect is, in a very real sense, the universal overarching existential disconnect. For this reason, Villaurrutia’s poetry is insistent in the failures of the language of love, made all the more acute when the
brutal impediments to homoaffective love can be attributed to that failure. Villaurrutia’s meditations on love would appear to escape the gender marking of the heterosexist paradigm. This is so because the latter banishes homoaffectivity in an abyss of nonmeaning. In this abyss, linguistic truncation is the overarching attribute of emotional nonlife: “Soledad, aburrimiento, / vano silencio profundo” (Loneliness, boredom, / hopeles silence deeply wrought; from the poem “Nocturno Solo” [Lonely Nocturne]) (Villaurrutia 2004, 70, 71).

Both Pizarnik and Villaurrutia are typical of a poetic stereotype: while they maintained relations with other individuals of shared (erotic) interests, they were essentially loners in the pursuit of their literary commitments. A subsequent mystique or aura has emerged surrounding the figure of Pizarnik, in large measure stemming from the conjunction of so many factors that confirmed her status as an outlier: her Jewish origins, her status as an unconventional woman, her early all-consuming successes, her foreign experiences, her schizophrenia, her confinement to a mental institution, and, ultimately, her suicide (in her mid-thirties). While her writing can hardly be suggestive of any romantic coloring, the image of the mentally damaged poet continuing to seek refuge in her mother’s home is unquestionably the stuff of literary legends.

Néstor Perlongher (1949–1992)

By contrast, if the Argentine Néstor Perlongher—who, like Pizarnik, was also from the south-end working-class city of Avellaneda that is part of Greater Buenos Aires— was one of the most prominent writers of his day to succumb to AIDS, his legendary status is more the consequence of political activism than the clichés of the creative genius. Perlongher played a major role in bringing gay life out of the shadows during the period of neofascist military dictatorship (1976–1983), particularly the whole demonstrative panorama of the feminization of masculinity and the figure of the transvestite/transsexual that still dominates the Argentine queer gender imaginary. (Lesbians, while hardly welcome in Argentina, were able to fly much more below the radar than gay men during the period of intense militarization imposed by the armed forces, obsessed as they were with a masculinist ideology and manly virtues.) Perlongher had played a key role in the 1971 founding, under a previous homophobic and violent military dictatorship, of the Frente de Liberación Homosexual (Homosexual Liberation Front), reputed to be one of the first militant gay organizations in the world; it was in turn heir to an earlier group dating from 1967.

A social anthropologist as well, Perlongher moved to São Paulo, Brazil, to do graduate work at the University of Campinas. He was appointed professor of anthropology at the University of Campinas in 1985, and he died of AIDS in São Paulo in 1992. Perlongher published his Campinas graduate thesis as a book, O negócio do michê: Prostituição viril em São Paulo (1986; The occupation of the taxi boy: Male prostitution in São Paulo), which was
subsequently published in Spanish in Buenos Aires. This is unquestionably Perlongher’s most influential work, although it is read in tandem with his literary prose and his poetry. Although Perlongher has been accused of romanticizing the solidarity/erotic liaisons between the taxi boys, *O negócio do michê* is nevertheless the first sociological study of its kind in Latin America, and it established parameters for understanding male-male sexuality in Latin America that are still referred to today. An important geographical dimension of Perlongher’s study concerns the unique features of Brazilian/Spanish American male homoaffectivity—mediated by both culture and language—in the realm of prostitution.

Yet, while Perlongher’s prose has been extensively praised—this sociological document and his short stories and essays informed by both personal experience and academic research—he is also remembered for his poetry. And like the compositions of his compatriot Pizarnik, Perlongher’s poetry is extremely dense and stripped of sentimentality. Perlongher also earned a Guggenheim Fellowship (*1992; presented posthumously*), and his work enjoys recognition throughout Latin America. However, where Pizarnik’s writing never had an overt reference to military-inspired violence and the deeply ingrained homophobia that inspired that violence, Perlongher brings together both the political and the sexual in his own interpretation of how the personal is political and how there is no personal refuge, not even in the romantic love of more Anglo-American–inspired Latin American gay poets, in the political and any personal commitment to it. In a word, the poetic subject is not saved from homophobic violence; rather, the poetic voice would have the reader understand that the political process in Latin America is a guarantor of annihilating violence that goes far beyond circumstantial current events. Perhaps the *michê* (taxi boy) is able to take refuge in the solidarity of his trade, but that is not the case for the subject of homoerotic desire in Latin America as a whole.

One of Perlongher’s most cited works is the long poem “Cadáveres” (*Corpses*), for which
there exist two separate translations into English. Appearing in the grimly titled *Alambres* (1987; *Wires*)—the title refers not only to the wire fences of prisoner detention camps but also to the wires of the instruments of electric torture—“Cadáveres” references the almost surrealististically multiplying bodies of political dissidents and guerrilla fighters of the resistance. In the rather unusual case of Argentina, those bodies included sexual pariahs who were persecuted to a degree not found elsewhere in the authoritarian and neofascist regimes of Latin America of the closing third of the twentieth century. These mutilated and murdered corpses figure a grotesque expropriation of the bodies of the subjects of same-sex desire (either discovered to “be” such or assigned that attribution by the agents of sociosexual control who were beyond challenge), and they figure a sexual history for Argentina that has little to do with the culture of an insouciant Anglo-American gay lifestyle. Although much has changed in Argentina and elsewhere in Latin America with regard to lesbian and gay rights, homophobic violence remains underaddressed in any systematic way.

**Gabriela Mistral (1889–1957)**

One of the most important gay icons of Spanish American poetry is Gabriela Mistral, who won the Nobel Prize in Literature in 1945. The fact that Mistral was sponsored for the award by US First Lady Eleanor Roosevelt (1884–1962), at a time when post–World War II women were just beginning to acquire a healthy array of public voices, lends Mistral’s recognition a particularly lesbian poignancy in the context of the blatant misappropriation of her work by the masculinist and homophobic agents of cultural power in her native Chile, accompanied by an equal measure of distaste for her lesbian (or, at least, nonfeminine) persona and the strident refusal to even consider the implications of her gender nonconformity.

In actuality, Mistral penned little in the way of anything that can be called overtly lesbian verse. Nevertheless, despite the way in which nationalist interests emphasize the interrelated maternal and schoolmarmish aspects of Mistral’s poetry (in a country in which female grade-school teachers were expected to be essentially lay nuns), there is a significant displacement of conventional heterosexuality: a troping of the conventions of female-male love, especially from the point of view of a presumably subservient (indeed, often emotionally needy) female voice when addressing the male interlocutor; and even, perhaps, a certain parodying of emotional commonplaces. It is now widely known that Mistral, who was viewed by the Chilean establishment principally as an iconic educator of children, did not think much of the mythification of the grade-school teacher as a saintly paragon. Indeed, Mistral played important roles as a diplomat, as a voice of humanistic values, and as a spokesperson for an emerging Latin American feminist agenda, which explains her extensive friendship with Roosevelt. Thus, it is difficult today to read her famous “La oración de la maestra” (*The teacher’s prayer*), so often recited in official
educational ceremonies, as completely “straight” in its implied characterizations of the supine handmaiden of God and the state in the education of innocent children. It is this sort of almost saccharine maternalism that makes Mistral so readily available as a poet of institutional nationalism, while at the same time constituting a problematic discourse that is of interest to queer interpretations:

Lord! You who were a teacher, I beg you to forgive my teaching. Forgive my name as a teacher, You who were for the entire world....

Permit me to be more a mother than the mothers themselves, so that I may love and defend as they do those who are not flesh of my flesh. May one of my pupils be a perfect line of poetry and allow her to be pierced by my most penetrating melody when my lips can no longer sing.

(AUTHOR’S TRANSLATION)

Mistral, therefore is most prized for the overall queerness of her personal life (four known female partners), which included her quite difficult relationship with her homophobic native country that, on the one hand, lionized her for certain prominent thematic aspects of her work, while repudiating her for the questionable dimensions of her origins, her humanistic convictions, and her personal life. In this sense, Mistral stands in opposition to Chile’s other Nobel laureate (1971), Pablo Neruda (1904–1973). Neruda, who is important for many literary accomplishments, is most remembered, however, for the profound and frank heterosexual love of his poetry, in juxtaposition to which Mistral’s oeuvre is veritably a lesbian contestation.

An adequate anthology of Spanish American queer poetry remains to be assembled. Perhaps it would be impossible, given not only the extensive array of poetic practices that include, to one explicit degree or another, so many references to homoaffective love and desire, but also how one might want to insist that all significant cultural production is, to one degree or another, queer marked. The poets examined here would, in any event, be veritable anchors of any such anthology, and their importance would be confirmed by how the queer dimensions of their work, discussed in this entry, would very much underline such an anthology as a whole.

BIBLIOGRAPHY

Popular music would never be what it is today without its strong LGBTQ pull. From its origins in rock and roll from the 1940s and 1950s, popular music included a wide range of styles from the early 1960s onward. Historically, popular music helped steer an antiestablishment cultural movement in the United Kingdom and United States that gained momentum with the civil rights movement and protests against the Vietnam War. In 1969, with the Stonewall riots and subsequent gay rights movement, music was behind the queer community’s fight against government regulations that persecuted sexual minorities. Historically, musicians and bands have partaken in, and shaped, the sexual revolution, which challenged the normalization of heterosexuality and monogamy. Epic tracks testify to this, such as Dusty Springfield’s “You Don’t Have to Say You Love Me,” k.d. lang’s “Constant Craving,” Melissa Etheridge’s “Come to My Window,” the Who’s “I’m a Boy,” the Kinks’ “David Watts” and “Lola,” Tracy Chapman’s “Fast Car,” the Beatles’ “You’ve Got to Hide Your Love Away,” and the Tornados’ “Do You Come Here Often?”

LGBTQ identities were discernible in popular music long before Stonewall and are traceable back to the birth of the blues, jazz, and Weimar cabaret (the last a trend that emerged in late 1920s Germany). The intrinsic relationship between music and identity is always predicated on race, gender, sexuality, class, age, and citizenship; hence, divergences from “normalcy” have standardized queer forms of expression. Predating rock and roll, the singers Bessie Smith, Billie Holiday, and Ma Rainey (the “mother of the blues”) addressed topics of same-sex attraction, with Rainey often donning men's top hat and tails to express her nonheterosexuality, or rather, female-masculinity. Her hit “Prove It on Me Blues,” recorded in 1928, was the first resistance song that explicitly proclaimed a woman’s sexual interest for another woman. Blues would never have been the same without these bisexual women who demonstrated the potency of gendered Otherness as an expression of human behavior.

**Early Pioneers: Artists and Their Managers**

Through the ages, musicians’ identities have played a pervasive role, expanding the possibilities for self-expression. In the mid-1950s, rock and roll performer Little Richard
(né Richard Penniman) employed a falsetto singing style that complemented his flamboyant look. The lyrical hook “A wop bop a loo bop, a wop bam boom!” in his song “Tutti Frutti” (1955) was borne out of explicit references to anal sex and queer men (slang: fruity) in an over-the-top mix of camp and drag. Notably, the original lyrics were censored by Little Richard’s producer and not played in the United Kingdom. As one of the original pioneers of rock, he set the agenda for those who followed: Elton John, Mick Jagger, David Bowie, Madonna, Prince, Morrissey of the Smiths, and Holly Johnson of Frankie Goes to Hollywood. Then there was Johnnie Ray, often considered the “father of rock and roll,” who bridged the style of Frank Sinatra and Elvis Presley in an unorthodox and distinctly queer way. Ray's crooner voice, frequently mistaken for being black and female (his major influence being gospel), was transgressive. His performances stirred up a frenzy among his teenage audiences. Openly bisexual in an era when homosexuality was criminalized, he gained notoriety in the media through various arrests for solicitation. Ray's highly energetic performances were outrageous for their time, with his popularity sealed toward the end of his life in the United Kingdom and Australia rather than in the United States. Ray was also associated with the Los Angeles gay activist community, with personal friends including gay icons Judy Garland and Charles Pierce.

By and large, the unique relationships between artists and their managers have steered queerness in popular music. During the 1960s, many managers were up-front about their nonhetero sexuality: Robert Stigwood of Cream and the Bee Gees, Simon Napier-Bell of the
Yardbirds and Marc Bolan, Billy Gaff of Rod Stewart, Kenneth Pitt of David Bowie, Barry Krost of Cat Stevens, and Larry Parnes of Tommy Steele and Billy Fury. In addition, Brian Epstein’s openness about being gay had a major bearing on his managing the Beatles, illustrated not only in their music but also in their politics and image; he restyled their long hair look, with mop-top hair and tightfitting single-breasted, mohair suits, which many deemed effeminate. EMI chairman Joseph Lockman, who signed the Beatles, also declared his homosexuality, as did Andrew Loog Oldham, manager of the Rolling Stones, who put the band into drag for photo shoots and placed Mick Jagger on the road to being one of the most camp and dandified performers of all time. In addition, Jagger’s experimentation with glam-rock fashion and gay culture was influenced by his close contact with icons Rudolf Nureyev, Truman Capote, and Andy Warhol.

**Shifting Personas and Sensibilities**

In contrast to glam rock (or glitter rock) in the early 1970s was the English working-class mod look from the 1960s. A mod revival commenced in the late 1970s in the United Kingdom, spreading to the United States in the early 1980s. As a reinvention of the nineteenth-century Parisian flaneur, with sharp contours of tailored suits and shoes borrowed from the jazz boom of the late 1950s, the mods distinguished themselves from the rockers, a biker culture with distinctly different musical preferences. Links between the mod scene, glam rock, alternative rock, and art rock were established by David Bowie, who drew stylistically on Elvis Presley and Little Richard.

While the glam rocker Jobriath became the first gay musician to sign to a major label (Elektra) in the United States in the early 1970s, Bowie was the most talked about artist in the United Kingdom. Constructed on shifting personas such as Arnold Corns, Major Tom, Ziggy Stardust, Halloween Jack, Aladdin Sane, the Thin White Duke, and Jareth the Goblin King, Bowie’s inimitable style turned to a Warholian pop-art aesthetic that was quirky, camp, and androgynous. Mostly, it was the brazen politics of his coming out to *Melody Maker* in 1972 that marked a watershed in rock history; greatly inspired, fans, gay and straight, would rethink their sexuality and gender roles. Contesting conventions and gender norms in his songs and appearance (clothes, makeup, hair, and mannerisms), Bowie would demonstrate the transgressive power of pop music. This was particularly discernible in his tactics of gender play evident in the albums *Hunky Dory* (1971), *The Rise and Fall of Ziggy Stardust and the Spiders from Mars* (1972), *Aladdin Sane* (1973), *Diamond Dogs* (1974), and *Heroes* (1977). Revolutionizing attitudes toward gender and sexuality, Bowie dismantled the boundaries that keep people apart; he proved to generations that being queer is a “natural” part of human existence. Moreover, he showed that glam rock and pop styles are about ideology and authenticity (*Auslander 2006; Hawkins 2016*).

A close friend of Bowie was the New York hipster Lou Reed. Throughout his career, Reed sustained a degree of opacity around his sexual orientation. His song "Walk on the Wild
Side” (1972), produced by Bowie and Mick Ronson, contained lyrics that unsettled normative sex roles. Referring to transsexuality, transvestites, oral sex, and male prostitution, this song was risqué, released when homosexuality was still certified as a mental illness by the American Psychiatric Association in its *Diagnostic and Statistical Manual of Mental Disorders*. Reed’s close collaboration with Warhol involved his importing avant-garde rock music into the popular arena as a platform for highlighting difference and sexual ambiguity. Reed would be a spokesman for transgender people, collaborating in 2004 with Antony (later to become Anohni) on the track “Fistful of Love” (2005). In line with Warhol, he addressed aspects of sexuality that broke with conventions and norms, his cause being to fight for people of minority sexualities.

Albeit from a different perspective, Dusty Springfield’s sexuality also drew much media attention. In an interview with the *Evening Standard* in 1970, Springfield came out as bisexual. A major icon of the Swinging Sixties, this blue-eyed soul singer from England based much of her style on Motown, which she introduced to the United Kingdom. Springfield’s style of singing, ultraglamorous look, and camp disposition turned her into role model.

Janis Joplin, whose bisexuality was public knowledge, died at age twenty-seven in the same year Springfield came out, leaving behind legendary tracks such as “Piece of My Heart,” “Me and Bobby McGee,” and “Ball and Chain.” It was also around this time that Elton John declared his bisexuality; he would come out as gay only in 1988, starting the Elton John AIDS Foundation in the early 1990s. Among the numerous nonhetero contemporaries of Springfield and John were rock legends Freddie Mercury, front man of the group Queen; Pete Townshend, lead guitarist and main songwriter for the Who; and Dave Davies, lead guitarist of the Kinks. In effect, all these musicians provided vital sites for contesting and celebrating gender difference—that is, before the arrival of AIDS.

**AIDS and the 1980s**

For many, AIDS set the clock back. Artists now struggled for AIDS awareness, battling against prejudice. Among those who bravely became associated with HIV/AIDS patients and their causes was Madonna Louise Ciccone, an activist for AIDS victims, who experienced the loss of close friends to the disease. Her video for “Like a Prayer” (1989) would become an ode to religious freedom, the atrocities of AIDS, and equal rights, while her album *Erotica* (1992), with tracks such as “Deeper and Deeper,” confronted taboos of sexual desire and homosexuality. Madonna’s solidarity with the LGBTQ community has gone down in history. As one of the most significant queer icons in pop, she had as her mission to denounce homophobia, racism, and misogyny, supporting marginalized cultures, such as blacks, transgendered persons, Hispanics, Muslims, the Roma people, and lesbians. Her work would emancipate gender by foregrounding queerness and the LGBTQ community in the majority of her songs. *Erotica*, simultaneously released with her controversial book *Sex*, became a milestone in pop from the 1990s onward, empowering a
new generation of female artists, such as Beyoncé, Christina Aguilera, Pink, Britney Spears, Nicki Minaj, Lady Gaga, and Janet Jackson.

Like her contemporary Prince, Madonna developed Bowie’s strategies of gender play, taking them to new heights. Prince, who died in 2016, will be remembered as a pansexual effete male artist who always wore makeup, high heels, and unisex clothing. In the song “Controversy” (1981), from early in his career, he asked, “Am I black or white? Am I straight or gay?” In contrast to Bowie and Madonna, Prince was African American, with a quite different set of challenges. Rejecting clichés of the macho black male performer, he liberated the stricture of masculinity. Parody became his main tool. Significantly, women were more part of his world than men, in the recording studio, on stage, and in his private life. Mirroring his own fluid identity, his musical style was crossover; he constantly readjusted to new technologies, trends, and production techniques. Instating his original, androgynous identity in the 1970s, he staked out the territory for dissident masculinity among future generations of pop artists.

While Prince was arguably one of the queerest males in popular music, there were other overtly nonheteronormative celebrities and bands, predominantly based in the United Kingdom: Boy George from Culture Club, Bronski Beat, Eurythmics, Soft Cell, the Pet Shop Boys, Wham!, Erasure, Frankie Goes to Hollywood, Morrissey of the Smiths, and others. A spate of straight artists also raised the bar for queer visibility; among these were Billy Bragg, Michael Jackson, Dolly Parton, Diana Ross, and Barbra Streisand. All these artists had a strong LGBTQ following and expressed their solidarity with marginalized groups throughout their careers. MTV, with its launch in 1981, showcased popular culture and its subjectivities by playing music videos twenty-four hours a day, seven days a week. It also seized the opportunity to respond to the AIDS epidemic in 1985 with a provocative campaign that targeted teenagers and safe sex. Various organizations sprang up, dedicated to the fight against AIDS in pop music. The Red Hot Organization, for instance, was established in 1990 in response to the hardships encountered by New York artists. Featuring celebrities such as Annie Lennox, David Byrne, Tom Waits, U2, Deborah Harry, Iggy Pop, and k.d. lang, the album Red Hot + Blue was released in 1990, selling over 1 million copies. Significantly, this became the template for many other releases by Red Hot, such as Red Hot + Dance, No Alternative, Red Hot + Country, Stolen Moments: Red Hot + Cool, Red Hot + Bothered, and Red Hot + Rio 2. The impact of Red Hot and its numerous album releases was to raise donations and create awareness of HIV and AIDS on a global scale. In Latin America, the bisexual singer Cazuza (Agenor de Miranda Araújo Neto) in 1989 became the first national figure in Brazil to come out as HIV positive, and he played a crucial role in raising awareness about the transmission and effects of AIDS. After his death a year later, his mother founded the nongovernmental organization Viva Cazuza, which still directs royalties to HIV-positive children and adolescents.
As one of the most mediated forms of entertainment, popular music puts identities continuously on display (Hawkins 2016, 2017). In 1998 George Michael, who originally rose to fame in the duo Wham!, created a media stir when he came out. Caught by an undercover Los Angeles police officer (who allegedly tried to solicit him) at Will Rogers Memorial Park in Beverly Hills, he turned this incident to his advantage by putting his hands up and confessing on national television. Directly following this incident, his song and video “Outside” was released. It became a potent retort to the hypocrisy around gay bashing and prejudice. Satirizing the Los Angeles police force and California law, the video graphically captured the struggles of LGBTQ people. At the climactic point depicting Michael dancing with his Village People look-alike troupe, the men’s lavatory magically transforms into a disco floor. Michael’s arrangement of “Outside” is hi-NRG (pronounced “high energy”) disco, a response in itself to the resistance movement of LGBTQ communities that accelerated in the 1970s. The politics of outing himself to disco demonstrated how this style continued to survive and subvert conventions some twenty years after the infamous “disco demolition night” on 12 July 1979, at Comiskey Park in
Chicago. At the height of this event, between two games of a scheduled baseball doubleheader, a huge crate of disco records was spectacularly exploded, at which point thousands of White Sox fans charged onto the field.

In quite a different way, Kurt Cobain of Nirvana, four years Michael's junior, turned to a subgenre of alternative rock, grunge, also known as the Seattle sound. Cobain’s own complex identity spurred him on in negotiating and resisting norms. Uneasy with his own straightness, he would claim that he always felt gay in spirit. A self-proclaimed feminist and anti-racist, he committed himself to the cause of LGBTQ rights. By the time of his death in 1994 at age twenty-seven, Cobain had reconfigured white US rock music as a queer genre (Hawkins 2016). Often appearing in dresses on stage, he would disturb the divide between male bonding and homosexuality by lovingly kissing Nirvana's bass guitarist, Krist Novoselic. In addition, a long-standing feud between Cobain and Guns N’ Roses was rooted in Cobain’s deep disdain for the homophobic and misogynistic attitude of that group’s lead singer, Axl Rose. As political activist, Cobain with Nirvana issued a statement in 1992 against the proposed (and ultimately defeated) Oregon Ballot Measure 9, which would have removed the LGBTQ community's antidiscrimination protection.

**Eschewing Norms in Songs**

Inherent in the majority of popular songs are narratives of love. Songs are invitations for listeners to think about their identities and eschew conventions and norms. Consider the liberation and hope for millions in tracks such as Gloria Gaynor's “I Will Survive,” Diana Ross's “I'm Coming Out,” Cher’s “Believe,” “Smalltown Boy” by Bronski Beat, “I Want to Break Free” by Queen, “Go West” by the Pet Shop Boys, “Y.M.C.A” by the Village People, Culture Club’s “Do You Really Want to Hurt Me,” Lady Gaga’s “Born This Way,” Frankie Goes to Hollywood’s “Relax,” “Battle Cry” by Angel Haze, “You Make Me Feel (Mighty Real)” by Sylvester, and Logic’s “1-800-273-8255.” Powerful sentiments are communicated by these songs’ memorable musical riffs, hooks, and production. Importantly, it is the voice that becomes the signifier of sexual identity. A fitting example is R.E.M. front man Michael Stipe, who incorporated into his albums subject matter that is oriented toward political activism and tolerance of gender fluidity. His voice, which defined R.E.M.’s sound, has always worked in tandem with the band’s fashionable image and “new” masculinity. It was with the release of the album *Monster* in 1994 that “a new openness about sexuality in Stipe’s interviews” was detectable (Maus 2006, 205). That R.E.M. muddied its style by revising rock, infusing it with other styles, such as disco, contributed to the band’s appeal, especially for fans considering alternative forms of identity.

Musical performances harness expectations of identity—usually, the straighter the genre, the less likely to disturb norms (Whiteley and Rycenga 2006; Hawkins 2017). This is borne out of the strong reactions to the metal icon Rob Halford of Judas Priest after he discussed his homosexuality in an interview with the *Advocate* in 1998. Heavy metal, known for its
embodiment of conservative social norms, has fewer gay icons and audiences than many other genres. Hence, it would take sixteen years before two high-profile metal artists followed Halford in coming out, as Cynic members Paul Masvidal and Sean Reinert did in 2014. Also, Kristian Eivind Espedal, better known as Gaahl and the front man of the Norwegian black metal band Gorgoroth, came out as gay in 2008, and front woman Otep Shamaya of the nu metal band Otep, revealed to the media in 2005 she was lesbian.

Creative Impulses

Following the launch of her career in 2008, Lady Gaga became a major queer icon, celebrating difference and displacing gender norms. While gender experimentation is fodder to media hype, it is often the result of a creative urge to try new things. The New York band Scissor Sisters, formed in 2001, combined glam rock, disco, pop rock, and electroclash in its debut album Scissor Sisters (2004), an arrival point in popular music history. The group's original musical signature was built on the legacy of Madonna, Elton John, George Michael, the Pet Shop Boys, Freddie Mercury, and Kylie Minogue, as it challenged heterosexual hegemony via its “genderqueer” strategy (Leibetseder 2012). Together with colead singer Ana Matronic, Jake Shears would emphasize a gay sensibility in Scissor Sisters’ songs, videos, and live onstage antics, earning a reputation for being shocking, subversive, and delightfully outrageous.

While Scissor Sisters was increasing in popularity, Lady Gaga’s career was launched. Her breakthrough came with her debut studio album, The Fame (2008), and its reissue, The Fame Monster (2009), which fused glam rock, disco, goth, and synthpop. Lady Gaga, a
YouTube phenomenon in her own right, quickly established herself as a major queer icon, celebrating difference and displacing gender norms. Through drag, she demonstrated that variations in femininity could widen the space for women and minority groups to empower themselves. As part of the post-Madonna generation, Lady Gaga extended the politics of representation into spaces that were shaped by new forms of technological production and social media. Toying with gender norms, she disturbed stereotypes through strategies such as “bio queening” (Halberstam 2012; Iddon and Marshall 2014; Hawkins 2016).

Inextricably linked to feminism and notions of otherness, bio queening involves artists who are biologically female performing in an exaggerated manner and appropriating male drag queens.

A rapper of Afro–Puerto Rican descent, Destiny Nicole Frasqueri, known as Princess Nokia, grew up within the queer community of New York City. Identifying as bisexual, Princess Nokia rose to fame through her performances in the gay community. In 2017, she made headlines by slapping a white male in the audience at one of her shows for mouthing sexist and racist comments. Like many artists of her generation, Nokia released her material on YouTube. Her second track, “Bitch I’m Posh,” went viral on SoundCloud, paving the way for her debut album, *1992 Deluxe*, released in September 2017. Another female artist known for queening is Nicki Minaj, often acclaimed as the “black Lady Gaga.” Minaj would emerge as one of the most famous female rappers of all time during the first decade of the twenty-first century. Taking hip-hop and rap in new directions, Minaj became a beacon for minority groups, with a large gay following. Addressing the problem of suicide among gay teenagers, she has been a fierce spokeswoman for equality and antidiscrimination.

Notwithstanding her own alleged bisexuality, Minaj has steered away from stereotypes by exaggerating her construction of femininity. In the video of her hit “Anaconda” (2014), she slams racism, misogyny, and structures of patriarchy in a highly aestheticized pornosphere. Drake, who is a featured guest on the track, also appears in a scene in the video. In the climactic moment, Minaj uses a lap-dance sequence to disempower the male. Following in the steps of Queen Latifah, Salt-N-Pepa, and Missy Elliott, Minaj situates the black female body in a context that refutes traditional classifications.

Trans Artists

Transgender pop artists have always been part of the music industry. In the 1950s, the actress and nightclub singer Christine Jorgensen became the first white trans woman to draw media attention. Historically, trans men have been less represented than their female counterparts, notable exceptions being Billy Tipton, Mina Caputo, and Beth Elliott. It is important to point out that *agender* artists, such as Angel Haze, choose the pronoun “they” to refute conforming to structures of genderqueer classifications (Leibetseder 2017). Other notable transgender artists include the black Colombian trans woman Janer, La Gata, Jessica Xavier, Joe Stevens, Alexandros N. Constansis, Lucas Silveira, and Dana
International. Without exception, transgender artists in popular music focus not only on aspects of gender redefinition, sexuality, and the complexity of intersectionality but also on the political issues that necessitate recognition and survival.

**Into the Future**

In the early years of the second decade of the twenty-first century, a new stream of LGBTQ hip-hop artists emerged. Frank Ocean released his album *Channel Orange* (2012), about his desire and love for a man. Turning to social media to access their fan bases, a new generation of African American musicians, influenced by queer ball culture and drag, would identify with the label queer hop (as opposed to homo pop). Azealia Banks, Zebra Katz, Le1f, Mykki Blanco, and Angel Haze queered hip-hop at the same time certain white artists gained visibility. Additionally, the country artist Steve Grand ached for his lover in the song and video “All-American Boy” and the pop artist Troye Sivan narrated the struggles of same-sex relationships in a trilogy of music videos, while the indierock singer-songwriter John Grant lamented being HIV positive on the track “Ernest Borgnine” (2013). Kissing, holding hands, having sex, and facing suicide are powerful narratives integrated into these heartbreaking tales of queer relationships. Will Young, Miley Cyrus, Sam Smith, Olly Alexander, Beth Ditto, Alex Newell, Lowell, t.A.T.u., and Mary Lambert have also pushed LGBTQ rights to the forefront of public awareness in their acts.

At the close of the second decade of the twenty-first century, a significant shift occurred as many straight men and women shared the voices of LGBTQ artists. In particular, transgender people became more conspicuous, with artists such as Anohni speaking out on issues that deal with being a trans woman. Her trans voice became a powerful mediator of sexual fluidity, representative of a gradually shifting public perception of what gender is. Similarly, trans artists Angel Haze, Mykki Blanco, Ezra Furman, Shea Diamond, Mina Caputo, Black Cracker, Cash Askew, Laura Jane Grace, Laith Ashley, Shawnee, Ryan Cassata, KC Ortiz, and Lucas Silveira gained visibility in mainstream pop. The tremendous effort that goes into shaping identities in popular music involves stories of survival through happenings that map out performers in extraordinary ways. Sexual freedom, in all its diversity, requires dissolving queerphobia/homophobia by getting fans to rethink sexual orientation and the possibilities for articulating their own gender in any number of contexts.

Pornography

Paul R. Deslandes
Associate Professor, Department of History
University of Vermont, Burlington

The depiction of nonnormative sex acts in written and visual forms throughout history.

Images and descriptions of various forms of same-sex and opposite-sex desires and acts have existed for millennia, serving a variety of purposes over the course of human history. In some instances, they were intended to stimulate the senses and inspire sexual desire. In others, depictions of sexual acts were meant to serve explicitly political purposes by creating opportunities to critique monarchs or government officials. The word pornography—which is Greek in origin and translates roughly as “to write about prostitutes”—was not used to describe material of this sort, in any kind of sustained way, until the nineteenth century. Still, historians interested in this topic have frequently applied the term to a variety of representations from different periods and regions ranging from seventeenth-century England (Toulalan 2007) to twenty-first-century China (Jacobs 2012). As a field of study, explorations of pornography have generated considerable scholarship since Steven Marcus produced his landmark study The Other Victorians: A Study of Sexuality and Pornography in Mid-nineteenth-Century England (1966), as evidenced by the creation of the journal Porn Studies in 2014.

Scholars interested in the subject of sexual representation have tended to struggle with definitions. Some, for example, have sought to differentiate pornography from erotica, with the former, as historian Karen Harvey (2005) has noted, defined as material that contains explicit and repeated references to sexual organs and acts, and the latter being more likely to achieve its erotic ends through the use of allusion and metaphor. Still others, such as historian Ian Moulton (2013), use the phrase “erotic writing” to describe sexual representations in the early modern period. For the purposes of this entry, the word pornography is used in its widest and most encompassing sense to trace the long history of erotic representations intended to stimulate desire while simultaneously, perhaps, performing other cultural functions such as self-assertion and self-realization (Waugh 1996). Pornography is assumed to be one of the many ways in which elements of the LGBTQ+ experience might be reconstructed. To borrow from historian Lisa Sigel, “It acts as a mirror—or, more accurately, as a series of broken mirrors—that reflects, refracts, and distorts a picture of sexuality” (Sigel 2002, 2).
Erotic Images in the Ancient World

Images and texts that might be considered, broadly, as part of the history of pornography date to the ancient past. In the Greek world (c. 750 BCE–146 BCE) sex between men, in particular, was a feature of life in many of the diverse independent states that made up the archipelago. Reverence for the athletic nude body was a prominent feature of these cultures, reflected in the public statuary that dotted the landscapes of many Greek cities. While these works of art, familiar to many contemporary museumgoers, must have certainly piqued the erotic interests of ancient Greek men and women, other artistic forms were more clearly intended to titillate and excite sexual passions. Erotic verses, for instance, were recited at public and private celebrations, and depictions of sexual contact between the erastes (older men) and the eromenos (adolescent youths) were a common theme on the painted vases and drinking vessels that remain a vital source for historians interested in studying this period (Hupperts 2006).
Erotic images were also a feature of life in ancient Rome and the Roman Empire (c. 500 BCE–450 CE). While some moralists argued that homosexual relations were a pernicious import from Greece, and Roman law penalized sex between Roman citizens and freeborn boys (slaves were not covered by this law), it is clear that same-sex eroticism was an important part of Roman culture. Visual material that both depicted same-sex love and excited sexual passions survives and reminds us that, as in the case of the Greeks, relations between men and between women were not necessarily socially proscribed. For instance, a first-century CE silver drinking vessel, referred to as the Warren Cup, contains two erotic depictions of men having anal sex. It was purchased by the British Museum in 1999 for £1.8 million and has been the subject of academic disputes, with some claiming that it is a forgery (Alberge 2014). Similarly, images of various opposite-sex and same-sex acts have been unearthed in the excavated remains of the city of Pompeii, a Roman imperial resort located in what is now southern Italy, which was covered by hot volcanic ash when Mount Vesuvius erupted in 79 CE. Found in a brothel and in a bathhouse, these images of men having anal sex and women engaging in cunnilingus were meant to advertise the services of prostitutes and to stimulate desire (Williams 2010).

A tradition of erotic writing and imagery was also present in several non-Western contexts in the ancient period. In China during the Jin dynasty (265–420 CE) a tradition of erotic poetry that described male prostitution and sexual acts between men emerged (Hinsch 1990). Other ancient writings contained erotic content that could be used to instruct and to stimulate pleasure. One source, written in the classical Indian language of Sanskrit sometime between the second and the fourth centuries CE and titled the Kama Sutra, discussed sexuality in a frank and open manner. Intended as a commentary on various aspects of the human existence—as well as a rumination on love, desire, pleasure, and a whole host of experiences and emotions—it was also clearly used to stimulate the senses with descriptions of multiple sexual positions and same-sex relations. The subject matter of the Kamasutra was diverse and included descriptions of women using dildos and discussions of oral-sex techniques (Carton 2006). Similarly, depictions of same-sex behaviors were a feature of temple art in northern India (particularly in the district of Odisha). Carved sculptures on the outside of temple entrances were frequently explicit and depicted women engaged in sexual acts with other women or men, mutually masturbating or performing oral sex. Ceramic art produced in the period 150 to 800 CE by the Moche on the northern coast of Peru also dealt with erotic themes and in a number of instances depicted anal sex between male figures (Weismantel 2004).

The Tenth to the Seventeenth Centuries

Christianity and Islam, both of which took hold in Europe, the modern-day Middle East, and parts of Asia in the late ancient and early medieval periods, condemned homosexual acts, seeing them as crimes against nature and violations of God’s plan for humanity (though
Christianity tended to denigrate the pleasures of the flesh more than Islam, which placed a higher premium on sexual pleasure. Despite official injunctions against sodomy, male homoerotic texts and images still emerged as a component of medieval culture in Christian and Islamic territories. Celebrations of friendship between men in Christian Europe often contained homoerotic elements. The monk and theologian Anselm of Canterbury (1033–1109) ruminated in his writings on the nature of love in letters he wrote to his religious brothers at the Bec monastery in Normandy, France (Vaughn 2010). While historians have debated the degree to which pronouncements of this sort were sexual (as opposed to spiritual), the homoerotics of these texts must be considered as part of a broader history of textual and visual representations of desire. Islamic poetry and prose works, including one text titled The Meadow of the Gazelles: In Praise of Beautiful Youths by the Egyptian Muhammad al-Nawadj (c. 1383–1455), lauded the beauty and sexual allure of adolescent boys and young men. Intended to highlight varied expressions of human sexuality, texts of this sort reveal the ubiquity of erotic celebrations of same-sex desire (Patané 2006).

Sexually explicit images emerged as an important component of the visual cultures of China and Japan in what European historians tend to identify as the early modern period (1500–1750). In China, erotic writing and visual art depicting same-sex relations were prominent features of seventeenth-century culture. Works such as Jinpingmei (1611; The golden lotus) and Tuan-hsiu-pien (c. late 17th century; Records of the cut sleeve) contained detailed descriptions of sex between men. While less common, descriptions of sex between women appeared in seventeenth-century texts that detailed, for example, activities in a Buddhist convent. Illustrations, scroll paintings, and prints also depicted sexual acts in explicit terms. One showed a woman using a dildo to pleasure another, while multiple paintings from the period graphically illustrated men engaged in anal sex (Carton 2006). The tradition of erotic art was a prominent feature of Japanese culture during this period, as well. Known as shunga, these works appeared in painted form, in woodblock prints, and in books, and were especially popular during the Edo (or Tokugawa) period in Japanese history (1603–1868). Brothel scenes and depictions of anal sex between men, in keeping with several Japanese traditions that sanctioned these relations between older and younger Buddhist monks, samurai warriors, and actors, were prevalent features of these works (Clark et al. 2013; Screech 2009).

**European Traditions—Seventeenth and Eighteenth Centuries**

In Europe the emergence of a vibrant and extensive print culture in the late fifteenth century transformed the ways in which erotic art was produced and distributed in that region of the world. In the seventeenth and eighteenth centuries pornographic texts and images were a common feature of European cultures. Much of this printed work was frequently expensive (though prices did begin to decline from the seventeenth century)
and beyond the reach of the many ordinary men and women who remained illiterate. It was also often, in terms of intent, not exclusively about arousing sexual desire or providing erotic pleasure. As historian Lynn Hunt has observed about pornographic texts and images in this period, “If we take pornography to be the explicit depiction of sexual organs and sexual practices with the aim of arousing sexual feelings, then pornography was almost always adjunct to something else until the middle or end of the eighteenth century” (1996a, 10). In many instances, this work used explicit descriptions of human sexuality to address political developments such as the restoration of the English monarchy in 1660 or the power of the Catholic clergy and the aristocracy in prerevolutionary France.

Work depicting same-sex acts abounded in this context. Pietro Aretino (1492–1556), an Italian author, produced a fictional series of dialogues between two prostitutes in a 1534 publication that detailed both sameand opposite-sex acts. Sex between women was depicted both textually and visually, in particular, in The Dialogues of Luisa Sigea (c. 1659), a book by the Frenchman Nicholas Chorier (1612–1692). The acts highlighted in this text tended to be kissing, manual stimulation, and pubic rubbing. Though frequently criticized as a sterile or unproductive endeavor in this period, sexual acts between men were also represented in this flourishing print culture. The play The Farce of Sodom, or the Quintessence of Debauchery, first published in the late seventeenth century, discussed sex between men in explicit terms with the intention of both producing shock and stimulating desire (Toulalan 2007). This tradition of depicting same-sex acts in textual and visual forms continued into the eighteenth century. In England, modern pornographic traditions (with a primary emphasis on pleasure) were inaugurated by the publication in the 1740s of John Cleland’s Memoirs of a Woman of Pleasure (known also as Fanny Hill), a work that contained descriptions of sexual relations between women and between men alike.

**Pornography and Its Regulation—The Nineteenth Century**

The politically oriented pornography that proliferated during the era of the French Revolution (1789–1799) and critiqued the ancien régime by portraying, for example, members of the prerevolutionary National Assembly engaged in anal sex (Hunt 1996b) came to influence British traditions in the early nineteenth century, most notably the work of a London pornographer named William Dugdale (c. 1799–1868). Pornographic novels and texts that depicted homosexual acts or flagellation scenes between members of the same sex became a dominant feature of the book trade in mid-century Britain and elsewhere. In metropolises throughout Europe, the display of obscene literature in booksellers’ windows was an important part of the public culture of the city. Specific districts catered to the consumers of pornographic texts (such as the purported sexual memoir My Secret Life, published privately in the 1880s), the most notable being London’s Holywell Street, a thoroughfare near the Thames in the borough of Westminster (Nead 2000). It was in these spaces that same-sex-desiring men could purchase, in 1881, The Sins
of the Cities of the Plain, a pornographic novel that contained graphic descriptions of sex between men.

While various laws against obscenity had been enacted in different regions of the world before the nineteenth century (e.g., a 1722 Japanese regulation against shunga and other forms of erotica), this era saw increased efforts to suppress the distribution of pornography. Britain's Obscene Publications Act (1859) and laws in other European countries sought to enforce new standards of moral purity and maintain bourgeois gender ideals. In the United States in 1873, moral purity campaigners such as Anthony Comstock (1844–1915) persuaded the federal government to pass an act suppressing both the trade in and circulation of obscene literature, which included not just pornography but also material about contraception (Horowitz 2002). It is important to note that these efforts occurred at the same time that sexological definitions of normative and deviant sexuality emerged and antihomosexual laws were passed in Germany (in 1871) and Great Britain (in 1885).

New censorship laws were intended to thwart both the trade in pornographic texts and, increasingly, printed images, particularly those that appeared in the form of photographic cartes de visites (small images pasted onto cardboard). The trade in these images was global, with Paris functioning as an important center in Europe. Depictions of same-sex acts including fellatio, cunnilingus, anal sex, and mutual masturbation were common in this material and have been preserved in specialized archives such as the Kinsey Institute at Indiana University (Waugh 1996). Historian Dan Healey (2001) has noted that some social observers and legal officials in late nineteenth- and early twentieth-century Russia commented on the tendency of homosexual men to possess various sorts of pornographic postcards. Increased international travel and the movement of goods around the world meant that images from Africa, Asia, and the Middle East circulated freely by the 1880s and 1890s and contributed to the fetishization of non-European bodies during the age of high imperialism. Cheap and accessible pornographic postcards from this period also explored homosexual desire, with one set showing a female couple undressing as a preamble to sexual contact. Similarly, the now famous photographs by Wilhelm von Gloeden (1856–1931) of Sicilian and Tunisian young men, taken in the 1890s, were enormously popular among men who had sex with men (Waugh 1996). They were also further expressions of the Orientalist tendencies present in published works, including the essay by Sir Richard Francis Burton (1821–1890) on the “Sotadic Zone” (a region that included the Mediterranean and the Middle East where, he alleged, sex between men was a common practice), which was published with his English-language edition of tales from the region, The Book of the Thousand Nights and a Night (1885–1886).

**Pornography—The Early Twentieth Century**

Although textually oriented pornography did not disappear entirely in this period, the
marked turn toward the visual at the fin de siècle, embodied in the craze for postcards, foreshadowed important changes in the years after 1900. Some sources from this period, such as the Brazilian text O menino do Gouveia (1914; Gouveia’s boy), continued to combine explicit prose with detailed images of anal sex between older and young men (Green 1999). But the move toward pictures was undeniable. This era, a crucial one in the history of erotic images, witnessed both the growth of the pornographic magazine and the rise of the pornographic film, each of which was important to the formation of modern sexual subjectivities (Waugh 1996). Increasingly, as more explicit gay and lesbian identities developed in the late 1920s, the consumption and possession of sexological literature, novels dealing with same-sex desire, images of nude bodies, and pornography became an important way to delineate one’s place in the community of the same-sex desiring. Yet, legal restrictions on access to materials defined as obscene continued in many places around the world, occasionally limiting their consumption. For example, in Britain in 1928 access to The Well of Loneliness, an important lesbian novel by Radclyffe Hall (1880–1943), was challenged successfully in the courts, and the novel was banned as obscene.

These attempts to limit cultural representations of same-sex desire or material thought to be sexually stimulating did not keep them from appearing, though. Same-sex–desiring men (and to a lesser extent, women) could stimulate their fantasies in the early twentieth century by reading physical culture magazines or nudist publications common in Europe, North America, and parts of Asia. Aside from the magazines themselves, advertisements in American publications such as Muscle Builder and Strength and Health remind us that there was a robust trade in nude, male images among the readership of these magazines (Krauss 2014). The magazine format was especially important in Germany, where a flourishing same-sex–desiring and gender-nonconforming culture existed prior to the emergence of the Nazi state in 1933. One publication, founded by Adolf Brand (1874–1945) in 1896 and popular into the twentieth century, contained homoerotic images and nude photographs that occasionally got the magazine’s publisher in trouble with German officials. Other publications produced by the German entrepreneur Friedrich Radszuweit (1876–1932) appealed to same-sex–desiring men and women with erotic drawings and glossy pictures (Beachy 2015).

Similarly, erotic films began to appear shortly after the medium first gained cultural salience in the early years of the twentieth century. While male homosexuality seems to have been relatively rare in this early material, scenes between women (intended to stimulate men) were a feature of silent films of the 1920s that were played in brothels and in all-male environments in the United States, France, and Argentina (among other sites). Referred to as “stag” films, these cultural products attracted a variety of audiences by depicting homoeroticism or fleeting same-sex acts. Indeed, as Thomas Waugh and others have noted, these films’ use of “camp” and references to alternative sexual practices may have appealed to those who were covertly queer (Waugh 1996; Church 2016). Stag films were not the only nude productions from this era. Amateurs such as the American Otis
Wade created a series of home films from the 1930s through the 1950s that depicted nude men boxing and wrestling, masturbating, performing fellatio, and engaging in intercourse (Waugh 1996).

**The Emergence of Modern Pornography**

Images and publications intended for primarily gay male audiences proliferated in the 1950s and 1960s. In 1950 French author Jean Genet (1910–1986) directed the film *Un chant d’amour* (A song of love), which depicts male desire in a prison setting, employing images of masturbation and male penises. The film also dealt with the issue of interracial desire, literally revealing both European and North African bodies. Consumable items other than films appeared around this time, including new types of physique magazines that, as cultural products, fell somewhere between early twentieth-century physical culture magazines and the more explicit gay pornography that would take off in the 1970s. In the United States, the leading publication (begun in 1951) was *Physique Pictorial*, a venture started by Bob Mizer (1922–1992), founder of the Athletic Model Guild, an organization intended to represent the many young men who entered the modeling and acting professions following World War II (Krauss 2014). Mizer was not alone in his efforts. In Great Britain photographer and entrepreneur John Barrington began a similar venture in 1954 with the publication of *Male Model Monthly* (Smith 1997). While British consumers were drawn to American aesthetics and magazines, it is important to note that British aesthetics, too, were celebrated in publications such as *Man Alive: The Magazine of Britain's Top Physique Photographers* (first edition published 1958). Same-sex–desiring women had access to pornography that depicted opposite-sex acts or lesbian relations intended for male audiences, but customer-specific lesbian pornography seems to have been relatively limited in this period. That said, in English-speaking countries women had access to representations of female same-sex eroticism in lesbian pulp fiction by authors such as the American Ann Bannon (1932–).

Obscenity laws continued to regulate what could appear in print and in film, but by the 1960s, many traditional restrictions began to fall away as social attitudes about sexuality and nudity shifted and laws began to soften. With the advent of gay activism and radical liberationist politics in the late 1960s and 1970s, celebrations of gay and lesbian identities entailed not just the emergence of movements such as the Gay Liberation Front (in the United States, Great Britain, and Canada) and the Front Homosexuel d’Action Révolutionnaire (Homosexual Front for Revolutionary Action) in France but also the appearance of increasingly explicit pornography. In the United States gay magazines in the 1970s began to feature discussions of gay culture, full frontal nudity, and explicit sexual narratives. This trend was also evident in Great Britain, where the porn entrepreneur Alan Purnell started a magazine called *Him Exclusive* in 1974. This venture, which still had to contend with government censors, was a new kind of endeavor, committed to discussing
gay sexuality in a frank and open way and providing readers with alluring images that were anything but coy or ambiguous in meaning (Deslandes 2013). Similarly, a variety of explicit textual sources and images in this period documented the sex lives of trans individuals and contributed to their eroticization among different populations (some straight-identified and others queer). In the 1960s and early 1970s, for instance, pornographic memoirs such as Vivien Le Mans’s Take My Tool (1968) and Lyn Raskin's Diary of a Transsexual (1972) documented both gay sex and postoperative transsexual relations with heterosexual-identified men (Escoffier 2011).

The rise of print pornography during these years was accompanied by the rapid expansion of sexually explicit films that catered specifically to both heterosexual and homosexual audiences and built on earlier traditions, most notably stag films and work by artists such as Genet. In the United States and Great Britain, a trade in illicit films depicting same-sex acts between men developed in places such as San Francisco, New York, and London. Often shot on 8-millimeter film, these works were frequently distributed surreptitiously, literally “under the counter” (Waugh 1996). A vibrant soft-core industry that quickly achieved an international reach emerged during this period in Scandinavian countries such as Sweden and Denmark, where both homosexuality and pornography were decriminalized earlier than in Western Europe or North America. As with all forms of pornography, for many watching these films, pleasure was derived from viewing body types and aesthetics that were thought to represent particular national or ethnic traditions (Larsson 2017). The spread of soft-core films from Scandinavia and elsewhere, and their ability in some cases to evade censorship laws by simulating sexual acts and avoiding direct images of genitals, penetration, oral sex, or ejaculation, led to the growing popularity in the 1960s of what are sometimes referred to as “sexploitation” films. Depicting various acts and desires, these films had their origins in nudist-oriented features from the 1950s. By the 1960s these films became more explicit and began to explore more fully a diverse range of new topics including female homosexuality as the 1969 Swedish film Ur kärlekens språk (Language of love) did. As the 1960s gave way to the 1970s, attempts to prevent the release of these films were met with court challenges, some of which resulted in a loosening of restrictions (Stevenson 2010).

In the United States in particular, the film industry was transformed in several important ways in the late 1960s. The issue of homosexuality in film was brought to the fore with the release of John Schlesinger’s 1969 film Midnight Cowboy, which was set in New York City and focused on the relationship between a young man from Texas, Joe Buck, and a con man, Ratso Rizzo. While critics have disputed the nature of the relationship between Buck and Rizzo, the film’s depiction of male prostitution, violence, and same-sex intimacy earned it an X rating from the Motion Picture Association of America, which had implemented a new system in 1968 for assessing the age-appropriateness of films. Despite the X rating (a designation that came to be used almost exclusively for soft- or hard-core pornographic films), Midnight Cowboy went on to earn three Academy Awards, an indication that the
lines between pornography and art may have blurred in this period of rapid social change (Waugh 1996; Moon 1998).

While mainstream directors were attempting to deal with homosexuality and same-sex desire in more explicit ways, in the years immediately following the Stonewall riots in 1969 a thriving new gay pornography industry was producing a multitude of hard-core films (depicting “real” as opposed to simulated sex in explicit ways) for specialty theaters and home viewing. The most famous of these early movies was 1971’s *Boys in the Sand*, filmed on Fire Island in New York, which launched the career of the first real gay porn star, Casey Donovan (1943–1987). Films for same-sex–desiring women were limited in this period, but as Heather Butler (2004) has noted, depictions such as those in the 1968 sexploitation film *The King* provided relatively positive representations of lesbian sensuality and desire. The pornographic film industry, though dominated by Americans, was also present in other regions of the world. In Great Britain porn entrepreneur Alan Purnell produced an hour-length feature, *Hard Dollar Hustler*, and in France photographer Jean-Daniel Cadinot (1944–2008) began to turn his attention to pornographic films in the late 1970s. New pornographic traditions emerged in this period, as porn scholar Mireille Miller-Young (2014) has observed in her work on black women in pornography. With reference to what she refers to as “soul porn,” Miller-Young illustrates the ways these 1970s films could depict African American agency and at the same time, exploit earlier traditions of racial fetishization and objectification, especially when they were produced by whites.

By the 1980s gay porn (especially in the form of videotapes) was becoming a big business that created major stars such as Jeff Stryker (1962–) and Ryan Idol (1964–). As the AIDS crisis reached its height during the 1980s, the industry faced the issue of condom use, with some arguing that porn should continue to be about the fulfillment of fantasies and others (such as the gay American actor Glenn Swann) contending that pornographic films had an obligation to promote and teach about safe sex (Escoffier 2009). The late 1980s and 1990s saw a growing internationalization of the industry that led to the development of new centers of gay pornographic production in the Czech Republic and Hungary. In part, the growth of these centers was born out of economic desperation in these countries, where sex workers and performers were easily found as they struggled with the transition from Communist to capitalist economies (Jacobs 2007). BelAmi Studio, founded in 1993 in Slovakia, capitalized on this moment and became a major producer of gay pornography as the twentieth century gave way to the twenty-first. In post-Communist Russia, as historian Healey (2010) has noted, gay films began to appear during the 1990s and early in the next decade. While many of these, such as the Military Zone series, were made by foreign directors using Russian actors, some were indigenous, such as the film *Kazaki* (2004; *Cossacks*).

**Sex Wars and Contemporary Pornography**
The pornography industry was not without its detractors during this period. The 1980s witnessed the so-called feminist sex wars, a series of polarizing debates that divided feminists on a number of issues related to sexuality, including pornography. On one side were anti-pornography feminists such as Catharine A. MacKinnon (1946–) and Andrea Dworkin (1946–2005), who argued that pornography degraded women, perpetuated patriarchy, and encouraged sexual violence. On the other side of the divide were women such as Ellen Willis (1941–2006) who embraced “sex-positive” feminism, decrying puritanism and authoritarianism and arguing that the healthy enjoyment of female sexuality was central to liberation. Sex-positive lesbians used this opportunity to create their own explicit magazines, such as Bad Attitude and On Our Backs. Additionally, in 1985 a specifically female production company, Fatale Media, was created by Nan Kinney to produce pornographic films made by and for women. Depictions of same-sex relations between women and teenage boys (in both romantic and explicit terms) also appeared in Japanese manga (comics) and anime (animated films) beginning in the 1970s (Shamoon 2004).

Even as these debates were unfolding, the pornography industry was diversifying in significant ways. Entrepreneurs sought to capitalize on a variety of tastes and acts deemed transgressive by the majority culture, in an attempt to expand their market. One tradition that emerged in the early 1990s was what has been called “tranny” or “shemale” porn. Representative movies such as those in Joey Silvera’s Big Ass She-Male Road Trip series featured straight-identified men having sex with trans women who had breasts and female features but retained their penises. Many of these films involved scripts that relied on a certain amount of gender and sexual play and a moment of revelation (sometimes referred to as a “tranny surprise”) when the central male-to-female actress’s “true” genitalia are exposed to her unwitting partner (s), usually during a moment of intimacy. As film and literary scholar John Phillips (2006) has observed, “Transsexual pornography plays on the tension between concealing and revealing to generate maximum excitement in the viewer” (2006, 154). By early in the first decade of the twenty-first century, so-called strap-on videos in which female-to-male trans actors used dildos to penetrate male-bodied men also began to appear with greater regularity (Escoffier 2011).

This era also witnessed a continued fetishization of racial difference. Building on historically contingent stereotypes of Asian men as passive and feminine, films featuring Asian characters such as Secret Asian Man (1984) cast them as subservient and submissive to white men (Capino 2006). Attention to this gendering and positioning of Asian men in gay pornography was first introduced in the seminal work of Richard Fung, who published an important essay on the topic, “Looking for My Penis: The Eroticized Asian in Gay Video Porn” (1991). A recent study on Asian American masculinity and sexual representation by Tan Hoang Nguyen (2014) offers a reassessment of what the author labels Asian “bottomhood” in a variety of cinematic productions. In his work, Nguyen seeks to destabilize the top/bottom binary and the supposed fixity of racial categories by blurring
important lines between the masculine and the feminine, agency and victimhood, and pleasure and pain (Nguyen 2014). The tendency to fetishize racial “Others” was not, of course, exclusive to the United States. In France in the 1990s and the next decade, filmmaker Jean-Noël René Clair’s series Studio Beurs cast a colonialist gaze onto the bodies of French Arabs in poverty-stricken Parisian suburbs (beurs being the term for second- and third-generation French residents of Arab descent; Rees-Roberts 2008). While racial fetishization was common in this period, it is important to note that some men of color such as Enrique Cruz and Tiger Tyson (1977–) created videos that sought to capture African American and Latino sexual cultures more accurately (Escoffier 2009).

Since the 1990s, pornography geared to the same-sex desiring and depicting same-sex acts has been dramatically transformed by the rise of the internet. Pornographic images and films are ubiquitous on the web, with a nearly endless supply found on sites such as Xtube and Pornhub catering to a variety of interests and identities. On these sites, pornographic videos featuring trans actors appear alongside those geared to individuals interested in BDSM, leather, or interracial sex. Many of these sites blur the distinction between the professional and the amateur, with do-it-yourself videos having a considerable presence. For example, female-to-male trans porn actor Buck Angel has commodified his body online by promoting himself as a “dude with a pussy” in an effort to engage in a range of nonnormative gender performances and appeal to a diverse array of sexual desires (Jacobs 2007, 100). Similarly, ordinary people can acquire porn-star status by streaming themselves stripping, masturbating, or having sex with partners on sites such as Chaturbate. Blurring another line, international websites such as Manhunt and social media apps such as the US-based Grindr and Scruff and the Beijing, China–based Blued function not just as digital spaces where individuals can connect for romance and sex, but also as de facto porn sites, with individuals posting nude pictures and depictions of sexual acts. The internet represents a new frontier for both consumers and historians of porn. As the ending point for this entry, it reminds us that the history of pornographic images is ongoing and an area of study ripe for further exploration.

BIBLIOGRAPHY

The queering of pornography produced in Asia, with a focus on film and digital media.

The transnational circuits of pornography in various parts of Asia cut across multiple mediums ranging from woodblock prints, illustrations, scrolls, erotic poetry, paintings, performance forms, and storytelling practices. The focus of this entry, however, is primarily on print, cinematic, and digital media productions that are centrally located in modern capitalist regimes of sexuality. There is a diverse range of linguistic and cultural differences in the geographical terrain broadly termed as “Asia”; this entry deals principally with the regions categorized as South Asia, East Asia, and Southeast Asia.

When looking at multiple contexts in Asia, one encounters the dispersed trajectories of graphic sexual representations that often invite censure and yet persist as the heady underside of public culture. As Tan Hoang Nguyen argues, the “unanticipated flashes” of embodied affective responses while encountering moving-image media are crucial to mapping the nonlinear terrains of queerness in Asia (2014, 25). LGBT movements in different parts of Asia deploy the shifting nature of the pornographic for subjective explorations of sexuality and for community formation. The representational practices, modes of address, and codes of identification of commercial pornography, such as the “top-bottom” dynamics in Asian and Asian American gay porn, has opened up new directions for the study of sexuality, race, and the global formations of queerness (Fung 1991; Nguyen 2014).

A QUEER READING OF THE CHINESE SOFT-CORE FILM SEX AND ZEN II (1996)

This sex drama is the second film of the hit series Rouputuan (marketed as Sex and Zen in the West) from Hong Kong. Rouputuan Er Yunuxinjing (marketed as Sex and Zen II in the West) reveals the sexual exploits of a despotic lord who forces his daughter, Yiau, to wear a chastity belt and attend school disguised as a boy to preserve her virtue. A saga of sex and scheming begins when a demon known as the Mirage Lady enters the lord’s household disguised as a beautiful woman with immense sexual prowess. The Mirage Lady uses her sexual power to draw the energy out of her victims, both men and women, until they die. After killing several other members of
the household, she kills Yiau's father by making his insatiable penis explode, setting up a dramatic confrontation with Yiau. The actress Qi Shu (1976–), who later moved out of the B-grade circuit to achieve superstardom, plays the lead role of the Mirage Lady. In the film credits, in publicity materials such as posters, and in user comments on YouTube, the female stars Shu and Loletta Lee (1966–) are given top billing. The film taps into the commercial market for soft-core pornography.

The Sex and Zen series is based on the erotic novel from Qing China *Rouputuan* (1657; *The Carnal Prayer Mat* [1996]). Scholars have argued that both the implicitly homoerotic and the explicitly homosexual relations between men in this early modern text are erased in its contemporary adaptations that are marketed to appeal to heteronormative desires of men (*Chiang 2015*). But in spite of these erasures, *Sex and Zen II* transports us to an irreverent and fantastic world of sexual and gender play. The climax of the film is an electrifying sex scene between the Mirage Lady and Yiau where the Mirage Lady metamorphoses into a “man-mixed-woman” and penetrates Yiau with her penis. The homosexual encounter between the two women and the gender crossing of the Mirage Lady drive this erotic revenge drama. With its fixation on prosthetic, transferable, and perishable penises, its scenes of women’s sexual ecstasy, such as Yiau’s orgasmic dreams, and its shape-shifting of bodies and desires, this film opens up possibilities for a queer reading. The third film of this series, which was released in 2011, is the first Chinese 3-D pornographic film.

**Prohibition and Proliferation**

In such countries as Japan, India, and Singapore, the consumption of pornography for private purposes is legally sanctioned; but there are multiple controversies over the public circuits of pornography. In other countries, such as China, Malaysia, the Philippines, and Indonesia, pornographic materials are actively banned. Yet, these differing legal positions and policies cannot be translated into a neat mapping of the status of pornography in these countries. For example, the wholesale ban of pornography in mainland China, which also functions as a means to control political content, is less effective in regulating online
pornography in comparison to Hong Kong, which has a permissive policy but enforces a more orderly classificatory system (Yan 2015).

Rather than conceptualizing censorship as a repressive mechanism, scholarship from the second decade of the twenty-first century has focused on the productive relation between pornographic objects, circuits, and forms of censorship (Mazzarella 2013; Hoek 2014). In multiple contexts in Asia the recognition of LGBT identities and desires has been tied to the proliferation of erotic print and visual media forms. Scholars note that in Japan in the 1920s the popularity of the cult genre of *ero-guro nansensu*, or “erotic grotesque nonsense,” ran parallel to newly emerging interest in “queer sexuality” (McLelland 2011, 2015). In this period there was an increase in representations of male and female same-sex relations and gender nonconformity that later had an impact on the publication of early queer commercial magazines after World War II (1939–1945) in Japan (McLelland 2011). Erotic print media, which also popularized sexology, played a generative role in shaping the discourse of homosexuality with commercially successful gay magazines such as *Barazoku* (Rose tribe), which started publication in 1971 and had a successful run until 2004.

The Philippine porn industry is one of the most lucrative underground porn industries in the Asian region, making huge profits by recording, producing, and marketing pornographic materials. The flea markets in downtown Manila showcase a wide range of contemporary DVD products, including straight and queer pornography, marking it as an urban milieu that partakes of queerness through its own pirate technologies (David 2006). Another popular black market in queer pornography can be found in Thailand. While Thailand’s penal code prohibits the production, possession, and distribution of obscene publications, the enforcement of these laws is relaxed, and commercial gay culture has proliferated alongside the larger heterosexual entertainment industry. Peter A. Jackson (2011) observes that in the twentieth century Thai gay capitalism was often an underground phenomenon, linked to a black market in illegal pornography; but in the twenty-first century Thai gay and lesbian capitalism has increasingly become a legitimate, aboveground phenomenon with the rapid growth of mainstream investment in the commercial gay scene. Thus, the traffic in queer pornography in such Asian cities as Bangkok, Manila, and Tokyo constitutes nodal points that play a decisive role in shaping global cultures of queerness.

**Erotic Film Cultures**

There is a long history of production of erotic films in various regional contexts in Asia. These “dirty” films are often exorcised from sanitized histories of national cinema. Ali Nobil Ahmad comments on the “barefaced provocation” of Pashto and Punjabi musical numbers that cater to the working poor from Pakistan and Afghanistan (2016, 11). These films are also characterized by low production values and belong to genres of excess, such as horror, romance, and action. These regional film industries have also tapped into changing
technologies, such as VCDs, DVDs, and digital networks; Japanese adult videos have been highly popular in China and Taiwan since the 1990s.

Soft-porn theaters in India and Bangladesh that screen films containing “cut-pieces” (illegal pornographic bits that are inserted at the stage of exhibition) have functioned as a male domain of sexual pleasure that carries an air of disrepute. But these cinematic productions have also facilitated the stardom of leading actresses. The South Indian soft-porn film industry in the 1990s and early in the following decade led to the stardom of the actress Shakeela (1973–), whose films generated box-office receipts rivaling those of male superstars. Pashto films such as *Haseena atimbum* (1990; *Haseena atom bomb*) and *De khwar lasme spogmay* (1997; *Half moon*) gave cult status to voluptuous action heroines. Soft-porn theaters, marked as seedy and unruly, have also historically functioned as gay cruising spots in various cities and towns in Asia. The spatial and bodily practices facilitated by these collective spaces of film viewing have a significant role in fashioning queer cultures.

Scholars argue that sensational “body genres,” such as horror, romance, and exploitation dramas, often throw open the realm of queer sexuality. Katrien Jacobs (2015) explores soft-core erotic films from Hong Kong since the 1990s such as the *Yu pu tuan* (Sex and Zen) series and the *Liu jai yim taam* (Erotic ghost story) series, which stage queer scenes in supernatural settings. Ben Murtagh (2013, 83) observes that provocative Indonesian films, such as *Pembalasan ratu pantai selatan* (1989; *Lady Terminator*) and *Gadis metropolis* (1991; *Metropolis girl*), which project the stock figure of the “murderous lesbian,” have put into circulation gay, lesbi, and waria (transgender) representations on-screen. It is in these messy circuits of excess and sensationalism that normative sexual arrangements come under stress and unravel in disruptive ways.

**Digital Media and Pornography**

Transnational circuits of pornographic materials have been central to shifting media economies since the first years of the twenty-first century, with the popularity of mobile phones and increasing internet penetration. Nishant Shah (2007) observes that the internet does not merely become a medium for the circulation of pornographic materials; the interactions on multiple platforms such as IRC (internet relay chat) and blogs shape the category of netporn. There are multiple cracks and slippages in the conception of objects deemed to be pornographic, and attempts to curtail its flow are often met with greater innovation by users, distributors, and producers (Malhotra 2010).

This proliferation of interactive digital media networks has led to battles over censorship. Jacobs (2015) observes that in China’s rush toward cosmopolitanism and consumption there is a relative openness to sex entertainment industries that coexists with stringent antiobscenity measures. Jacobs traces how, in the face of these paradoxical formations,
Netizens are critical of massive corporate networks and attempt to build smaller crossborder initiatives. Noncommercial queer online micro movies, sexually explicit DIY (do-it-yourself) videos, sex blogs, and naked self-portraits are various tactics through which queer activists and artists in China, Hong Kong, and Taiwan participate in shaping sexual cultures in the face of stringent policing mechanisms by governing agencies. In other contexts, such as Thailand, increasing internet accessibility and the growth of queer social networking sites, such as Camfrog, since 2000 have supported the proliferation of real spaces and venues of queer consumption and socializing (Jackson 2011).

LEZHIN: SOUTH KOREAN WEBTOONS FOR MATURE AUDIENCES

The website Lezhin, owned by Lehzin Entertainment, carries the tagline “Your Fantasy — Our Content.” This portal, which offers premium webtoons for mature audiences, was established by South Korean blogger Heesung Han in 2013. It is offered in Korean, Japanese, and English, and it serves the global market. This is a paid site, though some chapters of a title are offered for free. Most titles include sexually explicit content. The obscenity laws in South Korea treat manhwa (Korean comics) published online differently from print publications, so the more graphic and risqué manhwa often takes the form of webtoons.

One of the main categories, boys’ love (BL), appears as a prominent link on the website’s landing page, featuring titles such as Make Me Bark and I Am Yours, Blood and Soul. A popular BL series distributed by Lezhin, Killing Stalking, by the female artist Koogi, moves into the edgy realm of obsession, torture, and sadism. From fluffy romances and everyday erotic stories set in schools and workplaces to sadomasochistic dramas, the website offers a wide range of material. In addition to BL, the site also features girls’ love (GL), a genre involving sexual and romantic relations between women, linked to lesbian-themed works in manga since the 1970s, with titles such as Elixir, Girl in the Birdcage, and What Does the Fox Say. The titles are categorized as “mature,” “romance,” or “fantasy,” and there are warnings for explicit content. The flourishing online presence and global marketing of erotic manhwa from East Asia points to the transnational terrains of queer cultures of pornography.

Queer Crossings

Pornography in Asia points to the volatility of codes of desire. Poorva Rajaram (2015)
comments on how, in her search for lesbians on-screen in India, she came across a playlist on YouTube titled “hot lesbo” consisting of sequences from multiple regional language films that featured “women-on-women” scenes: “They weren't ‘lesbians,’ but the videos spoke in a double-tongue: these women were clearly playacting the role of both a man and a woman. At another level, they were also women romancing each other.” Through these gyrations of doubleness, cultural artifacts orchestrated for heterosexual masculine consumption are reappropriated into a lesbian economy of desiring.

The queer circuits of pornographic film productions are opened up in the studies on “pink films,” the largescale production of erotic films by independent studios since the early 1960s in Japan. While there are a small number of gay pink cinema productions, such as 

*Kyokon densetsu: Utsukushiki nazō (1983; Beautiful Mystery)* and *Anata-ga suki desu, dai suki desu (1994; I like you, I like you very much)*, the bulk of these productions feature heterosexual sex acts. Yet the film-viewing culture facilitated by pink cinema is around libidinal encounters between men that cannot be mapped onto a linear project of gay identity formation. In pink cinema theaters “displaying heterosexual porn stories to audiences of heterosexual men who are there to have sex with other straight or queer men, there is no simple way to trace gender positions from screen representation to spectator performance” (Arnold 2015, 18). Experimental queer cinematic productions such as *Sugar Sweet (2001)*, *I.K.U. (2001)*, and *Ho yuk (2002; Let’s Love Hong Kong)* consciously play on the borderlines between pornography, virtuality, and queerness.

The unpredictable crossings between content, address, and embodied modes of reception in the mise-en-scène of pornography allow for heterogeneous conceptions of queerness that can take into account affective domains of shame and submission. In an insightful analysis of queer moving images from Asia, Nguyen argues that commercial gay porn “invite[s] viewers to identify with the bottom as much as, if not more than, the top” (2014, 11) and he argues for “a politics of bottomhood that opposes racism and heteronormativity without scapegoating femininity” (2014, 15). Nguyen’s interventions conceptually engage with pornographic forms in order to open up critical ways to dismantle racism alongside heteronormativity.

**Fan Cultures**

It is important to look at the flourishing fan cultures of another popular form from Japan, *yaoi* or boys’ love (BL)—a genre of manga (animation and text-based fiction) for women, created by female artists, featuring intense homoerotic relationships between idealized youthful male characters. Although this genre is marketed primarily to young heterosexual women in Japan, in practice the fantasy world of yaoi attracts a wide range of readers, authors, and reading practices.

There is a vibrant network of production and circulation of yaoi and BL to different parts of
Southeast Asia and East Asia, such as the Philippines, South Korea, and Taiwan, through local yaoi fan meetings and active participation in online fan community sites (Martin 2012; Fermin 2013). Fans tinker with the gender and sexual regulations that shape their local contexts using these immersive forms that disrupt the “synchronicity of ‘sexual identity’ and sexual fantasy” (McLelland 2003, 58). In such contexts as the Philippines, yaoi is identified with issues of homosexuality, and the themes of these genres function as spaces for the development of lesbian sexual identities (Fermin 2013).

Scholars have argued that bara manga, which is marketed to homosexual men, has to be contextually analyzed in relation to the narrative and artistic practices in such popular gay magazines as Barazoku and Bádi in Japan (Baudinette 2016). Instead of characterizing bara manga as hypermasculine and reading it solely in contrast to the androgynous male figures in yaoi, Thomas Baudinette (2016) observes that different styles of bara create diverse representations of gay subjectivity. He also argues that erotic bara, which often deploys sadomasochistic plot elements, is not intended to fashion gay subjectivities and practices; the exaggerated muscular bodies and close-ups of anal and oral penetration aim at arousal and should be seen as a marketing strategy. Thus, the transnational fan cultures of manga and its linkages to queer desires open up a rich field for analysis.

**Mass Media and Sexual Journeys**

It would be misleading to position the commercialized industry of pornography and its market-driven practices as “queer counter culture” or to celebrate it as consciously putting into motion oppositional sexualities (Boellstorff 2003, 23). Female-friendly pornography production companies, such as Silk Labo in Tokyo, also capitalize on set conceptions about what women would like to see on-screen (Hambleton 2016). Therefore, it is necessary to take into account the more contingent and unstable relations between mass media and subjectivity and trace how queer subjects and groups deploy these materials in inventive ways for their own ends.

Joseph N. Goh (2017) observes that in Malaysia, in the light of the legal prohibition of all materials deemed to be indecent, pornography shares similar spaces with the criminalization of nonheteronormative sexual expressions. Goh draws on his interviews on issues on sexuality and faith with “gay-identifying” and “bisexual-identifying” men in Malaysia who primarily access pornography through the internet and use such websites as Pornhub and RedTube. In these candid narratives, the respondents characterize pornography consumption as a means for the performance and sense making of sexuality. Pornography thus becomes the instrument through which they “secure ‘permission’ to enter into the realm of sexual pleasure on their own terms” (Goh 2017, 457) and complicate the scripts of morality and deviance. Goh maps the mediated process of queer self-fashioning that moves beyond simple notions of illegality and vilification.
In her 2016 personal narrative about coming to terms with her transgender identity in India, Nadika Nadja foregrounds the formative role of pornography, ranging from Nancy Friday’s *Forbidden Flowers* (1973) to Crash-PadSeries.com:

> My coming out as a trans person happened slowly. Tentatively. Seeking firm ground and fast friends. And as I came out and became confident in my identity, I came out as someone who loved porn. All kinds of porn. It was porn that told me it was okay to be a girl even if others thought you were a boy. And that it was okay to like girls, even if you were a girl who was thought of as a boy.

In South Asian alternate digital media sites, there are multiple narratives about using the internet for accessing pornography as a way of exploring queer sexuality and for building online community networks. An area in need of further research is how queer subjects in different parts of Asia with differential access to media technologies draw on the expanding world of pornographic practices to navigate their sexual journeys.

There are significant efforts underway by feminists and queer groups to tap into digital technologies, visual art, writing, and filmmaking in order to create an alternate body of erotic productions that can speak to queer desires. But queer possibilities are also at play in the larger field of public cultures of sexuality in Asia, be it a soft-porn thriller, commercial gay porn, the *jhatka* (jerk) of a Hindi film heroine in a song-and-dance sequence, or the excitement of being part of a community of yaoi/BL fans. It is in these proliferating commercial circuits of the pornographic, alongside activist initiatives to produce queer porn, that the varied imaginations and practices of “queer Asia” can be located.

Pornoterrorismo and Post-Porn

MARIELA SOLANA
Assistant Professor of Cultural Practices, Institute of Initial Studies
Universidad Nacional Arturo Jauretche, Argentina

An artistic and political practice active throughout Latin America that aims to liberate and empower sexuality through the subversive resignification of pornographic images.

Pornoterrorismo is an artistic and political practice that uses explicit representations of the body in performance art, poetry, film, body art, music, and other artistic devices to question sexual and gender normativity and to promote a sex-positive attitude. Originating conceptually in Spain with the work of Diana J. Torres and taken up and reinterpreted throughout Latin America, especially in places such as Argentina, Chile, and Colombia, it can be understood as a form of post-porn critique because its response to the oppressive sexual representations of mainstream pornography is not censorship but rather the subversive resignification of pornographic images. The “Pornoterrorist Manifesto,” signed by many artists from all over the world and published online in 2009, defines it as “a form of insurgence, divergence, counter-hegemony, subversion, a sexual insurrection, and an objection to gender” (Torres et al. 2009; translation by author). Pornoterrorismo uses art, especially performance art, as a laboratory to liberate and empower sexuality, to experiment and play with nonnormative fantasies and desires, and to make visible a wide range of queer bodies and pleasures. Even though the word terror is included in its name, its ultimate purpose is not to generate fear—although a liberated sexuality can be scary—but rather a state of excitement and arousal that shakes and provokes the audience to think about the politics of bodily representation. Some of the themes that emerge in pornoterrorism include BDSM, ecosexuality, queer sex, non-ableist sex, do-it-yourself and amateur sex videos, menstruation, visceral images and fluids, excrement, fisting, squirting, de-genitalized pleasure, and the use of dildos and other sex toys. Pornoterrorism also purposefully depicts bodies that are not typically included in mainstream pornography (at least in a necessarily positive light), such as ones that are fat, old, pregnant, and trans.

Pornoterrorismo is an artistic practice closely linked to the Spanish queer scene—especially to people such as Torres, who first published Pornoterrorismo in 2011, but also to other Latin American post-porn artists, including Leonor Silvestri from Argentina, Felipe Rivas San Martín from Chile, Nadia Granados from Colombia, and Felipe Osorno from Mexico. It has been strongly influenced by gender and sexuality studies, especially by queer theory, sex-positive feminism, transfeminism, and porn studies. In addition to being a form...
of sexual and gender critique that questions mainstream pornography, it also questions institutionalized art, the capitalist economic system, and international and local social injustice.

**Beginnings**

In September 2001 Torres and Pablo Raijenstein were invited to create and stage an artistic performance in Madrid. A few days before their presentation, the terrorist attacks known collectively as 9/11 occurred in the United States. Affected by the ways the media handled the attacks, especially in light of the anti-Muslim propaganda they promoted, Torres and her partner realized that they needed to change their original performance to address terrorism “but in a very dirty way,” as Torres noted in a 2009 interview that was posted on YouTube in 2010. In a classic post-porn strategy, their new performance resignified and sexualized the images provided by the media: they created an image of a woman in a burka penetrating the anus of a man with an American flag draped over his body. They called this performance “pornoterrorismo”—coining the term—not only because it was a sexual parody of the increasingly tense relationship between Islam and the United States but also because they wanted to provoke the audience by using the term terrorism in an artistic intervention and by linking it to the pornographic. A few years later, Torres reflected on the powerful connection of these two terms: “Is there a more beautiful fusion than that of the words ‘porn’ and ‘terrorism’? The erotics of terror, an unexplored land that opens itself up like a corpse for an autopsy” (Torres 2014, 50; translation by the author).

It is clear, however, that the means of violence involved in pornoterrorist interventions differ greatly from those of traditional terrorist attacks. The preferred weapons of pornoterrorismo are not guns or bombs but rather politicized bodies, sex, and fluids in imagery and text. These weapons seek to terrorize society’s rigid morality but only as a response to the terror that queer people experience on a daily basis. Torres has suggested that the etiology of the word terror includes the onomatopoeia “trrrrr,” the phonetic representation of a tremor: “And I am convinced that many people would tremble if the world was the way I imagine it, they would live in fear just as I do in their own world” (Torres 2014, 53).

Torres’s 2001 performance was not immediately followed by other pornoterrorist actions by herself or others. It was only in 2006 that she decided to dedicate herself fully to developing this kind of performance. New groups and artists, both in Spain and Latin America, had begun to emerge around that time following a similar postporn spirit, such as Post-op, Quimera Rosa, the Go Fist Foundation, Girlswholikeporno, Lucía Egaña Rojas, María Llopis, and Itziar Ziga from Spain; Ludditas Sexuxuales and Acento Frenético (Frenetic Accent) from Argentina; and Colectivo Universitario de Disidencia Sexual (CUDS; University Collective of Sexual Dissidence) and Hija de Perra (Daughter-of-a-Bitch) from
Post-Porn, Mainstream Porn, and Porn for Women

Many artists whose works engage pornoterrorist and postporn practices, both in Spain and Latin America, consider the work of Annie Sprinkle (1954–) a starting point for their own artistic interventions (Torres 2014; Llopis 2010; Milano 2014). Even if the term post-porn was coined by the Dutch artist Wink van Kempen in the 1980s, Sprinkle is usually regarded as responsible for popularizing the post-porn movement in the early 1990s. Sprinkle is an American ecosex activist, sex-positive feminist, and performance artist. She is also a former prostitute, porn actress, and porn director. In the early 1980s, dissatisfied with the mainstream porn movies she was working in, she decided to make her own films. In 1981 she wrote and directed Deep inside Annie Sprinkle, a movie that parodies porn conventions in order to tell a story from the perspective of the empowered female protagonist. As the film scholar Linda Williams suggests, what is novel about Sprinkle’s work “is that she injects elements into this narrative that disrupt the active male/passive female paradigm of conventional pornography” (1993, 124). A few years after creating porn videos, Annie applied her sexual expertise to creating artistic performances and thus became one of the most iconic names in the world of post-porn. Between 1989 and 1996, she toured around the world with the Post Porn Modernist Show, a theater piece that included the famous “Public Cervix Announcement,” an act in which she invited the audience to investigate her cervix with a speculum and a flashlight.

As is well known, pornography was one of the dividing lines in the so-called feminist sex wars of the late 1970s and early 1980s. Spanish and Latin American post-porn artists align themselves with sex-positive feminists, and they dismiss anti-pornography positions from feminists such as Catharine A. MacKinnon (1989) and Andrea Dworkin (1981), who argue that porn is inherently degrading for women: “Pornography permits men to have whatever they want sexually … women bound, women battered, women tortured, women humiliated, women degraded and defiled, women killed” (MacKinnon 1989, 326–327). Even if they agree that mainstream porn is faulty, post-porn performers reject the political value of censorship and state control. The post-porn answer to hegemonic porn is not the elimination of pornography but rather queerly creative porn.

Post-porn is also wary, however, of the kind of work done by people such as Erika Lust, a Spanish porn director who specializes in making “porn for women.” For Lust, porn for women should be able to show what women want: hard-core sex but also romance, a good narrative, intimacy, “oral sex performed on women,” “consensual sex,” “modern men that share our values” (2008, 40; translation by the author). Lust also assumes that porn for women should be aesthetically pleasing. For instance, the female protagonist should wear “a cute Miss Sixty, Armani, or Mango dress” (24). Pornoterrorismo questions not only mainstream porn but also the sexual essentialism behind this sort of porn targeted for
women. According to María Llopis, leaving behind commercial porn for this new kind of porn would be like “jumping from a hot plate only to land on the flames” (2010, 12; translation by the author).

Post-Porn in Latin America

Latin American post-porn can be dated back to late in the first decade of the twenty-first century, when a group of underground artists influenced by feminism, LGBT activism, and queer theory turned dissident sex into an integral part of their artistic production. By early in the next decade, there were many post-porn festivals, workshops, and exhibitions taking place in major Latin American cities such as Buenos Aires; Lima, Peru; Mexico City; and Santiago, Chile. Latin American post-porn picks up some ideas from American queer theory and European post-porn but does so to deliver a message that addresses regional specificities (Milano 2014). For instance, it deals with the criminalization of abortion, institutionalized and ordinary machismo, femicides and male violence, homo-and transphobia, the rigid sexual morality of the Catholic Church, postcolonial problems, and the colonial legacies of social and racial inequality. In addition to this, Latin American post-porn artists distrust new forms of gay and trans normalization, and they question hegemonic forms of feminism that focus mainly on obtaining legal reforms. The post-porn critique of homonormativity is especially relevant in countries such as Argentina, Uruguay, and Brazil where LGBT demands, particularly same-sex marriage, have become part of each respective state’s political agenda.

Thus, the social and political histories of Latin America have directly shaped post-porn production throughout the continent. This is the case, for instance, with the video performance “Ideologia” (2011; Ideology), by the Chilean artist Felipe Rivas San Martín. This piece combines Chilean archival footage from the period before Augusto Pinochet’s military dictatorship with BDSM images and gay porn. Meanwhile, Rivas reads a text about his activist past and masturbates. The video is a provocative reflection on the homoerotics of left-wing politics, and it ends with a “cum shot” of Rivas on a picture of Salvador Allende, the Chilean socialist president who was overthrown by Pinochet’s coup in 1973. Despite being selected for an exhibition at the Centro de Extensión in Valparaiso, Chile, in 2016, by the National Council of Culture and Arts, the video was later censored by the Chilean Ministry of Culture because it contained sexual images not suitable for minors.

Another example of how local social issues make their way into post-porn art is the work of the Colombian artist Nadia Granados, also known as La Fulminante. Abortion, compulsory motherhood, and male violence are common topics in her work. La Fulminante, her over-the-top artistic character, embodies the stereotype of the horny, sexy Latina but with a twist: she is too shocking, too provocative, and sometimes even gross and repulsive. In her performance “Clean Car, Dirty Conscience,” presented at the 2012 Rencontre Internationale d’Art Performance in Quebec, Canada, she washes a car covered with mud, pouring water...
over both the car and herself, imitating the archetypal porn scene of the sexy car wash. A man inside the car interrogates her using a megaphone, asking a series of abusive questions, first personal and then sexual, simulating a visa interview for entering the United States. The piece starts and ends with Granados in a trash bag, implicitly alluding to the ways in which victims of femicide are sometimes found in many Latin American cities, such as those along (or near) the US-Mexico border. The performance is thus a critique not only of the dehumanizing immigration policies of developed countries but also of the misogynist dehumanization of women who are literally turned into trash as a result of male violence.

PHOTOGRAPH TAKEN BY PATRICK ALTMAN, COURTESY OF ÉDITIONS INTERVENTIONS

Colombian Artist Nadia Granados Performs "Clean Car, Dirty Conscience" at the 2012 Rencontre Internationale d'Art Performance in Quebec, Canada. In this piece, Granados, also known as La Fulminante, hijacks the archetypal porn scene of the sexy car wash to critique not only the dehumanizing immigration policies of the United States but also the misogynist dehumanization of women.

Other important Latin American post-porn artists include Leonor Silvestri, part of the Argentine group Ludditas Sexxxuales, who has collaborated with Diana J. Torres reciting poems in collective performances, and the Mexican artist Felipe Osornio, also known as Lechedevirgen Trimegisto (meaning “milk of the Virgin of Trimegisto”), whose work addresses the violence and vulnerability of queer masculinity in homophobic cultures. The artistic works of Frau Diamanda from Peru, Azael Valderrama from Colombia, Hija de Perra
from Chile, and Acento Frenético from Argentina are also worth mentioning.

**Feminism, Queer Theory, and “Cuir” Theory**

Post-porn and pornoterrorismo are self-reflective movements that have been strongly informed by critical theory, especially sex-positive feminism, transfeminism, queer theory, and pornography studies. Some of the books most commonly cited by Latin and Spanish post-porn artists are *Gender Trouble* (1990) by Judith Butler, *Testo Junkie* (2013) by Beatriz (Paul B.) Preciado, and *King Kong Theory* (2009) by Virginie Despentes. These authors are invoked to attack male domination, heteronormativity, and sexual essentialism, to support a performative account of gender and sexual identity, and to defend sex work and sexual dissidence. Preciado and Despentes are also considered active members of the Spanish post-porn scene. Preciado is particularly important because he organized the “Post-porn Marathon” at the Barcelona Museum of Contemporary Art in 2003, probably the first major post-porn festival in Spain. Some of these post-porn writers and artists, such as Preciado or the members of CUDS, defend the need to produce dissident knowledge in traditional spaces, such as universities or museums, whereas others prefer to publish books with independent, small book publishers and organize talks, debates, and study groups in underground places.

Many post-porn artists have published their own work on gender, sexuality, and pornography. Some of the most important post-porn books are *El postporno era eso* (2010; That was post-porn), by Llopis; *Pornoterrorismo* (2011), by Torres; *Por un feminismo sin mujeres* (2011; For a feminism without women), edited by Jorge Díaz and copublished by CUDS; and *Ética amatoria del deseo libertario y las afectaciones libres y alegres* (2012; Ethics of love, liberatory desire, and free and happy affectations), by Ludditas Sexxxuales. The Argentine scholar Laura Milano has written one of the most systematic and comprehensive studies about the international post-porn scene: *Usina posporno* (Post-porn industry), published in 2014.

Rivas (2011) has coined the term *cuir*—which in Spanish sounds like, and builds off, the English word *queer*—to refer to the appropriation and resignification of American queer debates and arguments by Latin American thinkers, showing the affinities but also the distance between theories about sexual and gender dissidence in Latin America and the United States. Many cuir writers, such as Rivas, Silvestri, and Milano, are active members of the post-porn scene in their respective countries, and they use post-porn productions as a source for their own theoretical reflections. Post-porn festivals, in turn, include talks and conferences about nonnormative gender and sexuality, and cuir thinkers are usually invited to participate in them.

**Post-Porn Circulation**
Post-porn art is presented both in institutional spaces—such as museums, universities, and theaters—and in marginal places such as squatted houses, co-ops, employee-owned factories, and subaltern cultural centers. The former locales are chosen by those thinkers with ties to academia, such as Preciado, whereas the latter are usually preferred by those artists closer to anarchism and punk rock, such as Go Fist, Torres, and Silvestri.

One of the most common ways to promote the production and dissemination of post-porn art and cultural practice is festivals. These events usually combine performance art, video projections, open calls for amateur porn videos, workshops, and talks. They are one of the most important ways of bringing together post-porn performers from different Spanish-speaking countries (but also with the wider international audience and participation in mind). Several examples include the Barcelona edition of the international festival Queeruption, the Muestra Marrana (Filthy Exhibition), which started in Spain but then moved to Latin America (first to Mexico City in 2015 and then to Quito, Ecuador, in 2016); the PorNo PorSi festival, which has taken place in Bogotá and Buenos Aires; and the Chilean festival Dildo Roza (Dildo Rub). These festivals are usually self-organized, self-financed, and nonprofit. Sometimes they use crowdfunding to support the event, and they tend to reject commercial sponsors. Besides showing pieces by wellknown post-porn artists, they also organize workshops that promote horizontal relations and interactions between the performer and the audience, as well as open calls for do-it-yourself porn videos.
As stated earlier, another form of spreading post-porn ideas is book publishing. Many post-porn writers are strong opponents of the privatization of intellectual property, and they decide to release their books under Creative Commons licenses (Torres 2014) or to publish manuscripts under a special copyright licensing agreement that allows the public to freely access, reproduce, adapt, or distribute copies of the work as long as any resulting copies or adaptations are bound by the same licensing agreement (Ludditas Sexxxuales 2012; Díaz 2011). Most post-porn artists share videos of their performances on their blogs and Vimeo accounts, pointing to how they have embraced open-access digital cultures as a platform for accessible dissemination to wide audiences.

Finally, another important space for post-porn production and experimentation are the workshops that many pornoterrorist artists regularly organize. These include the Female Ejaculation Practical and Experimental Workshop, organized by Torres; the Squirting and Prostate Massage Practical Workshop, hosted by Silvestri and Ludditas Sexxxuales; and the various ecossexual workshops that Annie Sprinkle and Elizabeth Stephens have coordinated in Gijón and Barcelona, Spain, in the second decade of the twenty-first century.

Even though it is still an underground practice, the proliferation of international festivals and the easy access to post-porn digital products are turning pornoterrorism and post-porn into sites of increasing interest not only for gender and sexuality scholars and activists but also for the general public. In 2015, for instance, a post-porn festival at the University of Buenos Aires caused such a scandal that most media outlets in Argentina were constantly talking about post-porn. All of a sudden, post-porn was on everyone's lips. Like so many other marginal practices that have gained mainstream attention, the challenge for post-porn and pornoterrorism in the years to come will probably be how to cope with its increasing popularity while staying true to its queer spirit of provocation.

Pride Demonstrations in Europe

CHRISTOPHER EWING
Assistant Professor, Department of History
Virginia Commonwealth University, Richmond

A historical and contemporary look at pride events held around Europe.

Since the first marches were held in western European countries in the 1970s, Gay Pride—also known in Europe as Christopher Street Day after the street in New York City’s Greenwich Village where the Stonewall Inn is located—has been a subject of controversy. Early marches were small demonstrations with a few hundred participants, but by the 2010s, parades in some major European cities could draw more than a million marchers and observers. At the same time, in the three decades after the disintegration of the Soviet Union, other pride marches have come under violent attack from right-wing radicals, particularly in postsocialist countries, highlighting the uneven acceptance of LGBTQ rights across Europe.

Western European Beginnings, 1970–1990

The first pride march was held in New York City in July 1970 to commemorate the 1969 uprisings at the Stonewall Inn. The first pride march in Europe was held in London in July 1972 to similarly commemorate Stonewall; about 2,000 people attended (Plummer 1999). It was not until 1977, however, that organizers in Barcelona held the first pride march on the continent. Although police repressed the march, activists continued to organize marches in Barcelona and Madrid in subsequent years (Llamas and Vila 1999).

The year 1977 saw one of the first gay rights demonstrations in the Netherlands, which also had connections to the United States. Following the repeal in Dade County, Florida, of a recently passed ordinance outlawing discrimination against gay men and lesbians, protestors took to the streets of Amsterdam on 25 June 1977, leading to the formation of groups that, in 1979, would collaborate with the preexisting LGBT organization Cultuur en Ontspanningscentrum (COC; Center for Culture and Leisure) to organize the annual Roze Zaterdag (Pink Saturday), an event often equated with pride celebrations (Schuyf and Krouwel 1999). Much like in the Netherlands, French gay and lesbian activists came together in 1977 to organize the first pride event in Paris, which drew about 400 demonstrators. German activists organized the first Christopher Street Day celebrations in Berlin and Bremen two years later (Leroy 2010; Beljan 2014).
ATTACKS ON PRIDE DEMONSTRATIONS IN MOSCOW

Following the decriminalization of homosexuality in Russia in 1993, limited public space opened up for lesbian and gay Russians. Beginning in the late 1990s, initiatives like the Festival of Lesbian Art and the Festival of Women’s Songs were launched in Moscow with little resistance (Stella 2013). However, in 2005, when Nikolay Alexeyev, leader of the newly established organization GayRussia, announced that he would apply for permission to organize Moscow’s first pride festival, he was met with vocal public opposition. The city government granted permission to hold the planned conference and cultural events but refused to permit the march, scheduled to be held on the central thoroughfare of Tverskaya Street (Stella 2013). The march took place anyway but was violently broken up by neo-Nazis and Orthodox protesters.

Although the city government has consistently refused to grant permission, small marches have taken place each year since 2006. Marches in 2007, 2008, and 2012 were met with homophobic violence, as well as police harassment and arrests, with the police notoriously lenient toward homophobic attackers (Stella 2013; Baer 2011). In other years, activists avoided violence by keeping secret the location of demonstrations (Stella 2013). Although the European Court of Human Rights ruled that banning pride events violated the right to peaceful assembly, in 2012 Moscow officially banned pride events for 100 years (Ammaturo 2015; Horne et al. 2017). The following year, the Russian parliament approved a broad bill that made illegal all public promotion of homosexuality, effectively banning pride events across the country (Ammaturo 2015). Even with the legal crackdown and homophobic backlash, small groups continue to hold pride demonstrations and other protests in the face of violent repression.

BIBLIOGRAPHY

Stella, Francesca. “Queer Space, Pride, and Shame in Moscow.” Slavic Review 72, no. 3
Although drawing inspiration from the United States and from each other, pride events remained relatively local during the 1980s and did not develop evenly. Across the board, marches took up issues such as HIV/AIDS and related discrimination. However, in France, the repeal of antihomosexuality laws in 1982 led to general disaffection that manifested in a decline in the number of Paris Pride participants from 10,000 in the early 1980s to 2,000 to 3,000 by the second half of the decade (Fillieule and Duyvendak 1999). In contrast, the number of pride participants in the United Kingdom grew exponentially during the 1980s, and the Netherlands and Germany saw growth as well, despite ongoing internal divisions (Plummer 1999; Schuyf and Krouwel 1999).

Expansion, 1990–2018

During the 1990s and the next decade, pride parades expanded in both size and geographic range. New local pride events were organized in some western European countries. In 1994 Italian activists organized the first Rome Pride, which drew a crowd of about 20,000 (Di Feliciantonio 2016). French activists organized the first pride march in Marseille that same year and in Montpellier, Nantes, and Toulouse in 1995. In 1996 activists in both Amsterdam and Brussels organized the first citywide pride marches (Hekma 2014; Eeckhout 2011).

Pride began to take on a particular European meaning in the 1990s and the next decade as well. In 1992 the first EuroPride was held in London, attracting a crowd of 100,000 people (Caudwell 2017). EuroPride quickly became a popular annual event and is hosted in a different European capital each year. With the inclusion of postsocialist countries into the European Union, EuroPride also began to take place in eastern European cities, first in Warsaw, Poland, in 2010 and then in Riga, Latvia, in 2015.

Pride events in some postsocialist countries have been directly linked to European integration. Following the incorporation of the rights of sexual minorities into the Charter of Fundamental Rights of the European Union (EU) in 2000, pride marches have sometimes served as a litmus test for LGBT acceptance. Commenting on the 2012 ban of Belgrade Pride, Birgitta Ohlsson, Swedish minister for European affairs, suggested that the ban might complicate Serbia's path to EU membership (Kahlina 2015). The following year, to explain her support for a pride march in the Croatian city of Split, Minister of Foreign Affairs Vesna
Pusić stated that, “Now that we finally became European in a political sense, it is time to start to behave accordingly” (Kahlina 2015, 78).

**Backlash, 2000–2018**

Pride events have drawn special attention in eastern Europe, not least because of a violent backlash in some postsocialist countries. In the Balkans, about 1,000 demonstrators attacked Belgrade’s first pride march in 2001, causing pride events to be banned there until 2010 (Taylor 2014). In 2002 the first Zagreb Pride was also attacked. In 2011, 4,000 to 10,000 counterprotesters violently attacked pride participants in Split, but, unlike Belgrade, the attack led to increased policing rather than an official ban (Moss 2014). In the Baltic, Riga Pride was attacked between 2005 and 2009. When organizers in Riga combined with organizers in Estonia and Lithuania to create Baltic Pride, the march was attacked in 2010 in Vilnius, but since then the event has been more heavily protected by police (Caudwell 2017). Moscow, in particular, has made headlines for violence against pride parades, which have been held intermittently since 2005 despite being officially banned each year until 2012, when they were banned until 2112.

Violence has not been limited to eastern Europe. In 2006, following Britain’s defeat in the World Cup, some disgruntled fans attacked a pride gathering at Trafalgar Square in London (Winn-Lentsky 2007). At the same time, Slovenia’s first pride march in Ljubljana in 2001 and Estonia’s first pride march in 2011 were met with little to no opposition, highlighting the difficulty of casting eastern Europe as monolithically homophobic (Caudwell 2017).

**Internal Criticism**

Some LGBTQ activists have criticized pride for being alternately heavily commercialized, apolitical, or exclusionary. In 1997, following the introduction of charges for floats at Berlin’s Christopher Street Day parade, some activists organized an alternative pride event in the traditionally working-class and immigrant neighborhood of Kreuzberg, which was held annually until 2017 (Kalender 2011). In 2010 American philosopher Judith Butler refused Berlin Pride’s Civil Courage Award, citing the complicity of some of the organizers in racist practices and stating that the award should instead go to several queer-of-color groups, including Gays und Lesbians aus der Türkei (Gays and Lesbians from Turkey), lesbische und bisexuelle Migrant_innen, Schwarze Lesben und Trans* (LesMigraS; Lesbian and Bisexual Migrants, Black Lesbians and Trans*), SUSPECT, and ReachOut. Some eastern European activists have also argued that the exporting of pride events represents a form of “cultural imperialism,” and pride’s concomitant identity politics do not easily map on to sexual subjectivities in some postsocialist countries (Stella 2013). In addition, some activists and scholars have further criticized the exporting of pride to eastern Europe as condescendingly pedagogical, in that it is used to educate eastern Europeans about sexual progressivism in order to integrate these regions into Europe (Caudwell 2017).

BIBLIOGRAPHY

Pride parades are events organized annually by LGBTQI activists and communities across the world. These events may fulfill various functions, including commemorating crucial events in queer history (e.g., the Stonewall riots of 1969, the HIV/AIDS crisis in the 1980s); serving as a sounding board for claiming human rights and engaging in political protest against governments and institutions; and celebrating the culture, diversity, and pride of the LGBTQI community.

Pride events may acquire different configurations, depending on the purpose, the historical context, and the geopolitical location in which they take place (Lundberg 2007). In some countries, often depending on the sociopolitical attitudes toward the LGBTQI community, these events take the form of marches that resemble political demonstrations more than parades celebrating pride and diversity; Baltic Pride is a case in point (Davydova 2012). In other locations, where pride parades have become institutionalized events, the element of celebration is more prominent, with a carnival-like atmosphere. One of the most notable examples of this latter type of pride event is the Sydney Mardi Gras Parade (Altman 1997; Johnston 2005). When the carnival element of pride events is emphasized, it is common to see organized floats, performances, and various groups parading while displaying often ironic features of their own subgroup or identity (e.g., dykes on bikes, drag kings and queens, bears, etc.). Often, pride events feature national flags or the famous rainbow flag in all forms and shapes (Lundberg 2007). Scholars have debated the role of pride parades in “normalizing” (Peterson et al. 2017) LGBTQI identities and/or promoting “homonormativity” (Johnston 2005) and “homonationalist” narratives (Puar 2002; Ammaturo 2016).

At a glance, pride parades and marches entertain a fundamental relationship with bodies, given their potential to “mark” different (nonheterosexual) bodies (Johnston 2005) and channel the (re)production of LGBTQI-stereotyped corporeality and aesthetics (Enguix 2009). At the same time, these events are also crucially connected to the notion of space (Valentine 1993; Johnston 2005; Ammaturo 2016), given their fundamental role in “queering spaces” that are traditionally considered to be heterosexual (Valentine 1993).
Another distinctive element is pride events' fundamental connection with urban settings, particularly “gayborhoods.” In many global cities, the organization of pride events is tightly connected to the use of space in specific gay or gay-friendly neighborhoods, such as the Castro in San Francisco, Greenwich Village in New York, Soho in London, and Chueca in Madrid. Additionally, often underlying these events is a dialectical distinction between LGBT participants and (presumably straight) onlookers (Berlant and Freeman 1992; Johnston 2005; Ammaturo 2016) as well as a crucial distinction between the public and private spheres (Enguix 2009; Lundberg 2007). Furthermore, in many contexts gay pride parades are characterized by a heightened—as well as problematic—presence of corporate sponsors that help finance the organizations and the events.

Traditional historiography maintains that the first pride parades and marches were organized in 1970 in New York, Los Angeles, and Chicago in the aftermath of the infamous Stonewall riots of 1969 in New York (Bruce 2016). These events (Christopher Street Liberation Day March in New York and Christopher Street West in Los Angeles) took their names from the street where the Stonewall Inn was located. After the 1970 commemoration of the riots, pride parades grew in importance and events began to be held in an ever-growing number of cities across the United States, Canada (Kates and Belk 2001), and various countries in Europe. The first parades in the United Kingdom (Walton 2010) and Germany (Griffiths 2015) were held in 1972, followed by Spain in 1977 (Enguix 2009), and France (Blidon 2009) and Italy (Rossi Barilli 1999) in 1979. In Australia, the first Sydney Mardi Gras Parade, today one of the largest and most popular pride parades in the world (Johnston 2005), was organized in 1978 (Markwell and Waitt 2009).

While the Stonewall riots are typically thought to have marked the beginning of gay liberation activism, they were crucially preceded by resistance and activism in the aftermath of World War II (Bérubé 2010), both in the United States (Armstrong and Crage 2006) and throughout Europe (Rupp 2014). Organizations such as the Mattachine Society and the Daughters of Bilitis (Enguix 2009) in the United States, Der Kreis in Switzerland, and Cultuur en Ontspanningscentrum (COC) in the Netherlands (Rupp 2014) were precursors of the LGBT activism of the 1970s. Keeping in mind a critical approach to the romanticization of Stonewall as the founding moment of LGBT activism (Jagose 1996), nonetheless, the Stonewall riots did represent a watershed in queer history (D’Emilio 1992), leading to the spread of discourses of “pride, defiance and visibility” (Johnston 2005, 4). At the same time, initially, pride events predominantly catered to white, male participants, marginalizing ethnic minorities, women, and transgender people (Bruce 2016).

Throughout the 1980s, pride parades multiplied and attracted an ever-growing number of participants. This was partly due to the advent of the HIV/AIDS crisis, as Kevin Markwell and Gordon Waitt (2009) have suggested. Paradoxically, the HIV/AIDS crisis brought the community closer together, enhanced visibility and coming out, and contributed to the
politicization and activism of many members of the LGBT community (Altman 1988; Seidman 1988). People living with HIV, as well as members of organizations such as ACT UP, joined pride parades to raise awareness and demand public recognition of the epidemics that various national governments had blatantly ignored. By the beginning of the 1990s, the organization of pride events had become increasingly institutionalized and, in some contexts, even acknowledged by local municipalities (Markwell and Waitt 2009), which started to invest in cultural and artistic events in order to attract visitors and tourists. The 1990s also saw the celebration of the first EuroPride, in Madrid in 1992, and in 2000, the first WorldPride, hosted by the city of Rome.

The Globalization of Pride Parades

Globalization has profoundly affected the ways LGBTQI identities have been framed across different latitudes. While Dennis Altman (1997) has cast doubts on the existence of a unified, global definition of the term gay, he has nonetheless used the term global gay to signal a specific model of homosexuality of Western imprint that has been adapted in various geosocial and political contexts throughout Asia, North Africa, and elsewhere. Other scholars (Binnie 2004; Massad 2008) have also reflected on the implications of the globalization of “gay” identities. While these engagements predominantly focus on male homosexuality, similar attention is given to the globalization of other identities within the LGBTQI community, such as transgender persons (Dutta 2013), lesbians (Woodcock 2004), and bisexual persons (Hemmings 2007).

Carol Southall and Paul Fallon (2011) have noted that in 2010 more than 350 pride events were held across the world. Beginning in the 1990s, pride events were organized in various countries in Latin America, with some exceptions such as Mexico in 1979 (López-Vicuña 2004), with the pride event in São Paulo in Brazil becoming one of the biggest and most renowned in the world (Encarnación 2011). In the Caribbean and Central America, the most important events have been held in Mexico and in Cuba since 2012 (Mezzofiore 2011). In 2015 Jamaica also hosted a pride parade for the first time (Davis 2015). In Africa, the first pride event was held in Johannesburg in 1990 (Reid and Dirsuweit 2002), but despite its success, Johannesburg's celebration has been criticized for being too “white” and “elitist” (Barbier 2017). Given the criminalization of homosexuality in many countries in Africa, it remains difficult for LGBTQI persons to enjoy the right to freedom of expression and freedom of assembly and association. Nonetheless, in spite of official hostility, activists organized a pride-like event in Uganda in 2014 (Nyanzi 2014). Some countries in the Middle East/North Africa region also must contend with the criminalization of homosexuality when attempting to organize events. In Israel/Palestine there have been organized gay pride parades since 1998 (Solomon 2003), and in 2017 Lebanon held its first pride event (Kanso 2017). In Turkey, pride events have been held since 2003 (Durgun and Kalaycioğlu 2014). The pride events are objects of intense political scrutiny in Turkey.
(Öktem 2008) and tensions in Israel/Palestine, due to queer/liberal activists’ opposition to pinkwashing (Gross 2014). Across the Asia-Pacific region (excluding Australia and New Zealand), the first pride parades and marches were held in 1994 in the Philippines and in Japan, followed by Taiwan in 1997 and Thailand in 1999 (Sanders 2005). In mainland China, the first event was held in Shanghai in 2009 (Chan 2009). In 2005 Hong Kong began holding events (Wong 2007). In Singapore, where homosexuality is still criminalized, the first IndigNation events were held in 2005, and in 2009 the now popular Pink Dot SG event (Lazar 2017) was established. Although homosexuality is still criminalized in India, pride events have been held there since 1999 (Agrawal 2012). During these events, organizations such as the Naz Foundation (Basu 2016) have seized the opportunity to protest against Section 377 of the criminal code, a relic of British colonialism that criminalized homosexuality.

Pride events were largely absent from countries in central Europe and the Balkans until the end of the 1990s, when activists managed to organize events in some parts of this wide geopolitical region. In the Russian Federation, attempts to organize pride parades have been consistently blocked (Stella 2013) despite rulings of the European Court of Human Rights (such as Alekseyev v. Russia) condemning the bans and impediments. The passage in 2013 of the Russian gay propaganda law (Polsdofer 2013) and the persecution of gay men in Chechnya in 2017 (Walker 2017) have worsened the situation for LGBTQ persons in the country. The situation is similar in former Soviet republics in Central Asia, such as in
Kyrgyzstan (North 2016), where the LGBTQ community continues to be repressed. In central Europe, pride events have been organized since 1997 in Hungary (Renkin 2015), since 2001 in Poland (O’Dwyer 2012), and since 2011 in the Czech Republic (Vuletic 2013). Pride events have also been organized in various countries in the Balkan region: in Serbia beginning in 2001, and resuming in 2009 after an eight-year hiatus (Slootmaeckers 2017); in Croatia since 2003 (Kuhar 2011); and in Albania since 2012 (Likmeta 2012). In Bosnia and Herzegovina, activists have organized the Queer Sarajevo Festival intermittently since 2008 (Zarenkiewicz 2016). Some commentators view the expansion of pride parades in countries across Eastern Europe partly as a signal of the countries’ desire to demonstrate adherence to so-called European norms (Ammaturo 2014; Slootmaeckers et al. 2016). In this regard, it is important to recognize the key roles played by the European Union (Slootmaeckers et al. 2016) and the Council of Europe through the European Court of Human Rights (Ammaturo 2014) in helping LGBTQ communities in Eastern Europe and the Balkans ensure that their rights to freedom of expression and assembly are respected.

Parallel to the globalization of Western LGBTQI identity terms, there has been increasing participation by nonbinary persons and intersex activists in communities and events traditionally dominated by gay and lesbian activists. Collaboration and patterns of inclusion among the various segments represented in the LGBTQI initialism are often problematic (Stone 2009). Nonetheless, a significantly diversified range of actors are increasingly taking part in community initiatives and pride events across the world. Some pride events also cater to specific segments of the LGBTQI community, such as dyke marches (Brown-Saracino and Ghaziani 2009) and trans pride events (McConnell 2014). Others particularly target other groups whose identity may be transversal to sexual orientation and/or gender identity. An example is the Folsom Street Fair in San Francisco, which caters to the leather and BDSM (bondage and discipline, dominance and submission, sadism and masochism) community (Teunis 2007). Furthermore, parades increasingly include various ethnic and national minority groups, LGBTQI asylum seekers and refugees, and members of various religious denominations.

**The Commodification of Pride Parades**

Over the years, pride parades and marches have acquired a further significance that goes well beyond their immediate function of representing the achievements, human rights claims, and visibility and pride of LGBTQI communities worldwide. Scholars (Altman 1986, 1997; Puar 2002) have interrogated from different critical perspectives the intersections between the globalization of LGBTQI identities and their commodification. Particularly since the 1990s, LGBT (or more specifically, gay) tourism has been increasingly linked with the consumption of specific events and lifestyles, giving rise to the expressions “pink pound” and “pink dollar” (Southall and Fallon 2011, 223). In this regard, Lynda Johnston has noted the role that gay pride parades have played in enhancing the “commercialisation
and commodification of queer lifestyles” (2005, 100).

Until the mid-1990s, Southall and Fallon (2011) have argued, gay travel was a niche market with only selected gay-friendly destinations. Conversely, Jasbir Kaur Puar (2002) has observed that during the 1990s, the industry of gay and lesbian tourism was at its peak. Other commentators, such as Dereka Rushbrook (2002) and Gabriel Giorgi (2002), have interrogated the geographical expansion of gay and lesbian tourism in connection with commodification and globalization. Traditionally, gay travelers have been depicted as affluent, with high disposable incomes (Southall and Fallon 2011), and the term queer tourism generally indicates affluent gay tourists rather than a diverse range of queer travelers. In this regard, some scholars (Puar 2002; Johnston 2005) have critically reflected on the exclusiveness, in terms of class, race, and gender, of queer travel and tourism. Within this context, pride parades are the most “visible and dynamic components of the LGBT tourism system” (Southall and Fallon 2011, 224).

The identification of this partly untapped market has meant that since the 1990s, various countries have increasingly sought to capture this segment of tourism by promoting themselves as gay-friendly destinations. Often, this is through the official promotion of annual pride parades held in major cities such as San Francisco, New York, Los Angeles, Montreal, São Paulo, Sydney, London, Amsterdam, and Paris. Further resources are dedicated to the marketing of pan-European pride events, such as EuroPride, as well as global events, such as WorldPride. In many countries, the commodification of pride parades also normally leads to the targeted marketing of queer customers by restaurants, bars, and hotels (Johnston 2005).

The commodification of pride parades has some important consequences for the nature, dynamics, and politics of these events. Various commentators (Valentine 2002; Rooke 2007; Binnie and Skeggs 2004) have investigated the dynamics whereby pride parades have been permeated by commercial interests. The commodification of pride events, which echoes David T. Evans’s (1993) discussion of the commodification of (homosexual) desire as a strategy for inclusion of gay individuals in the citizenry, is closely connected to the possibility of these events becoming depoliticized (Ammaturo 2016). The presence of corporate sponsors, in particular, may be problematic, but the organization of pride events worldwide has become increasingly complex and requires substantial financial resources.

Steven M. Kates and Russell W. Belk (2001) have mapped trajectories of resistance through consumption and resistance against consumption during pride parades. They argue that during pride parades, individuals may resist dominant culture either through (excessive) consumption or through active critique of the commercial cooption of pride parades by commercial actors. At the same time, the globalization of queer tourism in general can be said to have some ambiguous features. As Puar (2002) has argued, the motivations and implications of queer travel oscillate between trying to promote forms of transnational
solidarity networks between activists and fostering a liberal paradigm of freedom based on patterns of consumption enabled by the so-called pink dollar. The commodification and commercialization of pride parades, therefore, can be said to represent, at least partly, an expression of the normalization of the LGBT and queer movement through co-optation into the nation-state, as well as into global neocapitalism (Ammaturo 2016).

**Opposition and Backlash to Pride Parades**

In countries where homosexuality is criminalized and/or LGBTQI persons are directly or indirectly persecuted, organizing a pride event may be impossible and/or dangerous. This may be because of obstacles to freedom of expression and freedom of assembly and association for LGBT groups, or it may be related to general societal hostility and a generalized climate of homophobia or transphobia. In some instances, opposition, backlash, or clampdowns on pride events are enacted by institutional actors in the executive, legislative, and/or judicial spheres. In other cases, opposition to pride parades comes from noninstitutional actors, such as religious groups, nationalist groups, or other organized groups belonging to civil society at large. Furthermore, while some forms of opposition are peaceful, others can escalate into violent confrontations and attacks.

The proliferation of pride parades across the world during the twenty-first century has been subject to episodes of institutional opposition as well as backlash by noninstitutional actors in various countries. In Europe, the most significant instances have been registered in Poland (Gruszczynska 2009) and the Russian Federation (Stella 2013). In these countries, either the authorities have enacted administrative bans on the organization of pride events or they have imposed administrative impediments that have made organizing pride parades onerous. There also have been numerous instances of backlash and protests organized by nationalist and/or religious groups in Serbia (Slootmaeckers 2017), Georgia (Roth 2013), and Croatia and Montenegro (Kahlina 2013). Another notable example of institutional opposition to pride parades has been registered in Turkey, where the government first banned pride marches in Istanbul in 2015 and in 2017 extended the ban to the capital, Ankara (BBC 2017).

Psychoanalysis in Argentina

MARIANO BEN PLOTKIN
Senior Researcher, Centro de Investigaciones Sociales (CIS, CONICET-IDES), Argentina
Professor of History, Universidad Nacional de Tres de Febrero, Argentina

The development of Argentina as a center of psychoanalysis in Latin America.

Within the last fifty years, Buenos Aires has become perhaps the most renowned international center of the consumption and diffusion of psychoanalysis. Today, the city not only boasts one of the largest psychoanalytic communities of the world, but psychoanalytic terms and concepts have permeated into everyday speech: psychoanalysis became a filter through which various sectors of urban Argentina have come to interpret reality.

Although the “psychoanalytic boom” started in the early 1960s, the presence of psychoanalysis in Argentine culture has a much longer history. Sigmund Freud, the Austrian neurologist and founder of psychoanalysis, himself ([1914] 1955) mentioned a paper on psychoanalysis delivered in Buenos Aires as early as 1910 by the Chilean doctor Germán Greve (1869–1954). By the 1920s and 1930s, psychoanalysis was known and discussed by several psychiatrists active in Buenos Aires and other major cities. In 1936 Fernando Gorriti (1876–1970), a prestigious South American psychiatrist, wrote a book in which he analyzed seventy-four dreams of a patient following “Freud’s method.” By the 1930s, psychoanalysis was also a common staple in popular publications. In the early 1930s jornada, a widely read newspaper, even included a column in which readers were invited to submit their dreams to be analyzed by someone who signed as “Freudiano” (Plotkin 2007). At present, Argentina boasts the earliest extant psychoanalytic institution affiliated with the International Psychoanalytical Association (IPA) in the Spanish-speaking world: the Asociación Psicoanalítica Argentina (APA; Argentine Psychoanalytic Association), established in 1942. Since 1943 the APA has published uninterruptedly Revista de psicoanálisis, South America’s first psychoanalytic review.

The Psychoanalytic Boom of the 1960s: Between Modernity and Tradition

The Argentine psychoanalytic boom of the 1960s had diverse roots. Like many major cities in the world, Buenos Aires and other large cities in Argentina underwent a fast-paced process of social and cultural modernization during the 1950s and 1960s. However, in contrast with most European countries and the United States, the modernization in Argentina took place under conditions of restricted political freedom. After the fall of the
authoritarian—although formally democratic—regime of Juan Perón in 1955, the country suffered a long process of political instability, including military dictatorships that lasted through 1983, when democracy was finally restored. Moreover, in the late 1960s, the country saw the emergence of radical guerrilla movements that were harshly and illegally repressed by the military, thus resulting in an increasingly violent environment.

Society was changing fast. In the 1960s women, who had been enfranchised in 1947, entered the job market and the system of higher education in large numbers. Yet, this process of social and cultural modernization was limited by the restrictions imposed by state repression and also by the conservative values still predominant among various sectors of society. Thus, conditions were ripe for the diffusion of a system of thought that could provide explanations for social and cultural changes without threatening accepted views. Psychoanalysis hence came in handy because it incarnated those tensions between modernity and tradition. Analysts introduced a new vocabulary, legitimizing advanced discourses on sexuality and a certain rupture with traditional cultural patterns. At the same time, however, psychoanalysts promoted family models and gender roles that were compatible with traditional views. For instance, the Austrian-born Marie Langer (1910–1987), the only female founding member of the APA and a prestigious analyst recognized as a pioneer in the analysis of female sexuality, wrote the following in 1951:

At the sight of a mouse, our grandmothers climbed on a chair and raised their skirts crying for help, but ... they had no problems with breast feeding their children. Nowadays, young women know how to drive cars ... and even airplanes, but frequently either they do not know how to feed a baby or they give up this task.

(13; TRANSLATION BY MARIANO BEN PLOTKIN)

Arnaldo Rascovsky (1907–1995), another founding member of the APA who was also very active in the media, elaborated the popular theory of “filicide,” according to which there is a phylogenetic tendency of parents to destroy their children. Thus, the murderous oedipal child, who wanted to get rid of his father to have sexual access to his mother, in Rascovksy's view, became a victim of his parents' homicidal desire. Therefore, such behavior as sending newborn babies to nurseries, not breastfeeding them, and even sending older children to kindergartens amounted to “micro-abandonments”—that is, mild forms of filicide. In a 1975 book, Rascovsky wrote that “the increasing participation of women in multiple industrial, professional ... activities ... has been carried out at the expense of the maternal function. The maternal function implies constant presence and emotional support during the early development of the child, not disrupted by other activities” (14–15; translation by
Plotkin). For both Langer and Rascovksy, women could find total fulfillment only in motherhood.

On other issues, such as homosexuality, at least until the late 1970s psychoanalysts also held views that did not differ much from those held by criminologists and psychiatrists around the beginning of the twentieth century. Even though it is well known that Freud did not consider homosexuality a mental disease, as he made clear when he treated a homosexual woman (Freud [1920] 1957), Argentine psychoanalysts persisted for decades in seeing homosexuality as a disease that could (and should) be “cured.” Until at least the 1980s, homosexuals were discouraged (if not openly prevented) from becoming psychoanalysts. Although, by displacing the discourses on sexuality from the traditional realms of religion, eugenics, or sexology, psychoanalysis introduced a rupture in the conceptualizations of sex and gender, the most prestigious APA members still adhered to visions of homosexuality that in some cases were not all that different from those promoted by positivist criminologists in the early twentieth century. Thus, the Spanish-born Angel Garma (1904–1993), one of the founding members and a longtime leading figure of the APA, wrote in 1944 in Revista de psicoanálisis that homosexual relations usually degenerated into quarrels, jealousies, and envy that could lead to crime and homicide. In the late 1960s and 1970s many psychoanalysts interviewed by the media on homosexuality expressed similar opinions (Bazán 2004), even though, by then, gay men had already established their first political organizations (with lesbians getting organized later). Therefore, psychoanalysis constituted a discourse that was disruptive and conservative at the same time. This proved to be particularly attractive to a society that not only was torn between modernity and tradition but was also living under repressive dictatorships.

**Popularization and Politicization of Psychoanalysis**

In the late 1950s prestigious analysts from the APA began to be routinely featured in the media. Moreover, in those years, the first university programs in psychology were created at public universities. Unlike in most countries, the programs in Argentina showed a clear psychoanalytic orientation from very early on. Even today, the largest such program—the one offered by the University of Buenos Aires—concentrates almost exclusively on psychoanalysis, particularly on a version of it rooted in the ideas of the French psychoanalyst Jacques Lacan (1901–1981). During the 1960s and 1970s, psychology became a popular profession for women who wanted to pursue university studies, replacing schoolteaching as a career of choice for many of them. The psychoanalytic (clinical) orientation of the psychology programs created a possibility for women to work at home in a society still bent on traditional gender roles. Moreover, psychology, which in Argentina (unlike in most countries) is considered a synonym for psychoanalysis, opened up a legitimate space for women to talk publicly about female sexuality. Female
psychologists were routinely featured in popular magazines and television shows as experts (legitimized by possessing a specialized scientific knowledge) on sexuality. Their views, however, were sometimes congruent with those held by traditional sectors associated with Catholicism. Most female psychologists and psychoanalysts in the 1960s and 1970s, for instance, opposed the use of birth control pills (Plotkin 2001). Once again, psychoanalysis introduced changes in social mores, or legitimized ongoing ones, but did so with ambivalence.

In contrast with Europe or the United States, Argentina did not produce a specifically Argentine school of psychoanalysis. In the early days of the APA, analysts were ardent adherents of the object relations theory of the Austrian-born British psychoanalyst Melanie Klein (1882–1960) (Plotkin 2001; Dagfal 2009). Their emphasis on preoedipal relations and on intrapsychic developments, as opposed to more concrete traumas of sexual abuse, could be explained by this theoretical allegiance. Later, starting in the early 1970s, Lacan's version of psychoanalysis gradually gained ground, and it has remained predominant to this day. The absence of a specifically Argentine version of psychoanalysis facilitated the appropriation of psychoanalysis by different social, cultural, and political environments. Different interpretations of psychoanalysis were simultaneously compatible with the demobilization of society imposed by the military dictatorships and with the political radicalization of certain sectors of society in the late 1960s and 1970s.

The APA was considered a politically conservative institution. However, in 1971, for the first time in the history of the psychoanalytic movement, a sizable group of senior analysts resigned from the institution and from the IPA for political reasons. They tried to create a politically committed version of psychoanalysis, but the bloody dictatorship that took power in 1976 cut their intentions short. Most of them were forced into exile, and a handful of them were killed or “disappeared.” While the main psychoanalytic institutions kept growing unmolested, other people used psychoanalysis as a form of resistance against the dictatorship. Some analysts even took members of the guerrillas under treatment at high personal risk, while others became active in the emerging human rights movement.

In spite of the conservatism of the official psychoanalytic institutions (which, by 1976, included two IPA-affiliated societies in Buenos Aires, plus many independent ones), by the mid-1970s, leftist intellectuals of all persuasions recognized psychoanalysis as an appropriate subject to think and talk about. The reasons for this are complex. First, for some people psychoanalysis had become a highly politicized discipline. The secessionists of 1971 not only challenged the APA’s (and the IPA’s) rigid institutional frameworks but also contributed to generating broader debates about the place of psychoanalysis in society, discussions that transcended the “psy” community, composed of psychologists (most of whom practiced psychoanalysis), psychoanalysts, and psychiatrists. Second, there was an already large and increasing number of followers of Lacan’s doctrines. Whereas traditional orthodox psychoanalysis had been closely associated with clinical practice, Lacanian
psychoanalysis was perceived as a cultural phenomenon. Contrary to the majority of APA members, most Lacanian analysts did not hold medical degrees but rather had backgrounds in such disciplines as philosophy, literature, or psychology. Some of them even enjoyed an already established reputation as writers or critics. This was a clear advantage in a country such as Argentina, where the intellectual elite had traditionally been small and fluid. A case in point was Oscar Masotta (1930–1979), a well-known multifaceted leftist intellectual who, by the mid-1960s, when he began studying Lacanian psychoanalysis, was already influential in the areas of philosophy, literary criticism, and pop art. Masotta soon became a leading figure of Lacanian psychoanalysis in Argentina. He is recognized as one of the earliest introducers of Lacanism into Spanish-speaking countries. His prestige attracted many progressive intellectuals to psychoanalysis.

Psychoanalysis and the Dictatorship

The murderous military dictatorship of 1976 placed terror at the center of its strategy for disciplining and demobilizing society. The official discourse was anti-psychoanalytic. As one of the generals in power declared, Karl Marx and Freud were ideological criminals. Some generals even associated psychoanalysis with terrorism (Plotkin 2012). Paradoxically, however, in those years the Argentine “psychoanalytic culture” all but consolidated. Members of the “psy” professions were not singled out for persecution by the military because of their profession. Rather, those who suffered repression were targeted as a result of their real or alleged leftist sympathies. At the same time, however, the APA refused to publicly denounce the dictatorship at international forums. Instead, it even accepted funding from the military government to organize an international conference in 1976 (Plotkin 2001). Many psychoanalysts shared their general worldview (including their views on sexual and gender transgression) with conservative sectors of society. APA members routinely participated in seminars and conferences sponsored by the government. The institution continued to grow; by 1979 it was the fourth-largest psychoanalytic institution in the world. In parallel, Lacanian psychoanalysis also got consolidated, although its practitioners did not seem to have been particularly interested in the most transgressive aspects of Lacan's theory on sexual and gender differences discussed by Patricia Gherovici in her works (e.g., Gherovici 2017).

Even more disturbing than the psychoanalytic community’s failure to denounce the abuses of the dictatorship was the military appropriating for its own purposes certain elements of the psychoanalytic discourse: those promoted by the most conservative sectors of the increasingly heterogeneous psychoanalytic community. The same categories that psychologists and psychoanalysts were using to explain juvenile criminality were appropriated by the government to explain political subversion. Through television ads, parents were encouraged to provide psychological support to their children in times of crisis in order to keep them safe from politically subversive temptations (i.e., becoming
political activists or members of a guerrilla organization). Additionally, media-friendly psychoanalysts (mostly from the APA) appeared regularly in the state-controlled media to underline the importance of traditional gender roles and the family as the foundations of a healthy society. Leftist subversion was characterized as a mental disease similar to psychosis, neurosis, homosexuality (which was conceived as a disease), or drug addiction. The military associated any deviation from what it considered “normality”—particularly any sexual deviation—with leftist political activism. The military even used the services of some independent psychologists in its concentration camps to determine which prisoners were apt for “reeducation” (while the rest were killed) (Plotkin 2012). At the same time, however, many psychologists and psychoanalysts became fierce defenders of human rights and opponents to the military regime.

**Twenty-First-Century Developments**

In the twenty-first century, although the hegemony of psychoanalysis as a therapeutic technique has been questioned from several quarters, psychoanalysis as a broadly defined cultural artifact continues to be vibrant. In 2001, when Argentina underwent one of the worst economic and political crises in its history and most forms of social knowledge had lost legitimacy, psychoanalysts became public intellectuals who were routinely called on by the media to explain the origins and the nature of the crisis (Plotkin and Visacovsky 2007). As a professional group, however, psychoanalysts did not seem to be at the social vanguard on issues related to sex and gender.

Argentine society has undergone important changes in terms of visions of gender and sexuality in the first two decades of the twenty-first century. A country that introduced legal divorce only as late as the mid-1980s, Argentina in 2010 became the first country in Latin America (and the tenth worldwide) to pass a national law that fully recognized same-sex marriage, including the right to adopt children. The “egalitarian marriage law” (as it is commonly known) was the result of an active campaign launched by the Federación Argentina de Lesbianas, Gays, Bisexuales y Trans (Argentine Federation of Lesbians, Gays, Bisexuals, and Transsexuals), a group that became very active and highly visible since its founding in 2005. Except for the most conservative groups linked to the Catholic Church, this piece of legislation enjoyed broad support across society. Since 2010, gays, lesbians, and transsexuals have also been admitted as officers in the armed forces, and in 2011 for the first time a male lieutenant colonel married a male captain, both officers on active duty in the army.

In 2012 Argentina’s National Congress passed another foundational law that allowed people to freely choose their gender without the requirement of submitting to surgery or other medical procedures of gender change. However, the law also established that the federal state must cover the costs involved in any related medical procedures and treatment for transsexual individuals who choose to undergo gender reassignment surgery.
and/or hormonal treatment. The law explicitly rejects the pathologization of transsexualism. Although psychoanalysts were not particularly active in the preliminary discussions on either law, a few of them addressed the issue in different media. Once again, many of them (including those of Lacanian persuasion) continued to consider homosexuality as a pathology that needed to be treated while expressing doubts about the efficacy of those laws.

Psychopathia Sexualis (1886; Richard von Krafft-Ebing)

FRANZ X. EDER
Professor, Department of Economic and Social History
University of Vienna, Austria

Influential reference work on sexual pathology that classified homosexuality as a pathological aberration and a symptom of hereditary degeneracy.

Psychopathia sexualis (Sexual psychopathy) was first published in 1886 and became the leading reference work of sexual pathology in the late nineteenth and early twentieth centuries. Its author, Richard von Krafft-Ebing (1840–1902), was a major psychiatrist of his day and a professor of nervous diseases at the Universities of Graz (1872–1889) and Vienna (1889–1902). His best seller categorized and labeled almost all deviant sexual phenomena of his era, including sadism, masochism, fetishism, and exhibitionism. The book elaborately discussed homosexuality and homosexual acts, which were forbidden by Austrian and German penal law.

Background

When Krafft-Ebing published his first articles on konträre Sexualempfindung (usually translated as either "antipathic sexuality" or "contrary sexual sensation"), he was familiar with less than a dozen case histories of invert, or umnings, words then used to describe homosexuals. This small number did not discourage him from putting forth a general theory of homosexuality. According to him, the congenital “contrary sexual feelings” could be explained as an inherited pathological aberration of the brain and a functional symptom of hereditary degeneracy or degeneration. As Karl Heinrich Ulrichs (1825–1895) and Carl Westphal (1833–1890) had already proposed in their investigations from some years before, Krafft-Ebing assumed that homosexuals have essentially different sexual feelings and contrary characteristics (Eder 2011). Their “inversion” determines their whole character: therefore, men desiring men were interested in female clothes and activities; the reverse was true for women desiring women. It was further contended that in the “worst” case even the whole body converges to the other sex. As a typical sign of degeneration most of these people also experienced psychic anomalies.

Krafft-Ebing was a follower of Bénédict Augustin Morel’s (1809–1873) degeneration theory, which since the 1860s had found supporters across Europe. According to Morel, the degenerative phenomena could be located in the person’s appearance, brain, and nervous system. This physical lack, caused by heredity, has tremendous social and cultural
consequences for the person affected. Former psychiatrists made use of the heredity model to answer moral questions from a biological and anthropological viewpoint. Krafft-Ebing argued that signals of the degenerate basis of homosexuality could be found during childhood and adolescence, such as in strong sexual impulses and forms of behavior that do not fit to the child’s sex. In subsequent years “contrary sexual” love developed as a gushing emotion and exalted demeanor. Moreover, by one’s gait and gestures the fully pronounced type can be recognized. To Krafft-Ebing, it was a sign of aberration that so many homosexuals are talented in the arts and literature and yet suffer from madness and moral insanity. As the most conspicuous symptom of degeneracy, the contrary sexual sensation occupies the whole consciousness and all expressions of life.

Richard von Krafft-Ebing, Author of Psychopathia Sexualis (1886). Krafft-Ebing's reference work on sexual pathology categorized and labeled almost all deviant sexual phenomena of his era, including homosexuality and homosexual acts. He explained these “contrary sexual feelings” as an inherited pathological aberration of the brain and a functional system of hereditary degeneracy.

The Book's Contents

From 1886 to 1903, Psychopathia sexualis (with the subtitle with Especial Reference to the Antipathic Sexual Instinct: A Medico-forensic Study) was published in twelve editions and contained an increasing number of case histories, most of them on the “contrary sexual
“sensation” (Oosterhuis 2000, 152). The cases were divided into “perversity” and “perversion”: perversity contained all forms of same-sex acts, which, owing to exceptional circumstances, primarily occurred in prisons, barracks, or boarding schools. These acts were committed by persons who did not suffer from inborn “homosexuality.” When they returned to their former lives, the delinquents adopted “normal” heterosexual intercourse again. Within the group of “true” perverts Krafft-Ebing saw various degrees of development:

1. Traces of hetero-sexual, with predominating homosexual, instinct (psychosexual hermaphroditism).
2. There exists inclination only toward the same sex (homo-sexuality).
3. The entire mental existence is altered to correspond with the abnormal sexual instinct (effemination and viraginity).
4. The form of the body approaches that which corresponds to the abnormal sexual instinct.

(1906, 336)

He thereby emphasized the importance of congenital feeling: “The determining factor here is the demonstration of perverse feeling for the same sex; not the proof of sexual acts with the same sex. These two phenomena must not be confounded with each other; perversity must not be taken for perversion” (286). Genuine homosexuals would constitute a sick and perverse type of human being.

With this classification Krafft-Ebing questioned the assumption of the criminal responsibility of same-sex offenders. If this kind of sexual desire was manifested by a natural drive, homosexuals should not be persecuted by law. Paragraph 175 of the criminal code of the German Empire and Paragraph 129 of the Habsburg monarchy’s criminal code held severe penalties for “fornication against nature.” Krafft-Ebing suggested that same-sex sexual interactions should be punished only when they are committed in front of an unconcerned third person or by violence. Furthermore, pederasts should be punished, because their young victims are not mature enough to give consent.

According to Krafft-Ebing, female homosexuality was uncommon. For this kind of sexual relationship he could refer only to a few observations, so he conceptualized the idea of “lesbian love” as an analogy to the male model. Moreover, he tried to explain how such females differed:
(1) It is more difficult to gain the confidence of the sexually perverse woman; (2) this anomaly, in so far as it leads to sexual intercourse, inter feminas, does not fall (in Germany at any rate) under the criminal code, and therefore remains hidden from public knowledge; (3) sexual inversion does not affect woman in the same manner as it does man, for it does not render woman impotent; (4) because woman (whether sexually inverted or not) is by nature not as sensual and certainly not as aggressive in the pursuit of sexual needs as man, for which reason the inverted sexual intercourse among women is less noticeable, and by outsiders is considered mere friendship.

(1906, 395–396)

Krafft-Ebing believed that so-called Mannweiber (manly women) constitute an obvious "specie," which was characterized by more or less female versus male attributes. Because of their congenital degeneration, most of the lesbians should have masculine feelings and a male sex character.

As a sexual pathologist, Krafft-Ebing suggested a precise division of labor between the courts and psychiatrists: the former should be responsible for the prosecution and punishment of the pederasts, the latter for the diagnosis and assessments of the contrary sexuals. By diagnosing same-sex perversion, the sexual pathologists would find out that most of the “homosexuals” do not identify themselves as degenerate invalids or psychiatric patients. Surprisingly for the pathologists, most of them seemed to be happy with their “perverse” sexual sensation and suffered mainly from the social prejudice and the severe laws. Nevertheless, Krafft-Ebing argued, the contrary sexuals should consult one of the Nervenärzte (nerve doctors) to find out the scientific and objective reasons for their feelings. With this medical improvement, they would be able to identify themselves as a homosexual subject or as a so-called homosexual.

**Significance and Impact**

Autobiographical letters of confession and the case materials that were published by Krafft-Ebing showed that most of the “homosexuals” were influenced by the idea of the pathological model and its categories of self-perception. During his research and correspondence with the patients, he came in contact with members of the middle and upper classes who told him about their sexual lives, emotions, and practices that did not fit into contemporary bourgeois morals. Many of them attributed themselves to psychiatric categories. They explained their life as a “perverse” case history and constructed their identity under the concept of “contrary sexuality.” It is misleading, however, to classify
Krafft-Ebing and other contemporary sexologists only as agents of a pathologization and the “homosexuals” as helpless and passive objects of psychiatric discourse. As most of the patient letters prove, the homosexual life story was influenced by the interaction of self and foreign images. Harry Oosterhuis summarized this complex relationship by noting that “new ways of understanding sexuality emerged out of a confrontation and intertwining of professional medical thinking and patients’ self-definition. The theory of degeneration and an emphatic understanding of individual predicaments existed side by side” (Oosterhuis 2000, 212). Reading such case histories, “homosexuals” could find out that they were not alone and that their feelings could be explained in rational and “objective” scientific terms.

Thereby, the narratives provided a specific biographical structure that began from childhood and family education and continued to first sexual experiences. Moreover, they offered stories about the individuals’ aversion to and fear of a sort of “coming out” while writing to the psychiatrist. Although the pathological point of view dominated in Krafft-Ebing’s book, the biographical narratives of his patients and correspondents had a lasting impact on the development of (homo)sexual identities. These individuals spoke about themselves, and they spoke the “truth” about their experiences within the medical and pathological frame of perversion and perversity (Savoia 2010). They thus demonstrated that sexual identity is not given by nature or an intrinsic drive. It emerged as a socially patterned narrative based on a society’s given supply of sexual scripts and modes of looking at and understanding one’s self. As Philippe Weber expressed it in the title of his 2008 book on sexual pathology and homosexuality: Psychopathia sexualis was the starting point for “the urge to narrate.”

Additionally, Psychopathia sexualis conveyed as well the idea that “homosexuality” had an essential impact on a certain identity. The best seller found a wide readership, and its narratives provided recognition of and identification with unusual sexual lives (Ammerer 2011). Krafft-Ebing’s taxonomy of sexual deviance (e.g., the terms homosexual and heterosexual that were invented some decades before by Karl Maria Kertbeny [1824–1882]) dominated both the medical context and commonsense thinking. His psychiatric categories and terms became the templates for literary characters that represented same-sex love, sexuality, and identity. For instance, Thomas Mann (1875–1955) used his understanding of Psychopathia sexualis to characterize sexually deviant characters in Buddenbrooks: Verfall einer Familie (1901; Buddenbrooks [1924]). This novel illustrated the etiology of homosexuality—with homosexuality, in this case, being an outcome of the congenital sociophysical decline of the Budden-brook family. On the one hand, it showed that the breakdown is caused by the forces of modernity, such as the hectic nature of urban life, neurasthenia, and decadence. On the other hand, the “contrary sexual sensation” of Mann’s main characters arms them with an increased artistic sensibility, aesthetics, and Geist (mind) (Schaffner 2011).

The psychiatric strategies of Psychopathia sexualis became an object of satire, too. Frank
Wedekind’s polemic poem “Perversity,” for instance, was originally titled “Krafft-Ebing.” Oskar Panizza’s (1853–1921) *Psychopathia criminalis* (1898) criticized the social implications of the psychiatrists’ classification and the reductionist nature of pathological case writing (Lang, Damousi, and Lewis 2017). Krafft-Ebing’s authority was also used to promote homosexuality itself. For example, in the classic lesbian novel *The Well of Loneliness* (1928), by the English author Radclyffe Hall (1880–1943), which told the story of a “female sexual invert” called Stephen Gordon, Krafft-Ebing was referenced by name. This literary figure is conceptualized on the basis of pathological ideas, showing that various forms of sexual desire can exist within one sexual preference. Gordon is pictured as a sexually active female “invert” who defines herself as “a sexy and sexed martyr” (Bauer 2003, 37).

Even though Krafft-Ebing started his career as a theorist of degeneration, he found his path through his communications with his patients and correspondents. In his later years, he became an advocate for a more individual and psychological understanding of sexual feelings. As a result of the autobiographical confessions of his correspondents and the influence of other sexologists, such as Havelock Ellis (1859–1939), Sigmund Freud (1856–1939), and Magnus Hirschfeld (1868–1935), he changed his view of the degenerative and pathological origins of the contrary sexual sensation (Oosterhuis 2012). In the last edition of *Psychopathia sexualis*, which was authorized by himself, Krafft-Ebing claimed that

```
this abnormality must not be looked upon as a pathological condition or as a crime, but the development of the vita sexualis with its reacting effects upon the mind and the moral sense; it may proceed with the same harmony and satisfying influence as in the normally disposed, a further argument in favour of the assumption that antipathic sexual instinct is an equivalent for heterosexuality.
```

The cultural production and activism of queer Puerto Ricans living in major US cities and their continued connection with the island.

When assessing literary and cultural production by queer Puerto Ricans, it is essential to consider the influence and contributions of those living in the diaspora. According to the 2010 US census, 4.6 million people who identify as Puerto Rican live in the United States, with the majority of these living in New York, Florida, New Jersey, Pennsylvania, and Massachusetts. The reasons for these migrations over the years are diverse and are discussed below, but it is important to note that for many queer Puerto Ricans who moved from the island to the United States, questions of gender and sexuality were at the center of their relocation. It is not possible to speak of the Puerto Rican diaspora as monolithic, particularly because inflections of Puerto Rican culture in Chicago, for example, will differ from those in New York, Orlando, or rural Massachusetts. Therefore, this entry focuses on queer Puerto Rican cultural production in the diaspora through the entanglements between literature, activism, and performance art.

Sylvia Rivera and the Young Lords

In a talk given in 2001, Puerto Rican–Venezuelan transgender activist Sylvia Rivera (1951–2002) recounted the summer night in 1969 when she threw the second Molotov cocktail of the Stonewall riots in New York City, widely considered to be a turning point in LGBTQ activism in the United States. While the riots have become a symbol of LGBTQ resistance, the contributions of Rivera and of other trans women of color have historically been relegated to the background of early gay and lesbian activism in the United States. Rivera told this story at the Lesbian and Gay Community Center (now known as the Lesbian, Gay, Bisexual, and Transgender Community Center) in New York City to illustrate not just continuous efforts to whitewash the history of LGBTQ resistance, but also the persistence of marginalized members of the community in making their voices heard. After the Stonewall riots, Rivera, along with Marsha P. Johnson (1945–1992), went on to found STAR: Street Transvestite Action Revolutionaries, a trans and gender nonconforming activist group that would remain active in various ways until Rivera’s death in 2002.
Rivera and many of the Young Lords were part of the first generation of Puerto Ricans born and raised in the United States after the mass migration of Puerto Ricans to cities like New York, Chicago, and Philadelphia. Their migration was due in part to Operation Bootstrap, a policy that during the 1940s and 1950s shifted the Puerto Rican economy from agriculture
to industrial production and export. The collaboration between Rivera and the Young Lords marked a great departure from the discourse surrounding any form of dissident sexualities or gender nonconforming identities that were prevalent in Puerto Rico.

**Manuel Ramos Otero and the Experience of Sexile**

In his 1995 article “Toward an Art of Transvestism: Colonialism and Homosexuality in Puerto Rican Literature,” Arnaldo Cruz-Malavé underscores and critiques the general absence of gay and lesbian Puerto Rican literary subjects for the better part of the twentieth century. Citing gay Puerto Rican poet Carlos Rodríguez Matos, he notes that from 1942 to 1973 (i.e., from the publication of Carlos Alberto Fonseca's poem “En voz baja ... a un efebo” [Quietly...to an Ephebe] to Víctor Fragoso’s “El reino de la espiga” [The kingdom of the wheat spike]) there is no overt mention of gay and lesbian subjects in Puerto Rican poetry. Cruz-Malavé also indicates that the erasure of gay and lesbian desire is not just constrained to literature, but to Puerto Rican life and culture in general. Víctor Fragoso (1945–1982), the poet signaled here as the rupture in that poetic silencing of gay and lesbian desires, was based in New York City and would go on to produce a rich, though relatively unknown, body of work that prominently explored gay and Puerto Rican identities. In recent years, such scholars as Lawrence La Fountain-Stokes and Yolanda Martínez-San Miguel have brought attention to the fact that while the economic and political motivations for Puerto Rican migration to large metropolitan areas of the United States have been recognized and studied for many years, sexuality as motivation has been largely ignored.

In 1997 Manuel Guzmán coined the term *sexile* to refer to the “exile of those who have had to leave their nations of origin on account of their sexual orientation” (Guzmán 1997, 227). Manuel Ramos Otero (1948–1990) is one of the figures that exemplify this notion of sexile in the Puerto Rican case. Ramos Otero moved to New York City in 1969 and began publishing poetry and short-story collections in the early 1970s. He returned to Puerto Rico shortly before he died of AIDS in 1990. His texts prominently featured gay Puerto Rican men living in New York City. In an interview published shortly after his death, Ramos Otero says that he moved to New York City immediately after finishing his bachelor’s degree at the University of Puerto Rico because he felt that he would not be able to live freely as a gay man on the island.

First of all, it was the best option for leaving my home. Second, I couldn't stand the repressive atmosphere in Puerto Rico anymore. I realized that New York was a city where I could live without feeling persecuted all the time. In Puerto Rico, I was subject to a lot of persecution because I was so open with my sexuality.
The persecution he mentions refers to the contentious relationship that he maintained with other writers in Puerto Rico. The open discussion of his sexuality in his work put Ramos Otero at odds with the literary establishment in Puerto Rico. For example, in an interview published in 1977, Puerto Rican writer José Luis González addressed how sex and the erotic have been successfully incorporated into contemporary Puerto Rican literature. Despite such claims, González was reluctant to include Ramos Otero within this group of writers, claiming that he is “obviously a very talented writer who has not yet developed the artistic distance necessary to transform his own experiences into literature” (Díaz Quiñones 1977, 47).

**Ramos Otero’s Queer Diasporic Writings** Ramos Otero makes note of this in the short story “Descuento” (“The Untelling”), included in his last short-story collection, *Página en blanco y staccato* (The point blank page). Referring to González’s critique and to the central place gay love and desire have in his texts, he writes, “Understanding that one of the cruelest political battles takes place in bed, I learned that the only remaining alternative (however much I might try to avoid it) was to return to the story of love and avenge myself on the inquisitors of Puerto Rican literature” (Ramos Otero 1988, 101–102).

Related or not to these “inquisitorial” tendencies, the truth is that for the better part of the 1990s and the next decade, Ramos Otero’s work was largely unobtainable. Early in the first decade of the twenty-first century, only one of his books, *Página en blanco y staccato*, was available in bookstores. The rest of his work circulated among readers in the know in photocopy form. A key turning point for the circulation of Ramos Otero’s work, as well as for that of many other writers, is the 2007 publication of the first-ever anthology of gay, lesbian, and queer literature from Puerto Rico and its diaspora, edited by Moisés Agosto, David Caleb Acevedo, and Luis Negrón, titled *Los otros cuerpos: Antología de temática gay, lésbica y queer desde Puerto Rico y su diáspora* (The other bodies: Gay, lesbian, and queer anthology from Puerto Rico and its diaspora). In this collection, Puerto Rican queerness is fully understood as a diasporic project. It includes authors who spent most of their careers both on the island and in the United States. The volume is dedicated to the memory of Ramos Otero and includes his short story “El cuento de la Mujer del Mar” (The story of the woman of the sea), marking the first time since the early 1990s that one of his works was put into wide circulation. *Los otros cuerpos* has been regarded as a turning point in the understanding of queer cultures in Puerto Rico, and it is particularly significant that Ramos Otero functions as somewhat of an organizing figure for this new phase of queer literature on the island.

In 2011 the Instituto de Cultura de Puertorriqueña (ICPR; Puerto Rican Cultural Institute)
reedited Ramos Otero’s only novel, La novela bingó (The bingonovel), originally published in 1976 in New York City. In 2013 Ramos Otero’s posthumous poetry collection, Invitación al polvo (Invitation to dust), was reprinted with great success. His work has also been adapted for theater and performance. His short story “Loca de la locura” (Queen of madness) was adapted by Teatro Pregones as El bolero fue mi ruina / The Bolero Was My Downfall in 1997 and has been performed regularly since. Puerto Rican performance artist José “Pepe” Álvarez adapted La novela bingó into a multimedia performance piece titled LA MAMUTCANDUNGO in 2015, demonstrating the renewed interest in and continuing relevance of Ramos Otero’s work for queer artists both on the island and in the diaspora.

**Archiving and Memorializing a Queer Life** In 2014 the Rare Book and Manuscript Library at Columbia University announced that it had recently acquired Ramos Otero’s personal archive as part of its new Latino Arts and Activism Collection. This collection includes the personal archives of writers such as Jack Agüeros (1934–2014), Rosario Ferré (1938–2016), and Cuban-born Dolores Prida (1943–2013), as well as the photographic archive of La prensa, the oldest Spanish-language newspaper in the United States. This collection was founded and is curated by Puerto Rican filmmaker and scholar Frances Negrón-Muntaner. In her own work, Negrón-Muntaner engages many of the themes that Ramos Otero sheds light on in his texts. For example, in her 1994 film Brincando el charco: Portrait of a Puerto Rican, Negrón-Muntaner addresses the questions of “sexile” so present in the works of Ramos Otero. The filmmaker plays “Claudia,” a lesbian Puerto Rican artist struggling to find community in the United States. The film highlights not only the difficulties of dealing with homophobic family members, but also the issues of being a queer artist of color in the United States.

The Ramos Otero papers now housed at Columbia University are unique in that, as a result of having been handled by various family members and friends since the author’s passing, they offer a very broad perspective not just on what the writer himself considered important, but also on what his family and friends deemed to be archivable. Among letters from the author to friends and family, one can find extensive correspondence among these friends and family detailing the aftermath of the writer’s death of complications from AIDS in 1990. Manuscripts can be found alongside books that, because of their publication date after the author’s passing, clearly belonged to other family members. The archive invites the user to think about the ways that diasporic networks and kinships shape how queer lives are archived and memorialized.

**HIV/AIDS Activism**

It also important to note the role that queer Puerto Ricans played in the fight for accessible treatment and general care for those with HIV/AIDS. Negrón-Muntaner, along with Peter Biella, directed the documentary AIDS in the Barrio (1989), which focuses on the effects of the epidemic among Latino communities in Philadelphia. Moisés Agosto, who would go on
to edit *Los otros cuerpos*, was one of the founding members of the Latino caucus of ACT UP (AIDS Coalition to Unleash Power). In 1992 Agosto also edited a special issue of *SIDAhora* (AIDSNow) dedicated to arts and literature. *SIDAhora* was a Spanish-language magazine published by the People with AIDS Coalition. Work by writers such as Néstor Perlongher (1949–1992) of Argentina, Severo Sarduy (1937–1993) of Cuba, and, of course, Ramos Otero was included in the issue. This is of particular significance because it appears to be one of the first attempts at constructing a hemispheric network of queer HIV-positive writers and artists.

Agosto’s engagement with Puerto Rican communities affected by the HIV-AIDS crisis extended beyond New York City. In an interview given to the ACT UP Oral History Project, Agosto narrates his experience with the group in New York City, as well as his organizing efforts to bring members to Puerto Rico to engage local communities in the fight against HIV/AIDS. This group’s intention was not to begin an ACT UP chapter in Puerto Rico (although one eventually started) but to help local communities start their own movement for accessible care on the island. Some of the materials produced for this visit are currently archived at the New York Public Library. One protest sign in this collection stands out. A Puerto Rican flag was spray-painted on white poster board; on top of the flag, in black paint, is written “EL E.L.A. ME MATA” (The Estado Libre Asociado [or Commonwealth status of Puerto Rico] is killing me). While this poster was made for a meeting of the National Commission on AIDS that was held on the island, activists were very clear that this fight was about more than HIV. It was not just the epidemic that was killing them but a colonial regime perpetuated by the United States which began with US annexation in 1898 following the Spanish-American War. Following in the footsteps of activists like Rivera, this was an intersectional struggle: by advocating for the decolonization of Puerto Rico, they were also advocating for their own queer liberation.
A Puerto Rican Flag Decorates a Memorial to Those Killed in the Mass Shooting at the Gay Nightclub Pulse in Orlando, Florida, 2016. Twenty-three of the forty-nine people killed during “Latin Night” at Pulse on 12 June 2016 were Puerto Rican. In the aftermath, queer activists used the tragedy to highlight the violence perpetrated on queer Latinx bodies in American society.

The 2016 Pulse Nightclub Shooting

Building on this history of social and cultural engagement led by queer Puerto Ricans, it is important to highlight two recent events that have been transformative for these communities. The first of these was the mass shooting at the gay nightclub Pulse in Orlando, Florida, on 12 June 2016. That night, Omar Mateen opened fire on a crowd gathered for Pulse’s weekly “Latin Night,” killing forty-nine people and wounding fifty-eight others. According to the New York Times, 90 percent of the victims were Hispanic or of Hispanic descent. Twenty-three of those killed were Puerto Rican (Álvarez and Madigan 2016).

While media outlets focused mostly on the shooter’s connections to the terrorist group ISIS and on the issue of gun regulation in the United States, the fact that this was an attack on queer Latinxs (a gender-neutral term used to refer to Latino communities in the United States) was pushed aside in favor of a whitewashed narrative of a threat to the American way of life. In the aftermath of the shooting, Puerto Rican novelist Justin Torres wrote a piece for the Washington Post titled “In Praise of Latin Night at the Queer Club,” in which he brings to the forefront the lived experience of queer Latinxs in the United States. Once
more, the concerns over being accepted by families and over having to leave one's country to be able to live as an out queer person were highlighted. He speaks about the violence enacted on black and brown queer bodies, both physically and institutionally. Violence, for Torres, is not just street harassment and physical harm. It is also perpetuated by immigration policy, trans bathroom laws, and the Puerto Rican debt crisis. But Latin Night at the queer club offers a respite from that violence:

> You didn’t come here to be a martyr, you came to live, papi. To live, mamacita. To live, hijos. To live, mariposas.

> The media will spin the conversation away from homegrown homophobic terrorism to a general United States vs. Islamist narrative. Mendacious, audacious politicians—Republicans who vote against queer rights, against gun control—will seize on this massacre, twist it for support of their agendas.

> But for a moment, I want to talk about the sacredness of Latin Night at the Queer Club. Amid all the noise, I want to close my eyes and see you all there, dancing, inviolable, free.

*(TORRES 2016)*

**Hurricane Maria**

The second transformative event was the passing of Hurricane Maria over the island in 2017. On 20 September, the category-four hurricane made landfall on the east coast of Puerto Rico. The damage caused by the storm was unprecedented. All systems of infrastructure—communications, electricity, water distribution—collapsed for months. Even more destructive than the storm, however, were the crippling slow reactions by both the local and the federal governments.

Queer communities in the United States responded to the crisis by setting up fund-raisers that would offset the institutional violence many queer Puerto Ricans on the island would be facing. Among the many relief efforts, a group of queer Puerto Ricans in New York founded the Queer Kitchen Brigade. In order to address the growing fresh food shortage on the island, the Queer Kitchen Brigade gathered to can and pickle fresh fruits and vegetables that would be sent back to the island. They also collaborated with the Puerto Rican Resilience Fund to help build a seed bank for farmers in Puerto Rico. In the two months after the hurricane, the brigade grew beyond New York, with trips to Philadelphia to teach others how to can and pickle food. To extend their reach, they also published a zine called *U CAN TOO! Un Cuir [Queer] Canning Guide*, which explains their canning processes to others.
interested in participating.

On the island, a group of performers, one of whom was noted queer performance artist Mickey Negrón, founded a traveling theater troupe that staged ¡Ay, María! in public spaces in all Puerto Rican municipalities. The play emphasizes community building in the face of disaster, and offers its audience a space in which they can process more than just the day-to-day struggles with lack of electricity, water, and other basic needs. The performance also addresses the growing militarization of the island in the months after the hurricane and the neglect and corruption of both federal and local governments, reminding audiences that the true disaster was not a natural one but a political one. ¡Ay, María!, the Queer Kitchen Brigade, and other queer- and feminist-aligned groups that have been active in the aftermath of the hurricane are further evidence of the importance of queer discourse in the fight for social and economic justice in Puerto Rico. These groups and the other figures discussed in this entry exemplify the ways that literature, performance, and activism have intersected in queer Puerto Rican communities from the late 1960s to the present.

The publication of cheap paperback novels dealing with gay and lesbian characters, often in sensationalistic ways, starting in 1950.

Gay and lesbian pulp fiction refers to the proliferation of cheaply produced paperback novels with gay and lesbian themes available in the United States during the mid-twentieth century. During this period a number of paperback publishing houses cashed in on increasing public interest in homosexuality, coupled with relaxations to censorship and obscenity laws, to produce thousands of gay and lesbian pulp fiction titles. Lurid cover art combined with titles such as *We Walk Alone, The Strange Ones, Edge of Twilight, These Curious Pleasures*, and *Whisper His Sin* evoked the notion of homosexuality as something that existed on the margins of society and in urban underworlds where immorality abounded.

Pulp novels were not known for their literary merits, being very hastily produced, often by inexperienced writers, with little to no editing. Instead, they focused on sensationalism to sell copies. Dealing with the controversial and then taboo topic of homosexuality, they were part of a wider boom in pulp fiction publishing that traded in sex, violence, and social obsessions or themes that were at the time considered risqué, such as adultery, juvenile delinquency, white slavery, interracial relationships, drug use, and prostitution.

Gay and lesbian pulp fiction holds an important place in LGBTQ history as it provided the first opportunity for many gay, lesbian, and bisexual people to see depictions of same-sex desire in print. Through reading about gay men and lesbians falling in love, having sex, and forming relationships, often set against the backdrop of an emerging gay scene, many people realized that they were not alone in their desires. Joan Nestle (1983) has gone as far as to term it “survival literature.” Gay and lesbian pulp fiction also brought awareness of homosexuality and same-sex desire to mainstream heterosexual audiences. In this way, gay and lesbian pulp fiction can be seen as part of the creation of a visible gay and lesbian culture that transpired in the latter half of the twentieth century.

**Major Differences between Gay and Lesbian Pulp**

Although they emerged at the same time and within the same social and cultural contexts,
the histories of gay pulp and lesbian pulp are very different. Lesbian pulp fiction was a mass-market publishing sensation, with estimates of more than 2,000 titles published from 1950 to 1965. Gay pulp fiction, however, never captured as broad an audience. Whereas lesbian pulp fiction was often marketed to a heterosexual male audience, gay pulp fiction was predominantly marketed to gay men. As a result, far fewer gay pulp novels were produced and sold. In addition, the definition of gay “pulp” is more complicated than that of lesbian pulp, as the type and quality of gay novels produced in the standard pulp paperback format ranged from literary works through to explicitly pornographic titles. Lesbian pulp fiction, by contrast, conforms more neatly to the genre conventions, tropes, and style of pulp fiction more generally.

Both gay and lesbian pulp fiction can be seen as products of their time. Plotlines were generally homophobic in nature, with homosexual characters represented as miserable social outcasts or devious perverts out to corrupt the innocent. Heterosexuality was typically cast as the salvation for gay characters who could realize the errors of their ways. Suicide, murder, or insanity often followed for those unable or unwilling to repent. However, not all gay and lesbian pulps depicted homosexuality in such bleak terms. This was particularly the case for pulps that were written by gay men and lesbians, as opposed to the swathes of moralizing pulp titles that sought to convey a conservative message, albeit through sensationalism and exploitation.

The Paperback Revolution

Before World War II (1939–1945) books were an expensive commodity available only in hardback form. Distribution was fairly restricted, as books were sold only in bookstores, and bookstores themselves could generally be found only in larger cities. As a result, reading was viewed as an elite activity. During World War II, however, the paperback emerged as a cost-effective and easily transportable way to provide reading material to US troops. The creation of the paperback book transformed the reading practices of Americans in the mid-twentieth century. Paperbacks were very cheap to produce and sold for around 25 cents apiece, as opposed to around $1.95 for a hardback. As a result of the distribution innovations of the paperback publisher Pocket Books, paperback novels were made available in a wide range of outlets, such as newsstands, drugstores, and bus stations. For the first time books were affordable and available to millions of Americans, all over the country.

Initially, publishing houses produced paperback reprints of existing hardback novels. However, demand increased so rapidly and was so high that publishers looked for new ways to satisfy a hungry reading public. The result was the paperback original (PBO), newly written titles that went straight into paperback editions. One of the pioneers of PBOs was Fawcett Gold Medal, which went on to become one of the main producers of lesbian pulp fiction. The PBO allowed for not only a material revolution in the book industry but also a
revolution in the type of fiction that was produced. Because they were typically viewed with disdain by the “legitimate” publishing world, PBOs circumvented the scrutiny of literary reviews, which dealt only with hardback books.

Their tangential relationship to the respected publishing world makes it difficult to discern readership figures for gay and lesbian pulps. Publishers Weekly recorded sales only from bookstores, and therefore many of pulp’s major outlets, such as newsstands and grocery stores, are not accounted for. Even if realistic sales figures were available, they would be unlikely to reveal much about actual readership. The illicitness but also vital importance of these novels to gay and lesbian people at the time meant that copies were routinely passed from person to person. At the same time, however, given the social and legal implications of being outed, many gay and lesbian readers threw away or set fire to books after they had read them.

**Artwork and Cover Copy**

Cover art and cover copy are among the defining characteristics of gay and lesbian pulp fiction. Provocative images of buxom, scantily clad women and bare-chested, domineering men, against backdrops of bedrooms, prison cells, alleyways, and all manner of illicit scenarios were intended to entice a readership attuned to the scandal and vice promised by the pulp market. Often, the cover art and copy bore little or no resemblance to the actual plot. Authors rarely had any say over the covers of their novels, which were designed purely to sell copies regardless of accuracy. One notable exception is Carl Corley (1921–), who did the artwork for many of the twenty-two novels he wrote between 1966 and 1971.

Artwork often exaggerated or invented heterosexual elements of novels in order to appeal to both male voyeurism and expectations of heterosexual plot resolutions. Meanwhile, the copy sought to simultaneously titillate and moralize. Cover copy frequently made reference to shining a light on a murky underworld and exposing the social ills of homosexuality so that they could be better understood and thus eradicated. This outward gesture to conservative mores and pretended sociological interest was part of a necessity to demonstrate, in order to get around censorship laws, that works were of sociological value and in the public interest.

**The Golden Age of Lesbian Pulp Fiction**

The lesbian pulp fiction boom was an explosive phenomenon of mid-twentieth century publishing. It has been suggested that the popularity of lesbian pulp fiction took even the publishing houses by surprise and that the genre emerged more by accident than by design. Over a span of around fifteen years, now known as the “golden age” of lesbian pulp, thousands of lesbian pulp titles were produced by a range of publishing houses, some of the most notable being Fawcett Gold Medal, Midwood Tower, Beacon, Avon, and Bantam. It is
widely agreed that the genesis of this golden age can be traced back to a single book: *Women’s Barracks* by Tereska Torrès (1920–2012). Published in 1950 by Fawcett Gold Medal, this PBO was a semiautobiographical account of the author’s experiences in the Free French Army during World War II, featuring a frank treatment of women’s sexuality. Although lesbianism was not the central theme, it featured various lesbian characters and liaisons, giving the paperback-reading public an insight into different “types” of lesbians.

*Women’s Barracks* was an immediate sensation, selling 1 million copies in the first year, and going through thirteen reprints between 1950 and 1964. Such was its success that in 1952 it drew the attention of the US House of Representatives’ Select Committee on Current Pornographic Materials (known colloquially as the Gathings Committee, after its chairman, Ezekiel Gathings). The committee devoted much of its five days of hearings to discussing the novel as an example of how paperback books were promoting moral degeneracy. It is widely held that the resulting notoriety helped to sell even more copies of
Keen to capitalize on the success of *Women's Barracks*, Dick Carroll, pulp fiction editor at Fawcett Gold Medal, approached the author Marijane Meaker (1927–), herself a lesbian, to produce a novel that would focus on a lesbian relationship. Under the pseudonym Vin Packer, Meaker penned the 1952 novel *Spring Fire*, which told the story of sorority sisters Leda and Mitch, who enter into a lesbian love affair but are discovered by the rest of the sorority. *Spring Fire* was even more of a success than *Women's Barracks*, selling 1.5 million copies in its first year of publication. *Spring Fire* also set the tone for the lesbian pulp fiction genre, reflecting the contradictions of a society that was clearly fascinated to read about lesbianism but which required reassurance of the ultimate normality morality, and superiority of heterosexuality. Meaker recalled the initial conversation between her and Carroll:

\[ \text{Carroll: You cannot make homosexuality attractive. No happy ending.... Our books go through the mails. They have to pass inspection....} \]

\[ \text{Meaker: In other words, my heroine has to decide she's not really queer.} \]

\[ \text{Carroll: That's it. And the one she's involved with is sick or crazy.} \]

*(PACKER [1952] 2004, VI)*

The ending of *Spring Fire* sees Leda institutionalized after a total nervous breakdown, while Mitch realizes she never really loved her and is instead ready to move on with her life. The lesbian cliché of heterosexual rehabilitation for one character and death or insanity for the other became a staple of the lesbian pulp fiction genre. What were tragic endings for lesbian readers were reassuringly normative, and in that sense heterosexually “happy.”

The tragic/heterosexual resolution was one of several formulaic lesbian pulp components. Another staple, frequently used, was an all-female setting, such as sorority houses, college dorms, prisons, and, of course, lesbian bars. In addition, psychoanalytical explanations of lesbianism, popular at the time, were regularly employed in explaining characters’ motivations and backgrounds.

**Lesbian Authors and Lesbian Readers**

Although thousands of lesbian pulp titles were produced, the vast majority were written by men and pitched to a heterosexual male audience. Following the initial success of *Women's Barracks, Spring Fire*, and other formative lesbian pulp titles, a variety of paperback
publishing houses produced a steady stream of lesbian-themed novels. They hired pools of emerging authors to write potboilers, with very little turnaround time and very little editing. The result was a torrent of formulaic pulp that appealed to prurient interest and voyeurism.

Amid this glut, a small group of lesbian authors produced an estimated 100 positively written lesbian novels aimed at a lesbian readership. Some of the most significant and important lesbian pulp authors were the aforementioned Vin Packer (who also wrote lesbian nonfiction as Ann Aldrich, and, later, children’s books as M. E. Kerr), Ann Bannon, Valerie Taylor, March Hastings, Paula Christian, Joan Ellis, Sloane Britain, Artemis Smith, and Randy Salem. Yvonne Keller (1999, 2005) has done substantial work in identifying and outlining what she terms “pro-lesbian pulps,” or those lesbian pulp titles that portray lesbianism in positive terms and feature happy, or at least ambiguous, endings for lesbian characters. As Keller states, these pro-lesbian pulps were overwhelmingly written by lesbian authors, who were writing for a lesbian audience.

**Ann Bannon and Valerie Taylor** Ann Bannon (pseudonym of Ann Weldy [1932–]) is perhaps the most famous author of lesbian pulp fiction. Between 1957 and 1962 she wrote the five novels that make up her Beebo Brinker series and which secured her reputation as “the queen of lesbian pulp fiction.” In 1957 she released *Odd Girl Out*, which went on to become the second-best-selling PBO that year and which ushered in a new wave of positive depictions in lesbian pulp. Bannon’s heroine, the flawed but endearing butch Beebo Brinker, and the array of characters around her captured the hearts of a generation of women drawn to Bannon’s depictions of lesbianism and coming-of-age in the postwar United States. Bannon received hundreds of fan letters over the years from women who wanted to thank her for her novels and also ask her where they could find lesbian women in real life.

Ironically, Bannon was, at that time, living a closeted married life in Philadelphia and visiting Greenwich Village’s gay bars on the weekends, gathering material for her novels and glimpsing for herself the lives that lesbians were living. Bannon’s popularity has endured, and, thanks to reprints by lesbian feminist and mainstream presses over the years, she has reached out to new generations of readers. Her series has even been turned into a play, *The Beebo Brinker Chronicles*, which ran off-Broadway in 2007 and was nominated for a media award from GLAAD (formerly the Gay and Lesbian Alliance Against Defamation).

It has been suggested that Bannon’s canonization in the lesbian pulp world has led to other, equally important writers being overlooked, most notably Valerie Taylor (pseudonym of Velma Nacella Young [1913–1997]). Taylor, author of some of the most positively written lesbian pulps, including *The Girls in 3-B, A World without Men*, and *Journey to Fulfillment*, recalled her reasoning in coming to the genre:
I began writing gay novels around 1957. There was suddenly a plethora of them on sale in drugstores and bookstores ... many written by men who had never knowingly spoken to a lesbian. Wish fulfillment stuff, pure erotic daydreaming. I wanted to make some money, of course, but I also thought that we should have some stories about real people—women who had jobs, families, faults, talents, friends, problems; not just erotic mannequins.

(1989, 1)

Taylor played a major role in lesbian rights campaigning. She belonged to the Daughters of Bilitis and Mattachine Midwest and contributed her work to the lesbian publication the Ladder. She devoted many years to activist causes, including LGBT rights, feminism, elder rights, and peace campaigning.

**Gay Pulp Fiction**

Whereas lesbian pulp fiction is relatively easy to identify, with a familiar pulp style and formulaic settings and characters, as well as a clear time period (1950–1965), gay pulp fiction is much more difficult to define. The first paperback gay novels, appearing in the late 1940s and early 1950s, were reprints of hardback editions, notably Blair Niles’s *Strange Brother* (1931), Gore Vidal’s *The City and the Pillar* (1948), and Harrison Dowd’s *The Night Air* (1950). These titles were respected works of literature, treating homosexuality with subtlety. Susan Stryker (2001) notes that compared with the relatively large number of prewar lesbian-themed texts from which paperback publishers could draw, there were very few treating male homosexuality.

The late 1950s saw another small flurry of paperback reprints, notably James Baldwin’s *Giovanni’s Room* (1956). Alongside came a smattering of PBOs, again nowhere near the numbers seen in lesbian pulp fiction. One of the most positive portrayals was in Lonnie Coleman's *Sam* (1959), in which the main character is surprisingly well adjusted, engaging in healthy relationships, and surrounded by a circle of friends.

Throughout the pulp fiction decades various alternative publishing houses specialized in catering to a gay male market. However, they had to be covert in their advertising in order to avoid censorship and prosecution. They did not always succeed, and this, coupled with the financial difficulties of running such small, secretive presses, meant that many such publishers came and went. Among the more successful of these was the small but established Greenberg Press, which published several of the period’s most significant works, including André Tellier's *Twilight Men*, Richard Meeker's *Better Angel*, Nial Kent’s
The Divided Path, and James Barr’s Quatrefoil, the latter of which has gone on to be a gay fiction classic.

After a series of US Supreme Court decisions that paved the way for more pornographic material to be published, a new wave of gay pulp took hold. These novels were targeted specifically to a gay male audience seeking explicit erotic material. They typically had thin plots strung together with a series of increasingly graphic sex scenes, known as “hots.” Editorial convention suggested that these should make up around 20 percent of pulp novels. Considering that the average pulp ran to only around 45,000 words, there was little room for character development once the “hots” had been included. One of the most prolific publishers of graphic gay pulp was PEC French Line, which published around eighty titles from 1966 to 1971, including the unsubtly titled Gay Whore (Jack Love), Hollywood Homo (Michael Starr), and Gay Stud’s Trip (Bert Shrader).

As in lesbian pulp, much gay pulp took on the moralizing tone of the times. Protagonists were regularly depicted as being dragged down into underworlds of homosexuality and vice against their better judgment. Tragedy often befell those who could not claw their way back out. Again, however, as with lesbian pulp, some less reactionary representations did find their way onto the shelves. In some cases, this was achieved through sensitive renderings of gay male identity and sexual relationships. In the later part of the pulp era explicit porn novels reveled in celebrations of graphic male sexuality without the need to kowtow to censorship and moral equilibriums.

The Song of the Loon It is widely held that the most successful and significant gay pulp fiction novel was Richard Amory’s (1927–1981) Song of the Loon, published by Greenleaf Classics in 1966 (along with two sequels, Song of Aaron and Listen, the Loon Sings). Michael Bronski (2003) cites an estimate by Tom Norman, the author of American Gay Erotic Paperbacks: A Bibliography (1994), that 30 percent of gay men in the United States purchased a copy. It inspired a porn film in the 1970s and even a parody novel, Fruit of the Loon (1968). Drawing on the conventions of the pastoral, Song of the Loon depicts a mythical West where Native American and Euro-American men live together in sexual and spiritual harmony, free from the constraints of civilization and basking in the naturalness of homosexual love.

Critical Responses
SOURCE: GREENLEAF CLASSICS, INC.

Cover of Song of the Loon (1966). This novel by Richard Amory is widely considered to be the most successful and significant work of gay pulp fiction. Drawing on the conventions of the pastoral, Song of the Loon depicts a mythical West where Native American and Euro-American men live together in sexual and spiritual harmony.

Despite defining and dominating gay and lesbian fiction of the postwar period, gay and lesbian pulp has not always attracted scholarly attention. This is partly because of its presumed lack of literary merit, as well as the often problematic depictions of gay and lesbian people as psychologically troubled and doomed to a life of misery. This meant that, following the gay liberation movement, some scholars, critics, and community members were keen to distance contemporary LGBTQ scholarship from what they saw as an embarrassing and damaging part of LGBTQ history. Lee Lynch’s influential 1990 personal essay titled “Cruising the Libraries” states just such a view: “I devoured the books, loved the characters, identified completely. This was a mistake. These books, while validating because they acknowledged the existence of lesbians by portraying us, destroyed any incipient pride I might have had in my true fairy self.... The characters were more miserable then [Jean-Paul] Sartre’s, and despised as well” (40).

However, toward the end of the twentieth century and gathering pace in the twenty-first
century, scholars in LGBTQ studies have taken another look at gay and lesbian pulp, finding positive depictions of an emergent gay and lesbian consciousness. In addition, these scholars have argued that although gay and lesbian pulps are often problematic in their depictions of homosexual identity, they are a product of their time. They are situated in the complex social, cultural, and political milieu of a United States struggling with new and often contradictory views on sexuality and gender following the upheaval of World War II, and culminating in the various social justice movements of the late 1960s and 1970s.

The much larger number of lesbian pulp novels produced than gay pulp novels is mirrored in the critical treatment each genre has received. There is now a substantial body of secondary literature on lesbian pulp fiction. There remains relatively little secondary material on gay male pulp. What does exist tends toward annotated bibliographies and anthologies. In part this is a result of the difficulty in tracing gay pulp titles. Another factor is the difficulty in defining gay pulp fiction as a particular genre. One work that attempts to synthesize the world of gay pulp fiction is Bronski's *Pulp Friction* (2003). Stryker devotes a section of her 2001 book *Queer Pulp* to an overview of gay pulps.

**Demise and Legacy**

In 1965 the publishing frenzy that was lesbian pulp fiction came to a sudden end. The very sequence of events that led to the demise of the lesbian pulp genre allowed gay pulp fiction to enter its more explicit and niche phase. Following a series of US Supreme Court decisions throughout the 1960s it became much easier to publish and distribute explicit material. The result was a groundswell of pornographic publishers trading in magazines and erotic novels. They began producing lesbian-themed material that was explicit in a way that lesbian pulp fiction never was. Simultaneously, the paperback publishing world lost interest in lesbian pulp, possibly because of waning public interest in an increasingly liberal society where sex was becoming more openly discussed.

Meanwhile, this very same turn of events allowed for the open publication of explicit gay male pulps. A similar groundswell of small publishing houses, such as the mail-order book service and publisher Guild Press and a number of California-based publishers including several prolific offshoots of Greenleaf Classics, produced a range of gay pulp catering to a variety of niche sexual tastes. Gay male pulps therefore continued through the “free-love” days of the late 1960s and into the post-Stonewall era of gay liberation, where gay sex and sexuality were celebrated in the pages of these “one-handed reads.”

In the twenty-first century, gay and lesbian pulp fiction has enjoyed something of a renaissance, as new readers have sought to both reclaim this element of LGBTQ history and revel in the camp and kitsch artwork now available in everything from fridge magnets to postcard books. Coffee-table books such as Stryker’s *Queer Pulp* and Jaye Zimet’s *Strange Sisters* (1999) celebrate both the lurid artwork and the tales of mid-twentieth-century
queer love within. All this suggests that gay and lesbian pulp fiction continues to both titillate and delight.

**BIBLIOGRAPHY**

As a British colony from 1842 to 1997, Hong Kong has followed British laws that criminalize male homosexual conduct. Even though the Sexual Offences Act of 1967 decriminalized private male same-sex conduct in the United Kingdom, the colonial government made no effort to follow the change (Kong 2011). It was not until July 1991 that the colonial government agreed to decriminalize male homosexual acts on condition that they are between two men over age twenty-one and take place in private. Meanwhile, the age of consent between a man and a woman is sixteen. The inequality inherent in this age difference was challenged in court through the case known as Leung T. C. William Roy v. Secretary for Justice and ruled, in 2005, as violating the right to equality (Hartmann 2005).

The Hong Kong legislation never policed sexual conduct between women and remained silent on the topic of lesbianism. In 1983 a court report by the Law Reform Commission stated that no age of consent for sex between women could be established, given the lack of available information on lesbian sex. As a result of state silence on lesbianism, female homosexuality was deemed insignificant and irrelevant to the issue of discrimination and therefore unnecessary to discuss in the media or legal space (Tang 2011).

In July 1997 Hong Kong became a special administrative region of China. In 2009 an amendment was passed stipulating that same-sex couples would also be covered by Hong Kong’s Domestic Violence Ordinance. However, Matthew Cheung Kin-chung, the minister for labor and welfare, stressed that same-sex marriage/partnership would not be recognized “as a matter of legal status” (PinkNews 2009).

In 2015 a British woman known by the initials “QT” sued the Hong Kong Immigration Department on the grounds of discrimination for refusing to grant her a dependent visa. Joined in a UK civil partnership in 2001, QT wanted to join her partner, known in court documents as “SS,” in Hong Kong where the latter had been working for years. QT’s application for a spousal visa had been denied twice. In March 2016 the case was dismissed by Hong Kong’s High Court. The judge ruled that the director of the Immigration
Department was right to treat QT and her partner as unmarried persons because legislation did not include civil partnerships or same-sex marriages within Hong Kong's concept of marriage. Ming Gwong Se (Society for Truth and Light), a Hong Kong–based conservative Christian organization, applauded the ruling for its defense of marriage as the fundamental institution for social stability (Loeng 2016).

QT appealed to the Court of Appeal. The case was heard on 15–16 June 2017 to settle whether the recognition of an overseas civil partnership as one between “spouses” would contradict or affect the legal definition of marriage in Hong Kong. The British lawyer Dinah Rose, who was handling QT’s case, argued that although Hong Kong legislation did not recognize polygamous marriage either, the Immigration Department once allowed a sponsor to bring with him any one of his spouses at his own choosing (Lai 2017). She argued that heterosexual polygamous marriages should not be treated differently than same-sex civil partnerships.

During the appeal, twelve leading financial institutions applied to back up QT in the court as interveners. They asserted that the discriminatory immigration policy hindered their ability to recruit global professionals, negatively affecting the whole financial industry in Hong Kong (Lau 2017). The court denied the application, even while acknowledging that the Immigration Department’s denial of a spousal visa to QT is contradictory to the department’s aim: encouraging talented people to live and work in Hong Kong, while maintaining stringent immigration control.

On 25 September 2017 the Court of Appeal ruled in favor of QT. Although the judge directly stated that granting QT a dependent visa does not validate any kind of same-sex union, he acknowledged that the Immigration Department’s definition of “spouse” as applicable only to a union between a man and a woman constituted indirect discrimination for QT. This historic victory was a big step for those fighting institutional discrimination against LGBTQ people in Hong Kong. The Equal Opportunities Commission of Hong Kong, an independent statutory body, welcomed the ruling and urged the government to develop a comprehensive legal framework to protect LGBTQ rights (Lau 2017). “It does not provide much help to local LGBT individuals in Hong Kong,” the chief executive of Rainbow of Hong Kong, a local LGBT nongovernmental organization, told the press (Radio Free Asia 2017; translation by Billy Gong). He found that the case reflected the backwardness of the policy toward same-sex couples and urged the government to start drafting antidiscrimination legislation.

**BIBLIOGRAPHY**

On Friday, 11 May 2001, a party attended predominantly by gay men on a floating disco called the Queen Boat was raided, according to Human Rights Watch, by members of “the Cairo Vice Squad and officers from State Security Investigations,” resulting in the detention of “some three dozen men” (Long 2004a, 22). The Guardian (London) also reported that “about a dozen Europeans, along with a Saudi, a Qatari and a Kuwaiti, were released on the spot” and that “women were also allowed to leave the boat” (Dawoud 2001). The men arrested on the boat, as well as several other allegedly homosexual men arrested before 11 May (Long 2004a), ultimately became the group described in the English press as the Cairo 52 and in the widely distributed Saudi newspaper Al-ḥayāt as Qawm Lut al-judud, or “The New People of Lot” (Ṣalāḥ 2001b).

In November 2001, according to Amnesty International (2003), of the fifty-two men arrested, “the court sentenced 23 men to prison terms of between one and five years. Twenty-one were convicted of ‘habitual debauchery,’ one of ‘contempt of religion’ and another on both charges.” In a 2008 interview with journalist David Khalili, the Egyptian filmmaker Maher Sabry reported that in May 2002 all the verdicts except for two (the men convicted of “contempt of religion”) were retried in a civil court. The second trial of the remaining fifty men ended in March 2003 with twenty-one sentenced to three years in jail (Khalili 2008). In subsequent appeals trials, according to the US Department of State (2004), on 4 June and 16 July, fourteen of the convicted men had their sentences reduced to time served and probation, requiring them to spend their nights in police custody. Two of the remaining seven did not attend the appeals trials, and the other five did not appeal, becoming fugitives in the eyes of the Egyptian state.
The Queen Boat on the Nile River in Cairo, Egypt. The Queen Boat, a well-known Cairo nightspot, became the focus of an investigation into alleged homosexual activity involving fifty-two Egyptian men. The resulting trials created a sensation in both the Egyptian and international media in 2001 and 2002.

Media Reaction

The case became rapidly sensationalized by the Egyptian media and made its way to the Western press. It was covered in strikingly different ways by the two media groups. Whereas the Western media focused on the violations of human rights that took place over the course of the Queen Boat trials, Arabic-language media focused on the more sensationalistic aspects of the case and the accusations made by the prosecution, in which the Cairo 52 were called “Satanists” and “Followers of Lot.” Arabic-language media also repeated claims by investigators for the prosecution accusing the men of having used the internet to form a secret group that considered the famous homoerotic poet Abū Nuwās (c. 756–c. 814) to be a prophet and that intended to subvert religion and engage in group sex; these investigators also claimed that a gay wedding was taking place on the boat at the time of the arrests (Salāhalāh 2001a). Other journalists living in Egypt and the Arab world also echoed arguments made by the prosecution that Western condemnation of the arrests and convictions was the result of globalization and the forcing of Western values onto Egyptian culture (Rashwān 2001).

Journalists for English-language media, however, focused more on the reports made by human rights organizations, such as Human Rights Watch, Amnesty International, and the International Gay and Lesbian Human Rights Commission, and on the mistreatment of the
men, allegations of torture, and what they perceived to be the draconian nature of their
arrests and sentencing (Hawley 2001; BBC News 2001; Dawoud 2001). British
celebrities, including Elton John, Ian McKellen, and Emma Thompson, signed a petition in 2002 calling
for the release of the twenty-three men who were initially convicted in Egyptian court (BBC
News 2002b). Other news editorials also accused the administration of US president
George W. Bush of turning a blind eye to the arrests and convictions in Egypt, while
condemning groups such as the Taliban, because it did not want to jeopardize relations
with Egypt, considered a US ally (Boston Phoenix 2002).

**Trial Proceedings**

Scott Long claims that the trial was the result of political feuding between wealthy and
powerful Egyptian families, observing that “the lead defendant, Sherif Farhat, was a
businessman related by blood and marriage to eminent Egyptians” (2004a, 22). He was
arrested before the other men were, along with some of his associates from work and
elsewhere, to support the prosecution’s claim that he belonged to a “homosexual
organization.” It was believed by Farhat’s family and some of the men arrested that
Farhat’s arrest was the result of a political vendetta (Long 2004a).

While the initial charge against the men was *fujur* (debauchery), which does not explicitly
criminalize homosexual conduct in the legal codes, the charge of *fujur* has been used,
according to Long, repeatedly in Egyptian court cases to mean “noncommercial male
homosexual conduct” (Long 2004a, 14). Because charges of *fujur* were not considered a
matter of state security, the additional charge of “contempt of heavenly religions” was
levied against two of the men who were arrested (24).

In order to justify this charge, the claim was made by the prosecution that the men arrested
were part of a cult, led by Farhat, that existed for the purpose of promoting homosexuality.
In his book *Unspeakable Love* (2006), Brian Whitaker mentions that the “State Security
officers claimed to have found a booklet in [Farhat’s] home entitled *Agency of God on Earth: our
Religion is the Religion of Lot’s People, our Prophet and Guide is Abu Nawas [sic]*” (129–
130). These claims, as well as the previously mentioned ones made by the prosecution,
were picked up and repeated by the Arabic-language media (Salāh 2001a).

The trial proceedings were heavily covered by both the Egyptian and international media,
with the identities and faces of the defendants widely publicized. Although the men were
kept from contact with their families, several of the men’s families learned where they were
and what happened to them through the newspapers. Additionally, the trial was made open
to the public and was heavily attended not only by the media but by casual observers as
well (Long 2004a).

**Human Rights Abuses**
In an article on the Queen Boat trials, Long described the atrocities that the men who were arrested in the Queen Boat raids (as well as in other situations for alleged homosexual conduct) were subjected to; they were “beaten with whips or hoses, suspended in excruciating positions, burned with cigarettes, subjected to electrical shocks” (2004b, 13). He also reported that the defendants were forced to go through “forensic anal exams” to see if they had had homosexual intercourse, a detail that was also mentioned by Al-ḥayāt (Salāḥ 2001b). The New York Times Magazine also reported that the men were “beaten, bound, [and] tortured” throughout the course of their imprisonment (Azimi 2006).

Both the New York Times and Human Rights Watch claimed that the Queen Boat trials led to the expansion of previous practices of internet and phone surveillance by the Egyptian government in order to entrap Egyptian gay men (Azimi 2006; Long 2004a). Long (2004a) further reported that undercover police officers were posing as gay men on internet dating sites in order to meet and arrest gay men, and that the Egyptian vice squad was compiling lists of gay men that they would at times round up, detain, and torture for up to weeks at a time, sometimes inviting them to parties for the purpose of arresting them.

Critiques

Nationalist rhetoric was frequently deployed by the Egyptian government and in Egyptian editorials to justify the Queen Boat arrests and the treatment of gay Egyptians. Long (2004b) reported that the Egyptian government claimed that the arrests were necessary to defend Egyptian cultural values and that foreign criticism of the trials and the arrests was an attempt to impose Western cultural values on Egypt. This view was reiterated by writers for the Egyptian press, who further pointed to local Egyptian human rights groups not condemning the arrests as a sign that this was an imposition of Western human rights values on the Arab world, while also claiming that international human rights groups—just like the cult that the defendants of the Queen Boat trials were accused of belonging to—were seeking to overturn Arab-Islamic values, and with them Arab-Islamic civilization (Rashwān 2001). In an interview with the BBC News (2002a), however, Hisham Kassem, director of the Egyptian Organization for Human Rights, said that, because of extremely homophobic attitudes held by the Egyptian people, they were not able to speak publicly against the Queen Boat trials and arrests for fear of being unheard when they spoke against human rights violations against other persecuted groups in Egypt.

One of the most significant critiques of the Queen Boat trial proceedings and its coverage in the media both inside and outside the Arab world was leveled by Columbia University professor Joseph Massad. In his 2007 monograph Desiring Arabs, he claims that the “Gay International” capitalized on the events of the Queen Boat trials in order to further their aim of globalizing Western concepts of gay and lesbian identity, contending that they attempted to refashion the trials as an Arab equivalent of the Stonewall riots. Massad argued that as the men on trial denied that they were gay, and resisted being photographed
as part of the trials, a parallel between these events and the very public nature of the Stonewall riots is false.

Long responded to Massad’s claim that international LGBT groups were engaged in a globalizing and colonialisit project by pointing out, first, the colonialisit roots of Egyptian laws criminalizing fujur, and, second, that these laws “[stemmed] from a law against prostitution passed in 1951,” which “arose out of anti-colonialisit fervor for recovering national integrity. Both the Muslim Brotherhood and secular nationalists wanted to erase the shame of licensed brothels maintained by the British, where Egyptian women serviced the country’s military overlords” (2004b, 16). Long further points out that the rhetoric criminalizing sex acts in the Arab world mostly came from Europe as an influence of colonialisim and that most laws pertaining to sex in Egypt were derived from Napoleonic law. Responding specifically to Massad’s claim that the “Gay International” was responsible for imposing Western norms of sexuality on the Arab world, Long describes human rights organizations such as the one that he works for as “NGOs [nongovernmental organizations] with miniscule budgets and infinitesimal cultural power,” claiming instead that Western concepts of gayness have come to be in the Arab world through a process of circulating global discourses and “corporate and commercial forces [underlying] the flow of images and information that is creating hybrid cultures almost everywhere” (15).

Long also argued that the actual reason behind the Queen Boat arrests was not to persecute homosexuals but to provide a pretext for the expansion of the Egyptian security apparatus in order to crack down on the “dissenting left” in Egypt (2004b, 20). This is an idea further expanded on by Nicola Pratt in her 2007 article “The Queen Boat Case in Egypt: Sexuality, National Security, and State Sovereignty.” In it, she claimed that “the punishment of homosexuality was not only represented as a means of securing Egyptian manhood but also as a means of protecting Egyptian national security” (137), and she argued that “the public harassment of homosexual men represents an opportunity to regain control of the ‘inner domain’ of the nation” (138). Additionally, Pratt contended that this criminalization of homosexuality was an attempt by the Egyptian government to assert its power in the wake of economic decline. Through this assertion of power and the emphasis on making the Egyptian national identity understood as a specifically heterosexual one, Pratt claimed that the Egyptian government was attempting on some plane to “resist global inequalities” (144).

BIBLIOGRAPHY

The term *queer domesticity* refers to intimate LGBTQI+ arrangements of the activities, space, style, and finances of the home, as distinguished from kinship or family. The concept strictly concerns the setting up and administration of a household as opposed to the family structure.

**Queer Domesticity in Popular Culture**

For many outside the queer community, the concept of queer domesticity is largely shaped by television portrayals of LGBTQI persons in urban queer settings in the United States or the United Kingdom. The 1993 British miniseries *Tales of the City*, which aired in the United States a year later, was the first to present such a portrayal. Adapted from a book series by American author Armistead Maupin (1944–), *Tales of the City* depicted the lives of a group of people living in a boardinghouse in San Francisco that included several characters with nonnormative sexualities. Other popular television series in this genre include *Queer as Folk*, which first aired in the United Kingdom in 1999 (and then had an American-Canadian spin-off that aired on Showtime from 2000 to 2005), about a group of gay men in the postindustrial city of Manchester and its famous Gay Village, and *The L Word* (also on Showtime; 2004–2009), about a group of lesbians in Los Angeles. On American network television, the shows *Will and Grace* (1998–2006; revived in 2017) and *Modern Family* (2009–) featured a mixture of gay and straight domesticities in New York and California, respectively.

**The History and Social Conditioning of Queer Domesticity**

In real life, queer-identified people have set up living arrangements and made homes in divergent ways throughout modern history, even in the years before the appearance of these popular culture presentations and the liberalization of Western legislation that allows for civil unions and same-sex marriage. Class, marriage, and parenting status, along with the rural or urban context, were arguably the most significant factors affecting queer domestic arrangements before the change in the legal landscape. Also, persons with private income, such as an inheritance or a significant family allowance, had access to a greater
variety of options in designing their household settings in alternative ways than did those in a more challenging economic position. On the other hand, historically, in rural and urban working-class settings, it was often seen as normal for same-sex persons to share rooms and beds both to economize and because of the lack of space.

Gender is the most profound aspect influencing the history and social conditioning of queer domesticity in the modern history of nation-states. Women who desire other women have had fewer economic options, though perhaps more social space to create queer households than men who desire men. Because women often earn less and are more restricted in their use of public space than men, their queer relationships have played out in the domestic sphere more often than those of men. A pair of women teachers, shopkeepers, domestic workers, or nurses could share a home without being suspected of illegitimate intimate relations. They could shield themselves from social disapproval and oppressive laws that criminalized homosexuality by disguising their lesbianism under more socially acceptable relationships, such as same-sex friendship or economic convenience for women who are single for reasons related to their profession. Yet whereas men could live alone as “bachelors” but not as couples, women living alone were often seen as sexually suspect, and it was hard for them to find a place to live. For example, in the Nordic welfare countries, which have often been hailed as early havens for gender equality and working women, divorced women often had trouble finding homes to rent until well into the 1970s. A divorcée was seen as “sexually loose,” and a threat for married men; this view was exploited not only in popular literature and common gossip but also in pornography.

Because of the history of “the closet,” as well as social and legal discrimination, queer domesticities are different from heterosexual unions in that nonmarried men living together—unless in such exceptional (and temporary) all-male contexts as army barracks or seasonal work camps—raise more suspicion than women who live together. Sociological, historical, and anthropological scholarship has shown the difficulties faced by gay men who share households, as they must challenge the prevailing norms of gender in the home while also enduring the disapproval of their society and culture. For example, in such countries as Russia that promote the importance of women in the home, men are often expected to be absent from domestic affairs. Men setting up a home together and sharing domestic tasks have also been perceived as strange in other modern societies. In the United Kingdom, a 1950s-era memo from the Law Society declared that “male persons living together do not constitute domestic life” (Cook 2014, 3). Gay men have thus been perceived as a threat not only to kinship and family but also to domesticity. However, many British queer men, such as the famous gay author Oscar Wilde (1854–1900) and the romantic socialist architect Charles Ashbee (1863–1942), not only set up beautiful homes, but also signaled how interior design might be politicized in divergent ways.
A Communal Kitchen in a Kommunalka, Saint Petersburg, Russia, 2015. A kommunalka (an urban flat with private rooms and a shared kitchen common) has provided Russian women a way to live with their female lovers and to create queer domesticities while presenting a “normal” heterosexual living situation in the eyes of the society and the authorities.

Architecture and Interior Design

Modern architecture and urban planning in the nineteenth and twentieth centuries was mostly done by men because women were accepted—and then only gradually—into the profession only starting in the twentieth century. Feminist and queer architecture are still very small fields today. However, many lesbian and gay people who were among the pioneers of interior architecture have arguably made an impact on how we think of domestic aesthetics in the West, including trends in furniture and decoration. For example, the aesthete Wilde decorated his London home in a fantasy Orient style. Wilde’s distinctive divan has influenced many modern queer-identified persons or queer-style-appreciating straight people who want to follow gay and lesbian interior legacies. As the queer art historian Harri Kalha has suggested, queer designers have questioned “our familiar/familial narratives of reproductive futurism in design, a field traditionally devoted to the construction and maintenance of Nation, Home, Family and Capital; the design field continues to have designs on us all” (2011, 41).
The Queer Response to Political, Social, and Religious Realities

Different political regimes and gender policies have profoundly influenced the diversity of options for queer people setting up their domestic life. Historically, lesbians and gays have responded differently to the political and social realities of their immediate cultural environment. For example, Russian lesbians before the liberal era of the 1990s (and again after new “antigay laws” were passed in 2013) have used various strategies to protect their queer domesticity in a hostile society. They have, for example, adopted such disguises as sham heterosexual marriage or posing as “divorced” mothers. In this, the *kommunalka* (an urban flat with private rooms and a shared kitchen common) has provided Russian women a way to live with their female lovers and create queer domesticities while presenting a “normal” heterosexual living situation in the eyes of the society and the authorities. The *kommunalka* was perhaps the most important social experiment undertaken by the Soviet regime, having as much, if not more, of an effect on the outlook of inhabitants than external political realities. It remains an alternative way to organize one’s housing and domestic life outside of the heteronormative family structure. Therefore, it has been useful to lesbians who could better afford this form of housing than buying or renting their own flats, and who traditionally do not look for casual sex in the public, but have had an interest in forming micro-communes that rely on mutual care, politics, and intimacies. The legacy of the queer *kommunalka* is captured in a genre of Russian lesbian songs about it.

In addition to political regimes, religion has also had a considerable impact on queer domestic arrangements. For example, in the rural Finnish countryside in the 1950s, a group of queer women created and maintained a wayward Christian community. They built their own houses and church, designed special attire, and called themselves Sisters in Faith. They reinterpreted the official Lutheran Church’s dogma to include a range of woman-to-woman intimate domestic activities, such as embracing, hugging, dancing, kissing, and singing together as Christian. They also created a peculiar genitalia-centered anointment ritual, which was later deemed a criminal homosexual act in the eyes of the law.

Seen in historical and cross-cultural perspective, the malleability of kinship and family arrangements among LGBTQI persons shows that they have always had the desire for and have found specific strategies to build their own domestic arrangements, whether the political ideology of their society was discriminatory and hostile or democratic and accepting of diversity. Sometimes the reason for designing their own queer domesticity was the hostility they experienced in their homophobic family homes; at other times, it was the queer relationships they wanted to create or bring to their homes. Lesbian, gay, and feminist politics from the 1970s onward sought to deconstruct the heteronormative concept of home as the site where a reproductive straight couple could bring up their children that influenced the practices of queer domesticities. For example, queer squatters
in Brixton, United Kingdom, and Amsterdam in the 1970s and 1980s experimented with queering society’s domestic space, and present-day adult communes in large Western cities are building on this queer legacy.

Queer in Latin America

HÉCTOR DOMÍNGUEZ RUVALCABA
Professor, Department of Spanish and Portuguese
University of Texas at Austin

The theoretical differences between the North American term queer and its application in Latin America.

Queer studies, politics, and culture have been an implicit component of Latin American modernity, although the use of the word queer as such is limited to a sector of academia and the arts environment more related to transnational circles. Some gay and lesbian public intellectuals, such as Mexican writer and journalist Carlos Monsiváis, Chilean writer and performer Pedro Lemebel, and Peruvian Mexican academic Norma Mogrovejo (2011), have expressed their resistance to using this term as “theoretical colonialism.” Nevertheless, they do not have the same reservation toward words such as gay or even theoretical apparatuses such as Marxism and feminism that also came from Europe or North America. Others, such as Ecuadorian academic Diego Falconí (2014) and Argentine writer and activist Valeria Flores, have used cuir as a way to Hispanize the word queer, but it is not clear whether this phonetic rewriting of the English word also necessarily redefines it. Decolonial perspectives from Latin American academia tend to emphasize local queer expressions as opposed to the globalized homonormative gay culture; hence, there tends to be less of an everyday concern with the contours of the “queer” (or the “cuir”) in Latin America.

Thus, a number of ethnographic works explore the specificities of underground sexual cultures as a way to indicate the impossibility of universalizing LGBTTTI (lesbian, gay, bisexual, transgender, transsexual, travesti, and intersex) identities. Works by Joseph Carrier on sexual practices in Mexican western cities, Annick Prieur on trans culture in Mexico City, Marinella Miano Borruso on muxes (the trans indigenous communities in Oaxaca), Marcia Ochoa’s ethnography on the Caracas trans scene, and Giuseppe Campuzano’s museography on travestis in Peru have revealed a diversity of practices and conceptions developed against the grain not only of the hegemonic sex-gender culture but also of the assumptions of the Euro-American gay and lesbian movement. Topics such as how bisexuality is associated with macho identity, the gray zones of double standards, and the preservation strategies of traditional queerness in some indigenous communities show that the specificities of sexual culture in Latin America are elusive when one tries to relate them to theoretical categories produced in Europe and the United States. That is a major reason to highlight these unique corporeal practices as a mark of distinction that makes
necessary a process of adaptation of modern concepts that, like queer, come from political experiences foreign to the Latin American context. It is for this distinction that the use of cuir makes sense, although in academic conversations and activism its use is more related to decolonial perspectives.

While queer studies of the theoretical type in Euro-American academia enact a criticism of identities to liberate sexual dissidents, in Latin American discussions the interpretation of queer, mainly in activist circles, is generally understood as the sum of sexual and gender diversity, underlining a militant positioning against patriarchy and heteronormative institutions. In some Latin American instances, the diversity acronym LGBTTTI includes Q, perhaps intimating that queer is an identity itself, referring to the construction of an androgynous expression in which feminine and masculine marks coexist in one body design. Political agendas of sexual diversity are in general articulated under identity discourse. For several political circles in Latin America, this makes the criticism of identity politics by the most canonical proponents of Euro-American queer theory incomprehensible or even inadmissible.

The Problem of Translation

The translation of the concept is one of the issues that comes up often in debates among queer studies specialists. For Brad Epps (2008), queer is untranslatable because, when used outside of its anglophone scope, it misses its original affective content, charged with an uncomfortable pejorative connotation. Another issue related to translation has to do with the intersection of coloniality and sex. For instance, in his analysis of the sixteenth-century bilingual Spanish-Nahuatl Florentine Codex organized and compiled by the Franciscan friar Bernardino de Sahagún (1499–1590) with the aid of several elite Nahua scribes, Pete Sigal (2007) notes how colonial translation of sexual practices that were admissible for Nahua culture transforms them into something condemnable, and even erases them with terms such as nefarious sin, loathsome and unpronounceable acts. The colonialist interpretation of some Nahua sexual practices, therefore, changes their value from being sinless to something shameful and forbidden, although it would not be correct to state that Mesoamerican cultures did not have any equivalence to the notion of sin. Colonial processes define queerness in Latin America. Scholars such as Osvaldo Bazán, Zeb Tortorici, and Sigal, who have studied the history of queer sexuality in colonial Latin America, report a vast number of cases in which sexual practices that are not legitimate under Catholic Church doctrine were brutally punished (and, at times, brazenly ignored). This violence memory, collected from the juridical archives of the colonial civil and religious administrations from the sixteenth to the early nineteenth centuries, demonstrates unequivocally that queerness describes a zone of rejected, repudiated individuals whose abjection is partly articulated as a religious obligation, but mainly as a state mandate. That is, they are abject by rule, and it is expected that good citizens
discriminate and expel nonheterosexual individuals. But this rule is not reinforced in every case. Instead, the effect of these rules is to establish policing boundaries intended to suppress scandals (at least those involving clergy and elite members), which builds the foundations of closeted spaces to make those punishable practices invisible.

When Epps observes that the word *queer* loses its historical value in the translation, he suggests that an option would be to find a comparable word in the Latin American lexicon. The political transformation that makes an English-language insult such as *queer* a proudly used concept that connotes liberation is missed in the case of any Spanish pejorative word that could be equivalent in the Latin American context. It is not possible to translate this insulting-now-theoretical word because none of these terms has undergone such a vindicatory process. Nevertheless, the concept of *queer* is a strong platform from which to deal with oppression of sexual diversity in North America and European scholarship (though it has less resonance throughout Latin America). Scholarship mainly produced in a transnational dialogue between North and South universities uses this theoretical tool to articulate criticism aimed at social inclusion of disenfranchised populations. It is in this academic conversation where the idea of decolonization of the queer body has introduced the need for specific, localized concepts such as *muxe*, *entundado* (to bewitch or enchant), *cuir*, *cu(y)r*, and so on. For Falconí (2014), *cuir* brings postcolonial/decolonial connotations, dealing with Latin American cultural and political specificities regarding representations and practices of the body. Falconí writes, “Part of Latin American *cuir* theory (that which flirts with post/de-colonial criticism) has proposed translation as a necessity—neither always easy nor certain—that is both careful and self-assured, critical and ludic in the cultural context to be able to apply the rich queer political and theoretical apparatus in Latin America” (2014, 98; translation by Zeb Tortorici).

In Latin American literary studies there are several instances of criticism addressing the queering process of a vast literary corpus, consisting of transforming the abject into a dignified subjectivity. Various literary works since the nineteenth century represent this process of queering, even though the term was not coined yet. One can find the aesthetic operation of making the sexual dissident an admirable and desirable subject in literary works such as *Bom-Crioulo* (1895), by the Brazilian writer Adolfo Ferreira Caminha (1867–1897), which made visible, without homophobic condemnation, homosexual and interracial attraction; in some poems and short stories by Amado Nervo (1870–1919), a celebrated Mexican poet who elevates the androgynous character to the summit of beauty; and in a myriad of novelists, artists, and intellectuals who in their search for aesthetic refinement have to move away from the normative expectations of the body. Several novels published at the beginning of twentieth century present queer characters in empathetic and even celebratory terms, defying the mandatory closet that has relegated sexual dissidents to the underground; narratives by novelists such as the Cuban Ofelia Rodríguez Acosta (1902–1975) and the Chilean Augusto D’Halmar (1882–1950) are good instances. The question of reducing homophobia with aesthetic strategies is one of the central motifs
Queerness and Modernity

One of the topics queer literary and cultural studies reiterate is the connection between queerness and modernity. If homophobia represents traditional values that are associated with endemic machismo, queerness symbolizes in many instances a modernizing expression. In the first half of the twentieth century, intellectual elites in countries such as Mexico and Cuba introduced audacious representations of deviant sexualities, provoking fervent debates that brought queer subjectivities and practices to the public's attention. Literary magazines such as Contemporâneos (1928–1931) in Mexico and Orígenes (1944–1956) in Cuba openly addressed homosexuality, which provoked several debates regarding machismo and its implications in national culture. In the 1920s and 1930s these debates revolved around the question of how Mexican revolutionary culture would be expressed in terms of gender. The corollary of these controversies was the foundation of a tradition of criticism of machismo as a factor of backwardness and an obstacle for the modernization that was imperative in the dominant political discourse. Here, modernity would be understood as following standards of living developed in Euro-American countries, which also means that this external influence is deemed a new form of colonialism and even, as happened in the Cuban Revolution of 1959, interpreted as a social disease caused by capitalism.

As part of this modernity imperative, in the 1970s the gay and lesbian movement started to demand respect and equality and was oriented to the liberation of oppressed sexual identities. Years later, at the end of the 1980s, the AIDS epidemic propelled a politics of rights, ranging from medical attention to nondiscrimination in workplaces and schools. The LGBTTTTI movement evolved in recent decades into championing the agenda of same-sex marriage. This normalization of sexual dissidence is considered to fall under the scope of queer politics, even though it is based on identity vindication. This fact contradicts what Euro-American academia defines as queer, opposing it to identity politics. Queer Latin American culture, arts, and politics do not see this identity politics criticism as its main objective. This does not mean that there is a misunderstanding of the theory; it is instead a re-signifying of queer politics. Here, to translate is to displace the meaning. Queer functions as a political resource because it refers to a historical process by which bodies that were considered condemnable acquired a new value not only as acceptable, but also desirable. Hence, queer politics in Latin America is aimed at dignifying the wretched and enfranchising the excluded regardless of whether it is named “queer,” “cuir,” or “cuy(r)” — or simply left unnamed.

Same-sex sexuality is evident in the literary heritage of the Arab world. Male homoeroticism is a staple feature of medieval Arabic poetry (Wright and Rowson 1997), and both hadith (oral scriptural tradition) and Islamic jurisprudential dealings with male sodomy date awareness of same-sex sexuality among men back to the first Arabo-Islamic societies of the seventh century. Evidence of the existence of homoerotic desire among women in Arabic letters comes down to us in remnants concentrated in the golden age of the Islamic empire, between the ninth and thirteenth centuries (Habib 2007). With respect to the modern world, the generally accepted consensus among contemporary Western theorists is that while same-sex practices previously received significant attention in the Arab world, they do not elicit identities (El-Rouayheb 2005; Massad 2007). This elicitation, according to the consensus, began after an encounter with Western imperialism and colonialism in the mid-twentieth century and the subsequent withdrawal of British and French influences after World War II (Massad 2007).

Theorists agree that gay and lesbian identities in themselves are Western in origin, and together with the subsequent international LGBT rights movement that gained traction in the final decade of the twentieth century, these are sometimes seen as the product of urbanization and capitalist individuation in the West (D’Emilio 1983), after which the family unit no longer held sway as it once did in feudal societies, where inheritance was incumbent on marriage and the reproduction of (male) heirs. The Arab world, by extension, is often thought to have experienced a less rapid process of industrialization, where familial ties, religious beliefs, and tribal customs are still deeply entrenched in a marriage economy, which exacerbates the emergence of identitarian homosexuality.

Although this is a commonly advanced narrative of the state of same-sex sexuality and desire in the Arab world in contemporary theory, it is glaringly inaccurate in that same-sex sexual practices have never ceased to exist there, and these practices have always produced identities. While there is an evident and growing LGBT rights movement emerging in the Arab world—one that extends from global LGBT rights and adopts and grafts terminologies and taxonomies produced in the West onto preexistent, culturally
specific homosexuality (Habib 2016)—the widespread preexistence of homosexual persons is evident from the abundance of indigenous terminology to describe them. While these terms are mostly derogatory, their plentiful existence demonstrates that homosexual activity must necessarily produce identities, even if not all homosexual acts are identitarian in nature and even if these identities are often imposed pejoratively on their subjects.

Arabic exists in two primary modalities: a formalized language (Fusha) that is shared by and understood by literate users of the language anywhere in the world, and a multifaceted populist language (ʿAmiyyah) that is split into numerous dialects that vary widely in vernacular, accents, and dialects. The predominant dialects are determined by geographical location. For example, while dialects and vernacular vary in the Levant region, the countries within this geographical space are distinctly similar. The countries of the Gulf have their own similar constellation of Arabic dialects. The countries that constitute North Africa enjoy their own rich dialect as well, and Iraqi and Egyptian dialects are each distinct in their own ways. There are twenty-three Arabic-speaking countries in the world, and together they constitute the Arab world—a world rife with multiple ethnicities, religions, degrees of urbanization and rurality, and a vast diversity in social and cultural formations, sometimes within one country. The remainder of this entry is dedicated to addressing the subject of “naming” homosexuality in the Arab world as it is here defined.

**Classical Arabic Terms for Men**

In classical Arabic, which relies on formalized Arabic and is therefore universally understood by literate Arabic speakers, heritage terms describing homosexually acting men are most commonly connected to the Qurʾan and the story of Lut. The story of Lut first appears in the Torah and the Old Testament (where he is known as “Lot”), and is recounted with some variation in the Qurʾan. A luti, a man who is of or pertaining to Lut and thus the tribe of Lut, is a man who is understood to be a sodomite of other men. This term, while originally used to denote the insertive party, came to be used interchangeably for the insertive and receptive parties, and this usage is widely recognized today. All countries of the Arab world recognize the term as denoting a man who has sex with men. While the term luti is not used in the Qurʾan and does not appear in the earliest Arabic lexicons as such, its use can be traced to the end of the eighth century and the beginning of the ninth. In Islamic literature, Ibn Abi Shayba, the collector and narrator of prophetic hadiths who died in 857 CE, appears to have introduced the term. For this reason, it is possible that the term luti’s proliferation, if not genesis, arose with Islamic jurisprudential efforts to legislate against the act.

Beyond religious texts, classical Arabic has a wide array of names to capture subtle nuances in sexual behaviors and proclivities. During the ninth century and well into the thirteenth, there was an explosion of erotological literature written in Arabic that sought to describe, chronicle, categorize, and theorize sexual activity in all its phenomena. From this rich
literature a wide variety of terms can be gleaned. *Al-maʾbun*, for example, is an Arabic word that appears in the earliest lexicons, referring to someone on whom an ill or evil has befallen (al-Farāhīdī 2003). It eventually became the term used to refer to the receptive party in an all-male sex act, thus helping to differentiate *al-maʾbun* (the one who receives the act of penetration) from *luti* (the one who performs the act of penetration). Consensual sexual encounters and rape are often not recognized as separate categories of behavior, and for this reason the prohibition of homosexuality is often seen as a prohibition of male rape of another male, leaving no room to litigate for consensual homosexual acts between adults (El-Rouayheb 2005). This might explain the semantic origin of the word *al-maʾbun* meaning one on whom an evil has befallen.

Aside from its lexiconographic roots, the word *al-maʾbun* also describes a man (usually effeminate) whose pleasure is to willfully seek penetration by other men. Heritage terms for effeminacy are at least as old as the hadith tradition, where stories about effeminate men having access to the women’s quarters date back to the life of the prophet Muhammad in the seventh century, and presumably, by logical extension, prior to that. The term *mukhannath* is a classical Arabic word used to refer to someone who is recognized to be male but who does not possess sexual desire for women, and it is usually coupled with descriptions of effeminate behavior and mannerisms. In hadith literature a mukhannath is not necessarily sexually active, or at least these early depictions do not focus on the sexual lives of such persons, other than to state that they did not desire women. Nevertheless, the term *khaneeth*, a derivative of the word *mukhannath*, is widely used (in a derogatory way) to refer to a homosexual man in countries of the Gulf, such as Saudi Arabia and Kuwait today.

**Arabic Terms for Women**

The Arabic heritage word for lesbian sexual activity is *suhaq*, from which the term *suhaqiyya* (denoting the woman who performs suhaq) is derived. Like *luti*, the word is readily recognizable anywhere in the Arabic-speaking world. Its first use and lexiconographic origin are ambiguous, but by the ninth century the word was widely used in erotological literature. It has been suggested that this word is not Arabic in origin but rather a derivation from the Greek *sapphikos* (Massad 2007). The word does appear in Omar al-Tabari's translation of a work by the first-century Greek astrologer Dorotheos of Sidon (Brooten 1996), but al-Tabari was a contemporary of the erotological literature in which this word already had appeared, and therefore it is unclear whether he imported it from Greek and Arabized it or used the prevalent Arabic term already in circulation to translate its Greek equivalent. It is more likely that the latter scenario is true. Erotological literature from the medieval period indicates that the word *suhaq* means “grinding.” Broadly, the word refers to the grinding of, for example, herbs; specifically, when used in relation to women, it refers to the grinding of the clitoris, which is seen as the distinctive
feature of sex between women. Medieval Arabic erotology appears to preclude penetration as a possible sexual activity between women. And while there are numerous terms for male homosexuality in various Arabic dialects, there are fewer terms for female homosexuality in current circulation, and *suhaq* is the predominant signifier of female homosexuality in the Arab world.

In Morocco, a country where French is spoken in greater frequency than Arabic, the word *lesbiana* has entered Arabic vernacular to name a lesbian. In Kuwait the native term *zahooq* refers to a woman who has sex with other women. Such a woman is also understood to be hypermasculine. In fact, in much of the Arab world that has not experienced a colonial encounter, the lines between transgender female-to-male persons and masculine lesbians are not as clearly drawn in the public imaginary. This renders feminine, same-sex–desiring women invisible and illegible, both contemporaneously and in what we glean from medieval literature.

In the first decade of the twenty-first century the phenomenon of female masculinity, coupled with homosexuality, began to garner the attention of local authorities in Kuwait. This followed from an increase in visibility of young adults who were legally female but who dressed ambiguously enough to be confused with boys. Their appearances in public spaces such as swimming centers and shopping malls and on social media gave rise to the terms *boyat* (a feminization and Arabization of the English word *boy*) and *sabyat* (a feminization of the Arabic word for “boy,” which is *sabi*, not to be confused with the word *sabbiyyat*, meaning “young adult females”). This resulted in moral panics, and a subsequent penal code was instituted, which led to the persecution of Kuwait’s transgender minority in 2007, leaving male-to-female transgendered persons particularly vulnerable to arrest and prosecution (*Nigst and Garcia 2010; Human Rights Watch 2012*).

**Local Terminologies and Slang**

Local terminologies give us a finer understanding of how local homosexualities are constructed in the social imaginary through language. These terminologies necessarily give rise to identity politics. For example, the slang terms for gay men in Iraq are *jarawi* and *frookh*, which mean “puppies” and “chicks,” respectively. These highly derogatory terms are used for adult homosexual men, but they also necessarily imply the male victims of pedophilic sexual abuse. In fact, there are no linguistic distinctions between pedophilia and homosexuality in Arabic slang, just as there once was no distinction between male rape and consensual homosexuality. The conflations of pedophilia with homosexuality and male rape with homosexuality often provide the rationale for enacting punitive measures against consensual homosexuality. Sometimes, however, the distinction between homosexuality and pedophilia is present linguistically, and this does not necessarily result in a more favorable view of the former. In Saudi Arabia, for example, the word *barzanji* refers specifically to a man (or young-adult male) who preys on boys.
In Saudi Arabia, the term *mubasbiss* refers to a homosexually inclined man. The origin of the word suggests something about its initial use and the setting of the scene; it refers to a person who calls out “psst, psst, psst” to someone to bring a camel to them, usually with the aim of milking it. The connection of the term with the clandestine subtleties of cruising, in which a man might call out “psst” to attract the attention of another, is compacted in the homosexual semiotics of this word. The connection of the word to desert life imbues it with the profound connection to the locality of the term’s origin and use. Not all local words for gay men can be traced back semiotically in the same way. It is unknown, for example, why *kitkal* and *hotteh* in Moroccan Arabic are used to refer to a gay man. The word *khawani*, used in Oman, may have a Farsi origin, and the word *barinthha*, from Kuwait, does not seem to have an Arabic origin either.

Most of the Arabic slang words that refer to gay men, however, do have a semantic significance. While homosexuality is often conflated with rape and pedophilia, it is also contradictorily associated with receptive passivity and effeminacy, and this is reflected in the terminology. A common construct of homosexuality around the Arab world reflects an understanding that only an effeminate man, presumed to be also a bottom (the willful *al-maʿbun*), is actually gay. The other party can be perceived, even by himself, as simply hypersexual—so sexual that he turns other men into women with his voracious appetite. This form of opportunistic homosexuality (not very different from the homosexuality seen in prisons, for example) can be gleaned from Arabic literature, if not in contemporary rural cultures and environments. In this literature the patriarch enjoys access to a variety of pleasures but usually also has a wife (or wives) and children, fulfilling the social expectation (and also his own) of his position as patriarch. Or else, in the absence of fulfilling his desire with a woman, a man may settle for something more readily accessible in a homosocially organized society. This does not preclude the existence of homosexual men who are gay, masculine, and “active,” for want of a better word; it simply indicates the general perceptions and conceptions that abound about the construct of homosexuality in language and mainstream society. In other words, we can observe, linguistically, how homosexuality is constructed as inseparable from a breach in manhood across the Arab world.

In Libya and Morocco, for example, the word *zamil* is used to denote a gay man, and in Algeria it refers to a cowardly or weak person, giving us a clue to its semantic origin. In the countries of the Levant there is a constellation of insulting terms such as *manyuk* and *manyak*, the slang terms for al-maʿbun, denoting one who is penetrated anally, and *mayet* and *mayeʿ*, which refer to a boy or man whose mannerisms are feminine; all are words for a male homosexual. The term *khawal* is used in Egypt and Sudan, and the word *tant*, the French word for “aunt,” is heard more usually in Jordan and Syria. All these words identify a homosexual as a man lacking in masculine qualities, and in all likelihood they reflect a view that only the receptive party in a sex act is a homosexual.
In Kuwait the word *taraf*, which formally refers to excessiveness or ostentatiousness, is also used to indicate an effeminate gay man, and the feminization of this word, *tarafeh*, refers to a transgender male-to-female person, indicating that a nuanced separation of the two identities is signified linguistically. This is also the case elsewhere in the Gulf, as in Saudi Arabia, where the word *thokri* refers to a constellation of gender atypical behaviors, from transvestism to female-to-male transsexuality. The term *jins*, however, both in Saudi and the rest of the Gulf, is used to refer to a transsexual person specifically. In Saudi Arabia gender-reassignment surgeries are sanctioned by the state, and transgender persons constitute a legally recognized minority who are able to change their sex on legal documents. This is the same in Egypt, where transsexualism and intersex are conflated in the heritage term *khuntha*, which was used in classical Islamic jurisprudence to discuss legal matters (such as marriage and inheritance) pertaining to intersex persons (Sanders 1991).

If it seems that there are few slang terms for female homosexuality discussed here, it is because the subject seems to produce little social discourse. The word *suhaqiyya* is the most commonly used, and the only known indigenous terms are *zahooq* in Kuwait and *banat al-'aishrah* in Syria, to “document a phenomenon that used to be prevalent among the pre-eminent female singers and the elite women of Aleppo in the 1930s” (al-Samman 2008, 303). Female homosexual proclivities are also implied among the *boyat* and *sabyat* as well. In literary Arabic one may encounter the words *mutarajjilat* and *muthakarāt*, or a slang version thereof, *mustarjilāt*, which refers to women who act like *rijal* (men). This does not necessarily imply homosexuality. In medieval Arabic literature there is one text that indicates that a subculture of suhaqiyyat in Morocco created and circulated the code word *tharifa*, which meant “witty one,” to signify that a woman was homosexually inclined (Habib 2007, 70). Absence of evidence of other terminologies is not evidence of absence, but evidence, in all likelihood, of how female sexuality is often shrouded in mystery and prohibition. Women also enjoy greater privacy, which means any subcommunities that form around sexual proclivities can be safe from the anthropologically voyeuristic gaze and social methods of surveillance and policing. The use of words such as *gay* and *lesbian* are also popular in regions of the Arab world where there has been an encounter with the West, whether through satellite television, social media, military occupations, or colonialism. And these words appear in spoken as well as written communications, just as one might use the Arabic word *masjid* in an English sentence. Gays and lesbians in the Arab world are increasingly using these words to identify themselves.

**Sexological, Positive, and Globalized Terms**

The terms that have thus far been discussed either reflect a pejorative view in which the power to name rests in the hands of a largely homophobic society, or are words borrowed from English or French. Another pejorative term for homosexuality that entered the Arabic
literary vernacular comes from Western sexology of the 1950s: the term *deviant*, with its Arabic equivalent *shudhudh* entered literary Arabic to refer to homosexuality around the time sexological literature began to investigate homosexuality as a mental disorder. *Shudhudh* generally means “deviation from the norm.” In fact, in neutral terms, when we say someone *shadhdha* (used as a verb), we mean that they strayed from the common path, they individuated, they struck out entirely on their own. *Al-shudhudh al-jinsi* became a widely used term and continues to be used in medical and jurisprudential discourse as well as conservative newspapers and magazines. It means “sexual deviance.”

However, in a climate of greater societal acceptance in the 1990s, following the success of the LGBT rights movement in 1973 in having homosexuality removed from the *Diagnostic and Statistical Manual of Mental Disorders (DSM)* as a psychological disorder, progressive writers and advocates in the Arab world, including Arab LGBT activists themselves, began to introduce new and positive terminology to name sexual and gender variance in Arabic. The most common term is *mithliyya*, derived from the root word *mithl*, which means “same” and serves as a literal translation of the *homo*-prefix in *homosexuality*. A gay man is referred to as a *mithli* and a woman is a *mithliyya*. This is a new, positive term that is beginning to gain wider usage in the Arab world, even among conservatives.

Adoption of a globalized framework that speaks directly to the “gay” and “lesbian” identity categories of the modern West seems to be flourishing as a result of local, grassroots efforts to reframe the conversation around homosexuality. As more and more gender and sexual minorities begin to organize in the Arab world, they are claiming and generating their own discourse about their desires and their identities (*Amer 2012*). Organized LGBT activists understand the key importance of language in determining the conceptual understanding of homosexuality, which has historically been coupled with pedophilia, rape, and even bestiality. Separating the consensual, adult homosexual reality from other practices is critical to changing societal perspectives. However, this process of globalizing the language of sexuality and sexual orientation is not without its critics, who see this as a form of cultural imperialism that is destroying indigenous sexual practices (*Massad 2007*). Less catastrophically, what these conceptual borrowings and hybridized migrations of sexual terminology seem to be doing is destroying indigenous sexual discourses in which the homosexual is misrecognized, criminalized, or medicalized. This comes with a certain level of danger because it creates in the political and social imaginary a new kind of homosexual: an organized, political entity that now requires state regulation, prosecution, or, worse, persecution. But historically, such has been the price often paid by minorities organizing for their civil rights.

Neorealism has been associated with Italian cinema between the mid-1940s and the early 1950s. Many film historians see the origin of neorealism in the so-called verismo, the naturalist tradition of Italian fascism. It was an attempt to establish an original Italian cinema and separate itself from the contrived cinema of Hollywood. Neorealism is usually explained with reference to the war and postwar periods, but its definition remains controversial. Most neorealist films present a population that, in light of the circumstances of the postwar period, was characterized by the trauma of postwar recovery. The films were shot in mostly gloomy rublescapes of demolished cities and employed amateur actors. The concept behind neorealism was to grasp reality and to present it without artifice. And yet, in so doing, many directors opted to depict gender and sexual norms in a way that opened the playing field to more varied, polymorphous images of desire and identity. Hence, it is important to include neorealist cinema in the annals of queer history.

The neorealist filmmakers came mainly from the Centro Sperimentale di Cinematografia (Experimental Center of Cinematography), a film school that was established in Rome by the regime of the ventennio, the twenty-year period of fascist rule in Italy. Some of their films, including explicit propaganda films, were even shot directly for the regime. The following six movies are often mentioned as quintessential neorealist examples: Roma città aperta (1945; Rome, open city), Paisà (1946; Pbsian), Sciuscià (1946; Shoeshine), La terra trema (1948; The earth trembles), Ladri di biciclette (1948; Bicycle thieves), and Umberto D. (1951); also sometimes cited among the prime examples are Ossessione (1943; Obsession) and Germania anno zero (1947; Germany year zero). However, because the aesthetic of realism can be found in virtually every film of that time, one could argue that the term neorealism applies to much of Italian cinema proper during the era of neorealism. During the three-year period between 1945 and 1948, more than 200 movies were filmed in Italy, many of which no longer exist today.

In the 1950s homoeroticism or queer aesthetics largely disappeared from Italian cinema in the wake of the end of the Allied occupation. Men returned home from war prisons, and with them came the reconstitution of normative family models, which served as the
Deviant Realities

The emergence of an aesthetic of realism, which gave Italian cinema worldwide fame, marks a radical historical rupture. The eye of the camera assimilated the events on the screen as a witness. It created the feeling of a passive spectator, one that might also subvert the heteronormative cinematic gaze.

Although some neorealist filmmakers, such as Pier Paolo Pasolini (1922–1975), were themselves gay, these films were not so much about the representation of homosexual relationships as about depicting a comprehensive crisis of social norms. Although there are numerous homosexual displays in neorealism, film historiography is divided on their meaning. The Germans and the Nazis are often portrayed in neorealist movies as caricatures of homophobic stereotypes or sadistic perverts. This also applies to female so-called sexual collaborators, often portrayed as stereotypical lesbian vampires or Marlene Dietrich prototypes. Many film historians suggest this was an externalization of the Italian guilt for fascism and war, with the German fascists contrasted with the “normal” Italians. However, equating fascism with homosexuality overlooks the numerous homoerotic and positive same-sex encounters depicted in other films. These appear most commonly in the gay director Luchino Visconti’s (1906–1976) film Ossessione, which is singled out for its uniqueness. Despite this tension, in most neorealist films queer aspects are at work in various ways.

Soft Men

One way is through the equation of fascism with hypermasculinity. Sexually aggressive masculinity in the neorealist films is rejected as fascist. In full contrast to the cinema of the ventennio, the sexual passiveness of Italian men in the neorealist era has positive connotations. Most of the male characters are gentle, friendly, and affectionate caretakers. They are portrayed as wounded if not broken, and there are no heroes to be found. In the films of the 1940s, these passive male bodies are not portrayed as lesser men. That changes only through the emergence of the countless comedies of the neorealismo rosa (pink neorealism) of the 1950s with the appearance of the ridiculed, effeminate inetto (the so-called inept man) or in the numerous series of the actor and director Alberto Sordi (1920–2003) and the actor Totò (1898–1967). In its passivity and openness, the neorealist male body becomes sexually objectified, or eroticized, and, by extension, in a sense feminized. This exceptional display, alien to the films of fascism and to the films of the coming decades, emerged in the immediate wake of the end of the war, chiefly on Italian screens.

Fierce Women
As for the female protagonists, the postwar momentum between both fascism and the 1950s is most notable as a discourse on female subjectification. The heroes of neorealist cinema are heroines. They are positive figures who go beyond the image of the mother or the fallen woman who needs to be saved. Women drive the action in neorealist films, whereas men are on the margins in terms of their actions. Women appear always against any authorities, are self-confident and self-sufficient, have illegitimate children, are sexually active and aggressive, and tend to engage in adultery. The films are also full of sexual relationships between Italian women and African American GIs, or rather deserters with whom they create alliances. Almost all these subjects were considered forbidden within the cinema of the *ventennio*. In particular, the break with nativist and biopolitical or culturalist racism is unique in Western film history.

The upcoming *divismo* of the 1950s, with its beauty pageants and the return of the star system in the film business ended the period of neorealist heroines. The antidivas, such as Anna Magnani (1908–1973) or Carla Del Poggio (1925–2010), increasingly disappeared from the cinemas and were replaced by another type of woman: the *maggiorate fisiche* (the so-called Italian sex bombs), represented by such actresses as Sophia Loren (1934–) and Gina Lollobrigida (1927–).

Neorealism emphasized the individual needs of women beyond marriage and family. Children depicted in the films were not represented as great blessings for their mothers. Instead, neorealist films created networks of women who produced strong social relationships beyond patriarchal structures. This is in stark contrast with the delicate lady in the florid melodramas of the *ventennio*. The women of neorealism appear natural, without any makeup, and have wild, disheveled hair; they are dirty and loud; they spit in public. Such images of women had not yet been seen on the screen. Above all, this approach was perceived and celebrated as realistic.

**Queering Neorealist Cinema**

Even though research on the neorealist movies recognizes the weakness of men, the central role of women, and gender-inverted relationships, neorealism today is not interpreted as a particularly feminist or gender-critical cinema. Hence, a revision of the neorealist cinema as a queer genre—as something beyond the norms of femininity and masculinity—is a necessary correction in historical (film) research. The neorealism of the immediate postwar period in Italy can be read as a cinematic expression of a polymorphously perverse desire.

**BIBLIOGRAPHY**

Queer theory, since its inception, has been notoriously difficult to define. As an academic field, queer theory’s points of origin are multiple and debatable, and its focus on destabilizing fixed categories and forms of knowledge production make constructing a definition a slippery task. Furthermore, many of the field’s key theorists warn against the domestication of *queer*, arguing that its political and semantic power ultimately rests in its “resistance to definition” (*Jagose 1996, 1*). *Queer* began as a pejorative term used to describe gay and lesbian people, and it was originally understood to mean “abnormal” or “sick” (*Halperin 2003, 339*). Today, it has been reclaimed by activists and academics to name a political and theoretical response to both homophobic and transphobic violence and discrimination, as well as growing frustration with the identity politics and assimilationist strategies of lesbian and gay studies and the modern LGBT movement. *Queer* also functions as an umbrella term that encompasses a wide range of people who challenge heterosexual gender norms and the politics of mainstream lesbian and gay communities (*Barker and Scheele 2016*).

Though there are many coexisting and complementary formulations across global contexts, queer theorists are generally understood to advance ideas that challenge heteronormativity—the assumption of heterosexuality as a dominant or natural state—by emphasizing gender, sex, and sexuality as socially constructed and unstable concepts, rather than natural or biological facts. In *Tendencies* (*1993*), Eve Kosofsky Sedgwick defines *queer* as a destabilizing force—an “open mesh of possibilities, gaps, overlaps, dissonances and resonances, lapses and excesses of meaning” (8)—in order to combat monolithic understandings of gender and sexuality. Queer theorists began by combining poststructuralist concepts of identity as unstable with feminist and gay and lesbian analyses of gender and sexuality as socially constructed categories imposed by the regulatory mechanisms of heteronormativity to challenge the assumptions being made about gender and sexuality. Rather than making an argument for the rights of a particular marginalized group, queer theorists consider the entire system of knowledge formation and regulation that perpetuates oppression and maintains the order of heteropatriarchy (*Hennessy 1993*). In the West, the field and its activism started as a response to the homophobia of mainstream society and a critique of feminist and gay movements that
assumed fixed and singular identities for their constituents. Instead of consolidating meanings, queer theorists have pointed to the way meaning surrounding gender, sex, and sexuality is contextual and shaped by cultural and social practices that differ historically and geographically (Barker and Scheele 2016).

Some critics argue that this narrative of the work accomplished by queer theorists constructs a false binary between gay and lesbian studies and queer theory, where previous scholarship is discounted as crude or too mired in identity politics to be productive (Halperin 2003). Indeed, queer theory's emergence is inextricable from the work of radical gay liberationists, lesbian feminists, and AIDS activists of the 1980s. In its disruption of the assumption that “woman” or “lesbian” are stable, fixed categories of identity, queer theory also draws on critique by feminists of color, who have similarly argued that the feminist movement and LGBT movements failed to consider intersecting identity categories and the multiple forms of oppression experienced by some of their members (Sullivan 2003). Challenging assumptions that sexual identity or gender were primary forms of identification that referred to a homogenous group, queer theory deconstructed these categories and offered new ways of analyzing the multiple and connected systems perpetuating oppression and inequality.
De Lauretis, Foucault, and American Queer Activism

Queer theory’s origin in the United States is usually traced to a 1990 conference at the University of California, Santa Cruz, organized by Teresa de Lauretis. Somewhat controversially, she titled the conference “Queer Theory: Lesbian and Gay Sexualities”; thus, she is credited with coining the phrase by uniting the term queer that activists and artists had begun using in gay-affirmative organizing in the 1980s with the intellectual clout of the word theory (Halperin 2003). In her introduction to the 1991 special issue of the journal differences, de Lauretis emphasized the “speculative” nature of queer at this juncture and suggested its potential to open up conceptual space for queer people to deconstruct “our own discourses and their constructed silences” (1991, iv). De Lauretis noted the way gay and lesbian studies, in its attempt to naturalize sexuality, delimits the study of gender and sexualities by replacing dominant scripts with a “gay white historiography” (Jagose 1996, 128) that perpetuates race and gender bias. Through her conference title, de Lauretis disrupted the restrictive discourse represented by “lesbian and gay”; as she wrote, this deliberate juxtaposition “is intended to mark a certain critical distance from the latter, by now established and convenient formula” (1991, iv).

The Rise of Queer as a Category of Identity and Resistance De Lauretis drew from the work of activists begun a decade earlier. Queer became an integral concept for HIV/AIDS activism and theory in the late 1980s and early 1990s as activists sought to disrupt the complacency and silences that endangered the lives of LGBT people. As Jeff Nunokawa notes, the lack of outrage around deaths caused by AIDS was tied to a cultural belief in the virus as a gay plague and gay people already pictured as “deathbed victims” (1991, 312) in the dominant cultural imagination. Members of ACT UP, an advocacy group focused on confrontational and direct action that formed in 1987 to address the AIDS crisis, would eventually go on to form Queer Nation, an LGBT direct-action organization in 1990. Queer Nation organized demonstrations in response to a rise in anti-LGBT violence and discrimination, and they became well-known for the rallying cry “We’re here! We’re Queer! Get used to it!” (Queer Nation NY 2016). In June 1990 the New York chapter of Queer Nation distributed a pamphlet titled Queers Read This, which urged readers to resist assimilation and elitism and contribute to a revolution that would make “every space a Lesbian and Gay space” and “every street a part of our sexual geography” (Queer Nation 1990). Queer had become both an affirming category of identification and a powerful means of resisting hegemony within and outside of LGBT movements.

In this push to transform spaces and increase radical visibility, American queer activism shared important goals with the gay liberation movement of the 1970s. Gay liberation, initiated by the Stonewall riots in June 1969, represented a break from the assimilationist approach of homophile groups that had formed in the 1950s, such as the Mattachine Society, whose slogan advocated “evolution not revolution,” and the Daughters of Bilitis
(Sullivan 2003, 25). Originally, the liberationist movement sought total revolution of a capitalist system that perpetuated white supremacy, misogyny, and homophobia (Smith 1993). Over time, the movement lost this revolutionary impulse, moving instead toward an ethnic minority model in which gay and lesbian people focused on winning civil rights and assimilating into dominant structures (Cohen 1997).

Queer theorists question this strategy, posing a challenge to the systems of thought that maintain these categories and the power relations that they ultimately uphold.

**Historical Understandings of Same-Sex Relations and Gender Expression** Michel Foucault’s *L’histoire de la sexualité* (1976; *The History of Sexuality* [1978]), Volume 1, became a foundational text for American lesbian and gay studies in the 1980s and emerging queer theories in the 1990s. Foucault, a French philosopher and social theorist, argued that homosexuality as a concrete category of identity is a modern formation created through shifts in knowledge production around sexuality. Foucault notes that until the mid-to late nineteenth century, while certain sexual acts might be understood as immoral or aberrant, these acts were not understood to represent an individual’s psyche or point to the construction of a particular kind of subject (Sullivan 2003). Foucault’s work helped shape queer theory’s understanding of gender and sexuality as historically contingent rather than as an essential truth, and as constructed through discourses that perpetuate particular power relations (Barker and Scheele 2016).

However, Foucault’s historicization of the move from “acts” to “identities” also inspired debate among key queer theorists. In *Epistemology of the Closet* (1990), Sedgwick argues that both Foucault and David Halperin, who followed Foucault’s lead, place too much emphasis on linear historical shifts, creating a “history [where] one model of same-sex relations is superseded by another, which may again be superseded by another” (47) and presuming a unified understanding of modern homosexual identity and practices. Instead, Sedgwick proposes an approach that privileges “plural, varied, and contradictory” historical understandings of same-sex relations and gender expression and acknowledges that multiple models and frameworks can coexist in a single historical moment. Halperin responded to critiques of the acts-to-identities framework by asserting that Foucault sought not “to convey what actually went on in the minds of different historical subjects when they had sex,” but to mark a contrast between the way “sodomy” and “homosexuality” were defined in European law, the Christian canon, and the writing of sexologists in the nineteenth and twentieth centuries (1998, 97).

In *Sexual Politics, Sexual Communities: The Making of a Homosexual Minority in the United States* (1983), historian John D’Emilio engages with Foucault’s constructionist theories in order to study the emergence of LGBT movements in the twentieth-century American context. Focusing the economic and cultural shifts brought on by World War II and its aftermath, historian Lillian Faderman’s *Surpassing the Love of Men* (1981) takes a broader
view, tracing romantic, sexual, and affectionate relationships between women from the sixteenth century to modern times. Faderman argues that intense relationships between women were pervasive and met with social approval prior to the twentieth century's pathologization of homosexuality. Similarly, Terry Castle's *The Apparitional Lesbian* (1993) explores the "ghostly" traces of lesbian identity, sanitized and made invisible by mainstream culture, in a study that spans writings by women and literary representations of lesbians across three centuries. Further contextualization of the histories of gay and lesbian communities has been provided by Esther Newton (1993), whose study of the gay resort community in Cherry Grove, on Fire Island in New York, traces the formation of community space that provided queer people with a vital escape from both the dangers and the demands of heteronormative city life for more than sixty years.

Poet, Essayist, and Activist Audre Lorde in 1983. Lorde addressed the erasure and silencing of black women and lesbians in much of her work, while also embracing a multiplicity of identity (black, lesbian, mother, poet, for instance).

**Lesbian Feminism, Women-of-Color Critique, and Intersectionality**

Queer theory owes much to the theoretical formulations of lesbian feminists, who challenged heteronormativity as an oppressive regulatory system and questioned its role in
shaping gendered behavior and identities. As the gay liberation and women's movements continued to take shape in the 1970s and 1980s, many lesbian women felt that their experiences were not being recognized by either movement (Jagose 1996). Adrienne Rich's 1980 essay “Compulsory Heterosexuality and Lesbian Existence” became a foundational text for queer theory for its analysis of heterosexuality as a coercive institutional fiction used to oppress women rather than a naturally dominant expression of desire. Describing heterosexuality as “compulsory,” Rich illustrates the extent to which women have been unable to explore alternative ways of living and being, such as lesbian sexuality and creating bonds with other women (Rich 1980, 648). Similarly, French materialist feminist Monique Wittig's 1980 essay “The Straight Mind” points to heterosexuality as a ubiquitous institution, arguing that the binary gender categories of “man” and “woman” must be destroyed, since their meanings perpetuate a heteronormative system (Sullivan 2003, 107). Controversially, Wittig states that “lesbians are not women,” since woman is a term that can only have significance within a heterosexual context (Wittig 1992, 32). In Ce sexe qui n'en est pas un (1977; This Sex Which Is Not One [1985]), fellow French feminist Luce Irigaray engages with psychoanalysis to describe a plural female sexuality, one that is not bound by a single sexual organ or “conceptualized on the basis of masculine parameters” (1985, 23). Lesbian feminism's critiques of heterosexuality as an institution that perpetuates gender oppression remain integral to queer theory and activism in the 1990s and in its current form (Jagose 1996).

Rich, Wittig, and other white lesbian feminists faced criticism because their work initially failed to account for differences among lesbians and among women more generally. In figuring lesbianism as a form of automatic resistance to heteropatriarchy, lesbian feminists erased the ways in which white women continued to benefit from white supremacy (Sullivan 2003). In response to the gaps in the civil rights and feminist movements, black feminists and women of color in the 1970s and 1980s created intersectional frameworks that accounted for intersecting identities and experiences of oppression. Poet, essayist, and activist Audre Lorde addressed the erasure and silencing of black women and lesbians in much of her work, including “The Master's Tools Will Never Dismantle the Master's House,” “The Uses of Anger: Women Responding to Racism,” and “The Transformation of Silence into Language and Action,” which were collected in Sister Outsider (1984). Lorde’s work drew attention to the material conditions of racism while also embracing a multiplicity of identity, often expressed through lists (black, lesbian, mother, poet, for instance), that challenged notions of a stable and homogenous gay or lesbian subject.

Chicana theorist Gloria Anzaldúa similarly questioned the way “queer” could function as a “falsely unifying” concept that “homogenizes” and “erases” difference in ways that are politically damaging to people of color (1991, 250). Anzaldúa used the term queer several years before de Lauretis, though her early contributions to the field have been recognized less frequently (Sullivan 2003). Her earlier work, the semiautobiographical Borderlands/La Frontera: The New Mestiza (1987) and This Bridge Called My Back (1981), an anthology
coedited with fellow Chicana writer and activist Cherrie Moraga, centered the experiences of queer women of color and helped to develop a theoretical framework for examining race alongside gender and sexuality (Escoffier 1998). Kimberlé Crenshaw gave these critiques a name when she coined the term *intersectionality* in 1989, arguing for the necessity of moving beyond a single-axis approach in favor of analysis that examines "the interaction of race and gender" (1989, 140). Queer theory continues to grapple with the relationships among gender, sexuality, and race.

For instance, in queer diaspora studies, scholars like Gayatri Gopinath (2005) further developed intersectional approaches, studying gender and sexuality alongside legacies of colonialism and nationalism to pursue global questions of queer regionalism and diaspora.

Critiques from women of color productively upended the notion of a singular and unified gay identity, and throughout the 1980s and 1990s, more theorists continued to challenge categorization and form new intellectual frameworks for thinking about gender and sexual identity (Jagose 1996). In her 1984 essay “Thinking Sex,” anthropologist and cultural theorist Gayle Rubin outlined the ways that some queer people continued to be marginalized by the LGBT and feminist movements because of a hierarchy of sex acts that deems some more natural or good than others. For instance, in the sex hierarchy enforced by religion, the media, and the legal/medical systems, monogamy is more appropriate than nonmonogamy, and pornography and S&M (sadism and masochism) practices are considered immoral or undesirable. Rubin wrote during the infamous "sex wars" that divided the women’s movement in the 1980s, and her essay responded to the "sex negativity" espoused by antiporn feminists. Her work, alongside writing by Patrick Califia, provided an important framework for challenging preconceptions around sex in order to create space for greater “erotic creativity” (Rubin 1993, 35).

**Queering Sex and Gender in the American Academy**

Early queer theorists of the 1990s continued to question categorization around gender, sex, and sexuality. Literary critic Sedgwick, who became one of queer theory's most influential practitioners, suggests that focus on the gender of object choice is a limiting and arbitrary way of defining sexuality. In *Epistemology of the Closet* (1990), she outlines the many possible means of delineating sexual activity, such as enjoyment of particular acts, sensations, frequency, or physical type, in order to point to the constructedness of gender as the most significant indication of sexual identity or orientation. Like Rubin, Sedgwick notes the way normative homosexuality perpetuates conformity to acceptable gender presentation, and she advocates for disentangling gender and sexuality (Sedgwick 1990; Barker and Scheele 2016). Sedgwick's work to expand textual and theoretical possibilities for *queer* helped to develop new frameworks and methodologies for exploring queer resonances in literary texts. Alongside colleague Michael Moon, who was a pioneer in creating gay and lesbian studies courses, Sedgwick taught some of the earliest courses in
queer theory. As queer theory began to find its formal place in the academy, in 1993 Halperin and Carolyn Dinshaw cofounded the peer-reviewed academic journal *Gay and Lesbian Studies Quarterly* (*GLQ*), published by Duke University Press, which became a critical site of scholarly exchange for theorists in the field.

Along with Sedgwick, American feminist philosopher Judith Butler remains one of the most prominent thinkers associated with queer theory. Butler's landmark text *Gender Trouble* (*1990*), subtitled *Feminism and the Subversion of Identity*, controversially challenged the notion of “woman” as a natural and unified category served by the feminist movement. Instead of arguing for the advancement of rights for “women” as a homogenous group, Butler questions the very construction of this category, asking us to consider whom it describes (*1990, 5*). Drawing on Foucault, Wittig, and others, Butler argues that gender is a regulatory fiction rather than a natural or essential truth, and that all people, not just queer people, perform gender. As she explains, “gender is the repeated stylization of the body, a set of repeated acts within a highly rigid regulatory frame that congeal over time to produce the appearance of substance, of a natural sort of being” (33). Butler does not suggest that gender amounts to drag, though she notes that the performances of drag artists reveal the “imitative structure” of gender itself (137). This concept of gender as a repeated social performance, rather than a fixed inherent reality, has become one of queer theory’s most enduring legacies. Butler continued to refine this theory in subsequent work, including *Bodies That Matter* (*1993*), which introduces the concept of “citationality” to describe the way expressions of gender draw from circulating narratives and constructions of masculinity and femininity.
Theories of performativity continued to resonate in the field and beyond. Queer theorist José Esteban Muñoz draws on Butler and Sedgwick in the field of performance studies, in which he develops the concept of “disidentification” to describe the way minority subjects use cultural performance as a survival strategy to navigate a mainstream culture that erases or disciplines nonnormative behaviors and identities (1999, 4). Like Butler, gender theorist Jack (Judith) Halberstam aims to illustrate the constructedness of gender, disentangling it from notions of natural or biological characteristics. In Female Masculinity (1998), Halberstam provides the first full-length study of forms of masculine presentation and expression that exist outside of cisgender men, including tomboys, butches, inverts, transmasculine people, female-to-male transsexuals, and drag kings. Significantly, in untethering masculinity from biology, Halberstam notes that rather than being an “imitation of maleness” or a performance, female masculinity allows us to see the way masculinity becomes constructed as masculinity in the first place (1998, 1). Halberstam’s later work, such as In a Queer Time and Place: Transgender Bodies, Subcultural Lives (2005), continues to foreground the experiences of trans and gender nonconforming people in theorizing queerness.
Queer Theory and Transgender Studies

The emergence of the field of transgender studies can also be traced to the 1990s, though its journey to full acceptance and integration into the academy is comparatively longer, only gaining a foothold in recent years. Many scholars trace transgender studies to the publication of Sandy Stone’s groundbreaking 1987 essay “The Empire Strikes Back: A Posttranssexual Manifesto.” The process of gaining institutional support and resources for academic inquiry around trans lives and experiences is still underway. In 2016 the University of Victoria named Aaron Devor chair of transgender studies, creating the first position of its kind. As with GLQ, Duke University Press again appeared at the forefront of creating space for radical scholarship, publishing the first journal devoted to trans studies, Transgender Studies Quarterly (TSQ), in 2014, with editors Susan Stryker and Paisley Currah.

The fields of queer theory and trans studies remain intertwined, since many queer theorists originally viewed transgender and gender nonconforming people as key to theorizing gender as constructed rather than as an essential quality linked to biology. As trans theorist Jay Prosser notes in his study of transsexual autobiography, Second Skins (1998), queer theory helped make it possible to “articulate the transsexual as a theoretical subject” and thus transgender studies is “allied with queer” (60). Yet, trans writers and theorists also struggle to define their experiences of gender as real and valid in the face of constructionist theories that seem to suggest gender is a socially constructed performance. Prosser, whose work foregrounds the material body, critiques Butler and other queer theorists for engaging the trans body as a trope, used to stand in for gender rebellion. In Assuming a Body (2010), Gayle Salamon attempts to heal fractures between the social constructionist theories of Butler and trans theorists like Prosser and Vivian Namaste, who foreground embodied experiences. Salamon argues that “to claim that sex is a social construct is not to claim that it is irrelevant, or invariant, or incapable of being embodied or reworked” (2010, 76). For Salamon, neither the discursive structures used to describe bodily feeling nor the significance of embodied subjectivity can be dismissed in theorization of gender.

In the social sciences, anthropologist David Valentine’s Imagining Transgender (2007) further builds conceptual intersections between trans and queer theory via ethnographic research that explores the “origins, meanings, and consequences of the emergence and institutionalization of the category transgender in the United States since the early 1990s” (6). Valentine questions the way low-income trans people of color, who use different categories of identification not recognized in institutional discourse, might be excluded from the “imagined future of justice and freedom” associated with activism and social justice work (6). More recently, in Black on Both Sides: A Racial History of Trans Identity (2017), C. Riley Snorton takes a trans-temporal approach, engaging the fields of black
feminist thought, queer-of-color critique, and disability theory in order to examine the
intersections between the way categories of race and gender are constructed and
circulated across the nineteenth century to the present.

**Bioscience, Technology, and Ecology**

The work of queer theory has not been confined to the humanities; many theorists have
pursued interdisciplinary lines of inquiry in the sciences. In *Sexing the Body: Gender Politics
and the Construction of Sexuality* (2000), biologist Anne Fausto-Sterling explains that
determining the sex of a body is far more complex than a binary gender system will allow.
As she writes, “there is no either/or…. Rather, there are shades of difference” (2000, 3). In
this work and others, Fausto-Sterling argues that “labeling someone a man or a woman is a
social decision” (3), and she points to the way our social beliefs about gender have an
impact on the production of scientific knowledge about sex. Fausto-Sterling calls for
feminists and gender theorists to engage actively with the fields of biology and medicine
rather than to focus solely on social and cultural understandings of gender, which leaves
critics politically vulnerable to objections based on scientific analysis of biological
difference. In the field of neuroscience, Deboleena Roy takes up similar questions in her
research around sex difference in the brain. Critiquing feminist resistance to
neuroscientific studies around gender difference locatable in the brain, Roy suggests that
examining gender difference, “especially the ontological status of biological matter,” has the
potential to open new pathways for feminist and queer theorists (2016, 533).

Queer theory has also been enriched by studies of technology and histories of computing.
Donna Haraway laid the groundwork for much of the later work on gender, sexuality, race,
and technology. In her iconic 1985 essay “A Manifesto for Cyborgs,” later revised and
published in 1991 with the title “A Cyborg Manifesto: Science, Technology, and Socialist-
Feminism in the Late Twentieth Century,” she uses the figure of the cyborg, defined as “a
cybernetic organism, a hybrid of machine and organism,” to critique the gender
essentialism and white privilege of the feminist movement she encountered in the 1980s.
The cyborg, through her ability to break down binarisms like human/animal and
human/machine, “suggests a way out of the maze of dualisms in which we have explained
our bodies and our tools to ourselves” (Haraway 2000, 316). In “Automating Gender”
(1991), Halberstam builds on Haraway’s ideas when he suggests that the “blurred
boundaries between mind and machine, body and machine, and human and nonhuman”
made possible by cybernetics further suggest that “gender and its representations are
technological productions” (439–440). In studying the work and life of Alan Turing (1912–
1954), a queer British mathematician whose calculations contributed to advancements in
computing technology, Halberstam and others have argued that “gender, ... like computing
intelligence, is learned, imitative behavior that can be processed so well that it comes to
look natural” (1991, 443). More recently, queer and trans artists, coders, and writers like
Zach Blas and Micha Cárdenas have engaged with the way computing intelligence can create space for “queer technological agency, interventions, and social formations” (2013, 561).

The breakdown of boundaries between animal/human attributed to Haraway’s work on cybernetics has also energized scholarship by queer theorists working in animal studies and at the intersections of queer theory and ecocriticism. In *Animacies: Biopolitics, Racial Mattering, and Queer Affect* (2012), Mel Chen unites queer-of-color critique with the fields of disability studies, affect studies, ecocriticism, and animal studies in order to question the binary division of “animate” and “inanimate” (2). In conversation with the field of ecofeminism and ecology more broadly, in *Queer Ecologies: Sex, Nature, Politics, Desire* (2010), Catriona Mortimer-Sandilands and Bruce Erickson argue that the goal of queer ecology is to examine the way that nature and sex intersect in order to “develop a sexual politics that more clearly includes considerations of the natural world” alongside an “environmental politics that demonstrates an understanding of the ways in which sexual relations organize and influence both the material world of nature and our perceptions, experiences, and constitutions of that world” (5). Queer theorists working in the biological, technological, and environmental sciences continue to challenge the way we construct knowledge around gender and the material body, as well as our relationships with the world around us.

**Global Sexualities and Western Queer Hegemony**

Western queer theorists have been criticized for imposing a universal queer identity onto non-Western identities, embodiments, and expressions in a way that fails to account for the specificities of different historical, cultural, and geographical contexts. Michael Warner warns of this impulse, explaining that “Anglo-American queer theorists [need] to be more alert to the globalizing—and localizing—tendencies of our theoretical languages” (quoted in Altman 1997, 419). Australian theorist Dennis Altman examined the way the spread of Westernized gay identities to countries like Japan, Korea, and Taiwan reflects the impact of globalization, capitalism, and modernity; he notes that the co-option of “gay” in Latin America and Asia illustrates the investment of some subjects in “being Western” and affluent just as much as it indicates the claiming of a sexual identity or experience (1997, 420). In *Desiring Arabs* (2007), Joseph A. Massad critiques the way international gay rights organizations, steered by Western white gay activists, act out a missionary’s task of imposing a dominant culture’s ideology—in this case, binarisms between heterosexuality and homosexuality, and a set of Western gay identities—that erases the complex non-Western subjectivities present in other countries. As he writes, “the categories gay and lesbian are not universal ... and can only be universalized by the epistemic, ethical, and political violence unleashed on the rest of the world by the very international human rights advocates whose aim is to defend the very people their intervention is creating” (2007, 41).
Critical work on Asia, on Africa, and in diaspora studies continues to challenge the notion of the “global gay” movement. In *Global Divas* (2003), Martin Manalansan examines the way the concept of “globalization” has been used “to index or mark sophistication and cosmopolitanism in queer culture” (5) by those who advocate for global gay solidarity, while critics underscore its relationship to the violent expansion of Western capitalism and the reach of “queer cultural imperialism” (5). Through his ethnographic study of Filipino gay men in New York City, Manalansan works to “complicate the popular and hegemonic tableau of a world turning gay or of queerness going global” (4). Fran Martin further contributed to the historicization and analysis of Asian sexualities by arguing that contemporary representations of romantic and erotic relationships between women in Chinese mass culture are frequently structured by a memorial mode, one that hinges on a narrative logic of “memory” and “remembering” (2010, 6). In *A Coincidence of Desires: Anthropology, Queer Studies, Indonesia* (2007), Tom Boellstorff argues for the importance of new collaborations between queer theory and anthropologists, especially as a means of studying gender and sexuality in Indonesia. Neville Hoad (2007) similarly unites work from multiple disciplines, including anthropology and literary studies, in order to examine public discourse around homosexuality in Africa in relation to the legacies of colonialism, decolonization, transnationalism, and globalization. His work on desire and affect across multiple time-spaces and states of coloniality provides vital historicization of sexualities that exist beyond Euro-American conceptualization.

In 2000 a group of scholars in Australia formed the AsiaPacifiQueer (APQ) group in order to strengthen dialogue between academics researching gender, sexuality, and culture in Asia. APQ co-organized a conference titled “Sexualities, Genders, and Rights in Asia: The First International Conference of Asian Queer Studies,” which took place in Bangkok in 2005. In the introduction to *AsiaPacifiQueer: Rethinking Genders and Sexualities* (2008), a collection of essays that emerged from the conference, editors Fran Martin, Peter Jackson, Mark McLelland, and Audrey Yue identify the conference as a key moment in the development of queer approaches in Asian studies, particularly because the work accomplished in Bangkok was not “preoccupied with speaking ‘back’ to the presumptive center of queer studies in the English-speaking West but rather sought to articulate direct intraregional conversations among diverse locations in Asia” (1). At the University of London’s School of Oriental and African Studies, ‘Queer’ Asia—a collective of researchers, academics, and activists founded in 2016—furthers this work by organizing annual conferences and programming that underscores queer voices in Asia and contributes to the construction of “a global platform from which to challenge dominant ideas, forms, and representations of gender and sexuality.”

**Queer Critiques of Global Capitalism, Crippping Queer Theory, and Queer Time**
In a roundtable discussion titled “Queer Studies, Materialism, and Crisis” published in GLQ in 2012, Jordana Rosenberg and Amy Villarejo noted that queer theory has also formed vital intersections with Marxist theory, economics, globalization and capitalism, class struggle, the relationship between racism and capitalism, and histories of materialism. Lisa Rofel, a roundtable participant, argued that queer hermeneutics, applied to analysis of global capitalism, “allows us to see that the value-form lies not just in material objects but in bodies deemed differently worthy of a valuable life” (Rosenberg et al. 2012, 129). This intersection of economics and queer theory significantly opens paths for a “postcolonial, postnationalist queer studies [that] refuses ... inadvertent collusion with American empire” (129). Another participant, Dean Spade, pointed to the necessity of such analysis to combat the process by which mainstream and capitalist “LGBT” nonprofits reinforce white supremacy, actively undoing the efforts of queer grassroots movements. While theorists continue to develop new intersections between studies of materialism and queer theory, Heather Love argues that a focus on the “lived realities of class and race” has long been central to American queer life, writing by queers of color, and working-class and such rural queers as Audre Lorde, Dorothy Allison, Leslie Feinberg, and Cathy Cohen (130–131).

The focus on the way conditions of global capitalism create violent conditions that deem only certain lives worthy of survival has also guided work at the intersections of queer theory and disability studies, or, as some prefer to call it, “crip studies.” As Rosemarie Garland-Thomson explains, disability studies “conceptualizes disability as a representational system rather than a medical problem,” examining the disabled body as a “cultural artifact produced by material, discursive and aesthetic practices” (1997, 181). Eli Clare aligns the use of the term *crip* by people with disabilities to the reclaiming of the term *queer* in service of radical work, explaining that “Queer and Cripple are cousins: words to shock, words to infuse with pride and self-love, words to resist internalized hatred, words to help forge a politics” (1999, 70). Robert McRuer argued that able-bodiedness and heterosexuality are ideologically intertwined, with able-bodiedness masquerading, like heterosexuality, as a “nonidentity” or the “natural order of things” (2006, 79). Furthermore, Tobin Siebers pointed out that “thinking about disabled sexuality broadens the definition of sexual behavior” (2008, 136), since “the sexual activities of disabled people do not necessarily follow normative assumptions about what a sex life is” (138). Many queer theorists in disability studies have called for a “cripping” of queer studies, in order to avoid replicating able-bodied hegemony within queer theories and movements.

Queer and crip understandings of sexual and erotic possibilities often involve shifting understandings of temporality, which is another key line of theoretical inquiry in the past decade of queer theory. In *Time Binds* (2010), Elizabeth Freeman outlines the concept of “chrononormativity,” which she describes as the “use of time to organize individual human bodies toward maximum productivity” (3). Similarly, Halberstam theorizes the way a queer temporality poses challenges to heteronormative and cisnormative scripts, describing “queer time” as “the dark nightclub,” and “the perverse turn away from the narrative
coherence of adolescence—early adulthood—marriage—reproduction—child rearing—retirement—death, the embrace of late childhood in place of early adulthood or immaturity in place of responsibility” (Dinshaw et al. 2007, 182). Tan Hoang Nguyen (Dinshaw et al. 2007) noted that some of these same temporal normativities are replicated in the imposed organization of “homonormative” timelines that value finding a partner by a certain age, coming out while young, and leaving bar scenes behind as a scene of youth. Conversations about queer time, space, and place continue to animate the academy, changing the way we conceive of the project of historicizing and theorizing queer bodies and lives.

Though queer theory has undoubtedly become a fixture in the academy, its prominence has not come without challenge. Halperin suggested that there is an elitism to queer theory that has led to the dismissal of important, earlier work; since queer theory presents itself as an “advanced, postmodern identity” that has “superseded both feminism and lesbian/gay studies,” it unfairly suggests that all previous work in lesbian and gay studies is “undertheorized” or too mired in “identity politics” to be useful (2003, 340). He pointed to the relatively rapid adoption of queer theory coursework and syllabi into the university system as evidence that it is perhaps not as radical or threatening to hegemony as originally envisioned. Additionally, Annamarie Jagose noted that feminist critics remain concerned that a “generic masculinity” remains at the heart of the “ostensibly gender neutral” queer mode of analysis, and that female and lesbian experience will be erased by this broad umbrella term that seems to encompass anything nonnormative (1996, 3). Indeed, there has been much anxiety about the lack of specificity surrounding the term queer, a fact that raises questions for some about its political efficacy. Cathy J. Cohen argued that queer theory has failed to generate a radical or genuinely transformative political movement, suggesting that rather than “destabilizing assumed categories and binaries of sexual identity” (1997, 438), it has simply created a dichotomy between “heterosexual” and “queer,” which becomes just another homogenized identity. Students of queer theory continue to grapple with these questions today, which seems only appropriate for a discipline that asks its practitioners to continually interrogate discursive structures, power relations, and forms of knowledge production within a wide range of historical and geographical contexts.

Queer Theory, African

ZETHU MATEBENI
Senior Researcher, Institute for Humanities in Africa
University of Cape Town, South Africa

The emerging field of study that encompasses an expanded understanding of LGBTI persons in Africa.

African queer theory deals with the pulling apart of the complex interaction between activism, citizenship, and identities. This version of queer theory extends its North American roots significantly. The Italian scholar Teresa de Lauretis is credited with coining the term queer theory in February 1990. At the time, queer theory was seen both as a subversive act to the notion of theory making and as a call to extend the field of gay and lesbian studies (Halperin 2003). This was met with some rejection. Stephen O. Murray, who had championed studies on homosexuality or same-sex sexuality in Africa and elsewhere, questioned the usefulness of this theory and the role it plays in changing society. Murray (2002) argued that rather than conceiving of “queer” next to “theory,” it should be seen more as a perspective. The practices and debates in North America on queer theory and queer studies have advanced with both the institutionalization of this field of scholarship and the “commodification of ‘queer’” (Watson 2005, 76). The same cannot be said for African contexts.

Emergence of Queer Theory in Africa

While queer theory has very strong Western origins, its emergence in African contexts extends its reach, applicability, and resonance. In many ways, the breadth of the continent, the unique political situations and histories in each country, and cultural diversities make a uniform queer theory impossible in Africa. This does not mean there is no space for queer theory. On the contrary, there is fertile ground for African queer theory to be developed and extended beyond Africa’s borders. Between 2013 and 2018 at least five collections containing the phrase “queer Africa”—or a variation thereof—were produced in the continent (Ekine and Abbas 2013; Martin and Xaba 2013; Matebeni 2014; Xaba and Martin 2017; Matebeni, Monro, and Reddy 2018). Yet, as of 2018, no academic institution in the continent had a dedicated queer studies program. A few gender studies departments in South Africa and a number of progressive academics in East African and southern African universities included elements of queer studies (or mostly same-sex sexualities) in their syllabi.
The term *queer* was introduced in Africa through activist groups in South Africa. At the time, South Africa was the only country with a visible gay and lesbian movement, having started in the city of Johannesburg and later in Cape Town. During the fight against apartheid, South African activists worked to eradicate all forms of injustices, including homophobia. In 1993 Cape Town lesbian and gay activists, under the banner ABIGALE (Association of Bisexuals, Gays and Lesbians) held that town’s first pride march, which was a highly political event on the eve of South Africa’s independence. ABIGALE was founded by Theresa Raizenberg and her then partner Taghmeda (Midi) Achmat, along with the latter’s brother Zackie Achmat, who later founded the Treatment Action Campaign. The 1993 pride march theme, “Forward to a Queer South Africa,” was spread across the large posters followed by the message “As long as bigotry, prejudice, and hatred remain, it will be necessary to assert Queer pride and demand equality” (*ABIGALE 1993*).

It is no surprise that the term *queer* entered the South African lexicon through activist groups. Gay and lesbian activists in South Africa were among the early champions of the fight against HIV/AIDS and maintained relations with groups such as ACT UP in the United States. Not only was ACT UP directly challenging homophobic laws of the US government, the group and its allies ensured that they “neutralised heterosexual spaces ... as legitimate queer spaces” (*Watson 2005, 73*). By using the term *queer* in asserting their political position in 1993 in South Africa, these activists were proclaiming a vision for an inclusive South Africa, one that would not segregate its citizens on the basis of sexuality, race, or gender. A queer South Africa, as the activists positioned, would be one that would challenge its own normative positions on who belongs to the country and on what basis. This position cut to the heart of questions of citizenship, many of which were robustly debated, as same-sex sexuality, gender diversity, and family diversity became protected under the new laws. The other position marked by the activists was the ongoing struggle toward a “queer nation.” This would be unending until all hatred, prejudice, and bigotry are eradicated. This activist position already suggested that queerness and a queer South Africa are persistent projects.

Since the early 1990s the term *queer* has undergone many changes in Africa. While it has gained traction in some countries, it has also been disavowed for its Westernizing influence. Some prominent scholars on African sexualities do not even mention the term *queer* in their scholarship (see *Tamale 2011*), while others make use of it to strategically critique systems of knowledge production (*Macharia 2015; Nyanzi 2014a; Matebeni 2014*). Not only has *queer* made its way to sit uncomfortably in the totalizing LGBTI initialism, it has simultaneously taken over these categories and presented itself as all-encompassing. Iterations of LGBTI/Q in each part of the continent vary considerably. South Africa, because of its progressive laws and an inclusive constitution since the early 1990s, may seem on the surface to have advanced LGBTI/Q rights on paper, but there remains a stark difference between those rights and lived realities (*Mkhize et al. 2010*). The emergence of the LGBTI/Q discourse in that country also took its time, with lesbian and gay agendas
taking prominence much earlier than those of either transgender or intersex individuals. As in other parts of the world, it is argued that bisexuality has been sidelined within queer studies or, more specifically, within lesbian and gay studies (Stobie 2007; Goldman 1996). The same could be said for transgender studies and, for the most part, intersex studies in Africa and beyond (Matebeni, Monro, and Reddy 2018; Stryker 2004).

In relation to what can be framed as African queer theory, Keguro Macharia offers an incisive point: “Intellectual production and activism meet at the archive” (2015, 141). This is no ordinary archive, as it is known that archives of colonial-era documents in Africa are less preoccupied with LGBTI persons. However, contemporary archives and archival practices offer new possibilities in relation to theory and practice (Reid 2002). Thus, the relationship between scholarship, or theory, and practice is key. Many African feminists working on sexuality and gender have argued and worked toward undoing the false distancing or binary between praxis/activism and theory/intellectual work (Mama 2007; Hames 2012; Bennett and Reddy 2007). In particular, Amina Mama positions “activist scholarship” (2007, 9) and “activist methodologies” (14) as crucial in considering the realities and political contexts that shape Africa. This is more pertinent in studies of sexuality and gender (identity) in Africa where same-sex relations and gender nonconformity is policed and where LGBTQI lives are criminalized and punished. Through the many studies and archival materials that have focused on sexuality and gender diversity in Africa, the following section unpacks African queer theory as it deals with the pulling apart of the complex interaction between activism, citizenship, and identities.

**Pulling Apart: Activism, Citizenship, and Identity**

*Queer* as an identity category is gaining significant traction in activist circles and among nongovernmental organizations in many African countries, particularly because of the limits of “LGBTI” and globalization. The term itself suggests a lack of boundaries and an extension beyond sex and gender conventions, while as an umbrella term including LGBTI, *queer* has been seen to hide racial, class, and ethnic differences (Johnson 2001). This version is not yet fully explored in African scholarship because *queer* is often used as shorthand for nonnormative identifications, thus encompassing all sexual and gendered identity categories outside the norm, regardless of their racial or class position. While there has been an increase in representation of queer figures in the arts and popular culture, the interrogation of *queer* itself, or “queering queer,” has been minimal.

In a provocative 2014 essay titled “Queering Queer Africa,” Stella Nyanzi insisted on a new reading and thinking of *queer* that goes beyond the straight/queer binary. She poignantly asked, “When firm boundaries are drawn between homosexuals and heterosexuals, isn’t this a simplistic restyling of essentialist schisms? Isn’t this another polarisation of binary oppositions—this time based on sexual orientation?” (2014a, 62). Nyanzi’s interrogations force her readers to really question the essence of *queer* in African contexts. It appears that
in most writing up to now *queer* has been deployed in the North American sense as what is at “odds with the normal, the legitimate, the dominant” (Halperin 2008, 200). Applying this definition of *queer* glides over processes of denormalizing that historically happened because of colonial conquests in Africa.

The urgency of queering the LGBTI discourse in Africa is pressing. This is evident in the popular pride events in the continent that resemble events in major cities around the world. Like the term *queer*, pride marches are gaining momentum in African cities as tools for coming out, claiming public space, and enhancing visibility. This is very different from the vision set out by early pride march activists as mentioned earlier. However, pride march tactics, which are largely borrowed from the West, are often not easily translatable. South Africa and Uganda have had the most popular pride events in the continent. In Uganda, these have been met with intense state intervention and a large military presence, with Ugandans facing possible arrests and detention for occupying streets as LGBTI persons (Nyanzi 2014b). This flies in the face of the global call to come out and be proud. Pride in South Africa, with its history that began in the early 1990s in the country’s major cities, has had to contend with racial injustice within the LGBTI community (Schutte 2012). Thus, pride in this country demonstrates the exclusionary nature and lack of intersectional politics of LGBTI discourse on visibility and claims to space.

South Africa’s prominence in the continent in terms of LGBTI issues is globally lauded. However, the gains that South Africa has made, compared to its neighbors, cannot easily be translated to the region and beyond. Bordering countries, including Swaziland, Zimbabwe, and Namibia, have some of the most stringent anti-LGBTI laws. Political leaders of these countries have openly spoken against same-sex sexuality, some likening gay and lesbian people to animals and calling them evil (Hoad 2007). Botswana and Mozambique, by contrast, are quickly making comparable advancements, particularly in advocating for LGBTI rights (Tabengwa and Nicol 2013). A number of transgender activists are forging new paths in terms of challenging the state to recognize their existence. In 2017 a trans man and a trans woman won legal battles through the Botswana High Court to be recognized as male and female, respectively (Graham 2017). The attorney general of Kenya ordered that transgender Kenyans be allowed a name change on their identity documents (Migiro 2014). Yet, in these same countries and many others where even same-sex sexual acts are still illegal, advocating for same-sex marriage or sex reassignment surgeries, which are accessible in South Africa, would be deemed politically naive and insensitive. Clearly, while there are many challenges faced in relation to same-sex issues, cleavages exist in relation to gender recognition. While transgender studies is sometimes seen to be in queer theory’s “shadow” (Stryker 2004, 214), it appears that in some African countries the former is quickly gaining momentum, although transgender is yet to be fully grappled with in Africa (Nyanzi 2014a).

Perhaps one area in which LGBTI people recognize their commonality is in relation to
movement across geographic borders. Many African LGBTI people are pushed out of their homes, communities, and countries because of their nonconformity in terms of gender identity and sexual orientation. In their countries of origin, LGBTI people are exposed and subjected to discrimination, persecution, exclusion, and violence, including murder and rape, at the hands of state and nonstate agents. They thus have no option but to flee. Only a few have the resources and networks to make it to the West (Massaquoi 2013); for many, the best option for refuge is South Africa, where there is the promise of freedom of movement. Yet, upon arrival in South Africa, many LGBTI people find a less appealing welcome, finding that they need to constantly navigate safety, access, and security issues. The realities faced by transgender asylum seekers and refugees are incomparable to the challenges faced by their cisgender (a term used for people whose gender identity matches the sex assigned at birth) lesbian, gay, and bisexual counterparts. As B Camminga notes, for many transgender asylum seekers, having to choose a gendered queue at the Department of Home Affairs in South Africa is predicated on “sex/gender as a category for classification for notions of citizenship, human rights, and viability of transgender lives” (2017, 62). This gender binary excludes the possibility of being transgender.

Emerging research in African scholarship attests to how local identities may conflict with Western categories of LGBTI, which are increasingly circulating and being adopted or reshaped by African activists through artistic interventions, the occupation of normative spaces, or the creation of new vocabularies that define existence (Matebeni 2014). In some cases, local terms are themselves contested; they can be both stigmatizing and/or empowering. In many African countries, the term MSM (men who have sex with men) has become popular in donor-driven research sites among many nongovernmental organizations working with sexual minorities. Thus, in such a context, even the category MSM is constantly shifting, being dependent on global health funding, agendas, and priorities. In other spaces, variations on English terms such as lesbian or gay take new localized meanings (Reid 2013). Zethu Matebeni and Thabo Msibi (2015) argue for vernacular terms and meanings that speak for queer African realities, including those used in Uganda and Kenya (kuchu), in southern Africa (ama[t]shikini, nongayindoda), or in Ghana (supi). These go beyond the sometimes-misunderstood LGBTI framing and offer new ways of engaging with language, power, and social relations.

Beyond southern Africa, a substantial body of African scholarly literature is emerging. This encompasses a number of fields, including queer representations in arts and cultural production, autobiography, citizenship studies, meanings of nation, access to health care, the fight against HIV/AIDS stigma regarding LGBTI communities, and the advancement of rights (Azuah 2016; Animashaun et al. 2016; Baderoon 2011; Ekine and Abbas 2013; Matebeni 2014; Nyeck and Epprecht 2013; Tamale 2011; Martin and Xaba 2013; Xaba and Martin 2017). These works also prioritize national and transnational networks, creating possibilities for a queer African reality. Given the levels of discrimination, heteronormativity, homophobia, and transphobic discourse (M’Baye 2013; Mukasa 2006),
new forms of visibility, which extend beyond national borders, are crucial. Visibility and invisibility can be seen as tactical strategies deployed by queer African people. The boom in queer African representations in social media and popular culture through blogs and websites (such as HOLAAfrica and Iranti) has ensured that trans and queer people represent themselves as fully and openly as they wish to be seen by the world. This kind of visibility is not possible in many parts of the continent, yet images of queer Africans abound. These media platforms perform an activist and interventionist role in advocating for queer people’s rights by emphasizing visibility.

Visibility and invisibility are both mediated by movements, shifts, political practices, and demands for (human) rights. The queer figure, given its complicated position in contemporary Africa as both despised and appreciated, depending on cultures and societies, is a figure constantly moving. “This movement includes moving between spaces, a being in-between, and hence points to one possible understanding of diaspora itself” (Gunkel, Matebeni, and Raissiguier 2015, 3). For LGBTI people, movement can also be between and within selves—through gender identification or sexual orientation. This is probably the most misunderstood transition in society and even within LGBTI spaces. A case brought by the Kenyan Audrey Mbugua (KTN Prime 2013) has challenged the courts in Kenya and public discourse about the relationship between transgender and sexual orientation. Mbugua (2013), who is part of the human rights organization Transgender Education and Advocacy, has been highly critical of transphobia among homosexuals. Many gay and lesbian people assume that transsexual, transgender, and intersex people are part of the fallacy created by the LGBTI categorization. However, the struggles that trans and intersex people face are not limited to sexual orientation to the extent that lesbian and gay people rarely address trans and intersex struggles in their own activism. This gap and division within activism has caused a lot of animosity and general lack of understanding of identities, implications for citizenship, and related activist struggles.

What Remains? The Space for African Queer Theory

If African queer theory deals with the pulling apart of the complex interaction between activism, citizenship, and identities, the question that follows would be, then what is left when the pulling subsides? Does it ever end? And what futures exist for trans and queer persons and African queer theory? The following story exposes the gap filled by African queer theory.

In 2008 Gay and Lesbian Memory in Action (GALA) in Johannesburg put together a photographic exhibit titled Joburg Tracks: Sexuality in the City that captured the lives of eight LGBT persons as they navigate the city of Johannesburg (Archival Platform 2012). The exhibit illuminated narratives represented through a queer map of Johannesburg and its connections with other parts of the continent: “queer movements in urban space, crossing temporalities and national boundaries, and thick with memory” (Sizemore-Barber 2017).
One person, in particular, named Edgar Dlamini (a pseudonym), a seventy-three-year-old black African man, was among the subjects of the exhibit. Edgar was born in 1934 in Cato Manor, Durban, and grew up in rural KwaZulu and later moved with his family to the township of Soweto in Johannesburg. At age twenty-four, he was asked by his extended family to choose a wife. This was a year after he and his brother lost their parents. He conceded, even though a sexual and romantic life with a woman was not his priority. A year later, his wife gave birth to twins, who were followed by three other children. In the twins’ third year, in 1962, Edgar met Petrus at a neighbor’s house. They started a loving relationship that saw them renting a room since the 1970s in single-sex hostels for their “private time” together and to bring other lovers. Their relationship continued until the men reached their late seventies, when one of them lost his ability to walk and thus limited their opportunities to meet.

The only tangible memory of Edgar that exists today is a photograph taken of his left hand adorned with a wedding ring. This ring signaled something significant—a heteronormative identity that allowed him complete acceptance and to participate in society. It also permanently connected him to his wife and children, to whom he was completely devoted. At the same time, his thirty-year relationship with his male lover and friend, Petrus, had to find room in this arrangement. As complex as this was, it suggested already a different way of thinking and conceptualizing the ambiguity of what may be referred to as an African queer life. Materially, Edgar’s life was grounded in African contexts and imperatives of his black identity—the love for his family and community, while navigating class struggles, sexuality, and gendered relations. It appeared that his life was that of both compromise and promise. This was a complexity grossly misrepresented under gay and bisexual categories, as well as in the coming-out discourse that is prioritized by Western utopian ideals of queerness. In an interview with GALA in 2008, Edgar captured his dynamic in these words:

This life is wonderful, but at times it hurts. You live with your wife, but you are involved with someone else who you are devoted to. You would not even be able to sleep next to your wife because you are thinking of your lover. Your concentration becomes divided, so you need to keep room for disappointment....

I would have liked to live my life openly, but I’m unable to do that, and I accept my life as it is. I live a double life. My wife does not know anything about this, but even if she did, there’s very little she could do. Still, if my identity was ever known, I would just die. That would really kill me. (emphasis added)

This story illustrates the pulling apart that African queer theory interrogates in the interaction between identities, citizenship, and activism. Edgar’s complex and rich life as a
young African man faced with the decision to continue his lineage coexisted with his desire to fulfill his life as a man committed to both another man and his own wife and children. These two identities were sustained beyond the realization of full rights for gay people in a free and democratic South Africa. He chose to exist in both their complex arrangements. While rights to be “free” through same-sex progressive legislation were accessible, his choice not to associate with those given rights allowed him a life without the compromise of his full citizenship as father, husband, and community member. It is the possibility of being known as living a double life—a life of diversities—that posed a risk to his life. There are many Edgars in many parts of the world. Many are forced, through various ways, to choose the one end of the binary over the other—to choose one life over another. And yet, African realities already pose multiple forms of existence.

This is a call for an African queer theory that makes multiplicities possible, to extend the choice of the binary beyond its limits. Nyanzi agonizes on the “limited fixing” (2014a, 67) of queer and transgender subjects, asking for more spaces for articulating multiplicities in gender experiences and subjectivities within local contexts. Until that happens the future for queer activism and queer beings—those who exist and are always pushing against the binary walls in contemporary Africa—is bleak. Without these extensions what remains of queer theory in Africa are hidden figures holding back on the complexity and ambiguous narratives of African queer people. The space of ambiguity, often presenting unknowability, is fertile ground from which African queer theorizing emanates.

Rape, Corrective, in Africa

DEEVIA BHANA
South African Research Chair (SARChI)
University of KwaZulu-Natal, South Africa

The use of rape to “cure” women with nonnormative sexual identities in Africa.

Corrective rape is an act of violence committed against women with nonconforming sexual identities in order to “cure” them of their sexual orientation. Other women and girls who may not be lesbians but are associated with lesbian women may also be at risk for sexual violence based on a desire to punish the sexual transgression. Corrective rape is based on dominant heterosexual ideologies about gender roles. Heterosexuality assumes that men and women are biological opposites where sexual desire is based on women desiring men and vice versa. Corrective rape is used to “cure” what is assumed to be abnormal behavior and reinforce normative understandings of gender and sexuality.

Corrective rape tends to be associated with black African women who defy gender and sexual norms in violation of culture. In many traditional settings, families play a strong role in disciplining sexuality, and parents often arrange for daughters to be raped in confinement either to cure them of homosexuality or impregnate them (Morgan and Wieringa 2005). While it is true that black African women face particular challenges, the problem with the conflation of corrective rape with African women in low-economic township settings has led to the pathologization of African lesbian women as passive, powerless victims of men.
Lesbian Survivor of Assault, South Africa, 2012. Lindeka Stulo was assaulted on two different occasions by the same man, who was enraged by her lesbianism. Many African lesbians are victims of what has been called "corrective rape," which aims to turn lesbians heterosexual through violence.

However, this view of African lesbians as victims of corrective rape and discrimination is limited. Noting the specific problems related to the experience of gender, race, class, culture, and sexuality, African lesbian activists have challenged homophobic assaults on lesbian women. To do this, alliances have been formed with LGBT civil society organizations and human rights organizations. In South Africa, progressive state policy has not deterred the rape of lesbians and nonconforming transgendered and bisexual women. As a result there are increasing challenges to corrective rape from LGBT and related human rights groups.

The term corrective rape is mired in controversy. Some gender activists suggest that the term is unhelpful, as corrective rape is situated within a wider context of gender violence, heterosexual domination, and women’s marginalized role (Di Silvio 2011). A focus on corrective rape only splits the broader social movement against gender-based violence and hate crimes. In light of these controversies, the concept of corrective rape is seen as a "necessary evil" (Di Silvio 2011). Working with civil society and human rights organizations holds the promise of building alliances that address the problems of sexual violence against women more generally and corrective rape in particular. These alliances based on a human rights framework are also contingent on ending the homophobic rhetoric of political leaders and changing policies throughout the African continent to recognize equality on the basis of sexual orientation, which requires political will to eradicate discrimination against lesbian women.

Refugees and Asylum in Africa

GUILLAIN KOKO
Human rights lawyer and social justice activist
Safe Space for LGBTI refugees program at Church World Service (CWS), South Africa

The unique challenges faced by African LGBTQI individuals forced to migrate in response to persecution in their countries of origin.

In their countries of origin, African LGBTQI refugees and asylum seekers are subjected to persecution and human rights abuses, including violence, harassment, threats, insults, hate speech, exploitation, rape, torture, murder, bullying, forced marriage, family ostracism, and economic and social discrimination. In fact, such persecutions are perpetrated by both state and nonstate actors. A 2017 research study conducted by the International Lesbian, Gay, Bisexual, Trans and Intersex Association indicates that thirty-three out of fifty-five African countries continued to maintain antisodomy laws that are now being reinforced by further criminalization of same-sex sexual conduct between consenting adults (Carroll and Mendos 2017).

This hostile environment impels many LGBTQI individuals to actively change their circumstances by fleeing their country of origin and seeking asylum or international protection in countries that provide them with greater protections and freedom. International protection of LGBTQI individuals starts with securing their admission to a country of asylum and safeguarding their human rights as enshrined in international law. The end result for the refugee may be local integration, resettlement, or voluntary repatriation.

International Legal Instruments and Their Application

Because their country of origin has failed to protect them, LGBTQI refugees enter the displacement cycle and become persons of concern under the mandate of the United Nations High Commissioner for Refugees (UNHCR). Essentially, there are four legal instruments in human rights law that regulate issues of LGBTQI refugees and asylum seekers in Africa: the United Nations (UN) Refugee Convention of 1951 and its 1967 protocol; the African Union’s Convention Governing Specific Aspects of Refugee Problems in Africa (1969); the Arab Convention on Regulating Status of Refugees in the Arab Countries (1994); and the Yogyakarta Principles (2007). The common characteristic of these instruments is that they have provisions that recognize persecution on account of sexual orientation and gender identity as grounds to seek asylum and that qualify the
LGBTQI applicant for refugee status under the terms of “membership in a particular social group.” In reality, however, many of the signatories to these conventions often fail to offer asylum and assistance to LGBTQI refugees.

One of the obligations of every state party to the UN Refugee Convention of 1951 is to enact national legislation that offers international protection to refugees and asylum seekers that it hosts within its own territory. In doing so, it gives effect to its commitment to the international legal refugee instruments that it has signed and ratified. Such legislation determines eligibility criteria, rules, procedures, and organs in charge of adjudicating refugees’ claims. Most countries in Africa delegate this task to the UNHCR rather than the branch of their own government responsible for regulating domestic affairs, as is the case with South Africa and Western countries.

While lodging their application, LGBTQI asylum seekers must demonstrate both their membership in one of the five categories (race, religion, nationality, particular political opinion, and particular social group) and a nexus between that membership and the persecution they are facing or risk facing. In some countries, the outcome of such an application is determined exclusively by the immigration bureaucracies, immigration courts, and the national court, whereas in other countries it is determined in conjunction with the UNHCR. These decisions may need to be appealed or judicially reviewed before a final decision is reached to reject or approve the application.

It is important to note that, unlike gay and lesbian asylum seekers, transgender claims are based on gender identity rather than sexual orientation. Bisexuals can often legitimately claim imputed membership in a particular social group of lesbians or gay men. This gender identity, rather than the claimant’s male or female anatomical characteristics, is viewed by the adjudicator as immutable and fundamental to the person’s identity. Transgender individuals may also affiliate closely with one another, are driven by their common interest in assuming the gender identity of the opposite sex, are recognized as a segment of the population, and are often singled out for different treatment. Transgender claims may, in addition, be based on imputed membership in a particular social group of lesbians or gay men.

**The Flow of LGBTQI Refugees and Asylum Seekers**

While fleeing homophobic persecution, LGBTQI persons in Africa take different paths, depending on where they will feel safe. However, given the ongoing homophobic discrimination in many countries in Africa, LGBTQI individuals have few choices when deciding on a country of destination within the continent to seek asylum so that they can integrate in a new community and start to live a normal life.

**Seeking Asylum within Africa** LGBTQI refugees in Africa make up a very small percentage
of the overall refugee population fleeing conflict and violence. Their pathway to safety must use the same support systems, such as refugee camps, as other refugees, yet they must endure the hostility and homophobia of other refugees to gain access to help. As the African nation with the most progressive legislation in terms of upholding LGBTQI rights and the rights of refugees, South Africa is the most preferred destination of LGBTQI refugees and asylum seekers on the continent, primarily targeting the big cities of Cape Town, Johannesburg, and Durban for settlement. Most LGBTQI refugees and asylum seekers come from Zimbabwe, Ethiopia, Nigeria, Uganda, the Democratic Republic of the Congo, Malawi, Somalia, Ghana, Angola, Burundi, Mozambique, the Republic of the Congo, Cameroon, Tanzania, Kenya, Lesotho, and Senegal. Kenya has been the second-most-popular destination for LGBTQI refugees and asylum seekers after South Africa. With two refugee camps, Dadaab and Kakuma, Kenya is home to hundreds of LGBTQI individuals who fled from Uganda to Kenya following the passage in 2014 of Uganda’s draconian Anti-Homosexuality Act (Senzee 2014). Most LGBTQI refugees in Kenya come from different countries in Africa, including Somalia, Ethiopia, Eritrea, and the Democratic Republic of the Congo, and concentrate in Kenya’s urban areas or the refugee camp of Kakuma.

**Seeking Asylum outside Africa** Besides the flow of migration of LGBTQI refugees within the African continent, there is another flow of migration of LGBTQI refugees outside the African continent. This type of migration has three primary forms: the resettlement process, direct flight, or irregular migration, such as illegal smuggling operations. While no official statistics exist on the number of LGBTQI refugees who leave the continent versus the number who flee their country of origin but remain on the continent, activists in Africa believe that the number of refugees remaining in Africa is higher than those leaving Africa. This assumption is based on the difficulties in obtaining visas to Europe and North America for those hoping to resettle via legal channels and the dangers inherent in human smuggling for those who resort to illegal means.

In the resettlement process, LGBTQI refugees and asylum seekers are identified by the UNHCR in their countries of asylum and referred for resettlement. However, holding refugee status is the precondition to resettlement. Research by the UNHCR reveals that there are ten main countries that receive refugees in the resettlement process as a third country sharing the burden of hosting refugees: Australia, Belgium, Canada, Germany, the Netherlands, the Scandinavian nations (Denmark, Norway, and Sweden), the United Kingdom, and the United States (UNHCR 2011). While the United States and Canada are primary destinations for resettlement, Germany is one of the countries that receives a significant number of LGBTQI refugees. In response to incidents of abuses against LGBTQI persons in refugee camps, Berlin opened its first LGBTQI refugee reception center in February 2016. The center has room for up to 120 LGBTQI refugees (“Berlin Opens” 2016).

LGBTQI refugees who choose to seek asylum via direct flight are generally those who can afford to pay their own travel expenses to escape persecution. They may do so on the invitation of siblings, friends, partners, or fellow LGBTQI activists who are already in the country of asylum. Such refugees enter the country of asylum legally by applying for a valid visa; they then claim asylum upon arrival to their destination.
The term *irregular migration* derives from the trafficking and smuggling protocols of the Palermo protocols, passed as supplements to the UN Convention on Transnational Organized Crime (2000). It occurs when LGBTQI individuals escaping persecution enter into a contract with smugglers to transport them to a foreign country illegally or use fraudulent documents in exchange for money. The contract ends when the refugees arrive at their destination. Those individuals leaving Africa by this mode generally do so by crossing the Mediterranean from northern Africa to reach southern Europe by boat. This mode of travel is extremely dangerous, as such refugees can easily be deceived by their smugglers and become victims of human trafficking, ending up in a cycle of exploitation and abuse. According to a 2013 article in *International Law News* by Omar Martinez and Guadalupe Kelle, “LGBT sex trafficking is commonly overlooked and rarely reported by local and national governments.”

**Challenges Faced by LGBTQI Refugees**

LGBTQI refugees face challenges at every stage of their journey, from the beginning in their home countries to their final destination. In his 2013 report “Invisible in the City,” Yiftach Millo of HIAS (formerly the Hebrew Immigrant Aid Society) outlined what he referred to as the “triple jeopardy” encountered by LGBTQI refugees in their migration cycle: jeopardy in their own country, jeopardy on their way to the asylum/host country, and jeopardy in the country of asylum.

**Jeopardy in Their Own Country** Prior to seeking asylum, hundreds of LGBTQI individuals face persecution because of their sexual orientation or gender identity. They face persecution and human rights abuses ranging from ostracization from their families and forced marriage, to evictions from their homes and local communities, loss of employment, involuntary outings by the media, and seizure of property; and from blackmail, illegal arrest and imprisonment, bullying at school, and murder of a partner, to torture, death threats, and beatings.

**Jeopardy on Their Way to the Asylum/Host Country** While fleeing persecution from their own countries of origin to a different country, LGBTQI asylum seekers still face unthinkable hardships on their way. Among those challenges are human trafficking, theft, extortion by truck drivers and fellow refugees, and physical violence including rape.

**Jeopardy in the Country of Asylum** Contrary to what most LGBTQI refugees expect, the country of asylum is not a “safe haven” for many LGBTQI refugees and asylum seekers. Most individuals do not have the resources to make it to the West, so South Africa or Kenya becomes the best option for refuge. Those refugees who remain in Africa often find their plight only marginally improved, as discrimination against LGBTQI individuals is strong even in countries known to have more liberal policies. LGBTQI refugees face continued discrimination, harassment, and exploitation in their new communities. LGBTQI individuals
face unique vulnerabilities. In many countries xenophobic and anti-immigrant sentiments are on the rise. When homophobia is compounded with xenophobia and outright racism (particularly in the West), it leaves many LGBTQI refugees in conditions similar to those in the countries that they left.

Economic instability is another crucial problem for LGBTQI refugees. With some African countries experiencing unemployment rates as high as 25 percent to 35 percent, finding a job in most countries is difficult enough as a foreigner. Finding a job as an openly homosexual or transgender foreigner is even more difficult. In the absence of support structures (either from their families at home, who have shunned them, or from the larger refugee community in the host country, as is the case in both South Africa and Kenya), this inability to secure consistent income leaves LGBTQI refugees at risk to unique forms of exploitation. Many are forced into prostitution, as the only way for them to earn money, but this exposes many LGBTQI asylum seekers to the risk of contracting HIV/AIDS and other sexually transmitted diseases.

In addition to the broad-based discrimination and exclusion they face, LGBTQI asylum seekers often experience difficulties in the documentation process in the country of asylum. As already suggested, although many countries officially grant asylum on the grounds of sexual orientation or gender identity, flaws in the documentation process leave many individuals who have legitimate asylum claims without refugee status. The reasons for the failures of the asylum system are not always that blatant, however. For example, many LGBTQI asylum seekers are not comfortable openly admitting their sexuality or gender identity to immigration officials when they first meet.

Generally, one of the most difficult tasks in the refugee determination process is to establish the credibility of the applicant. It is even more difficult for LGBTQI asylum seekers to convince immigration officers of their need for asylum based on their sexual orientation, given the difficulty in providing evidence in support of their claims. Genuine LGBTQI asylum seekers have been traumatized by officials who expect them to prove their status beyond a reasonable doubt. Bona fide LGBTQI asylum seekers have been denied refugee status because they failed to prove that they were high-profile activists, or because they were not perceived as being “gay enough” or were unable to produce photos of their partners, for example.

**Controversies**

Immigration in general and forced migration in particular are among the most controversial issues in many countries, particularly in receiving countries. The large influx of refugees and asylum seekers of all kinds to Europe as the result of war and instability in the Middle East and North Africa starting in 2015 led many Europeans to call for reforms in migration policy to scale back the number of refugees allowed. Even beyond Europe, US
president Donald Trump, shortly after he took office in January 2017, sought to severely restrict immigration through executive orders, particularly from certain countries in the Middle East and North Africa. Such changes in migration policy directly affect LGBTQI refugees, leaving many in limbo in detention centers or without options in their countries of origin.

Controversies also continue to churn around the issue of whether an LGBTQI asylum seeker claimant can be asked about and/or be expected to conceal or be discreet about his or her sexual orientation and/or sexual practices so as to avoid persecution. As noted by Alice Edwards in her foreword to Refugee Status Claims Based on Sexual Orientation and Gender Identity: A Practitioners’ Guide (2016), such questioning based on stereotyped understandings of what it means to be LGBTQI has no place in interviews with refugees. A related issue is how to assess the credibility of a refugee’s sexual orientation and what kind of proof should be or can be required. It is difficult to determine what would be considered evidence in such a scenario, be it videos, pseudoscientific testing of sexual orientation, or medical evidence.

There is also controversy related to the concept of “membership in a particular social group.” This concept was not defined by the UN Refugee Convention of 1951, so it remains unclear how to define those covered by the term. The UNHCR holds a very conservative view in which it refuses to acknowledge that the existence of laws criminalizing same-sex relationships or conduct constitutes the basis for refugee status and the preconditions to it, including past persecution and fear of future persecution. This view is not shared by most LGBTQI individuals and human rights activists.

Refugees and Immigration Policies

MARK GEVISSER
Independent scholar
South Africa

The history and current policies regarding LGBT refugees and asylum seekers.

According to the 1951 United Nations Convention on Refugees, a refugee is anyone who has “a well-founded fear of being persecuted for reasons of race, religion, nationality, membership of a particular social group, or political opinion” (UNHCR 2010, 3). Certain countries, such as Canada, have been granting asylum to refugees on the basis of sexual orientation or gender identity since the early 1990s (Lee and Brotman 2011). The category became a matter of international policy only in 2008, when the United Nations High Commissioner for Refugees (UNHCR) issued its UNHCR Guidance Note on Refugee Claims Relating to Sexual Orientation and Gender Identity, which established that the phrase “particular social group” is applicable to “LGBT individuals.” According to the guidance note, it had been “well established that sexual orientation can be viewed as either an innate and unchangeable characteristic or as a characteristic that is so fundamental to human dignity that the person should not be compelled to forsake it” (UNHCR 2008, 15). The note also specified particular ways that transgender people might fear persecution and violence.

LGBT Rights as a Global Issue

In the early twenty-first century, an era of profound globalization, the movement of people across borders resulted in an explosion of ideas and new perspectives. LGBT rights had previously seemed to be a preoccupation in the liberal, democratic Western world but was now a global issue. In former British colonies that became countries of the commonwealth, high-profile campaigns were initiated to decriminalize homosexuality, as in India during the 2000s. In formerly repressive societies, embracing full citizenship rights for gender and sexual minorities was seen as a decisive break with the past; this was particularly true for South Africa and for such Latin American countries as Argentina, Brazil, and Colombia. At the same time, one aspect of the global prominence of LGBT rights has been its use in the West as a yardstick to measure the lack of human rights in certain regions or countries, such as China. The issue has generated debates about homonationalism, the universal applicability of human rights, and neocolonialism. It has also influenced immigration and refugee policies. Moreover, the digital revolution has had a crucial impact on LGBT rights in the global context, sparking profound changes to queer communities everywhere. All of these factors created the conditions for what became a major phenomenon of the early
twenty-first century: refugees seeking asylum on the basis of a fear of persecution because of their sexual orientation or gender identity.

The UNHCR and the service organizations that worked with it first started using the collective concept of the LGBT refugee around 2005, when organizations in Turkey began noting a significant influx of male homosexual refugees from Iran fleeing imprisonment or forced medical procedures (such as sex-reassignment surgery). This particular cohort of refugees sought asylum on the basis of political opinion, but it became clear to those interviewing them that the primary reason for their flight was persecution (or the fear of it) due to sexual orientation or gender identity. Policy makers and advocates, thus, began advocating for the UNHCR to specify this as legitimate grounds for seeking asylum (ORAM 2011).

**National Advocacy for LGBT Refugees in the Western World**

In the early years of the twenty-first century, LGBT communities were developing and maturing in the liberal democracies of the West, as well as in South Africa and Latin America. Given the changing rights dispensation in these countries, their queer citizens began to feel that their countries might become havens for those in peril in other parts of the world; these citizens were becoming secure enough in their own rights to begin looking beyond their borders toward international solidarity. In 2008, in response to the UNHCR policy guidance note, an advocacy group called the Iranian Railroad for Queer Refugees was established in Canada to lobby for the country to receive resettled Iranian LGBT refugees from Turkey. In the same year, and also in response to the UNHCR, the Organization for Refugee, Asylum and Migration (ORAM) was founded in San Francisco specifically to address the issues of the LGBT refugee population; it has become the largest organization of its kind, globally.

Since 2008, fund-raising and providing reception for LGBT refugees has become a feature of queer communities or communal life particularly in North America and northern Europe, from Rainbow Refugee in Vancouver to the Centre for LGBT Refugees in Berlin. In South Africa, the refugee rights organization People Against Suffering, Oppression and Poverty (PASSOP) set up an LGBTI Refugees Network. In Mexico, there was a community-based shelter for transgender women in Mexico City; later, in 2017, a Franciscan friar set up a shelter near the Guatemalan border specifically for LGBTI (largely transgender) refugees from Central America.

In Canada, the Rainbow Railroad, which was founded in 2006, had helped over 200 people from fourteen different countries resettle by 2017. The organization came to the forefront for its response to the violent wave of repression against gay and bisexual men in Russia's Chechen Republic beginning in 2017. It began working with the Russian LGBT Network to
provide direct travel assistance to those in danger to get to safe houses within Russia and to resettle outside the country. It also lobbied the Canadian government for emergency visas. In June 2018 it joined forces with the US nongovernmental organization Human Rights Campaign for meetings with US authorities to call for an investigation into the alleged crimes against humanity committed in Chechnya and to lobby the United States to allow survivors into the country (Parshall 2018).

The history of the United Kingdom Lesbian and Gay Immigration Group (UKLGIG) perhaps best tells the story of LGBT rights advocacy and its relationship to broader political and social currents. It was created in 1993 as the Stonewall Immigration Group specifically to help same-sex couples that had one non-British partner stay together in the United Kingdom. By 1997 it had successfully lobbied for at least twenty applications for permanent residence; by 2000 the government had adopted a policy permitting the gay partner of a British citizen to stay in the country, and in 2004 the Civil Partnership Act legislated it. Having won this victory for queer Britons and their partners, the UKLGIG turned its attention to asylum seekers at almost exactly the time the notion of LGBT refugees entered the global human rights lexicon.

**International Human Rights Instruments**

Because of explicit nondiscrimination policies in countries such as the United Kingdom, Canada, and those of northern Europe, activists were increasingly appointed to intergovernmental policy-making bodies such as the United Nations, or to organizations such as Amnesty International and Human Rights Watch, while others became involved in setting up powerful global networks such as the International Lesbian and Gay Association (ILGA) and the International Lesbian and Gay Human Rights Commission (now OutRight Action International). Such European countries as Sweden and the Netherlands—later to be followed by France, the United Kingdom, and the United States—made LGBT rights a foreign policy priority and began lobbying for them at the UN High Commissioner for Human Rights and the UN General Assembly’s Human Rights Council. A key priority of this new global network was to specify the way that international human rights instruments applied to people who were persecuted on the basis of sexual orientation and gender identity. To this end, the benchmark Yogyakarta Principles were adopted by a group of human rights organizations in 2006, setting out twenty-six principles for the equality of LGBT people within the international human rights system.

Principle 23 of the Yogyakarta document demanded that “a well-founded fear of persecution on the basis of sexual orientation, gender identity, gender expression or sex characteristics” be accepted as grounds for the recognition of refugee status (Yogyakarta Principles 2007, 23). The 2008 UNHCR guidance note was a direct result of the Yogyakarta Principles, which also set out several other ways that LGBT refugees were to be protected. The value of the 2008 UNHCR guidance note was to set international best practice and to
enable resettlement to third countries. For example, a Ugandan refugee seeking asylum in Kenya could be resettled to Sweden from Kenya on the grounds that his fear of persecution was as great in Kenya—a country where homosexuality is illegal—as it was back home.

**LGBT Refugees**

Meanwhile, all over the world, queer people were coming out and forming their own organizations and networks, often under the umbrella of public health activism in the wake of the AIDS epidemic. This rendered them visible and vulnerable. In some societies this new visibility, combined with activists’ insistence on civil society mobilization and basic human rights, fomented state-sanctioned homophobic backlashes; the most notorious occurred in Zimbabwe, Uganda, and Russia. There have always been queer people migrating internally and across borders, away from the strictures (or even violence) of family and tribe, toward cities where they might lose and reinvent themselves. Particularly in war zones, refugees have always fled because of gender-based violence, a subset of which is violence on the basis of gender identity; this became particularly evident to the officers of the Refugee Law Project at Makerere University in Uganda when there was an influx of asylum seekers in that country from the Great Lakes conflicts of the early twenty-first century. As a consequence, and due to the UNHCR’s guidance note, the project facilitated the establishment in 2009 of an LGBTI affinity group called the Angels and began assisting its members to seek resettlement on the basis of feared persecution due to sexual orientation or gender identity.

In addition to these traditional queer refugees, there was, in the twenty-first century, a new generation of migrants—out of the closet, exposed, and politically conscious about their rights to personal autonomy—who found themselves “pushed” out of their home countries by explicitly homophobic and transphobic policies, and “pulled” to more tolerant societies by the promise (transmitted through digital media) of life in places where, they believed, they might be able to live in peace and dignity. The problem was that they often landed somewhere equally (or nearly) as inhospitable along the way.

**Third-Country Resettlement**

Third-country resettlement thus became a significant part of the LGBT refugee landscape; a major component of LGBT asylum work in countries such as Uganda, Kenya, and Turkey—countries that traditionally accept large numbers of refugees—was thus dedicated to assessing the situation of LGBT asylum seekers in these countries and recommending them for resettlement in countries where they would be welcome as LGBT people. This created a fundamental shift in the processing of refugees: before the advent of LGBT refugees, asylum seekers were recommended for resettlement on a case-by-case basis; now, however, there was a whole category of people who were, by virtue of these host countries’ own laws, unwelcome in the very country that had provided them refuge. The UNHCR itself was the
adjudicator of such decisions.

Particularly in Kenya, following the influx of Ugandan refugees after the passage of antihomosexuality legislation in 2015, it became a matter of course for the UNHCR to recommend this particular population for resettlement, not least because of the discrimination these new refugees experienced both in the agency's refugee camps and in the urban environment of Nairobi. The immediate crisis caused the UNHCR to fast-track LGBT refugee resettlement, with the assistance of the US government in particular. This created its own problems, however, including an unmanageable influx of new applicants, some of whom were considered suspect; when the UNHCR put the brakes on, a backlog was created, with attendant social problems that still had not been cleared by 2018 (Amuke 2015; Gevisser 2016).

South Africa presents a unique case in Africa. Given the country's constitutional protection of all citizens on the basis of sexual orientation or gender identity, LGBT refugees are welcome, in principle. One of the first asylum seekers granted refugee status on this basis was Tiwonge Chimbalanga in 2011. Chimbalanga was a transgender Malawian who had been sentenced to fourteen years hard labor after holding a public engagement ceremony with her fiancé; she had been pardoned after international intervention, including that of UN Secretary-General Ban Ki-moon (1944–), and asylum had been arranged in South Africa via Amnesty International and a local transgender advocacy organization (Gevisser 2014). But although several dozen asylum seekers from other parts of Africa have applied for asylum in the country since then, very few had been accepted by 2018; this was due to the country's unwieldy and unfriendly administrative process and a collapse in its appeals system, rather than to any specifically exclusionary policy. Nonetheless, several refugees in South Africa have been resettled elsewhere, due to transphobic and homophobic violence (such as the “corrective rape” of lesbians), as well as xenophobic violence (PASSOP 2012).

LGBT Asylum Statistics by Country

In 2015 the United Nations estimated that some 42 states had granted asylum to individuals on the basis of sexual orientation or gender identity (United Nations General Assembly Human Rights Council 2015). The best available data are from the United Kingdom. Between July 2015 and March 2017, there were 3,535 claims to asylum on the basis of sexual orientation. Most were from Pakistan (1,000), Bangladesh (454), and Nigeria (362). There were 257 from Uganda: at 67 percent of the total claims, this was by far the highest proportion from any country. Only 55 percent of the Ugandan applicants and only 25 percent of the Pakistani applicants were granted asylum: the rest were deported (UK Home Office, 2017). These figures were dramatically higher than those from earlier in the century: in 2009, advocates estimated that there were between 1,200 and 1,800 applicants (Metropolitan Support Trust 2009), and in 2010 the UKLGIG reported that it gave support and assistance to more than 500 asylum seekers, of whom only 70 were
New Zealand granted asylum on the basis of sexuality or gender identity to 25 people between 2012 and 2017 (Radio New Zealand 2017). In Canada, 561 refugee claims were heard on the basis of sexual orientation between April 2009 and June 2011; only 58 of these were granted (Laviolette 2014). These numbers increased exponentially in the following years.

In continental Europe, Belgium was the first country to take a significant number of refugees. It recorded that 116 cases were handled in 2006, of which 33 were granted refugee status; in 2010 the number of cases had risen to 522, of which 156 received protection. In Norway, 11 people were granted asylum on the basis of sexual orientation in 2008 to 2009. In the same period, the Netherlands estimated that it received about 200 applications per year, and Sweden 300 per year. Italy received 54 between 2005 and 2008, of which 29 were granted refugee status. There is no indication in the statistics about the provenance of these refugees (Council of Europe 2011).

The United States has granted asylum, in principle, on the basis of sexual orientation since 1994, but the numbers grew substantially after President Barack Obama (1961–) made the assistance of LGBT refugees a foreign policy priority in 2011 (Obama 2011). This decision followed the landmark speech by Hillary Clinton (1947–) at the UN Human Rights Council in Geneva in December 2011 in which she commented, specifically, that the human rights of LGBT people are violated when they are “forced to flee their nations and seek asylum in other lands to save their lives” (quoted in Capehart 2011). In 2015 the US Ambassador to the United Nations Samantha Power estimated that the country was resettling between 75 and 1,000 LGBT refugees annually (Mack, 2015); that year the United States also made it possible for LGBT refugees to bring their de facto spouses to the United States if the laws in their countries did not permit same-sex marriage (Ahmed 2015).

Ironically, US immigration policy had explicitly excluded homosexuals until as late as 1990, when the Immigration and Nationality Act was amended to drop “sexual deviation” as medical grounds for exclusion; these grounds had been on the books, in one way or another, since 1917. Moreover, from 1993 to 2010, being HIV-positive was grounds for inadmissibility or for denial of permanent residency. (As of 2018, HIV status could still be a reason to be refused asylum in the United States.) Although the administration of US president Donald Trump (1946–) had not, by 2018, specifically commented on LGBT refugees, advocates believed that its clampdown on asylum seekers in general, coupled with its pushback on LGBT rights, had had a chilling effect on the number of refugees in this sector seeking asylum in the United States (Human Rights First 2017).

In 2012 ORAM estimated that there were 175,000 “LGBTI persons ... in peril in their home countries worldwide,” and that of these, 7,500 managed to escape, 750 were able to access
the asylum system, and “only 350 are recognized as refugees” (ORAM 2012, 4). Even if the actual quantum is imprecise, the implication of ORAM’s inverted triangle is that only a tiny percentage of queer people “in peril” actually receive the protection of refugee status.

While such projections have played a key role in raising both consciousness about the situation of queer people worldwide and funds for their resettlement, they have drawn criticism from LGBT activists in the Global South over the “rescue narrative” that underpins some of the discourse. As the South African activist Melanie Judge wrote in the Guardian in 2014, “Promoting an ‘escape’ from Africa to ‘greener US pastures,’ without simultaneously addressing the underlying conditions that force this migration, is dangerous and opportunistic.” Such interventions, Judge said, were “at best palliative and patronizing [and] at worst they reinforce the victimhood of Africans and the savior status of Westerners. This is part of the logic that keeps the ‘homosexuality is unAfrican’ discourse in play.”

**Establishing Credibility**

If, indeed, there is so great a disparity between the number of queer people who need asylum and the number of them who actually receive it, what are the reasons for this? There has been significant investigation into this question, by ORAM and others (ORAM 2014; European Asylum Support Office 2015). Lack of access to financial resources and to information is primary, of course, but there also have been barriers put into place by the asylum system itself that make it even harder, in some respects, for LGBT refugees to gain asylum than for the broader refugee population. These include the burden of proof placed on the asylum seeker to prove that they are homosexual or transgender. The UKLGIG has documented specific LGBT asylum hurdles in the United Kingdom, from prurient questions about sexual activity to culturally inappropriate questioning (asking a Ugandan lesbian if she has read Oscar Wilde) to “disbelief that a person would engage in ‘risks’ (sexual) behavior” (UKLGIG 2013). The UKLGIG ascertained that in 2009, 73 percent of all LGBT asylum claims were rejected, and that between 2005 and 2009, 98 to 99 percent of such claims were rejected—which means that applicants, many of whom were already exposed as LGBT, were deported home (UKLGIG 2010). The year 2017 statistics from the home office showed a lower—but still substantial—percentage of rejected claims, as did figures from other parts of Europe (UK Home Office, 2017; Council of Europe, 2011).

The key issue, in the United Kingdom as elsewhere, was credibility: how does an assessment officer determine whether the applicant before him or her not only has a “well-founded fear of persecution,” but also is gay in the first place? Thus, credibility became a key cause for concern among potential host countries. Some countries, such as the Czech Republic, were accused of conducting invasive sexual arousal tests on asylum applicants (Jansen 2014). In others, such as Australia and the United Kingdom, there was spirited jurisprudence on whether the state could deport applicants on the grounds that they had
not exercised enough “discretion” about their sexual orientation back home (Millbank 2002; UKLGIG 2010).

In the United Kingdom, two applicants were denied refugee status on the basis that they could escape persecution in their home countries (Iran and Cameroon) if they returned home and concealed their identities. In 

HJ (Iran) and HT (Cameroon) v. Secretary of State for the Home Department, the men took the case on appeal, and in 2010 they won. In a passage from the Supreme Court judgment that has entered the queer canon, one of the judges, Lord Rodger, insisted that “just as male heterosexuals are free to enjoy themselves playing rugby, drinking beer, and talking about girls with their mates, so male homosexuals are to be free to enjoy themselves going to Kylie [Minogue] concerts, drinking exotically coloured cocktails, and talking about boys with their straight female mates” (quoted in Verkaik 2010).

Notwithstanding Lord Rodger’s stereotyping of gay men, the decision shifted the debate decisively and was incorporated in a second and far more comprehensive guidance note published by the UNHCR in 2012. This stated that although “an applicant may be able to avoid persecution by concealing or by being ‘discreet’ about his or her sexual orientation or gender identity” in the home country, this was “not a valid reason to deny refugee status.” Citing the British decision and others, the note continued that “a person cannot be denied refugee status based on a requirement that they change or conceal their identity, opinions or characteristics in order to avoid persecution. LGBTI people are as much entitled to freedom of expression and association as others” (UNHCR 2012, 9).

Still, the “credibility” issue continued to dog LGBT refugees, in Britain and elsewhere. In 2012 the Nigerian activist Aderonke Apata was denied refugee status in the United Kingdom because she was deemed to be lying about being in a lesbian relationship as “a cynical way of gaining status in the UK,” as the judge put it. She finally won her battle in a second appeal in 2017 (Taylor 2017).

Triple Jeopardy

Many other challenges remained, for both LGBT refugees and the service organizations set up to help them. These included what has been described as the “triple jeopardy” of being an LGBTI refugee: facing persecution not only in their home country but along the way and in their host country, too (Millo 2013). A key element of this jeopardy is the fact that the very homophobia or transphobia the refugees fled back home is likely to be a component in the expatriate community of compatriots that might otherwise receive and integrate them. Studies of LGBT refugees have, thus, found them to be singularly isolated (Millo 2013; PASSOP 2012).

Part of this triple jeopardy is the xenophobia, or racism, that LGBT refugees experience in
their host countries, along with the same homophobia or transphobia they experienced back home. As Congolese refugee Junior Mayema wrote in the South African media in 2013: "I am faced with all the frustrations and indignities and xenophobia that every African refugee has to deal with, but on top of that I have to deal with homophobia too: both within the asylum-seeking process and in the general society" (Mayema 2013). Mayema and several other LGBT refugees in South Africa were resettled on this basis.

The effects of this triple jeopardy were made manifest by a policy decision of the Israeli government in 2018 to deport African men who had applied for asylum on the basis of fear of persecution for being LGBT back home, along with all other adult male African asylum seekers (Yaron 2018). LGBT refugees in detention on Manus Island, attempting to get into Australia, were in a similar predicament in 2017; they were to be settled in Papua New Guinea, a country where homosexuality was illegal (Dawson 2017). In both these cases, the pro-LGBT policies of Israel and Australia were trumped by their anti-immigration ones. Similarly, Israel will not accept Palestinian LGBT refugees from the Occupied Territories despite the fact that Israel promotes itself as a haven of tolerance for homosexuals in the Middle East.

Unsurprisingly, the majority of LGBT refugees do not cite fear of persecution on the basis of sexual orientation or gender identity as the reason for their flight; instead, they either use other refugee criteria, or become economic migrants or illegal immigrants. In 2013, for example, the Williams Institute at the University of California, Los Angeles, ascertained that there were at least 267,000 undocumented adult LGBTI migrants in the United States (Gates 2013).

In 2017 the high-profile exposé of gay “concentration camps” in the Russian territory of Chechnya led to a series of fast-tracked asylum applications for queer Chechen refugees to Western Europe and North America; these garnered much media attention (Shuster 2017; Kakissis 2018; Murphy 2017). But even as LGBT refugees became potent symbols—the embodiment of a new global iniquity between those countries that embrace sexual and gender diversity and those that have rejected it—the actual number of these people is minuscule, a fraction of the total number of queer people who continue to live in their home countries, or who travel across borders in other ways.

Whether posed as a historical or a theological challenge, any consideration of the role of same-sex acts in the Christian tradition must begin with the observation that such acts stand as signs for other issues. Same-sex acts have sometimes been interpreted as rebellion against the order of creation and at other times as oppression of fellow human beings. They have sometimes been understood as free choices and at other times as ingrained orientations. Some people argue that same-sex acts are a rejection of God, and others argue that these acts are potential unions with the Son of God. It is obviously difficult to find anyone who will accept all these interpretations. For some, the acceptance of same-sex acts seems like accommodation to the fallen world, rationalization of the flesh, or diabolical deception. For others, it seems the product of a secularizing modernity that frees individuals from the bonds of Christianity. Hence the meanings assigned to same-sex acts become themselves indicators of what it means to be Christian. As Heather R. White (2015b) argues, historical narratives of secularization are often difficult to distinguish from the liberal Protestant project of purifying and dematerializing religion. Christians who affirm sex acts as part of their Christian practice might be “queering” the boundaries between Christianity and the secular world—or they might simply be putting into practice the Gospel, which, they argue, was from its very beginning a “queer” message of liberation.

This entry provides a very brief account of same-sex acts in relation to the structures—household, church, and monastery—that historically have organized Christian communities. It also looks briefly at the dissemination of Christianity—and the sexual norms of European Christians—among the colonized peoples of South America and Africa. While this approach might point to where the evidence is richest, its limitations should be acknowledged at the outset. The relative scarcity (though by no means absence) of references to sex acts between Christian women might be partially attributed to the historical exclusion of women from ecclesial offices, at least before late modernity. In effect, the sources paid greater attention to where official power resided. At the same time, some of the oldest Christian communities are centered in the Middle East, East Africa, and India. Academic studies of the role of same-sex acts in these traditions, particularly for the precolonial period, are scant.
Household and Church

The earliest Christians formed loose networks of household assemblies (ekklēsiai) connected by itinerant teachers who were described as “envoys” or “apostles” (apostoloi). Of these the most influential was Paul. Addressing politically weak communities, Paul focused his moral teaching on the household, understood as a married couple living with children, widowed and unmarried kin, slaves, and dependent clients. Household organization anticipated the imminent Kingdom of God, and those excluded from the Kingdom were excluded from the Christian household. Among those excluded were malakoi and arsenokoitai (1 Corinthians 6:9–11).

The former is a common word meaning “soft” in both a physical and a moral sense. The latter, not attested before Paul and extant only in sources dependent on him, is composed of roots for male and bed. Among the explanations offered for these terms is the suggestion that they refer respectively to the “receptive” and “insertive” roles in sex acts between men. These were neither hardened identities nor irremovable obstacles to participation in the Kingdom; Paul asserts that among Corinthian believers were those who had been malakoi and arsenokoitai before baptism. Unclear is whether these behaviors carried with them their own motivations for conversion, or whether individuals experienced renunciation as a sacrifice necessary for the sake of the Kingdom.

This exclusion of sex acts between males shows that the household itself was often the site of that activity. Demands that masters not threaten slaves or treat them unjustly (Ephesians 5:22–6:9; Colossians 3:18–4:1) imply forgoing the common practice of using/abusing them sexually. This might provide context for the precept ou paidophthorēseis found in “church orders” and other texts claiming apostolic authority (Didache, Letter of Barnabas, and Apostolic Constitutions). Frequently translated as “you shall not corrupt boys,” the command has been understood as a renunciation of Greek traditions of courting free youths. Pais, however, can refer to children regardless of gender and was often applied even to adult slaves. Paidaria is what Clement of Alexandria (c. 150–c. 215) calls young boys exposed for sale in the marketplace, thus providing a context for his repeated citation of the precept. He expresses pity at the boys’ powerlessness to refuse the depilation and feminine adornments meant to arouse the sexual attentions of potential buyers, but pity turns to outrage at free males who undergo similar depilation. Free male bodies deliberately made smooth signified either a desire to gain entry to women’s quarters and/or an invitation to be penetrated by other males, both of which amount to abdications of the moral responsibilities of the Christian householder (Clement’s Instructor 3.3.18–21).

Relations among early Christian households were complicated by ethnic strains, most importantly between Jewish and Gentile believers. Rejection of same-sex acts plays a key role in Paul’s efforts to alleviate these tensions. According to Paul, “Greeks” failed to
recognize the truth about the Creator in his works, worshipping the latter instead of the former (Romans 1:20–23). This exchange of truth for falsehood led to further inversions, namely the exchange of the “natural” use (of sex) for the “unnatural” on the part of Gentile women. Later Christian exegetes would disagree as to whether this refers to “irregular” heterosexual acts or sex acts between women, and at least one commentator, the fourth-century Ambrosiaster, changed his mind on the question from one edition of his work to the next (Brooten 1996). Paul is more explicit in saying that Gentile men abandoned the “natural” use of women, “committing shameless acts with men and receiving in their own persons the due penalty for their error” (Romans 1:27). These “shameless” acts are thus interpreted as punishments in themselves for the graver sin of idolatry. Playing on preexisting ambivalence about “honor” in same-sex acts, Paul hollows out Gentile claims to moral superiority, even as he does the same with Jewish believers who failed to uphold the revealed law. A universal need for divine mercy thus becomes the basis for solidarity between the varied domestic nuclei of the Roman Christian community, at the cost of same-sex relations.

While the paterfamilias (male head of household) served as an ideal model for the potential episkopos (overseer) or diakonos (servant) in the earliest churches (1 Timothy 3:1–13), as ecclesial organization departed from the household model, clerical offices were increasingly reserved for celibate men on the grounds that priests needed to be in a state of “purity” to preside at ever more frequent liturgies and that the Christian priesthood should not simply be transmitted from father to son. By the late fourth century, Pope Siricius could express outrage at bishops and deacons who continued to cohabit and have intercourse with their wives (Letter 1), although his letter demonstrates that many clerics resisted demands for purity. No such defense was mounted for same-sex acts. In addition to “pollution” associated with sex in general, sex acts between men could introduce potentially disruptive questions of dominance and submission in ecclesiastical hierarchies. Proving accusations, however, was difficult and potentially disruptive. The events that led to the deposition of John Chrysostom from the see of Constantinople, often seen as a consequence of the anti-Origenist campaign of Theophilus, bishop of Alexandria, were sparked by accusations that Isidore, a monk and priest who had served as Theophilus’s spokesman, had committed “sodomitic” crimes with several young men (Palladius, Dialogue on the Life of St. John Chrysostom 6.82–96).

**Rise and Rejection of Celibacy**

Orderly heterosexual households were not the most ascetically demanding institution among early Christians. While insistence that Christians reject all sexual activity was eventually labeled heretical, married Christian house-holders coexisted, at times uneasily, with individuals who professed chaste celibacy as a higher Christian calling. In addition to the dangers of the opposite sex, the “Sayings of the Desert Fathers” (e.g., Ward 1975),
collections of anecdotes concerning the ascetics of fourth-century Egypt, express anxiety at the ways the sexual attractiveness of boys and youths could complicate recruitment and endanger relations among such ascetics. A story is told concerning Abba Carion, who was joined in the desert by Zachariah, the son he had left behind when he became a monk. When the boy’s presence drew comments from other monks, Carion moved with Zachariah to other ascetic communities, where they were not recognized as father and son, and the comments grew even worse. Zachariah eventually stopped the gossip by bathing in an alkaline lake, permanently disfiguring himself.

Perhaps to discourage disruptive preoccupation with the sexual sins of others, another story is told of an elderly monk who did not report a fellow monk for sinning with a boy, noting that God, who saw their sin, had not responded with heavenly fire. Analogous warnings about the dangers young women might pose to female ascetics seem to be absent from the sayings of the most famous desert mothers, Sarah, Theodora, and Syncletica. Theodora does say of one penitent that "she never looked upon even a woman's face," suggesting the risk was not completely ignored. Several early accounts of journeys to the afterlife, likely written in monastic settings, report that women who engage in sex with other women will be severely punished in hell (Brooten 1996).

Coenobitic monasticism (a form of community in which individuals worked, ate, and prayed together) derived from the practices of these Egyptian ascetics and became the dominant model of celibate life. As an alternative to heterosexually reproductive households, nothing surpassed these sexually segregated communities in stability and cultural influence. The most important monastic rules for the eastern and western churches—those of Basil of Caesarea (c. 329–379) and Benedict of Nursia (c. 480–547), respectively—do not directly address same-sex acts, although prohibitions of special friendships and rules concerning the arrangement of sleeping quarters have been interpreted as expressions of concern. Evidence for such activity comes instead from the early medieval poenitentiales, books detailing appropriate penances for sins. Some canons make careful distinctions regarding the age, clerical status, and specific physical acts committed by the penitent. Less common are canons dealing with sex between women, including one that commands seven years' penance for nuns who use a "device" (machina). The use of terms derived from the word Sodom in these books led to the development of "sodomy" as a broad category of nonprocreative sexual crimes, both heterosexual and homosexual, a category that gained prominence in Peter Damian's Book of Gomorrah. A hermit who was eventually named cardinal, Damian (1007–1072) complained that confessors absolved their partners in sin with light penances, and he insisted that those guilty of sodomy be deposed from their offices (Jordan 1997).

The coexistence of celibate clergy, monastic communities, and married laity, all protected by divinely ordained civil authority, was never entirely stable. Its ultimate disruption is exemplified in the writings of the German theologian Martin Luther (1483–1546), who
condemned organized celibacy as a rejection of God’s foundational decree to “increase and multiply,” leading to a host of “secret sins” (“A Sermon on the Estate of Marriage”). As part of the rejection of the prevailing structures of the “universal” church, these sins—including same-sex acts—were reinterpreted in nationalist terms. Germans, Luther claimed, had been innocent of such crimes until Carthusian monks imported them from Italian monasteries and Rome itself.

With the abolition of organized celibacy, attention returned to ordering the household. The sin of the biblical Sodomites, a diabolical rebellion against the “natural ardor and desire ... divinely implanted in nature,” was aggravated by the fact that the men besieging Lot’s home included citizens with wives and children, responsible for the protection and discipline of chaste households. The example they set could only spell moral disaster for the nation as a whole (Lectures on Genesis 19:2–5). Similar sentiments were echoed by other Protestant reformers. Catholic reformers responded with stricter policing of monasteries and convents. A notable example is the seventeenth-century abbess Benedetta Carlini, investigated because of her reported visions and ultimately imprisoned for engaging in sexual acts with another nun (Brown 1986). The Reformations, Protestant and Catholic alike, resulted in the establishment of numerous competing churches, with the rejection of same-sex acts a rare point of agreement among them. Even here, however, there is a crucial difference, insofar as the Catholic Church, by retaining institutionalized celibacy, offered what some people might consider an elaborate “closet” in which same-sex acts could be discreetly housed. By rejecting those institutions, Protestant churches created what some have called a demand of mandatory, married heterosexuality.

**Missionary Activity and the Colonization of Sexuality**

As the Reformation was creating new forms of Christian belief and practice in Europe, missionary activity began to spread these forms abroad. The relationship between Christian missionaries and the colonial projects of the European powers was no less complex and ambivalent in the colonized territories than it had been in Europe. Merchants and civil authorities often made no distinction between their political and commercial enterprises and the spreading of Christianity. Missionaries sometimes protested their policies on behalf of indigenous people, though more often they cooperated fully with colonization. Approaches to proselytizing depended on the missionaries’ perceptions of the cultures they encountered. At one extreme, the French Capuchin Yves d’Évreux (1570–1632/33) argued that the indigenous peoples of the Amazon could be “civilized” and taught to embrace European trades, sciences, and religion (Évreux 1864). In contrast, the Italian Jesuit Matteo Ricci (1552–1610), acknowledging the sophistication of Chinese culture, advocated for the accommodation, even if only temporary, of many Chinese practices in the religious life of converts (a position that would start a prolonged argument in the Vatican).

Even where the will to accommodate existed, the indigenous systems of gender and sexual
behavior could confound and pose an existential threat to the Europeans who encountered them (Ochoa 2016). Where military and political will was present, European Christians often used violence to impose their own gender and sexual regimes on indigenous peoples. In what is now Panama, the Spanish conquistador Vasco Núñez de Balboa (1475–1519) massacred a group of men for dressing and behaving as women, while Évreux reports that a man named Tibira convicted of sodomy in northern Brazil was tied to the mouth of a cannon and blown apart as an example to others.

Suppression of indigenous genders and sexualities could expose and play on preexisting tensions and potential fault lines within indigenous societies. It has been noted, for example, that in the case of the Panamanian massacre, the local cacique (chief) handed the men, including his own brother, over to Balboa, suggesting that they were perceived as expendable (Goldberg 1991, 1992; Ochoa 2016). More complex is the case of Charles Lwanga and a group of young royal pages who had converted to Christianity and were executed by Mwanga II Mukasa (1866–1901), the Kabaka (king) of Buganda, in what is now Uganda, between 1885 and 1888. Mwanga’s execution orders were part of a broader policy of resistance to Christian missionary activity, which he saw as part of the European colonial infiltration. At the same time, the Roman Catholic Breviary commemorates the resistance of Lwanga and his companions to the sexual advances of the Kabaka, who was traditionally entitled to such privileges, suggesting that Christianity gave them a language and rationale for the refusal of a practice that was already resented. To add to the complexity, Mwanga, having been deposed by British forces, was received into the Anglican church not long before his death. Historical interpretation of the episode is still contested, as evident from controversies surrounding the visit of Pope Francis to the shrine of Lwanga and his companions at Namugongo, Uganda (Kabuye 2016).

**Same-Sex Acts as Christian Acts**

Despite this history, the acceptance of same-sex acts has been embraced by a substantial number of Christians, although obviously not without sharp opposition. The roots of this Christian reinterpretation of same-sex acts are arguably found in the “invention” (in both the sense of “discovery” and “social construction”) of the homosexual as an identity in nineteenth-century medical literature. Understood as a constitutive part of a human person, same-sex acts and the desires associated with them could no longer be dismissed as simple violations of natural order. Even when same-sex acts and desires were classified as a pathology, those who identified as “homosexual” could demand therapeutic and pastoral approaches beyond simple penitential discipline. Taken up, critiqued, and transformed into social, cultural, and political identities—lesbian, gay, and bisexual—“homosexuality” enabled Christians to engage the messages of egalitarianism and charity inherent in the Gospels and demand an account and a defense from those who insisted that same-sex acts were intrinsically disordered.
Coming from diverse ecclesiastical and theological backgrounds, LGBTQ Christians have taken a variety of approaches to scripture and sacred traditions. Nevertheless, certain common themes are worth noting, starting with the greatest weakness in the seemingly absolute Christian prohibition of same-sex acts: the absence of any such condemnation in the teachings attributed to Jesus in the canonical Gospels. Given the willingness attributed to him to critique Mosaic law (e.g., Mark 10:5, Matthew 19:8), Jesus cannot be assumed to have taken the Levitical prohibitions against such acts for granted, nor can Paul’s statements regarding same-sex acts be assumed to reflect unrecorded teachings of Jesus. Paul acknowledges that his letters contain his own thoughts, as well as material derived from his master’s teachings. His careful distinction between these two strains in 1 Corinthians 7:10–12 does not mean that his silence elsewhere indicates an unmodified transmission of Jesus’s thought. In particular, his descriptions of same-sex acts in Romans form part of a larger anti-Gentile polemic that has no obvious parallel in the sayings attributed to Jesus.

Hebrew scriptural texts associated with same-sex acts in the Christian tradition have also come under critical scrutiny. While attempts to deny any sexual element in the story of the destruction of Sodom (Genesis 18–19) are ultimately unconvincing, same-sex acts in that narrative are clearly intended as violent expressions of xenophobia and violations of hospitality, a far cry from their role in Christian LGBTQ cultures. Likewise, interpreted as parts of the Holiness Code that the Pauline mission refused to enforce on Gentile converts, the Levitical prohibition of “lying with a man as with a woman” (Leviticus 18:22, 20:13) loses its force for Christians. Efforts to interpret the relationship of Ruth and Naomi as “lesbian” and David and Jonathan as “gay” reverse the historical tendency to interpret same-sex acts as violence against the natural order and others by reading these stories of love and friendship as evidence of same-sex acts. While they falter for lack of explicit references to genital activity and objections to reading contemporary erotic identities back into the ancient Mediterranean, the reinterpretation of these narratives has provided models for relations between LGBTQ Christians.

Other models for contemporary same-sex relationships have been derived from later Christian traditions. John Boswell (1994) argued that rites for binding individuals in brotherhood/sisterhood (adelphopoiēsis), found in a number of Eastern churches, constituted blessings of same-sex unions comparable to marriages. While these rites would have been available to lay believers, monasteries would have provided settings for theological elaborations on same-sex love, exemplified by the treatise on spiritual friendship of Aelred of Rievaulx (1110–1167), a Cistercian abbot (Boswell 1980). As with the reinterpretation of figures from Hebrew scripture, these attempts to read references to friendship and spiritual kinship as signs of same-sex activity that is never explicitly mentioned tend to fail strict historical inquiry. Claudia Rapp (2016) discounts sexual interpretations of spiritual relationships, connecting them instead to strategies of extended kinship in medieval families, while Aelred explicitly condemns same-sex acts. Nevertheless,
models of friendship inspired by Aelred have come to play a role directly or indirectly in the work of lesbian and gay theologians (Stuart 1995; Bray 2003; Hunt 2015), while adelpheioiēsis rites have served as models for contemporary blessings of same-sex relationships/marriages.

Beyond valorizing same-sex acts, LGBTQ Christians have found resources for understanding their relationship with God in theologies that destabilize both the gendered image of God and the gender of the believer. This instability might have originated with Jesus himself, at least if sayings in the Gospel of Thomas that speak of the erasure of gender difference and of Mary Magdalene becoming male are authentic. While Thomas would be labeled a “Gnostic” text, examples of “virile” women such as Perpetua, who imagined herself a man when dreaming about her martyrdom (see Heffernan 2012), and the Egyptian ascetic Mother Sara—who told a group of monks, “It is I who am a man, you who are women” (Ward 1975, 230)—were accepted into orthodox traditions. Among the hagiographies (stories of the saints) are several that tell of young women who disguised themselves as monks and lived out lives of outstanding sanctity, their “true” gender being discovered only when their bodies were being prepared for burial (e.g., the lives of Euphrosyne and Marina in Vitae Patrum 1). In one of these stories, the saint was falsely accused of fathering a child and accepted responsibility for bringing it up without complaint. While such narratives are highly romanticized and historically dubious at best, their implicit message is that social expectations of femininity are clearly superseded by the call to the Christian ascetic life.

The same ascetic practices that encouraged women to embrace the spiritual “masculinity” of Christ could paradoxically lead men to embrace spiritual “femininity.” Preaching on the Song of Songs in the Bible, the Alexandrian theologian Origen (c. 185–c. 254) urged his listeners to adopt the role of the Shulamite Bride, representative of the soul embraced by Christ, the Bridegroom (Homilies on the Song of Songs 1). This theme was elaborated on for an exclusively male audience by Bernard of Clairvaux (1090–1153), who effectively asked his monastic brethren to imagine themselves receiving the kiss of Jesus’s mouth as brides. The gender of Christ is itself unstable, because the Word (logos) made incarnate in Jesus, which is grammatically masculine, is often identified with the Wisdom (sophia) of God, which is personified as a woman in Hellenistic Judaism, thus opening the possibility of a female Christ accessible to believers of any gender.

Early members of the Moravian Brotherhood shocked Lutheran settlers in the American colonies with their image of Jesus’s wounded side transformed into a vagina (Fogleman 2007). In the indeterminate gender of Jesus, the theology of LGBTQ Christians intersects with that of heterosexuals for whom erotic and spiritual love are not inherently opposed. Against objections that the juxtapositions of these diverse approaches constitute “confusion” comes the response that their variety opens a number of paths to union with God, while the contradictions they seemingly present point to the inadequacy of gender
categories when speaking about the final home of Christian believers in the Resurrection, “where they shall not marry, nor shall they be given in marriage” (Mark 12:25; Matthew 22:30).

**Conflict**

The emergence of self-affirming LGBTQ Christians has taken a variety of forms. Some LGBTQ Christians have formed movements within individual churches (e.g., Dignity, among Catholics; Integrity, for LGBTQ Episcopalians and Anglicans; Affirmation, among Mormons, etc.). Others have joined churches conceived of and founded as ministering specifically to sexual minorities, the most prominent of which is the Universal Fellowship of Metropolitan Community Churches, which was founded by Troy Perry in 1968. There are also interdenominational organizations, such as the Gay Christian Network, founded in 2001, that connect individuals from a variety of theological and denominational backgrounds.

Nevertheless, this flourishing of LGBTQ Christian communities needs to be considered alongside the fact that, in the United States and western Europe at least, queer people are less likely to identify as Christian than their heterosexual counterparts. A 2016 study by the Public Religion Research Institute found that nearly half of LGBTQ Americans were religiously unaffiliated, almost double the percentage of the population at large (Jones and Cox 2016 9, 34–35). In effect, the secularization of queer people is the flip side of the claims made by many of the faithful that active participation in same-sex acts and transgender lives is not compatible with Christianity. It has been argued that the rigorous demands regarding sexuality and gender made by Christian churches fuel a more general process of secularization, at least in Europe and North America (Woodhead 2007). Nevertheless there is a certain historical irony in the decline of Christianity among LGBTQ people because, as noted above, gay and lesbian rights groups found material support in liberal Protestant denominations, at least in the United States (White 2015b). But Christians have also been in the vanguard of opposition to acceptance and support of LGBTQ people. A great deal of that opposition has taken place in the political arena and is better discussed under that heading. Within churches themselves, the areas of conflict closely track the concerns for home, clerical authority, and the role of indigenous culture outlined previously.
Same-Sex Marriage and the Christian Household

As noted, early Christians saw the well-ordered household, in which sexual activity was restricted to a married couple, as a refuge against a hostile “pagan” social order that was destined to fall. By the twentieth century, many Christians had come to see their religion, and the “one man/one woman” model of marriage it had historically advocated, as foundational to a long-standing and stable social order. In the West, marriage, which in Roman times had been strictly a matter of private law, eventually become the purview of the church and then, after the Reformations, was increasingly regulated by the state. In predominantly Protestant societies such as the United States, the condemnation of same-sex acts and the absence of any formally recognized model of celibacy created huge pressures for individuals who were strongly or predominantly attracted to their own gender to take a spouse of the opposite one. As “homosexuality” became a psychological category, ministries began to emerge that combined psychotherapy and Protestant theology in an effort to “convert” homosexual men and lesbians into heterosexuals (Erzen 2006). The most prominent of these ministries, Exodus International, formally closed its operations in 2013, with a public admission that the ministry was largely ineffective in converting people to the heterosexual lifestyle. It has been argued, however, that the persistence of heterosexual marriages in which one or both admit to being primarily
attracted to the same gender has created its own “queerish” sexual orientation (Gerber 2015).

But a narrative in which Christians monolithically opposed secular advocates for same-sex and gender-neutral marriage is problematic on two counts. On the one hand, many lesbian, gay, and queer activists rejected marriage as heteronormative and oppressive, and a number of Christians interpreted this position as another indication of the moral degeneracy of LGBTQ people. On the other hand, as historians have documented, some same-sex couples sought and received blessings for their relationships in churches long before the movement to have them recognized in civil law. The language used to describe the earliest documented blessings in the United States, which took place in the 1970s, reflects debates about marriage in LGBTQ circles. Ironically, they also drew threats of legal prosecution from civil authorities and were ultimately defended as constitutionally protected expressions of religion (White 2015a). Parallels can be drawn with the history of same-sex marriages in the Netherlands, where some same-sex “friendships” had been discreetly (and not so discreetly) blessed in Reformed and Catholic churches decades before the first legal same-sex marriage in 2001 (Bos 2017). At the same time, the line between “religious” and “secular” opposition to same-sex marriage is not as easily drawn as it might at first appear. In Sweden, for example, opposition to “gender-neutral” marriages came predominantly not from the semiofficial Church of Sweden but from “free churches” (Roman Catholic, Pentecostal, etc.), which, despite accusations of imposing their religious beliefs on the country, framed their arguments without direct reference to scripture or other religious sources of authority (van den Berg 2017).

**Same-Sex Acts and Clerical Authority**

Clerical sexual misbehavior, and same-sex acts specifically, were historically an issue of discipline and grounds for degradation from office. In practice, however, public attention to such discipline risks undermining clerical authority, and the urge to conceal such behavior has been an institutional imperative in some churches. As with legalization of same-sex marriage, the scandals surrounding accusations of sexual abuse involving Roman Catholic priests that started in the 1980s and came to a crescendo in the early twenty-first century raise issues about the boundaries between ecclesiastical and secular jurisdiction (Sullivan 2012). There is little reliable information on the sexual orientation of Catholic priests, but at least some anecdotal evidence exists that the priesthood can seem a refuge for Catholic men who wish to conceal or sublimate sexual attractions to other males (see, e.g., Martin 2017, citing Colm Tóibín).

There is no obvious reason to think that sexual attraction to other males makes a priest more likely to commit sexual abuse. Nevertheless, as part of its response, the Vatican attempted to link the abuse of minors (many of whom were girls) and vulnerable adults to “active homosexuals” who had infiltrated the priesthood, and an instruction barring such
men from future ordination was released by the Congregation for Catholic Education (Grocholewski 2005). No less naive is the suggestion that sexual abuse could be curtailed by allowing Latin Rite priests to marry, implying that sexual misbehavior results from a lack of appropriate (heterosexual) outlets (see, e.g., Royal Commission 2017). In May 2015 the Methodist Church of Britain, which does allow married clergy, released a report on and apology for nearly 1,900 cases of abuse dating from 1950 to 2014, about half of which involved sexual abuse.

While sexual scandals erode clerical authority and contribute to a decline in active participation in churches, the ordination of openly gay and lesbian clergy, even those in committed monogamous relationships, has typically drawn resistance and led to schism in churches. Even in a relatively “smooth” case—involving the small, liberal, highly decentralized United Church of Christ, which is largely restricted to the United States and enjoys a certain cultural cohesiveness—the ordination of an openly gay pastor in 1972 eventually led to the formation of the Biblical Witness Fellowship in 1978, which opposed the move and was active as late as 2012 (Holmen 2013).

Far more fractious is the case of the Anglican Communion, a global body of churches that recognizes the archbishop of Canterbury, England, as its titular head. The issue of ordaining openly gay and lesbian individuals to the clergy was closely linked to the issue of ordaining women in the Episcopal Church, the branch of the Anglican Communion in the United States. (Perhaps not coincidentally, among the first women to be ordained, in 1974, was the prominent lesbian feminist theologian Carter Heyward.) In reaction against the ordination of women and openly gay and lesbian candidates, the mid-1980s saw the formation of the conservative Episcopalians United for Revelation, Renewal and Reformation. In 1997 a group of African and Asian bishops gathered in Kuala Lumpur, Malaysia, released a statement that included “homosexuality” among the corrupt fruits of Western neocolonialism.
Bishop Senyonjo was crucial in the establishment of Integrity Uganda, a branch of the international organization for LGBTQ members of the Anglican Communion. He remains a controversial figure in Uganda, at once held up as a Christian witness for LGBTQ rights and as an instrument of Western special interests.

The crisis came to a head in 2003 and 2004 when the Anglican Church of Canada authorized the liturgical blessing of marriages between same-sex couples, and Gene Robinson was elected bishop of New Hampshire, the first openly gay man to be so elevated. The Episcopal Church refused to accede to the demands of a special commission that it apologize and discipline those involved in Robinson’s elevation. The leadership of the archbishop of Canterbury was also challenged by a group of African, Asian, and Australian bishops who met in Jerusalem in 2008 to form the Global Anglican Future Conference (GAFCON), which opposes what it sees as “moral compromise, doctrinal error and the collapse of biblical witness in parts of the Anglican communion,” as outlined on its website. GAFCON has partnered with conservative Episcopalians in forming the Anglican Church in North America, which aspires to be the representative of the Anglican Communion on that continent. This group is not recognized by the archbishop of Canterbury (Holmen 2013).

**Queer Decolonization**

The turmoil in the Anglican Communion is emblematic of the challenges posed by same-sex and transgender Christians to global churches and the universal claims of Christianity. As seen in the reports of the Kuala Lumpur conference and GAFCON, calls for LGBTQ rights are often represented as a new kind of Western cultural neocolonialism and a threat to indigenous cultures.

African identity is invoked both by queer activists and the Christian leaders who oppose them. After the arrest of thirty-two men on suspicion of homosexuality and the murder of a high school student who had purportedly flirted with his male killer, Victor Tonyé Bakot
(1947–), the then archbishop of Yaoundé, Cameroon, complained to a congregation gathered for a 2005 Christmas Mass that “the powers of money and the evil forces want to force you, the people of God, to endorse the practice of homosexuality.... Pseudo-modernity, in other words, liberalism, should not lead the African to repudiate his or her own opinion in favor of infamy” (quoted in Tiedjou et al. 2010, 11; for the original French text, see Bakot 2005). The phrase “powers of money” refers to financial support given to Cameroonian LGBTQ organizations, and Bakot’s words closely resemble the appeal to “positive African cultural values” made by Amadou Ali (1943–), then serving as Cameroon’s vice prime minister and minister of justice, in defense of the arrests (quoted in Tiedjou et al. 2010, 10; see also Bakot 2005).

In contrast, the Kenyan queer activist Gathoni Blessol (2013) denounces the intrusion of American evangelicals in Africa and rejects both Islam and Christianity as artifacts of European colonialism. Blessol’s anger can be understood in light of incidents such as the abuse of gays and lesbians by the priest presiding at the funeral of murdered Ugandan gay activist David Kato (1964–2011), an incident that she personally witnessed. Her complaint about colonialism takes on extra salience in light of the support given by American evangelicals to harsh anti-LGBTQ legislation in Uganda and elsewhere in Africa (Williams 2013). However, her claim that Christianity was brought to Africa by European colonialists overlooks the ancient churches of Egypt and Ethiopia. The complex layering of queer, Christian, and African identities is palpable in the words of a thirty-year-old Cameroonian female soccer player who has a boyfriend as a “cover” for her relationship with another woman. “My family thinks that if you are athletic and you don’t have a boyfriend then you are a lesbian. I cannot afford for them to think this about me. I am very Catholic, and in my church, they think this is sorcery” (quoted in Tiedjou et al. 2010, 48).

Reconciling self-identification as lesbian, Christian, and African can be understood as a kind of decolonization, although that process does not necessarily entail the rejection of Christianity. It has also attracted straight allies. Bishop Christopher Senyonjo (1931–), for example, was crucial in the establishment of Integrity Uganda, a branch of the international organization for LGBTQ members of the Anglican Communion. While his support for sexual minorities attracted the ire of his colleagues, it was his involvement in the consecration of a bishop for the Charismatic Church of Uganda that ultimately forced him out of his episcopal position in the Church of Uganda, part of the Anglican Communion. He remains a controversial figure in Uganda, at once held up as a Christian witness for LGBTQ rights and as an instrument of Western special interests (Conger 2014).

At times, efforts at queer decolonization of Christianity appropriate ecclesiastical forms and turn them on their heads, as in the movement to get the Catholic Church to “canonize” the aforementioned Tibira, the Brazilian executed in 1614 by cannon fire as a martyr (Talento 2014; Cherry 2017; Sextro 2017). While the campaign is headed by Luiz Mott, a historian and activist who identifies as a humanist, it has drawn the attention of LGBTQ Christians
and echoes the canonization of the French heroine Joan of Arc (1412–1431), who violated
gender norms and was burned as a heretic. In Asia, the China Rainbow Witness Fellowship,
found in Shanghai in 2009, serves as a community for queer Protestants and Catholics
outside the formal structures of the state-run Chinese Protestant and Catholic churches. In
the United States, Yvette Flunder (1955–), senior pastor of City of Refuge United Church of
Christ in Oakland, California, and presiding bishop of the Fellowship of Affirming
Ministries, writes about the need of same-gender–loving people of color in the United
States to be healed of “oppression sickness,” contracted in the process of enslavement and
conversion, by reclaiming the indigenous roots of what she calls the “Metho-Bapti-Costal”
tradition of African American Christianity (Flunder 2015).

FILMOGRAPHY

Islam has a diverse historical cultural heritage that originated with Muhammad's claim of divine prophet-hood in seventh-century Arabia and subsequently spanned regions between Marrakech in northwestern Africa to Makassar in Southeast Asia. Historical evidence supports the view that Muslim societies were accommodating of same-sex behaviors and erotic desires, particularly during the premodern period (before 1900 CE in most of the Islamicate context). The ubiquitous presence of homoerotic poetry and writings on same-sex (including intergenerational or “pederastic”) love demonstrates a cultural milieu where such desires and relationships—both chaste same-sex desires and desires and behaviors of a more carnal nature—were considered acceptable, even if not universally approved in terms of religious law (fiqh). That same-sex sexual conduct flourished (based on details appearing in classical literature, poetry, biographies, and paintings) is certain, although actual explicit same-sex sexual behavior was not legally sanctioned but socially condoned.

The written record for the most part contains exclusive references to male homoerotic desire, including gender-nonconforming males (mukhannathin), with limited details regarding same-sex desires and acts among women, and these details coming, for the most part, from sources written by men. The practice of sexual rubbing (suhaq) among women was known to Muslims from the medieval era and was recorded (Habib 2007; Murray 1997). Women's homoerotic verse also appears in the late eighteenth and early nineteenth centuries in the Urdu poetry that flourished at the court of the Nawabs in the northern Indian realm of Awadh (Vanita 2004). Another limitation of the written record is that it is very much a reflection of the urban centers—mostly the elite environment of courtly and aristocratic aesthetics, belles lettres, and scholasticism—of Islamic civilization, such as medieval Baghdad and al-Andalus, Mamluk Cairo, Safavid Iran, Mughal and pre-Mughal Muslim South Asia, and Ottoman cities including Istanbul (Wright and Rowson 1997; Vanita and Kidwai 2000; El-Rouayheb 2005; Andrews and Kalpakli 2005; Babayan and Najmabadi 2008).

Same-sex love in the premodern period (roughly between the twelfth century CE and the
late nineteenth century), in the historical context of primarily Ottoman, Safavid, and Mughal lands (North Africa, the Middle East, the Near East, and South Asia) and their prior dynastic precursors from as early as the ninth century, manifested itself in various registers, and the context in which it was articulated or performed defined the response to it. There were the intergenerational affective relationships, which included but were not limited to or did not always necessarily involve same-sex acts, between mature men and younger men (youth or boys) bounded by the frameworks of patronage, education, mysticism, or just simple erotic desire. It was typical for men of power and/or learning (including Sufi shayks and mendicants) to take younger men under their wing—intellectually, spiritually, in environments of frolicking or servitude, and/or sexually (El-Rouayheb 2005; Kugle 2007). This configuration of same-sex relationships was considered normal although not universally approved, as demonstrated by the strident warnings furnished by some pious jurists on the temptations of beautiful boys. Then there was a type of same-sex desire that took the form of aesthetic appreciation, where men gazed on the handsome sight of beautiful youths, admiring their good looks and longing for a closer intimacy, either as part of a larger tradition of appreciating human beauty and/or contemplating God in the face of the beautiful beloved (El-Rouayheb 2005; Wafer 1997). These relations were sometimes chaste (or publicly proclaimed to be allegedly chaste) in that they were divested of sexual intent or conduct, but in other instances there was an erotic dimension to the relationships, sometimes resulting in one or more behaviors on the spectrum of intimate or sexual conduct, such as kissing, touching, or full sexual congress.

Given the common practice of gender segregation in premodern Muslim societies and unequal levels of power between men and women, the uniqueness of same-sex love and attractions were that these were relationships that were based on “mutual understanding”—meaning, important spiritual and intellectual sensibilities that had a “fluid shifting of dominance and submission, without reference to the overwhelming, culturally determined power disparity that existed between men and women” (Andrews and Kalpaklı 2005, 20). At the same time, in the Ottoman period and in premodern Iran, power relations between the men in sexual relationships with older and younger men were obvious, with the older man longing for the beardless, androgynous younger man or boy who in any sexual relationship is assumed to be the passive partner, similar to ancient Greek notions of same-sex love that extolled chaste love between older and younger men and discouraged, but tolerated, sexual relations between these men (Phillips and Reay 2011). The young, beardless youth occupied a transitory state on the cusp of full manhood that made him desirable erotically but also distinguished him from the category of being female (Najmabadi 2008). For an older man to desire to be anally penetrated was considered an anomaly (because no good reason was conceived of why a free, mature man in a phallocentric patriarchal society would want to be dominated and subjected to anal penetration), and an entire discourse pathologizing this tendency was constructed to diagnose and treat this psychological and physiological defect (El-Rouayheb 2005).
Nonetheless, same-sex sexual intimacy between men, irrespective of the ages of the parties, was apparent in Islamic literature and deemed typical, while practices were accommodated under conditions of “everything is done, very little is said,” or “do not ask and do not tell.” This idea of same-sex male love and homoerotic desire and behavior was evident in the cultural context of what the scholar of Islam Shahab Ahmed (2016) termed the Balkans-to-Bengal complex—a social, aesthetic, and literary landscape that was influenced by pre-Islamic practices, the Arabic and Persian discursive tradition and social mores, and the mobility of people across this geographical terrain. The cultural and aesthetic continuity between the geographic locations that fell under the political authority of the three great Muslim empires of the late medieval period—the Ottomans, the Safavids, and the Mughals—was evident in the overall consistent approach to sexuality and homoerotic love.

Muslim societies outside of this cultural context also had their own social and gender typologies relating to sexuality. In Southeast Asia, where the demarcation between two binary genders was less rigid, accommodations of same-sex sexual behavior were tolerated, and the fudging of masculine and feminine identities also opened up spaces for gender fluidity and gender nonbinary expressions, which continue today despite increasing opposition in the latter part of the twentieth century (Peletz 2011; Boellstorff 2007). Less documented is the historical reality of same-sex patterns in sub-Saharan Muslim Africa. Gender fluidity and same-sex relations historically existed and occupied visible space publicly in Hausa-speaking northern Nigeria, although such expressions have been curtailed since the advent of reformist Muslim movements and colonialism in the late nineteenth century, and further restricted with the adoption of Islamic law in the late 1990s (Gaudio 2009). Similar types of gender fluidity in terms of social roles and etiquette, as well as same-sex relations between men that followed the active-passive model of sexual acts, are documented along the eastern Swahili coast of Africa (Haberlandt 1998; Amory 1998). In this complex matrix, same-sex desire and love typically were lyrically celebrated, and same-sex acts were accommodated under the guise of not knowing, while these same acts were deemed sinful and unlawful, with sodomy constituting the most egregious crime.

Islam as Law and Religion

Beyond this cultural view of Islam, it is also appropriate to view it as a legal intellectual tradition that is composed of a theory of law (usul al-fiqh) that serves as an intellectual tool by which jurists are able to identify and understand the sources of the law with a view to articulating a substantive law (fiqh) that informs the community of believers (umma) on what God has rendered permissible, prohibited, obligatory, recommended, or reprehensible. The four sources of Islamic law are the Qur’an (the direct revelation of God’s word to the prophet Muhammad, representing sacrosanct knowledge about the human situation and its relationship to God and, more importantly for legal purposes, directives on how human beings should conduct themselves), the sunna (the precedent and practice of
the prophet Muhammad, and of the imams for Shi’a Muslims, which was recorded in hadith literature), *ijma‘* (juridical consensus within the legal schools on a rule of Islamic law), and *qiyas* (analogical reasoning whereby the rulings from the Qur’an and sunna are extrapolated and applied to new situations).

Historically there has been a consensus, by both Sunni and Shi’a jurists, that all same-sex sexual acts (between both males and females) are prohibited, as these acts constitute a breach of sexual modesty in that such acts do not occur within a legally sanctioned relationship, such as opposite-sex marriage or concubinage (sex between a male master and his legally owned female slaves). These are the only two legal avenues through which sexual relations are permitted. There is very little discussion in the legal literature about same-sex sexual acts between women, and where it is mentioned, the discussion revolves around what type of judicial discretionary punishment should be meted out (*Ali* 2016). Men caught in same-sex sexual acts short of anal sex are subject to discretionary chastisement. However, the discussion ordinarily revolves around penile penetration, specifically anal sex or sodomy (*liwat*), and it is principally through this act that the law views male same-sex sexual relations. There are two primary sources on which this prohibition is supported.

The first source relates to the story of the prophet Lut in the Qur’an (the biblical Lot). The people of Lut are described in the Qur’an as a transgressing community that commits murder and robbery and rejects God’s Prophet and message (29:28–29). The singular act in this story that has come to define the nature of the people of Lut is their indecency in coming “with desire unto men instead of women,” for it was an indecency that “none in the world had committed” before them (7:80–81). This coming of men toward other men with sexual desire (*shahwa*) was construed to be lewdness (*fahisha*)—specifically in the case of penile anal sex. The Qur’anic exegetical literature contains detailed accounts of the background and context of these sexual acts, including a view that male strangers were the object of violent sexual excess, but it was the fact that the Qur’an specified that these transgressing men approached other men with sexual desire (with or without consent did not matter much to jurists and exegetes), rather than women, that was the focal point of the moral tale. God sent angelic beings in the form of men to convey a message to Lut that he and his family (except his wife, who was considered to be a part of the transgressing community) should depart the town under cover of night so that they might be saved from God’s punishment the following day. When the angels arrived in the town, the townsfolk clamored at Lut’s abode requesting access to the men that he was sheltering. Lut responded saying, “These are my guests; so dishonor me not! Reverence God, and disgrace me not,” and then went on to make an offer by saying, “These are my daughters, if you must act” (15:68–71). The townsfolk responded by saying, “You know that we have no right to your daughters, and surely you know that which we desire” (11:79).

The second source is the hadith (a record of narrations primarily setting out the precedent
of the Prophet through details of what he said, did, or opined on) corpus, which contains narrations where the prophet Muhammad commands that people who are found to be doing the deed of the people of Lut should be killed (Brown 2017). Based on these sources, there was a historical consensus among jurists on the prohibition and criminal nature of male same-sex sexual intercourse, with sodomy singled out as the most egregious manifestation of such conduct. This view was shared among all five Sunni and Shiʿa schools of law, as the prohibition against same-sex sexual conduct was deemed to be recognized as necessarily forming an integral part of the faith of Islam. This view was categorically maintained by the jurists of the Islamic legal tradition and continues to be espoused by conservative and neotraditional Muslim scholars, who hold that same-sex sexual acts can never be legitimized within Islam.

The only difference of opinion that arose was in the punishment. One of the legal schools (Hanafi) categorized sodomy as a distinct sexual transgression from opposite-sex fornication or adultery (zina) and accordingly deemed a discretionary punishment by the presiding judge to be applicable where such punishment could not be more severe than the punishment outlined in legal sources (hadd) for zina (a hundred lashes for unmarried persons and stoning for married persons). The Shafiʿi and Hanbali legal schools viewed sodomy as a subset of zina and adopted the same ruling regarding punishment, but with minor modifications. The Maliki and Imami Shiʿa schools of law viewed sodomy in a more serious light and deemed death the only valid punishment (Brown 2017; El-Rouayheb 2005). These religious legal positions have held sway for the most part of Islamicate history since their crystallization in the formative period, when the methodology of Islamic law was developed. Despite these harsh punishments outlined in the substantive law, the requirements for a conviction were exacting. Today, in both Muslim-majority and Muslim-minority contexts, these positions are cited as evidence for the prohibition of same-sex sexual conduct. In the absence of a voluntary confession by the parties to the sexual act, four free male witnesses (two for the Hanbalis) who were upstanding and witnessed the actual act of penis-anus penetration are required to convict a person for illicit male same-sex sexual intercourse (El-Rouayheb 2005). In reality, such an evidentiary burden was extremely difficult, if not impossible, to meet, and this at times led to the imposition of less harsh punishments in Ottoman territories for sexual crimes where people were convicted on less substantial evidence (Ze’evi 2006). For example, in rare instances where punishment was meted out, fines levied according to the level of a person’s income and banishment from a neighborhood quarter replaced capital punishment for sexual crimes. However, a wider ambit was cast to include sexual indiscretions outside of penetrative sex, such as the intention to commit a sexual crime (including consensual same-sex sexual intercourse) or punishments meted out to fathers of boys who were abducted and sexually assaulted, for failing to prevent the assaults, which attracted a lesser burden of proof for conviction (Semerdjian 2008).

Two other things are important to note. The first involves the “legal-lyrical” contradiction
which has been outlined above with respect to the celebration and practice of same-sex love and behavior in verse, prose, and real life and the severe prohibition of such behavior in terms of the law. Same-sex love, whether sexual or platonic, seems to have been widespread and socially condoned, if not legally licit, and its explicit celebration in verse was considered socially acceptable and for the most part not legally proscribed, even if it may have been deemed improper by some. At the same time, however, the law was strict and severe in how it viewed same-sex sexual acts, particularly sodomy. People also vacillated between these different registers; for example, the same person could have written homoerotic poetry, or been a patron or friend of such a poet, or harbored same-sex sexual desires, and at the same time as a scholar may have confirmed the legal criminal and/or prohibited status of same-sex sexual behavior. The second is that the notion of an inalienable sexual orientation and sexual identity such as “homosexuality” did not exist in the premodern Muslim world. Accordingly, the historical discussion of same-sex behaviors in Islam did not operate with an understanding of “homosexuality” and “heterosexuality” as inalienable sexual orientations and identities, but it did recognize the nature of same-sex sexual desires and behaviors. This is clear from the legal discussion that was concerned only with a taxonomy of sexual acts and not desires or dispositions. In addition, the principle of consent as the necessary and sufficient requirement for lawful sexual conduct, and the inability of pubescent people below a certain age to furnish that consent, were not part of how sexual relations were understood. These continuities and discontinuities between the past and the present further complicate and enrich how the historical record is analyzed and understood today.

Islam and LGBTQ Issues in the Modern Period

There have been significant changes to the family unit and Muslims’ understandings of gender and sexuality in the modern period. The most influential impetus that directly and/or indirectly affected how Muslims customarily viewed gender and sexuality was the rupture that occurred with colonialism and European dominance. The breakdown in Muslim political power, technological stagnation, and traditional understandings of family, gender, and sexuality resulted in debates at the time and thereafter on these issues. The fluidity of sexual desires and the nonchalant attitude that characterized premodern Islamic attitudes toward same-sex love and homoerotic verse changed in the late nineteenth and early twentieth centuries, with modern Muslims viewing this part of their cultural and literary history with discomfort and embarrassment, sometimes amending the same-sex references in poetry to opposite-sex ones. These developments took place at the same time that European notions of sexual morality and the unnaturalness of same-sex desires and sexual acts were gaining a wider and more universal following both inside Europe and outside, through colonization and foreign European imperialism resulting in cultural exchange between Muslim-majority societies and their European overlords, which included ideas about sexual propriety (Ze’evi 2006; El-Rouayheb 2005; Kugle 2002). A good
example is the travelogue written by the Egyptian scholar Rifa’ah al-Tahtawi (1801–1873) regarding his visit and stay in France. In his writings al-Tahtawi compares the habits of the French with those of the Arabs. He praises the French men for not having penchants for youthful men and not writing homoerotic poetry, as well as eschewing same-sex sexual desire and conduct as immoral (as these things were common in al-Tahtawi’s Egyptian context).

Another factor at this time was the emergence of Muslim reformist movements that advocated for a literal reading of primary scriptural sources and a return to an imagined prophetic past free of the accretions of Muslim cultural and scholastic developments over the centuries. These include Wahhabi and Salafi groups in the Middle East and North Africa, the development of Usuli Shi’ism, the Sokoto caliphate in West Africa, Deobandi seminaries in South Asia, and, subsequently, socially conservative and politically active organizations such as the Muslim Brotherhood in Egypt and the broader Middle East and the Jama’at-e Islami in Pakistan. These modern reformist and/or political movements also extricated Islamic law from its dynamic premodern Islamicate sociopolitical context and posited it as the exclusive and fundamental locus of Muslim identity and being during both the colonial and postcolonial periods, thus further entrenching the legal proscription against same-sex sexual activity in Muslim societies that continues to have a bearing on many Muslim societies today.

Contemporary neotraditionalist and conservative Muslim scholars have maintained and continue to maintain the position that any erotic behavior between people of the same sex is strictly prohibited. Furthermore, some Muslim clerics also support the position that same-sex sexual desire is fundamentally unnatural and against God’s direction for humanity. In the aftermath of the Cold War, LGBTQ activism in the West began emerging as a significant force within the public sphere and liberal discourse culminating in many victories in the most recent past. At approximately the same time, contemporary queer Muslims found in the vestiges of their past a way to reclaim a place in Islam’s history and to use it as a tool in crafting a place for themselves in contemporary Islam.

The attempt by queer Muslims today to argue for a place within Muslim societies where their lives as LGBTQ-identified persons are accepted by the community and their sexual relationships legitimized by Islamic law is unprecedented. There are numerous organizations, the most apparent of which are located outside Muslim-majority countries, in the United States (Muslim Alliance for Sexual and Gender Diversity), South Africa (Al-Fitrah Foundation / The Inner Circle), Canada (Salaam Canada and El-Tawhid Juma Circle), the United Kingdom (Imaan), and the Netherlands (Maruf), among others. Some organizations in Muslim-majority countries include Naz Foundation (Pakistan), Helem (Lebanon), Seksualiti Merdeka (Malaysia), and Arus Pelangi and GAYa Nusantara (Indonesia). These organizations aim to provide a support infrastructure for queer Muslims, to advocate for the equal treatment and inclusion of queer Muslims in the
community, and to provide a forum for the discussion and development of an ethical and religious position that is sensitive to the experiences of queer Muslims. In Muslim-majority countries, either the LGBTQ issue is deeply underground, or, at best, there is some visibility and debates on (and support by nongovernmental organizations for) legal protections and social accommodation of persons to depart from heterosexual social norms. In Muslim-minority contexts where there exist legal protections and equal rights for LGBTQ people, the debates revolve around some of these factors, but there is a much more direct effort at and confidence in taking advantage of the favorable laws in these countries, such as freedom of expression, antidiscrimination laws, same-sex marriage or civil unions, and the freedom to exhibit one’s sexuality more visibly and vocally.

Diaspora has also complicated the picture. Widespread population movements since World War II (1939–1945) have brought about an exchange of media, ideas, and people within and between Muslim-majority and Muslim-minority locations. There is necessarily also unevenness within these Muslim-majority and Muslim-minority environments. For example, many queer male Muslims and others who work, sometimes under precarious employment conditions, in certain parts of the Persian Gulf find that they have access to more sexual opportunities, albeit discreet ones, in those contexts where they are not tethered to any “home” community with its attendant family and community pressures and observances. Inconspicuous spaces where same-sex sexual contact transpires or LGBTQ people socialize and organize, under the shadow of legal and social censure, also exist in many Muslim societies in the Middle East, South Asia, and Southeast Asia, among other areas.

On the scholarly side, there have been comprehensive arguments made by Scott Siraj al-Haqq Kugle, Junaid Jahangir, Hussein Abdullatif, and Hassan El Menyawi for the Islamic legitimization of queer forms of relationships and sex by reinterpreting the Islamic legal sources from the perspective of essentialist assumptions of inherent sexual dispositions, for confirmation of the positive nature of diversity, and for the urgent need to revive the Islamic tradition in light of contemporary understandings of sexuality and human rights. These readings have supplied alternative representations of the Lut story by rendering the wider context of the story as one that is focused on a community of men who, despite or irrespective of their sexual attraction to women or their female spouses, proceeded to use sex as a tool of violence toward and subjugation of other men. The moral of the story is thus dislodged from its traditional understanding of simply relating to the sinful and criminal nature of men having sex with men and changed to men who ordinarily have no desire for men, but who rape other men as a form of violent subjugation. The essential issue, according to this reading, is violence and coercion in sex, which its supporters argue is absent in consensual and loving same-sex relationships. Furthermore, the hadith literature is critiqued through the traditional method of both assessing the chain of narrators to a narration and the content of the narration with a view to discounting the soundness of the relevant narrations proscribing gender fluidity and prescribing death for those involved in
sodomy. These arguments also go further and venture a space for Muslim same-sex unions in Islamic law that will provide the necessary legal recognition for lawful same-sex sexual activity on the basis that contemporary understandings of same-sex relationships rest on the existence of queer Muslims who are constitutionally orientated toward members of the same sex, do not suffer from any congenital defects or psychological disorders in relation to their sexuality, and enter into romantic relationships that are based on consent, equality, and compassion (Kugle 2010; Jahangir and Abdullatif 2016; and El Menyawi 2012). The two main principles governing this novel understanding of romantic relationships are that the ethics of such relationships must be in accordance with one’s inherent sexual disposition and gender identity and/or that sex and gender identity should be irrelevant to such an ethical relationship (Kugle 2010; Ali 2016).

The arguments above are generally rejected by more conservative and neotraditional Muslim scholars. Jonathan Brown and Mobeen Vaid have published academic responses to the above arguments challenging the validity of these readings of Islamic sources and law and defending the neotraditional and conservative position on same-sex sexuality. The prohibition of same-sex sexual behaviors is deemed to be a part of those things that are commonly acknowledged as matters of the religion known by rational necessity (al-maʿlum min al-din bi al-darura), and accordingly it is not possible to depart from this established position. Furthermore, the privileging of modern conceptions of inherent sexual orientations and related identities is also challenged, the reinterpretation of the Lut story (which is pejoratively termed “revisionist”) is critiqued for its inadequacy in aligning with the historical scholarly consensus, and the critique of the hadith literature is found to be lacking in rigor and, therefore, not persuasive (Brown 2017; Vaid 2017).

There is a general unwillingness among the normative representatives of the Islamic discursive tradition and the wider Muslim community, both in Muslim-majority countries and in minority contexts, to open up a dignified space for queer Muslims within the wider Muslim community and its institutions, even though some Muslim scholars and laypeople in liberal democratic countries may support a civic space that provides equal recognition to queer people and attends to their needs. As for Muslim-majority countries, criminal sanctions for same-sex behavior, particularly sodomy, continue to be a part of the penal code in most countries—sometimes a relic of colonial rule. (Same-sex sexual activity is legal in a minority of countries, such as Turkey, Kosovo, and Indonesia except the province of Aceh, but this legal structure does not necessarily reflect local political and social attitudes.) Equality and protection from discrimination for sexual minorities have not been fully achieved. In some countries, there is no law against same-sex sexual conduct, but other laws—such as laws banning “unnatural” sex or public morality and decency laws—are sometimes used to clamp down on LGBTQ populations, and, in some instances, the legal status is ignored. These countries include Jordan, Lebanon, Bahrain, Iraq, Azerbaijan, and Kyrgyzstan. There is no clear divide between Sunni and Shiʿa. Historically in South Asia and the Middle East, Sunnis and Shiʿas have had the same social and legal attitudes regarding
same-sex sexual conduct and people who have exhibited same-sex desires, or who have experienced gender dysphoria.

Southeast Asia and South Asia have long traditions of people who have traversed beyond the neat gender binary, and these people, who in current parlance may be termed “trans,” embody and act out gender in ways that are both continuous with an established heritage and being molded by the experiences of modern Asian societies that consistently place such bodies on the margins. Nonetheless, these societies (such as Pakistan, India, Indonesia, and Iran) continue to provide some minimum social accommodation or legal protections for gender-fluid or trans individuals, including social or legal recognition of either a third gender, or of gender-reassignment medical procedures. In 2018 Pakistan’s parliament passed a law guaranteeing the right of trans persons to legally self-identify as male, female, or both, and prohibiting discrimination on the basis of gender identity. Another example is Iran, where there is some social and legal accommodation of trans identities, including state-sanctioned or legally recognized medical procedures to change a person’s sex. The contemporary attitude toward trans identities in Iran has its origins in Islamic jurisprudence (both classical and more recent iterations of Islamic law), as well as in understandings of sex and sexuality that came about during the twentieth century as a result of the intersection of various national and transnational discursive, intellectual, ideological, and social trajectories, such as the lived realities of people, activism, assumptions of family life, psychology, and criminology (Najmabadi 2014). In some ways, this accommodation in Iran cuts both ways. It is both a recognition and accommodation of trans bodies and identities, and, at the same time, it can also be construed as an effort to “heteronormativize” people who have same-sex desires or participate in same-sex practices (but who do not necessarily identify as trans) in a country that officially and vehemently rejects homosexuality and metes out strict sanction for those who are convicted of same-sex sexual activity, particularly male anal penetrative sex.

The historical record and contemporary reality suggest that although it is convenient to talk of Islam and homosexuality in stark terms, the case lends itself to more nuance and complexity, depending on how the question is framed and what constitutes the realm of Islamic authenticity. Sexuality and Islam are constructed and reconstructed at the intersection of various epistemological, political, and social trajectories. Nationalism, religious polarization and politicization, postcolonial and anti-imperialist discourses, cultural specificities, social class, and views on gender all influence the way in which the Islamic tradition can be said to either accommodating or oppositional toward same-sex sexuality and gender-bending. The execution of harsh corporal sanctions relating to alleged sexual crimes under self-declared Islamic regimes such as the Taliban and the Islamic State constitutes an example of performances that manifest Islam as an autocratic legal and political ideology in opposition to secular and liberal forms of governance, including illiberal wars fought and occupations undertaken by Western liberal governments. In other contexts, the retention and, at times, enactment of laws against men
who have sex with men (for example, in Indonesian Aceh, Iran, Pakistan, Malaysia, Egypt, and Saudi Arabia) and fierce debates in minority Muslim contexts on the subject demonstrate a larger struggle among Muslims for what Islam is, which frequently takes place on the plane of sexuality and gender.

Religion and Same-Sex Behaviors: Judaism

GREGG DRINKWATER
PhD candidate
University of Colorado, Boulder

Perspectives on homosexual behavior and gender variance in Jewish traditions.

Judaism as a religious system centers on acts, not beliefs. Jewish law, or halacha, focuses more on what people do than what they think. Judaism proscribes behavior, not feelings, especially public behaviors that might threaten the social system. Jewish sexual regulation is thus focused on specific acts.

Historical Context

Judaism was one of the first major religions to codify prohibitions on same-sex sexual relations. Early Jewish restrictions were narrowly focused on anal sex between men, referenced by the Hebrew phrase mishkav zachar, or “the ‘lying’ of a male.” Although other forms of male-male sex were not permitted, they were not explicitly restricted beyond more general prohibitions on nonprocreative sexual acts. Sex between women is not mentioned in the Torah and rarely surfaced as a concern among the early Rabbinic commentators on Judaism’s sacred texts.

This ban on anal sex between men may have helped the emerging Jewish people distinguish themselves from neighboring cultures of the ancient Mediterranean and Near East. Many of the cultures against which Judaism defined itself tacitly approved of or actively celebrated and ritualized same-sex erotic interactions, including anal sex, between men or between men and adolescent boys. Same-sex interactions were central to the cultures of ancient Greece and Rome, but there is also evidence of same-sex eroticism in ancient Mesopotamia, particularly among the Babylonians, Assyrians, and Sumerians, and in ancient Canaan, although the details vary considerably across these cultures. These ancient sexual systems generally focused not on the sex of the participants but on power relations defined by the age differences between partners, relative social positions, and the specific sexual acts involved. The Jewish ban, even after it was later explicitly extended beyond mishkav zachar, similarly centers on specific sexual acts. Even in the contemporary world, Judaism does not prohibit “homosexuality.” Halacha does not concern itself with a person’s sexual orientation or identity.

By the first few centuries of the common era, the Jewish ban on anal sex between men had
become so routinized and such a part of Jewish practice that the rabbis who wrote the great corpus of Rabbinic literature—the Talmud and the Mishnah—noted that Jews need not take extra precautions to prevent social intimacy between men that might lead to sex because “Jews are not suspected of mishkav zachar” (Babylonian Talmud, Kiddushin 82a), unlike the men of Rome and other cultures with which the rabbis were familiar. Beyond some minor discussions of male-male sex acts in Rabbinic literature, there is very little historical evidence of same-sex acts among Jews prior to the late 1800s, outside of areas under Islamic rule.

In medieval Spain (the Iberian Peninsula had been conquered by Islamic forces in the eighth century CE), such noted Jewish writers as Samuel ha-Nagid (993–1055 or 1056), Moses ibn Ezra (c. 1060–c. 1139), Judah haLevi (c. 1075–1141), and Solomon ibn Gabirol (c. 1022–c. 1070) produced poems with stylized and veiled homoerotic references to young men and adolescent boys, often referred to as fawns or gazelles—sevi in Hebrew (Roth 1982). Whether these poems reflected the lived reality of Jewish sexual activity in medieval Spain or were instead exercises in poetic mimicry of Arabic tropes and poetic devices remains contested. Unlike some of the Arabic Muslim poets that these Hebrew poets may have been imitating, the erotic elements are subtle enough to have been largely ignored or played down until recent decades, when scholars brought renewed interest to the homoerotic aspects of this body of work.

There is more available evidence of the lived reality of same-sex sexuality among Jews from the Ottoman Empire as early as the sixteenth century. Same-sex intimacy between men, although strongly denounced under Islamic law, as under halacha, was quietly tolerated within certain limited contexts for much of the period of Ottoman rule. As with the sexual systems of ancient Greece and Rome, such sexual expressions were governed by hierarchies of age and power that saw the penetrative, or “active,” partner as virile, whether the sexual partner was a woman, an adolescent boy, or an adult male. In Jewish records from the period, such acts are noted as deviant, but no more so than any other sexual misconduct, such as incest, rape, or adultery, and were no more concerning than many other acts prohibited by halacha.

Given the relative tolerance for such sexual expression in the Ottoman world up until the nineteenth century, Ottoman Jews saw no reason to presume such behavior was particularly abnormal, even if it violated Jewish law. But because it violated Jewish law, the Ottoman-based scholar Joseph Karo (1488–1575), author of the Shulchan Aruch, an authoritative compendium of Jewish law, revised the earlier Talmudic leniency that had been based on the presumption of a limited Jewish tendency toward mishkav zachar. Karo cautioned against male-male social intimacy (such as two single men sharing a bed) for fear that it might lead to male-male sex acts. While readily adopting the Shulchan Aruch, Ashkenazi, or eastern European rabbis, generally rejected Karo’s argument for such stringencies, suggesting they were perhaps necessary only for Sephardic Jews living under
Islamic rule where such acts were thought to be more common.

Jewish discussions of male-male sex acts became more frequent in central Europe (particularly in Germany and Austria) in the late nineteenth and early twentieth centuries with the rise of sexology and psychology, both of which contributed to the creation and solidification of the homosexual/heterosexual binary that defines the modern sexual regime. Secular Jewish scientists, medical professionals, and intellectuals, such as the Austrian neurologist and psychoanalyst Sigmund Freud (1856–1939) and the German physician and sexologist Magnus Hirschfeld (1868–1935)—the latter being the cofounder in 1897 of the Wissenschaftlich-humanitäres Komitee (Scientific-Humanitarian Committee), the world’s first organization advocating on behalf of the civil rights of homosexuals, and founder in 1919 of Berlin’s Institut für Sexualwissenschaft (Institute for Sexual Science)—were leaders in sexology and psychology and helped define the modern sexual regime. How their ideas spread into Judaism and halacha at the time is up for debate.

But their ideas and those of others sparked the creation of public identities around same-sex desires, which by the decades after World War II (1939–1945) threatened the long-standing heteronormative social order that Judaism aimed to preserve. Only at that point did Jewish leaders begin to speak about “homosexuality” as an identity—as opposed to same-sex sex acts—as a particularly pernicious threat to Jewish family and community. The vehemence of some Jewish critics of “homosexuality” rose in direct response to the increasing public visibility of Jews self-defining as gay and lesbian in the 1970s and 1980s. In this era, Rabbi Norman Lamm, then president of Yeshiva University, a prominent Modern Orthodox institution in the United States, called homosexuality “prima facie disgusting” (1974, 198). Rabbi Moshe Feinstein (1976), an Orthodox scholar and one of the twentieth century’s leading authorities on halacha, said it was “repugnant … despicable and uncivilized.” Jewish leaders of earlier eras were certainly not tolerant of same-sex sexuality, but neither did they direct any special attention to the topic. Jewish religious leaders began their vocal religious condemnations of gay and lesbian people only after gays and lesbians began organizing and advocating for public visibility and for social and religious acceptance. By the 1970s, Orthodox rabbinic leaders in the United States and Europe, particularly from the ultra-Orthodox world, were publicly denouncing so-called gay rights bills (nondiscrimination legislation at the local, state, or national level), with some Hasidic leaders calling for herem, or banishment from the Jewish community, of vocal gay and lesbian civil rights activists. Some Orthodox families would disown their own children if they came out as gay publicly, even sitting shivah (a Jewish mourning ritual) in some cases. But in the more liberal branches of the Jewish world, engagement with homosexuality and with LGBT civil rights moved rapidly in the opposite direction, with tepid expressions of tolerance for gay Jews voiced by Reform Jewish leaders in the United States and western Europe in the early 1970s, giving way by the late 1980s and early 1990s to a general acceptance of gay Jews as part of a diverse community, and then shifting once again to the explicit welcoming of LGBT people into the liberal Jewish world by the first years of the
Although Christian traditions have long based concerns over homosexuality largely on their interpretations of the biblical story from Genesis of Sodom and Gomorrah, from which comes the word sodomy, within Judaism the focus has been primarily on the relevant verses in the third book of the Hebrew Bible, Leviticus, and on restrictions over “spilling seed.” The Jewish interpretive tradition has rarely linked the Sodom story to sexual license generally, or to same-sex sexual relations specifically. Instead, the tradition has long seen this story as primarily about inhospitality, greed, arrogance, and injustice.

In Judaism, sex between men has generally been understood as prohibited by two verses in Leviticus (18:22 and 20:13) that both reference mishkav zchar as an “abomination”—the common translation of the Hebrew toevah—and attach a punishment of death (a punishment never carried out in practice). Most contemporary Orthodox leaders consider these Levitical verses as banning all sexual activity between men. Academic scholars of Jewish texts and many non-Orthodox rabbis offer alternative interpretations. Most understand these verses as referencing only anal sex between men, whereas others suggest that the ancient cultural context of the Bible implies that the verses reference male-male rape or cultic prostitution (prohibited in Deuteronomy 23:18) and therefore should not be understood as a ban on consensual sex between adults (including consensual anal sex). For these scholars, the broadening of the ban to other male-male sexual acts was a later rabbinic innovation.

Sex between women is not prohibited in the Torah. It has long been seen, however, as a violation of Jewish law based on interpretations of other biblical verses. One example is the halachic discussion of women prohibited from marrying into Judaism’s priestly class. Based on Leviticus 21:7, a prostitute (zonah in Hebrew) was unable to marry a priest. Rabbis later debated if women who “rub against each other” (a rabbinic euphemism for female-female sexual acts) were also rendered unfit to marry priests. The mainstream halachic authorities decided they were not unfit, although such acts were indecent. Another example is the rabbinic discussion of Leviticus 18:3–4 about not following the practices of the lands of Egypt and Canaan. The rabbis suggested that one such practice was marriage between two women and marriage between two men. The great philosopher and Jewish legal scholar Maimonides (1135–1204) later added that women who “rub against each other” should also be punished for following a practice of Egypt (but he held that it does not prevent such a woman from marrying a priest). In general, the lack of a direct textual prohibition on same-sex acts between women (as well as the rabbis’ phallocentric presumptions about what defines sex) has resulted in less discussion and debate on the matter within traditional Jewish communities.
Beginning in the 1970s, as self-identified lesbian and gay Jews sought to find a place in Judaism for themselves, some of them began seeing evidence of same-sex sex acts in the biblical canon, albeit not in the Torah, the central corpus of the Hebrew Bible. They see the stories of King David and Jonathan and of Ruth and Naomi as offering models for same-sex love that can help lesbian and gay people see reflections of themselves in biblical texts. In addition, when considering the textual prohibitions on same-sex acts within the Jewish tradition, many gay and lesbian Jews argue that the distance between biblical understandings of same-sex sexuality and contemporary understandings of sexual identities is so vast that it is not clear that the biblical restrictions are even applicable to a modern sexual regime entirely alien to the biblical worldview.

Transgender People

On the question of how to respond to transgender people, Jewish tradition cites biblical verses prohibiting cross-dressing and bodily mutilation, with specific references to castration, thus seeming to ban sex reassignment surgery (SRS) and body modifications more generally. But as with the sexual prohibitions noted above, the exact meaning or applicability of these Jewish legal limits to modern contexts is debated. Scholars offer variant interpretations of the meaning and intent of the ban on cross-dressing, noting loopholes contained within traditional texts. Likewise, Jewish law contains mechanisms for creating exceptions to legal parameters when human life is at stake—the principle in halacha of pikuach nefesh, rooted in the verse in Leviticus 18:5 that proclaims “You shall keep My laws and My rules, by the pursuit of which man shall live.” Psychiatrists and advocates for transgender inclusion note that cross-dressing or SRS may be essential for the health and well-being of transgender individuals and that, thus, these legal exceptions must be invoked.

Contemporary Perspectives

Judaism has no central body universally recognized as an authority over Jewish beliefs, practices, or structures. Some Jewish communities ordain openly lesbian, gay, bisexual, and transgender rabbis and celebrate sexual and gender diversity, whereas in other communities, Jewish leaders actively denounce homosexuality and demand clear boundaries and distinctive roles for women and men.

The branches of Judaism labeled “Orthodox,” “ultra-Orthodox,” “Hasidic,” or “traditional” understand themselves to be strictly following halacha and therefore generally have a negative relationship to public displays of same-sex sexuality. Most Sephardic Jews (descended from the Jews of medieval Spain) and Mizrahi Jews (who trace their ancestry to such Middle Eastern countries as Yemen, Iran, and Iraq) are part of the Orthodox or traditional Jewish worlds. Those labeled “progressive” or “liberal” maintain a more flexible or adaptive relationship to halacha and religious traditions. These branches of Judaism
include the Reform movement, Progressive Judaism (as Reform Judaism is generally called outside North America), Liberal Judaism (in the United Kingdom), the Reconstructionist movement, Renewal Judaism, and Secular Humanism. The Conservative movement (called Masorti Judaism outside the United States) straddles this Orthodox/Progressive divide by framing itself as bound by halacha, but a halacha responsive to the human condition as currently understood.

Beyond this very general division between Orthodox and Progressive Judaism, because of Judaism’s decentralized structure, Jewish communal attitudes toward LGBT people often reflect national, regional, and local norms among non-Jews in their home communities. Thus, Jewish communities in cities or regions known for large LGBT populations or strong support for LGBT civil rights tend to be more liberal on LGBT issues than their counterparts, regardless of denomination, in places with weaker support for LGBT civil rights.

**Orthodox/Traditional Judaism** Starting in the first decade of the twenty-first century, some Orthodox rabbis and communal leaders began speaking publicly in support of civil rights for LGBT people and for treating LGBT Jews with dignity and respect. Other Orthodox leaders reject such calls for inclusion, arguing that because halacha prohibits same-sex sexual activity and strictly regulates male and female gender roles, the affirmation of LGBT people threatens traditional Jewish practice. Some ultra-Orthodox leaders encourage therapy to change same-sex attraction (an approach rejected by most leading mental health experts), a hotly contested topic within Orthodox circles.

Steven Greenberg became the first openly gay Orthodox rabbi after coming out in 1999. In 2004 he published *Wrestling with God and Men: Homosexuality in the Jewish Tradition*, exploring the textual basis for Orthodox Judaism’s relationship to gay and lesbian people. In 2001 the filmmaker Sandi Simcha DuBowski released the documentary *Trembling before G-d*, which featured the stories of nine gay and lesbian Orthodox Jews, including Rabbi Greenberg, along with interviews with key Orthodox rabbis and communal leaders. The film sparked worldwide conversations on homosexuality within Orthodox communities and contributed to shifting the perspectives of many Orthodox leaders toward more compassion for the difficulties Orthodox gay and lesbian Jews face when trying to maintain their commitment to Judaism.

On the inclusion of transgender Jews, most Orthodox communities take a case-by-case basis approach. Orthodox leaders generally prohibit SRS before such surgery has taken place, but in cases where it has already taken place, Orthodox leaders sometimes allow transgender Jews who have had SRS to participate in communal life, with some referencing a minority legal opinion from the 1970s by Rabbi Eliezer Waldenberg (1915–2006), a widely respected Israeli authority on medical issues and Jewish law, in which he argued that “the external genitalia that are visible are the ones that determine gender for [Jewish
"law]" (quoted in Rabinowitz 2003). When transgender Jews participate in Orthodox communities with the support of rabbinic leaders, it is generally understood that they should do so discreetly, conforming to communal norms for gendered dress and behavior.

**Conservative Judaism** Conservative/Masorti Judaism integrates traditional observance of Jewish law with modern ethical and moral sensibilities, scientific inquiry, and engagement with critical scholarship of sacred texts. Conservative Jews make up the second-largest group of affiliated Jews in the United States. The movement’s leadership in the United States has encouraged Conservative synagogues to welcome LGBT Jews as members since the 1980s. But on the question of religious practice and Jewish law, Conservative communities have long maintained a more restrictive stance on same-sex sexual acts, ordination of LGBT rabbis, and same-sex unions. Official statements on LGBT issues have come from the Committee on Jewish Law and Standards (CJLS) of the movement’s Rabbinical Assembly. In 1992 the CJLS consensus was to prohibit both the ordination of LGBT people as rabbis and cantors, and the officiating of Conservative clergy at same-sex unions.

In 2006 the CJLS affirmed two separate legal papers with an equal number of votes. One urged the movement to maintain the 1992 status quo. The other reversed the 1992 positions and paved the way for Conservative rabbinical schools to ordain openly gay and lesbian rabbis, and to allow clergy to officiate at same-sex unions. The movement’s two US rabbinical seminaries quickly changed their policies to allow gay and lesbian rabbinical students. (Admission for openly bisexual and transgender students came a number of years later.) The Masorti seminary in Israel shifted its policy to allow gay and lesbian rabbinical students in 2012.

In 2003 the CJLS approved a paper on the status of transsexuals, concluding that individuals who have undergone SRS, and whose sex reassignment has been recognized by civil authorities, are considered to have changed their sex status according to Jewish law (Rabinowitz 2003). In 2017 the CJLS revisited that 2003 paper and approved an updated paper on transgender Jews and halacha that greatly expanded Conservative understanding of and respect for transgender people, including a commitment to recognizing the gender identity and pronouns preferred by transgender individuals, regardless of medical or legal intervention (Sharzer 2017).

**Reform Judaism** Since the 1990s, Reform Judaism has been the largest Jewish movement in the United States and is characterized by a strong emphasis on social justice, individual autonomy in the interpretation of the Torah, and gender equality. The majority of Reform congregations worldwide are in the United States, and most Reform institutions embrace LGBT people. In 1965 the movement’s National Federation of Temple Sisterhoods (founded in 1913 and once the largest Jewish women’s organization in the United States) passed a resolution deploring the harassment of homosexuals and calling for “revisions in the
criminal code as it relates to homosexuality.” This was the first resolution by a national American Jewish organization (indeed, the first in the world) to speak in favor of the rights of homosexuals—a major step by any religious organization on the subject.

In 1977 the Reform movement's Central Conference of American Rabbis (CCAR) passed a resolution calling for the decriminalization of homosexual acts between consenting adults and an end to discrimination against gays and lesbians. Since then, the US arm of the movement has continually supported the rights of LGBT people, both in civil and Jewish society. Leaders of Liberal Judaism in the United Kingdom have also been very vocal in favor of LGBT inclusion. Public support for LGBT people among Reform/Progressive leaders in other countries is also generally strong, although it is more tepid in socially conservative countries and largely absent in the Jewish communities of Russia and the former Soviet Union.

Leo Baeck College, the Progressive seminary in the United Kingdom, admitted its first openly gay students in 1984. In 1990 the CCAR endorsed admitting gay and lesbian Jews into Hebrew Union College (HUC; the movement's seminary) and the rabbinate, although a number of gay and lesbian rabbis received ordination prior to this 1990 decision, or came out as gay or lesbian after ordination. Germany’s Abraham Geiger College also admits gay and lesbian students. In 2003 HUC admitted its first openly transgender rabbinical student.

**Regional Differences** The United States and Israel are home to roughly 6 million Jews each, representing approximately 80 percent of world Jewry. The next-largest Jewish population, at just about 500,000, is in France, followed, in order of decreasing population, by Canada, the United Kingdom, Russia, Argentina, Germany, Australia, and Brazil. All other countries have fewer than 100,000 Jews each. Contemporary support for LGBT inclusion within the Jewish world is generally strongest and most developed in those countries where Orthodox Judaism accounts for a smaller percentage of the national Jewish population. (In the United States it is roughly 10%.) In those countries where Orthodox Judaism represents a larger share of the Jewish population—often the majority— LGBT inclusion is more controversial, as it is in those countries and communities that are more culturally conservative on LGBT civil rights in general, such as the Jewish communities of eastern Europe and Russia.

The conservative social contexts in Russia and eastern Europe discourage any movement toward tolerance for homosexuality within even Reform Jewish communities. Since Vladimir Putin's ascendance to the Russian presidency in 2000, the Russian state has encouraged a broad antigay movement within Russian society. Homophobia in Russia, commonly associated with the Russian Orthodox Church and right-wing nationalist political movements, has also been supported by the official leadership of the Jewish community in Russia, which has sparked similar responses by Jewish leaders in Belarus and Ukraine. The two competing chief rabbis of Russia, Berel Lazar (1964–) of the ultra-
Orthodox Hasidic movement, Chabad, and the Modern Orthodox Adolf Shayevich (1937–) have both publicly made strongly antigay statements. Lazar (who is strongly supported by Putin) has described efforts to hold gay pride parades in Moscow as blows to morality, indirectly giving license to the violent assaults against gay rights activists that have become common in Russia. Shayevich expressed approval of the hanging of homosexuals in Islamic countries during a 2015 interview with a popular Russian journalist. Even within the Reform movement in Russia, efforts to include gay and lesbian Jews—such as debates over officiating at weddings for gay couples—have been met with nearly uniform disapproval. In 2006 the chair of the Reform movement's national organization in Russia resigned in protest after a Reform rabbi in Moscow officiated at a union ceremony for a lesbian couple.

The perspective on LGBT rights is somewhat more open in the Jewish communities in countries in eastern Europe that are now part of the European Union, such as Hungary. With nearly 50,000 Jews (roughly the same as Mexico), Hungary has the largest Jewish community in eastern Europe beyond the borders of the former Soviet Union. A Jewish cultural center in Budapest, for example, houses a small Masorti congregation and the offices of a local gay rights group and other community organizations focused on civil rights.

Israel

Israel accounts for roughly 40 percent of the world's Jews but has a mixed record on LGBT inclusion. Civil protections for LGBT people under Israeli law are very advanced, with most civil rights protections enacted from the early 1990s forward. But support for religious inclusion of LGBT people in Judaism is relatively low compared to the United States and some other Western countries. The vast majority of Israeli Jews identify either as secular or as Orthodox/traditional; the presence of the progressive Jewish movements in Israel is small but growing. The Orthodox in Israel, like their counterparts globally, are generally negatively inclined toward public LGBT inclusion in Jewish religious life.

Secular Israelis may support Israel's pro-LGBT civil laws but often have little interest in debates over LGBT inclusion in Judaism. This split is reflected in Israel's LGBT advocacy organizations, which either are focused primarily on secular civil rights (such as the Agudah, the main national LGBT advocacy group) or are dedicated to expanding space for LGBT Jews within Orthodox Judaism. Of special note is the founding in 1997 of the Jerusalem Open House, an organization dedicated to supporting both LGBT Jews and Palestinians.

Starting in the first decade of the twenty-first century, the Israeli government began promoting its positive record on LGBT civil rights and has also created tourism marketing campaigns targeting LGBT communities. These efforts have been critiqued by activists as a form of public relations spin they have labeled “pinkwashing.” The idea behind pinkwashing is that the Israeli government cynically highlights its relatively strong record on LGBT civil rights to present itself as a cosmopolitan nation dedicated to human rights,
while playing down or sidestepping Israeli treatment of Palestinians, both within its own borders and within the occupied territories.

**LGBT Jewish Institutions**

Since the founding of the first Jewish LGBT organization in 1970, such institutions have proliferated around the world. The first LGBT synagogue, Beth Chayim Chadashim, was founded in Los Angeles in 1972 (at first defining itself as a “gay synagogue” and only later shifting to “LGBT”) and quickly affiliated with Reform Judaism (an earlier attempt to found a gay synagogue in 1970 in Brooklyn was unsuccessful). Perhaps most surprising is that the Reform Jewish establishment, which oversees applications for membership, accepted this gay synagogue’s application for membership so readily. In that same year, Chutzpah (the Yiddish word for “audacity”), a social group for gay Jews in San Francisco (later renamed Achvah, a Hebrew word for “declaration”) was founded, as well as the Jewish Gay Group in London. Although LGBT Jewish organizations can be found globally, LGBT synagogues (versus LGBT Jewish social or cultural groups) are largely limited to the United States, where over two dozen once existed in the 1990s. A few small LGBT synagogues existed briefly in Canada and Europe.

In 1975 a conference of gay Jewish organizations brought together representatives from Jewish gay groups as a gay Jewish response to the 1975 vote of the United Nations equating Zionism with racism. This informal umbrella grouping eventually became the World Congress of GLBT Jews, acting as an information- and resource-sharing network for Jewish LGBT organizations worldwide; still later, it changed its name to the World Congress (Keshet Ga’avah). Jewish organizations that focus on education, advocacy, and organizing toward the inclusion of LGBT Jews in Jewish life can be found throughout the Jewish world, with the bulk in the United States. Keshet, founded in Boston in 1996, became the largest such organization worldwide following its 2010 merger with Jewish Mosaic (founded in 2003 as the first national organization in the US dedicated to changing Jewish policy on LGBT Jews).

**LGBT Jewish Culture**

Any list of prominent figures in the arts, culture, and politics in the United States and Europe would include countless LGBT Jews, among them Marcel Proust, Gertrude Stein, Leonard Bernstein, Susan Sontag, Maurice Sendak, Allen Ginsberg, Jacob Israel de Haan, Claude Cahun (née Lucy Schwob), Emma Goldman, Harvey Milk, and Stephen Fry among many, many others. Most of these figures, though, rarely specifically addressed the intersections of Judaism and LGBT identities in their art or work.

One of the earliest cultural products dealing with a modern gay theme within a Jewish context was the Yiddish play *God of Vengeance*, written by the Polish novelist and dramatist
Sholem Asch (1880–1957) in 1907. Taking the world of Yiddish theater by storm, the play told the story of a Jewish brothel owner and his daughter, Rivkele, who falls in love with Manke, a young prostitute working in her father’s basement. A popular and critical success in Europe, the play was translated and performed in Russian, German, Polish, Italian, Czech, and Norwegian. When an English-language version premiered on Broadway in New York City in 1923, the cast was arrested and prosecuted on obscenity charges.

In 1923 the Czech poet and essayist Jiří Mordechai Langer (1894–1943) published *Die Erotik der Kabbala* (The eroticism of Kabbalah), an exploration of the erotic, and homoerotic, potential at the heart of Jewish mysticism and within Judaism. Langer went on to produce a body of often overlooked Hebrew poetry with homosexual themes.

The first novel to include Jewish and homosexual main characters was *Singermann* by the prolific American writer Myron Brinig (1896–1991). Published in 1929 and widely lauded by critics at the time, the novel, and its sequel, *This Man Is My Brother* (1932), focused on a Jewish immigrant family in Montana (a stand-in for Brinig’s own family of Romanian Jewish immigrants who settled in Butte, Montana) and included one character who was explicitly homosexual and another who was sexually ambiguous. Brinig’s works were widely circulated in England and Germany, in addition to the United States.

After Brinig’s novels and Asch’s play, LGBT Jewish themes appeared sporadically in artistic and literary products throughout the middle decades of the twentieth century. Most such works, such as the novel *Wasteland* (1946) by Jo Sinclair (1913–1995) or the poem *Howl*...
(1956) by Allen Ginsberg (1926–1997), were created by artists who themselves identified as LGBT. In other cases, artists lived heterosexual lives but wrote with empathy about LGBT characters, such as the Nobel Prize–winning author Isaac Bashevis Singer, who wrote short stories with lesbian characters, as well as “Yentl the Yeshiva Boy,” dealing with transvestism (the inspiration for the 1983 Barbra Streisand film Yentl).

In addition, Jewish and non-Jewish sex researchers and psychologists have published studies of LGBT people that often include Jews. These works include George Henry’s study on “sex variants” from 1941, Alfred Kinsey’s study of sexuality in the human male from 1948, and Israel Gerber’s account of rabbinic counseling of a homosexual in Man on a Pendulum from 1955.

Ultra-Orthodox Jews Protest a Gay Pride Parade in Jerusalem, 2008. The ultra-Orthodox branch of Judaism is particularly vocal in its objection to gay rights, publicly demonstrating against nondiscrimination legislation and calling for herem (banishment from the Jewish community) of gay and lesbian activists.

Within the world of film, The Boys in the Band (the 1970 adaptation of the 1968 play by the same name) introduced American audiences to the character of Harold, the self-described “thirty-two-year-old, ugly, pock-marked Jew fairy” played by Leonard Frey. Torch Song Trilogy (1988), written by and starring Harvey Fierstein (1954–), based on Fierstein’s 1982 Tony Award–winning play of the same name, brought a gay Jewish drag queen to movie screens worldwide. In the 1990s and first decade of the twenty-first century, multiple other independent and documentary films— such as Aimee and Jaguar (1999), Paragraph 175
(2000), Kissing Jessica Stein (2001), and Eyes Wide Open (2009)— included LGBT Jewish characters.
